IDEAL OPERETTAS AND CANTATAS

From Which to Make Selection Now for Spring Productions

THE CRIMSON EYEBROWS

A Fantastic Chinese Romance in Three Acts

Book, Lyrics and Music by MAY HEWES DODGE and JOHN WILSON DODGE

This melodious romance of old China combines delightfully interesting plot with most attractive musical settings. Reports of its use in various parts of the country are arriving continually.

Vocal Score With Dialog, Price, $1.00
Stage Manager's Guide, Price, $1.00
Orchestral Parts for Rental Only

BARBAROSSA OF BARBARY

Book by FRANCES BENNETT
Music by DAVID BRITTON

A Musical Comedy in Two Acts

Vocal Score With Full Dialog. Price, $1.00
Stage Manager's Guide, Price, $1.00

A delightful and amusing musical play that makes a very enjoyable and successful evening's entertainment for any audience. The plot is highly entertaining, the music is catchy, and within a reasonable amount of expense, the staging can be made very elaborate. Amateur performers can more than satisfy their audiences with this musical presentation of a mirth-provoking reformation of a band of pirates.

A New "Hit" in Comic Operas for Amateur or Semi-Professional Production

HEARTS AND BLOSSOMS

A Comic Operetta in Two Acts

Book and Lyrics by LIDA LARRIMORE TURNER
Music by R. M. STULTS

THIS melodious comic opera made such a "hit" at its first presentation that succeeding nights brought such crowds as to necessitate additional performances beyond those originally planned. The music, lyrics and dialog are such as to gain the spontaneous enthusiasm of any audience. Four love plots are unravelled with numerous laugh-provoking situations arising. The staging and costuming are not difficult and because this is such an excellent vehicle for young people in their 'teens and twenties the audience is treated to many pretty and fascinating stage pictures. "Hearts and Blossoms" truly gives promise of becoming one of the most popular of musical plays for amateurs.

Vocal Score With Full Dialog, Staging and Costuming Hints. Price, $1.00

THE CASTAWAYS

Libretto by A. M. FOSTER
Music by FAY FOSTER

A Clever, Melodious Operetta for Women's Voices in Three Acts

Vocal Score, Including Dialog, Price, $1.00
Stage Manager's Guide, Price, $1.00

KNIGHT OF DREAMS

Or "A Modern Pygmalion and Galatea"

Book, Lyrics and Music by MAY HEWES DODGE and JOHN WILSON DODGE

For a musical comedy that is worth while and ringing with melodies, and yet not difficult, this three-act play is ideal. It employs a very amusing story, while the staging and costuming can be easily handled.

Vocal Score With Dialog, Price, $1.00
Stage Manager's Guide, Price, $1.00
Orchestral Parts for Rental Only

A clever plot, replete with humorous situations, given a charming and excellent musical background by one of America's foremost composers. The chorus can be almost any number, and the main characters require one contralto, two sopranos, one mezzo and two speaking parts, one of these preferably a dancer.

An Immensely Successful Operetta for Young Ladies

GHOSTS OF HILO

Hawaiian Operetta for Young Ladies

By PAUL BLISS

The weird characteristic music of the Hula dancers joins with the haunting melodies and catchy rhythms of the songs and choruses in this delightful operetta for young ladies. The two-part chorus work is especially beautiful and is sure to arouse the appreciation of audiences. Suitable for indoor or outdoor performance, and may be lengthened by interpolating ukulele serenades, solos or dance numbers.

Vocal Score With Dialog, Music and Stage Manager's Guide, Price, $1.00
Orchestral Parts May be Rented

Opera Burlesque on College Life

CLEOPATRA

Book and Music by JOHN W. BRIGHAM

A NOVELTY musical burlesque for male characters, which abounds with excruciatingly funny situations. Every time it is produced word comes as to the great success and many laughs attending its performance. It is short and can be used as part of an evening's program. It makes a novelty used in conjunction with a men's chorus program in concert form. It is within the capabilities of high school and college young men.

Price, 75 cents

THE PENNANT

An Operetta in Two Acts

Lyrics by FRANK M. COLVILLE **Music by OSCAR J. LEHRER**

A composite description of "The Pennant" can be summed up in pretty tunes, amusing situations, well set-up young men, bright girls in smart frocks, a dance here and there, and a spirit of college "go." The choruses are made up of football players and college girls, and the musical numbers are of a pleasing character. This operetta has been produced successfully a flattering number of times in various parts of the country.

Complete Score and Dialog. Price, $1.00

An Artistic Musical Fantasy for Soprano and Two-Part Chorus

MOTHER GOOSE FANTASY

By ARTHUR NEVIN

ITS adaptability to limited producing facilities and its suitability for a brilliant and elaborate staging makes this a most acceptable work for any first-class young ladies' chorus. The addition of a professional soloist and of dancers will greatly add to the effect. The captivating choruses may be rendered by young people from eight to eighteen years of age, or by choruses made up entirely of young ladies.

Complete Score, Price, $1.00
Orchestral Parts May be Rented

FROM THE YELLOWSTONE

A Musical Drama for Solo Quartette and Chorus

Text by CHARLES O. ROOS and JUANITA E. ROOS
Music by THURLOW LIEURANCE

THE labors of the forester for the preservation of the forests and the untiring efforts of the musician in spreading abroad the hidden beauties of Indian music furnish the interesting points around which the plot of this excellent music drama is built. Can be rendered effectively in semi-concert form.

Complete Music and Dialog. Price, 75 cents.

A VIRGINIAN ROMANCE

A Musical Comedy in Two Acts

Lyrics by EDITH S. TILLOTSON
Book and Music by H. LOREN CLEMENTS

THE music of this short comedy is sprightly and catchy, introducing snatches of old war-time and patriotic melodies. The first scene is under the shade of the blossoming trees of a Virginia plantation, and the second is a reception room of a Southern mansion. It is most acceptable at any season of the year.

Vocal Score, Price, $1.00

CANTATAS FOR PRESENTATION IN CONCERT FORM

Mixed Voices

THE MERMAID

By JULIAN EDWARDS **Price, $1.25**

A brilliant, descriptive cantata which graphically depicts the roaring of the sea, the call of the mermaid, etc., in an interesting manner.

THE SINGING LEAVES

By GRACE MAYHEW **Price, 60 cents**

A bright, easy cantata from the text by James Russell Lowell. It is especially suitable for small choral societies.

THE VILLAGE BLACKSMITH

W. H. NEIDLINGER **Price, 60 cents**

A musical setting of Longfellow's popular , full of color and striking choral effects.

E GODDESS OF LIBERTY

AMILLE W. ZECKWER **Price, $1.00**

inspiring musical work, which glorifies dents and ideals, sacred to every American iot.

Treble Voices

MON-DAH-MIN

By PAUL BLISS **Price, 60 cents**

The artistic presentation of an Ojibwa legend makes an ideal work for choruses in girls' high schools and colleges, or any women's choral society.

FOUR SEASONS

By RICHARD KIESERLING
Price, 60 cents

This cycle of four bright and melodious three-part choruses will fit well in almost any program of treble voices.

THE FAIRIES' REVELRY

By RICHARD KIESERLING
Price, 60 cents

This very pretty cantata with dancing numbers may be used with good effect for concert or stage presentation.

PETER PAN

By MRS. H. H. A. BEACH
Price, 50 cents

In this song cycle the music has been delightfully fitted to the mood of the text, making a bright, rippling group, a classic for three-part women's choruses.

IN FOREIGN LANDS

By RICHARD KIESERLING
Price, 40 cents

This desirable work for two-part chorus singing is appropriate for a women's club, or a group of advanced singers.

DAWN OF SPRING

By RICHARD KOUNTZ **Price 60 cents**

The story of nature, expressed in spring, is exquisitely told with a beautiful, melodious setting. An excellent two-part work for school choruses.

THE MERMAID

By Fannie Snow Knowlton, Price, 60 cents

A brilliant work for a soprano solo with three-part chorus, which will prove a striking feature of any program.

LIGHT

By RICHARD KOUNTZ **Price 60 cents**

An excellent work for three-part voices. It offers great musical possibilities either for women's choral societies or school choruses. Sung with immense success by over 600 Pittsburgh school children under the direction of Dr. Will Earhart.

RUTH

By PAUL BLISS **Price, 60 cents**

This sacred cantata for womens voices is a most admirable setting of the well-known Biblical story in solo and four-part numbers.

For convenience and economy to those interested in these publications, examination privileges will be extended

"The Best Piano Method I Know"

Ignace Jan Paderewski

Ignace Jan Paderewski, world-famed pianist-statesman, after a careful examination of the master work of DR. WILLIAM MASON wrote

> ***"Your 'Touch and Technic' is the best piano method which I know and I congratulate you on being the author of so masterly a work."***

LISZT, GABRILLOWITSCH, JOSEFFY, and scores of great pianists and teachers, have praised this distinctive and original technical system in the strongest terms. This, perhaps, is the highest achievement in American musical educational work.

TOUCH AND TECHNIC (IN FOUR VOLUMES) By Dr. William Mason

Selling at $1.00, each volume represents the basis of the artistic and technical success of numerous famous pupils of Dr. Mason and countless disciples.

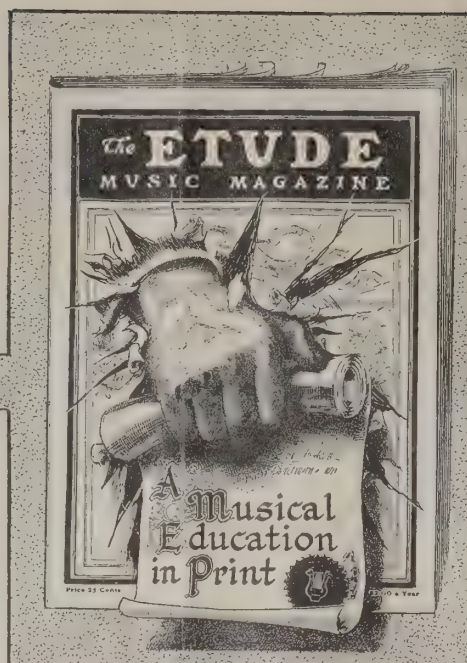
THE SYSTEM REQUIRES NO SPECIAL TRAINING COURSE TO UNDERSTAND. IT IS SELF-EXPLANATORY.

Dr. William Mason realized that the finest possible preliminary training was needed in combination with his ***Touch and Technic,*** and for this reason he was in constant collaboration with W. S. B. Mathews in the preparation of the original issue of the ten grades of the

STANDARD GRADED COURSE OF STUDIES FOR THE PIANOFORTE

Designed to accompany ***Touch and Technic,*** although each work may be used independent of the other. These ten interesting, melodious, practical volumes, selling for $1.00 each, have been the backbone of a very large part of the musical educational progress of America.

"THE STANDARD GRADED COURSE" IS UNCEASINGLY RE-EDITED, REVISED AND KEPT UP-TO-DATE BY RENOWNED TEACHING EXPERTS, INCLUDING FAMOUS VIRTUOSOS OF THE PIANO



IT IS ALWAYS THE LAST WORD IN THE MOST SENSIBLE, PROGRESSIVE TEACHING MATERIAL

Kindly let us send you with our compliments our 24-page "Guide to New Teachers" telling just how to use these world-famed methods also listing some three hundred pieces, studies, etc., which may be used as desired for supplementary material. This guide is invaluable in many ways. It is entirely free. Just send your name and address on a postal to-day and say "Please send your 24-page 'Guide to New Teachers.'"

The World of Music

Spontini's "La Vestale" was sung for the first time by the Metropolitan Opera Company, on November 12. Though one hundred and eighteen years old, and having been given many times in Europe, this was the first time it had been heard in New York. It was produced on a lavish vocal and scenic scale. Though in the type of an earlier day, it had a rather enthusiastic reception. Its first performance in America had been in Philadelphia, in 1828, by the French Opera Company of New Orleans.

The National Association of School of Music and Allied Arts met in convention in Chicago, November 27-28. The principal effort was toward the better understanding of and coördinating of standards among the different schools represented.

Ossip Gabrilowitsch celebrated the twenty-fifth anniversary of his American debut by a recital in New York on November 11; while in the week of November 9 Willem Mengelberg celebrated the twentieth anniversary of his first American appearance as guest conductor of the Philharmonic Orchestra of New York. Congratulations to each.

A "Radio-Opera" in one act has been commissioned for performance through station WRNY of New York, the composer selected being John Adam Hugo whose opera, "The Temple Dancer," was several years ago in the repertoire of the Metropolitan Opera Company.

"Princess Pat's" Canadian Regiment Band has received permission from the government at Ottawa to make a ten weeks tour of the leading cities of the United States, beginning in August, 1926. Welcome to our neighbors on the north!

The Fortieth Anniversary of Alessandro Vessella as conductor of the Municipal Band of Rome was recently celebrated by a gala concert in the Augusteum. This organization has often been mentioned as "a symphony orchestra of wind instruments," and on this occasion the program included the *Death and Transfiguration* of Strauss and the *Good Friday Spell* from "Parsifal."

A Brahms Festival is announced for next May at Heidelberg. The Brahms Society will sponsor the event and participate in the programs which Wilhelm Furtwangler will conduct,

The Claque has been outlawed by the management of the Chicago Civic Opera Company, in a circular letter sent to the artists of their organizaton, in which they characterize this old world importation as contrary to American standards of fair play. They intimate that neither the management nor the public are sufficiently gullible to be influenced by paid applause.

The Magnificent Royal Opera House of Madrid is threatening to collapse. Great cracks have appeared in the facade and inner walls, plumbing has broken, supposed to have been caused by blastings in the construction of an underground railway nearby.

The Post of Director of the Regio Conservatorio of Florence, which has been vacant since the resignation of Ildebrando Pizzetti a year ago, has been given to Giacomo Setaccioli, formerly teacher of composition at the Liceo Musicale di Santa Cecilia in Rome.

Dr. Edmund H. Fellowes, canon of Windsor Castle, and an authority on English Madrigals, gave three lectures in the Coolidge Auditorium of the Library of Congress, in October. His subjects were "The English Madrigalists," "Tudor Church Music," and "English Lutenists and Their Songs."

Dusolina Giannini, the young Philadelphia soprano who leaped so suddenly to fame at her first concert appearance in New York, achieved a real triumph on her recent appearance as *Aida* at the Staatsoper in Berlin. Thirty-six curtain calls were followed by the entire house shouting and clapping their way to the footlights, an ovation unprecedented for a foreign artist on her first appearance there.

Cornerstones of Five Structures of the American Institute of Operatic Art at Stony Point on the Hudson, were laid on November 2. Four of these units are dedicated to the memories of Lillian Nordica, Edward MacDowell, Victor Herbert and David Bispham.

Broadcasters Agreed to Compensate Composers and all owners of copyrights for the use of protected compositions, at meeting of composers, publishers and broadcasters during the Fourth Annual Radio Conference in Washington in the third week of November. Details are still to be worked out and agreed upon.

The Army Music School of Washington is reported to be about to be removed to either Baltimore or New York, the space in the Washington Barracks on the old arsenal grounds having become congested with other activities.

Beniamino Gigli has been decorated with the grand star, ribbon and cross of a Grande Offiziale of the Kingdom of Italy, in honor of his achievements at the Metropolitan Opera and his recent services as Honorary Police Commissioner of New York.

Easthope Martin, one of the most promising and popular of the younger English composers, died in London on October 18, at the age of thirty-eight. He was born at Stourport, Worcestershire, England, of Irish parentage. He had made several visits in the United States where his songs have been popular with both singers and public.

A Xaver Scharwenka Memorial is planned for the site of his entombment; and a fund for that purpose is being raised by a committee of prominent musicians.

Master Everard Stovall, an eleven year old boy of Santa Ana, California, gave a recital in October, devoted entirely to the works of Chopin and containing some of the most taxing compositions of the master. His interpretations gave promise of a really brilliant future.

Municipal Organs are reported as being owned by twenty-seven cities, fifteen of which employ municipal organists.

The Swedish Naval Band is announced for a tour of our eastern cities during the coming spring.

The Women's Symphony Orchestra of Philadelphia made its first appearance of the season with the Philadelphia Music Club, in the Grand Ballroom of the Bellevue-Stratford Hotel, on the afternoon of November 24. With a complete symphonic personnel of seventy members, under the baton of J. W. F. Leman, it gave an artistically satisfying interpretation of a program from the standard orchestral repertoire.

The Honolulu Symphony Orchestra has engaged Rex Dunn, former leader of the Seattle Symphony Orchestra, as conductor of the ensuing season of concerts.

Havana, Cuba, had in December a season of Mozart opera, during which "Don Giovanni," "Le Nozze di Figaro," and "Cosi fan Tutti" had performances by the Hinshaw Opera Company. These were under the patronage of the *Sociedad Pro Arte Musical,* a musical society which brings annually to Havana the greatest artists and the best there is in music, from all parts of the world.

Chamber Music, the most refined type of the musical art, is steadily finding greater favor with the public, if the number of organizations for its interpretation and the patronage of their programs may be taken as a measure. Perhaps no other symptom indicates so well a healthy movement of America towards becoming truly musical.

The American Opera Conductor seems to have arrived in the person of Henry G. Weber, the young leader who has won a place on the regular staff of conductors of the Chicago Civic Opera Company. He is at the helm of a full share of the performances, with no apologies offered by the press for either his youth or nationality.

Willem Landré's "Beatrijs," an opera based on a Dutch legend, with a libretto in the Dutch language and music composed by a Dutchman, which is a rarity in the musical world, was produced at The Hague on October 15. So much interest was created that it is to be given in Paris as well as in many Dutch towns. Its plot is founded on the story of a nun who forsook her cloister to live for fourteen years with her lover and who on returning found that during this period her work had been done by the Virgin herself.

The Associated Glee Clubs of America, with an aggregate of 1,100 men, will give a concert in the Seventy-first Regiment Armory of New York, on February 6, under the direction of Walter Damrosch. The association contemplates instituting a male chorus competition.

The Dutch Music Society celebrated its fiftieth anniversary by a four weeks' festival at Utrecht, in October.

A Marble "Donor's Tablet," executed by Brenda Putnam, the New York sculptress, has been placed in the new Chamber Music Auditorium adjoining the Library of Congress, in honor of Mrs. Frederick Shurtleff Coolidge, donor of the hall.

Carl Maria von Weber's Mass for Four Solo Voices, Orchestra and Organ, which was thought to have been lost in a fire of 1803, is reported to have been found with the score intact, at Salzburg.

Civic Music in Chicago "puts a new feather in its cap" by the announcement that the Chicago Symphony Orchestra is to give a series of concerts in the International Amphitheatre in the heart of the stockyards district, sponsored by the leading packing concerns and aligned with the policy of the Orchestra Association to carry the gospel of good music to all the people. Fifty cents will be the admission to all the seven thousand seats. In the third week of November this orchestra set a new record by daily concerts under local auspices. On Monday it was this concert in the pavilion of the stockyards; on Tuesday a new series of programs was inaugurated; on Wednesday the Children's Concert; on Thursday its Popular Concert; and on Friday and Saturday the regular pair of the subscription season. And the intimation is that this will not be unusual during the winter.

No More Broadcasting Licenses will be issued until there has been a reduction in the number of stations now in operation, according to a resolution passed, at the suggestion of Secretary Hoover, by the Fourth Annual Radio Conference at Washington; and this in spite of one hundred and seventy-five new stations clamoring for official permission to use the already greatly congested ether.

Dibdin's "Lionel and Clarissa," popular in both England and America for fifty years after its appearance in the Eighteenth Century, has had a successful revival at the Lyric Theater, Hammersmith, London.

"Le Petit Opera Louisianais," a new organization, has been formed in New Orleans for the purpose of a short season of opera in French. Perhaps this is a presage of a revival of the French Opera Company for which the "Creole City" was for more than a century famous.

The Frankfort City Library has acquired a manuscript score of incidental music to the play "Lanassa," attributed to "Capellmeister Mozart." The music is believed to be the lost entractes and choruses for the play, "Thamos, King of Egypt," which Mozart composed for a production at Salzburg in 1780, but which performance was deferred and this same music used for a production of "Lanassa" at the time of the coronation of Leopold II at Frankfort in 1790.

Prizes Offered by the National Federation of Music Clubs are: $1,000 for a Symphony or Symphonic Poem; $500 for a Choral Composition for mixed voices; $100 for a Violoncello Solo; $100 for a Song written by a woman and member of the Federation.

Vasa Suk, conductor of the State Opera Theatre of Moscow, has received the degree of People's Artist of the Republic, the highest honor to which a musician can attain in Russia.

Leonora Cortez, the young Philadelphia pianist, is again winning praise in European centers, her recent appearance in Munich having won for her especial recognition.

IN ADDITION

In addition to the main catalogs and advertising matter listed above, we publish information about all of our important publications. Anybody seeking the details about any Schirmer publication may have prompt and thorough informative service upon request.

SCHIRMER 1925 HIGHLIGHTS

SECULAR SONGS

At Starlight Time. (*High, Med., Low.*) *OLEY SPEAKS* *net* .40

Awake, Beloved. (*High.*) *CLARA EDWARDS*.....*net* .40

Back Again in Eldon. (*High, Med., Low.*) *OLEY SPEAKS* *net* .40

The Circus. (*Med.*) *ELEANOR MARUM*...*net* .40

Daisies (A Whimsy). (*High.*) *AMY WORTH*.....*net* .40

The Devil's Tail. (*Med.*) *LORRAINE NOEL FINLEY* *net* .40

If I Were a Tree. (*High.*) *RHEA SILBERTA*.....*net* .40

The Journey. (*High.*) *JAMES H. ROGERS*....*net* .40

Lavender Gown. (*Med.*) *CECIL CAMERON*.....*net* .40

The Look. (*High.*) *OSCAR RASBACH*.....*net* .35

Magic. (*High.*) *R. HUNTINGTON WOODMAN*.....*net* .40

Miss Mary, Won't You Come Into My Garden? (*High.*) *IDA BOSTELMANN*....*net* .40

Nocturne. (*High.*) *ELEANOR MARUM*....*net* .40

One Memory. (*Med.*) *CECIL ELLIS*.....*net* .40

Sail Away for the Rio Grande. (*High, Low.*) *DAVID W. GUION*.....*net* .40

Song is So Old (with Violin Obbligato). (*Low.*) *ROBERT HUNTINGTON TERRY*.....*net* .35

Twilight Song. (*Med.*) *SELIM PALMGREN*....*net* .40

SONG COLLECTIONS

Sketches of Paris. (*High.*) *KATHLEEN LOCKHART MANNING*.....*net* **1.00**

A group of six graphic pictures for voice and piano of street scenes in Paris. "Sure-fire" concert songs—unusual, yet melodious and musically attractive.

A Book of Songs for Little Children. *JEANNETTE DAVIS ROTHSCHILD*.*net* **.50**

Fourteen little songs. Melody, cleverness, and a marked understanding of child-psychology are outstanding features. Kindergarten and first-grade teachers will find them a joy forever.

Kathleen Malone's Book for Home and Kindergarten. *KATHLEEN MALONE net* **.75**

Forty-four action songs with marked rhythms, catchy melodies, bright original texts. Clear and copious instructions for the action-work.

SINGING: A Treatise for Teachers & Students

HERBERT WITHERSPOON *net*, **$2.00**

With authoritative writings pertaining to modern voice development and the vocal art in general, all too scarce, this book by such a master of singing as Mr. Witherspoon is of unusual importance. The author illustrates completely his method of teaching; setting forth with the utmost clarity the different facts and principles upon which his entire art is based.

OPERETTA

The Magic Nutcracker. *JANE KERLEY*.....*net* **.60**

An especially novel fairy operetta woven about the music of Tschaikowsky's "Nutcracker Suite." Despite its high standard, the music is easy to render.

THE WELL-TEMPERED CLAVICHORD *BACH*

(Edited by Edwin Hughes)

Schirmer's Library, Vols. 1483-1484 (Spanish and English)

***Each, net,* $2.00**

It is a well recognized fact that not one of the many existent editions of this immortal work, although associated with the names of some of the greatest classical editors, is completely satisfactory to the modern educator. Reverently approaching the task of creating a new edition, that should meet all objections, Mr. Hughes consulted seventeen existing editions; retaining as scrupulously as possible, as many of their meritorious points as were practical, and by comparison, securing the means of bringing his own work nearer to the original Bach.

HOW TO WRITE A GOOD TUNE

FRANK PATTERSON ***net,* $1.50**

The contents of this book were first published as a series of articles in *Musical Courier*. There they attracted such marked attention and furnished so much material towards the creation of a new musical science, that their publication in book form came as a matter of course. It is not an exaggeration to say that every composer or student of composition can find material of substantial value in this book.

PIANO SOLOS

Colonial Song. *PERCY GRAINGER*....*net* .60

Memories from Childhood. (Cycle for Piano.) *LEO ORNSTEIN*.....*net* **1.00**

Valse, from Suite for Two Pianos. (Arr. for piano solo by Carl Deis.) *ANTON ARENSKY*....*net* .85

Valses Viennoises. (Transcribed by Wanda Landowska.) *J. F. LANNER*...*net* .60

PIANO (*Educational*)

Airs and Dances of the 18th Century. (2nd and upper 1st.) *ANGELA DILLER*

March of the Musketeers. *net* .25

Sir Pantaloon.....*net* .25

Danse (Laujon).....*net* .25

Exaudet's Minuet.....*net* .25

The March of the Three Kings.....*net* .25

Gavotte et Musette (Intermediate). *PAUL ZILCHER* *net* .35

Pierrette (Lower Intermediate) *L. LESLIE LOTH*.....*net* .30

Pierrot (Lower Intermediate). *L. LESLIE LOTH*.....*net* .30

Remembrance (Intermediate). *PAUL ZILCHER*.....*net* .40

PIANO COLLECTIONS (*Educational*)

Eight Pieces in Easy Keys *MATHILDE BILBRO*..*net* **.50**

A useful collection of short numbers with titles. The melody, cleverness, and good educational ideas in general, common to Miss Bilbro, prevail throughout. Certain annotations and explanations of the scale are of especial value.

A Little Virtuoso Suite for Piano. *JOHN THOMPSON* *net* **.60**

Six easy pieces—clever and pretty—introducing scales, arpeggios, staccato, interlocking hands, rhythm, in most interesting ways.

My Own Little Music Book. *HAZEL GERTRUDE KINSCELLA*.....*net* **.75**

A combination of elementary method and very easy piano collection of both solos and duets.

Seeing Russia with Teacher. Ten Descriptive Duets. *LEO ORNSTEIN* (Sets I and II)...each *net* **.75**

These duets are rather easy and make attractive concert pieces for the lower intermediate or upper easy grades. These little ensembles are decidedly original and show in almost every measure the individual characteristics of the composer, without, however, that highly modernistic flavor found in some of his recently published works.

VIOLIN

Begin With Pieces. (Elementary method for individual or class instruction of beginners.) (Schirmer's Scholastic Series, Vol. 165) *net* **1.00**

Violin parts alone.....*net* **.25**

WALLINGFORD RIEGGER

Consists of very easy exercises, interspersed with interesting and tuneful pieces of no greater difficulty. Each exercise and piece has an easy piano accompaniment. Very carefully progressive, with many clever innovations.

Graded Studies in Ensemble Playing. With explanatory material and 20 Original Compositions and Transcriptions.....*net* **1.50**

WALLINGFORD RIEGGER

This useful volume is for ensemble work among violin teachers and in public schools. A number of different instrumental combinations are possible, and original features abound.

SCHIRMER'S SCHOLASTIC SERIES

First Book of Technical Exercises. (For Piano.) (*Vol. 176.*) *ELIZABETH QUAILE*.....*net* **.60**

Exercises for beginners, that are abreast of the best up-to-date methods. While promotion of dexterity is the object of the work, purely mechanical technic is not the sole aim. Such essentials as touch, legato, staccato, tone-balance between the hands, development of the weaker fingers, proper thumb motion, and so on, are developed as the finger facility is acquired.

Essentials of Violin Mastery. (*Vol. 171.*) *ALBERT STOESSEL*.....*net* **.60**

In these exercises, devoted to the left hand and arm, the author has endeavored to incorporate systematically certain fundamentals in a series of exercises that embrace all the essential technical demands of modern violinism. Furthermore, the author has endeavored to put his finger on the exact difficulties to be found in scales, arpeggios, thirds, sixths, octaves, fingered octaves and tenths.

Exercises for Hand-Extension and Muscular Control. (For Piano.) (*Vol. 175.*) *HARRY KRINBE*.....*net* **1.00**

We venture to assert that there is nothing in the literature of piano methods and exercises that covers the important matter of muscular control quite so comprehensively and concisely as this new volume. It may be used supplementally to any method after the pupil has reached the lower intermediate grades.

Pretty Finger Studies. (Forty Melodious Studies for Developing Technique in the Early Grades.) (*Vol. 160.*) *MATHILDE BILBRO*.....*net* **.60**

In this volume is found material for young pupils, from the very beginning through the entire first grade. The annotations are in English and Spanish.

15 Program Studies for the Development of Piano Technic. (*Vol. 172.*) *FRANCES TERRY*.....*net* **.75**

The music in this book is of only moderate difficulty—suitable for the intermediate grade. Its variety, cleverness and resourcefulness, mark this as the best work the composer has so far given us. It may be used with any piano course, and will serve admirably, because of its freshness and prettiness, as a recreation volume of delightful piano pieces.

Like Discovered Treasure

Special Bargains for Music Lovers

FOOLISH SONGS

The craziest, cleverest songs we know, every one a "nut" classic with lots of extra funny verses. The arrangements are so easy anybody can read them at sight. The Ukulele fingering is indicated by a simple diagram.

For voice, Easy Piano Accompaniment, Ukulele, Violin, Mandolin or C Melody Saxophone. Price 35c

HARMONICA

No. 1896 Marine Band harmonica has 10 single holes, 20 reeds, brass plates, heavy convex nickel plated covers with open back. A little pamphlet containing instructions for playing is furnished free with each harmonica. **Price 50c**

THE WIZARD VIOLINIST

A collection of humorous imitations and easy tricks. Imitations of Hurdy-Gurdy, Bagpipe, Hunting Scene, Blacksmith Forge, Donkey, Animals, Birds, etc. Just the thing for social and popular entertainments. **Price $1.00**

UKULELE

This Ukulele is our No. 1. It is well made, correctly fretted, finished in medium brown color. This instrument is a bargain at the price. **Price $2.00**

MUSICAL DICTIONARY

Pocket Standard Dictionary of Musical terms, 94 pages, 3½x5". Gives concise definitions of all the terms and phrases in general use in music, together with a treatise on the Rudiments of Music. **Price 25c**

SLIDE WHISTLE

One of the most popular of the musical novelty instruments. It is made of metal, finely nickel plated, 12½ inches long. The tones are produced by moving the slide up and down. Anybody can learn to play it with a little practice. It is used in many of the modern orchestras. **Price $1.50**

INSTRUMENTS OF THE MODERN SYMPHONY ORCHESTRA

A handy concise and comprehensive volume of sixty-four pages, supplying much needed information concerning the instruments that constitute the modern symphony orchestra. Its scope briefly covers the construction, tonal quality, range, and special uses of each instrument.

Illustrated with photographs of representative orchestra players, showing exact manner of holding and playing each instrument. **Price 40c**

MUSICAL JEWELRY

Attractive stickpins that are excellent reproductions of Musical Instruments. We have gold plated stickpins in the following designs.

Saxophone, Banjo, Violin with Bow, Cello with Bow, Cornet, Trombone.

Any stickpin listed above. **Price 75c**

KREISLER ENCORE FOLIO

Every violinist in the country should own a copy of this book which contains a collection of Mr. Kreisler's most popular encores. The artist has played every one of these compositions at hundreds of concerts and their popularity has long been established. For violin and piano. **Price $1.75**

SILVERIN VIOLIN STRINGS

The only metal string on the market combining the durability of the steel string with the resonant, singing quality of the gut string.

Our trial set consists of a Silverin Steel E, a Silverin Aluminum A, a polished Aluminum D, and a pure Silver G.

Price of set $1.00

FOUNDATION METHODS

Our series of Foundation Studies supplies the need of elementary methods which are thoroughly practical in every respect and absolutely modern in conception. They are especially intended for beginners, either with or without the assistance of an instructor. They are published for the following instruments:

Cornet, by Edwin Franko Goldman; Saxophone, by Ben Vereecken; Flute, by Ernest F. Wagner; Clarinet, by Carl Reinecke; Trombone, by Fred Blodgett; Baritone, by Alexander Archimede.

Price each $1.50

MONARCH POLISHING CLOTH

For cleaning and polishing brass and nickel plated instruments without the aid of any polishing liquid or paste. It contains no acid and will continue to polish until fabric is worn out. **Price 25c**

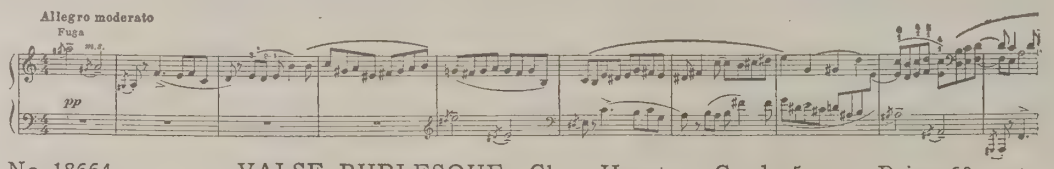
THEO. PRESSER CO.
Everything in Music Publications
1712-1714 CHESTNUT STREET
PHILADELPHIA :: PA.

A Wealth of Suggestions for Teachers of Advanced Students

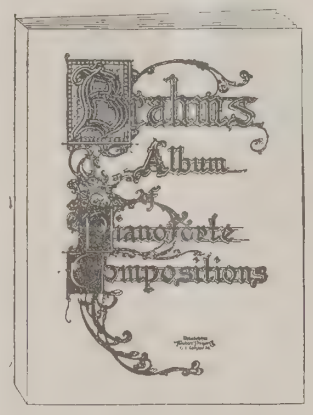
Mrs. H. H. A. Beach

"HEARTSEASE," shown in part on this page, is one of a set of five delightful compositions by Mrs. Beach, entitled, "From Grandmother's Garden." They are artistic gems for recital use. The four others in the set are named below.

Cat. No.	Title	Price
18436	Morning Glories.... A harp-like improvisation	.40
18438	Mignonette ..... A classic little minuet	.40
18439	Rosemary and Rue.. A slow movement, full of sentiment	.50
18440	Honeysuckle ..... A light waltz movement	.60



No. 18437 Price, 30 cents



HEARTSEASE—Mrs. H. H. A. Beach, Op. 97, No. 2—Grade 6

No. 18654 Price, 80 cents

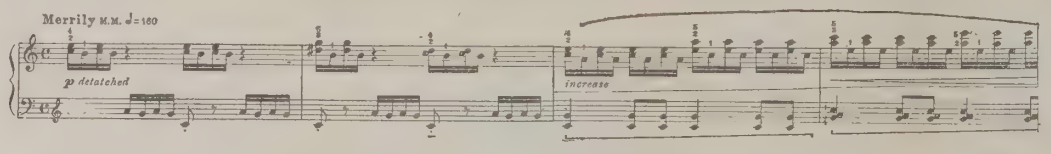
FANTASIA FUGATA—Mrs. H. H. A. Beach, Op. 87—Grade 8

BRAHMS' ALBUM, edited and compiled by Louis Oesterle. A fine volume of nineteen master compositions by Johannes Brahms. There is nothing better for the pianist who wants the best of Brahms' compositions. A short biography and portrait of Brahms are given.
PRICE, $2.50

R. Friml

A WIZARD OF MELODY, Friml might well be called. On this page an example of one of his numbers is given and the six compositions named below also have the enchanting qualities that individualize Friml's numbers.

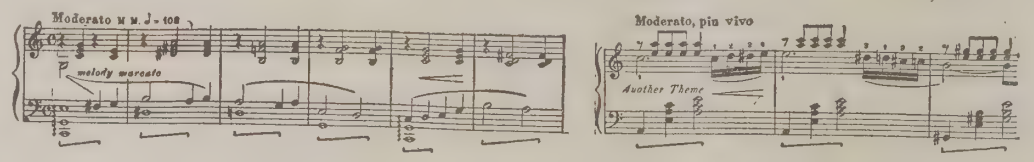
Cat. No.	Title	Price
18738	Valse Christine	.40
18739	Marche Mignonne ..	.50
18740	Water Lilies	.35
18741	Harlequinade	.40
18742	Fairy Ballet.....	.40
18744	Longing	.30



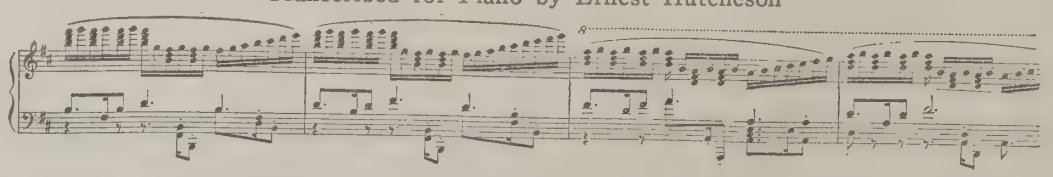
Masterly Transcriptions

THESE transcriptions embrace gems from the classic and operatic writings. Mme. Olga Samaroff has made a Victor Record of the "Valkyrie" transcription, of which a thematic is given. A few other transcriptions are—
Rubinstein's "Melody in F," transcription by E. Schutt. Pr., 60c.
Chopin's "Valse in D Flat," trans. by Moszkowski. Pr., 60c.
"Toreador's Song from Carmen," trans. by E. Schutt. Pr., 60c.

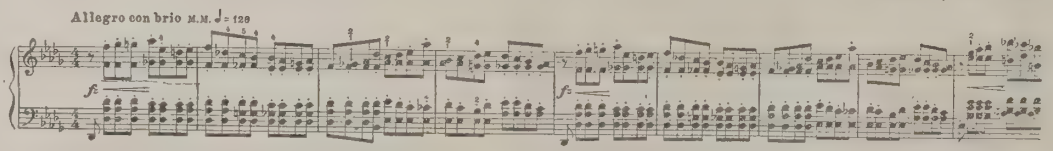
No. 18664 VALSE BURLESQUE—Chas. Huerter—Grade 5 Price, 60 cents



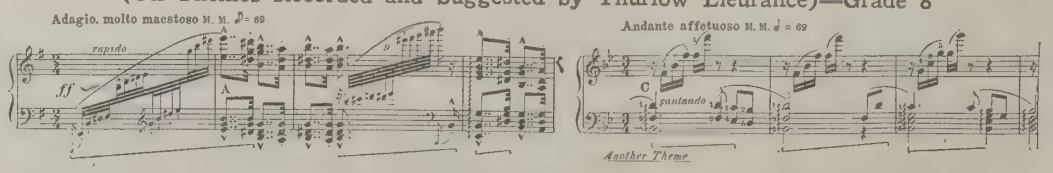
No. 14701 COASTING—Cecil Burleigh, Op. 9—Grade 6 Price, 40 cents



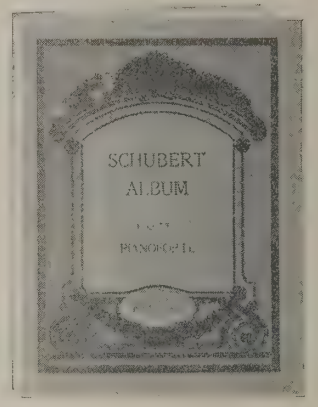
No. 18694 NOCTURNE (Complaint)—Josef Hofmann—Grade 5 Price, 30 cents



No. 18737 MOON DAWN—R. Friml—Grade 4 Price, 60 cents

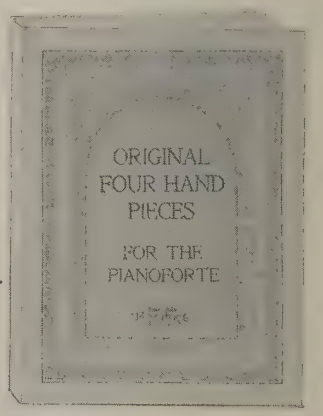


No. 16952 THE RIDE OF THE VALKYRIES (R. Wagner)—Grade 10 Price, $1.00
Transcribed for Piano by Ernest Hutcheson

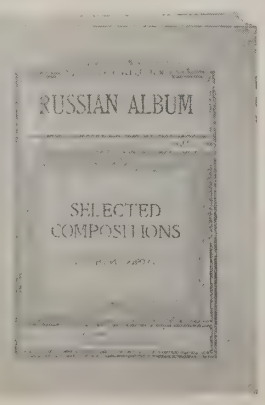


No. 14244 ETUDE DE CONCERT—Fay Foster—Grade 7 Price, 60 cents

No. 15322 AMERICAN INDIAN RHAPSODY—Preston Ware Orem Price, $1.00
(On Themes Recorded and Suggested by Thurlow Lieurance)—Grade 8



SCHUBERT ALBUM has between its covers twenty-four compositions by Franz Schubert. It is true that an accomplished pianist could play any of these numbers "right off," but their melodic and musicianly qualities are such that they are beautiful gems in the hands of those who give them an artistic and feeling interpretation. This is an album many pianists will find valuable, and certainly every pianist not familiar with Schubert's beautiful melodies, should possess it. PRICE, $1.00.



Josef Hofmann

JOSEF HOFMANN wrote five miniature masterpieces that are worthy of the attention they have received on the recital programs of some of the leading pianists. However, they are not difficult and many teachers find these engaging numbers with their clean melodic outlines excellent for pupils in the medium grades. "Nocturne," of which a bit is given on this page, is the most difficult of the set which has been entitled "Mignonettes" or "The Children's Corner." The other four are named below.

Cat. No.	Title	Price
18691	Wooden Soldiers, March	.30
18692	Lullaby, Berceuse...	.25
18693	Sister's Dolly, Polka	.30
18690	Lonesome, Song without words	.30

ORIGINAL FOUR HAND PIECES is one of the best collections for the library of the good pianist having a love for four-hand playing. There is not an arrangement in this volume, every number being an original writing for piano duet by such composers as Brahms, Moszkowski, MacDowell, Chaminade, Hummel, Schubert and others. PRICE, $1.25.

TWENTY-TWO excellent compositions by Russian composers are in this interesting album. These numbers include some of the most attractive and enjoyable of what might be termed modern compositions. Every good pianist will delight in these numbers, and it is because this has been found true by many that the "Russian Album" has enjoyed such an unusual sale. Price, $1.00.

AMERICAN INDIAN RHAPSODY, by Preston Ware Orem, on themes suggested by Thurlow Lieurance, is a striking concert novelty for the pianist. It is rather futile to endeavor to give an idea of this number with a small thematic, but two themes are shown. This is a genuine American rhapsody, being an idealization of the aboriginal themes in a manner as has been done with other national folk themes. Numerous foremost pianists are using this Rhapsody and it is a regular feature with Sousa's Band, Leps' Symphony Orchestra, and other similar organizations.

THE ETUDE

JANUARY, 1926 | Single Copies 25 Cents | VOL. XLIV, No. 1

The Triumph of Sacrifice

This issue of the Etude is fittingly devoted in part to the memory and work of the man whose sacrifices made it possible.

We who have been at his side unceasingly for many years, are perhaps too close in perspective to make an unprejudiced valuation of the great ability, character and soul of Theodore Presser. There are too many incessant remembrances of kindness and thoughtfulness to warrant us in even attempting this.

For that reason we have asked men and women who have viewed his achievements through the years to pay tribute to the man they knew.

His residence in Germantown adjoined that of the Home for Retired Music Teachers, which he established as one of the activities of the Presser Foundation. His attitude towards the residents was never that of a philanthropist bestowing bounty. Night after night he would go to the home, associate with the guests, join in games; and, during his last years, he was virtually a resident of the Home despite the fact that he lived in the adjoining house. He enjoyed his association with the teachers and they welcomed him almost as though he were a fellow-member of the group. Such humility comes only with greatness.

The Etude's First Radio Hour

The Etude's first radio hour was made momentous by the fact that it became a sad obligation to devote the period in part to a memorial to the founder of the magazine itself—the late Theodore Presser. This Memorial Service was reported by radio owners to have been most impressive. The double quartet of men from the Theodore Presser Company, which sang at the funeral, repeated the hymns used on that occasion: "Abide With Me," and "Nearer, My God, to Thee." Those singing were Albert Ockenlaender, Alfred Clymer, Oswald Blake, T. F. Budington, W. C. E. Howard, Elwood Angstadt, Frederick Phillips and Guy McCoy.

Mr. Henri Scott, of the Metropolitan Opera House, who was a personal friend of Mr. Presser, honored his memory by singing "Over the Mountain of Sorrow." This was followed by a short memorial address by Mr. John Luther Long, author of "Madame Butterfly."

Following the Memorial Service, Mr. Preston Ware Orem, music critic of The Etude, Mr. Edward Ellsworth Hipsher, assistant editor; Mr. Frederic L. Hatch, assistant music critic, and the editor, played and discussed educationally the music in The Etude, assisted by Otto Meyer, violinist, and Mrs. Dorothy Stolberg Miller, soprano.

The program was instructive, varied and interesting. The memorial address delivered by Mr. John Luther Long follows:

"In the death of Theodore Presser, music in all parts of the world has lost a commanding and helpful personality. He was one of those rare men who choose some one great idea upon which to found success. And his idea was simply—Music. But he was active and important in all of the numberless lines which music touches. The Etude, which he founded, is the greatest and most widely distributed of all musical publications, reaching, practically every part of the world. His Home for unfortunate music teachers, in Germantown, is the perfect model of what such a Home should be. It has accommodations for more than a hundred inmates. His unostentatious beneficence to elderly musicians and those too poor to pursue the study of music without help, penetrate to every country under the sun.

"His great publishing house is known everywhere. These, and many other benefactions which are known and unknown, are now managed directly and indirectly through a great trust known as The Presser Foundation.

"The officers and trustees of the Foundation in all of its departments, and the officers of the company, all are men who have in most cases been in the closest association with Theodore Presser and are impressed with the lofty ideals he established. The president of the Foundation and of the company is Mr. James Francis Cooke, who for eighteen years has been the editor of The Etude.

"To those who knew him well, Mr. Presser was a man of engaging and hospitable manner, and a firm and abiding friend to those whom he called 'worth while.' He was, as he often said himself, 'long suffering' with those who had weaknesses they were striving to overcome. He was a great admirer of efficiency and grew impatient if results were not forthcoming. Therefore, he was frankly irritated by those dillentanti who, however gifted superficially, had nothing of real moment to say to the world.

"His great interest in life was education, and it was his joy to associate with teachers of music. Through the organization of the Music Teachers' National Association, in 1876, in Delaware, Ohio, he laid the foundations upon which have been built the vast number of musical club activities in America, numbering hundreds of thousands of members.

"It is small wonder that many of the keenest observers have said that through his far reaching activities in so many different directions his influence in the field of music in America was greater than that of any other person, not even excepting Theodore Thomas.

"The man, who impresses himself upon his generation as Theodore Presser has done, is not likely to be forgotten; because he has chosen no great monument or mausoleum to house his renown, but the hearts of his fellowmen."

The Etude Radio Hour is held at eight o'clock Eastern Standard Time, on the second Thursday of each month at Station WIP, Gimbel Brothers, Phila., Pa.

Straight Down to Bed Rock

The builder who strikes right down to bed rock for his foundations insures permanency.

Theodore Presser built upon far stronger business, educational and philanthropic foundations than perhaps he himself realized.

So many were the principles that he instilled during forty years in the hearts and minds of his employees and fellow-workers, in all of the many branches of the institutions he founded, that it will be a source of great gratification to our friends, particularly our old friends, to know that there is a splendid organization now in charge to develop and expand his ideals in the future.

The Presser interests are now vested in the hands of strong men of eminence in the business, educational and financial world, practical workers in the business itself, men and women who have been trained for years as experts, and finally a considerable corps of musicians who are proud of the fact that they have been teachers of music—all earnestly promoting the policies which have been the basis of the great work established for musical education by Theodore Presser.

America's Greatest Present Problem

Because we feel very deeply that music may be one of the most precious remedies in America's greatest problem, we are again devoting valuable space to a subject dear to our hearts. Square miles of news prints have recently been aimed at this greatest problem—the monstrous multiplication of crime in our large cities—particularly crimes committed by young men and young women who are obviously without any moral equilibrium.

Richard Washburne Child, former American Ambassador to Italy, in an alarming series of Articles in *The Saturday Evening Post*, gives an account of the extent of crime in present day America, the sickening inability of the spineless police to suppress crime, and the apparent unwillingness of magistrates to support the efforts of the honest police by punishing offenders. *Collier's Weekly* had previously attacked the subject from another angle.

After having read all of this material, and more, we are far from dismayed. America is a thriving giant with a canker sore. Ninety-nine per cent. of the real manhood of our country is straight and upright. Because of the prodigious size of our land, the crime mania seems prodigious. The *New York Times*, in a lengthy, serious article, estimates that crime costs the United States ten billion dollars a year. The canker sore is getting so large that Americans are beginning to do some real worrying about it. This is the first sign of the promise of healthy concerted action leading to a change.

Readers of The Etude know that for years we have recognized this impending, disastrous condition and have repeatedly called the attention of our readers to it, long before the present newspaper and magazine furore. Our readers know of the non-proprietary "Golden Hour Plan" which we have sponsored and which is already introduced under various names in different schools all over the country. It is a plan for regular, systematic instruction in character building along non-sectarian lines, all glorified by the collateral employment of inspiring music. The Etude has circulated gratis thousands of copies of the programs indicated. It will be glad to send you one, complimentary, if you are interested.

While the plan was enthusiastically endorsed by many foremost Americans, including Thomas Edison, Hon. Henry Van Dyke, the late William Jennings Bryan, and many others, the best test of its worth is the continued and enthusiastic interest of musicians and its progressive introduction in many schools.

Here is the greatest present usefulness of music to the state. Good principles of morality, integrity, sobriety, truth, honesty, clean living and patriotism, planted daily in the child mind while that mind is elevated, enthused and spiritualized by means of inspiring music, means that if we can reach enough children in the right manner our crime problem will diminish enormously with oncoming years.

If we want good, law-abiding, God-fearing citizens in the future, we must raise them and not depend upon the clubs of the police to batter them into shape. The policeman's club may maim a crook, but it can never make a character.

The Etude readily admits that this training in the day-schools might be far better handled in the home or in the church. We are however, confronting a very practical problem. It is reported that over half of our population never sees the inside of a church from one year's end to the other. The church schools serve only a comparatively small portion of the public, owing to sectarianism. The American home of yesterday has been auctioned off at the block for an orgie of golf, gasoline, dancing and moving pictures—all valuable and important diversions when not carried to excess.

The garden of Youth was therefore stifled with weeds and the beautiful blossoms of innocence, purity, high American ideals, industry, steadfast honor and love of right faded before the noxious cheap cigarette, hip pocket flask, sensuous dances, putrid magazines, and sensational moving pictures.

This, however, has not changed the raw materials of the America of tomorrow. Our future rests in the hands of our parents, our clergymen and our teachers, far more than in those of the police and the judiciary who at best can only destroy the worst weeds in this generation.

The teachers in the day school and the music teachers all have a grave responsibility. Through some such plan as the Golden Hour they will have a vast opportunity for saving a great nation from the canker that if neglected might grow into a cancer. Music, and Music only, is the art which so elevates, edifies and enraptures the child mind, that it becomes responsive to suggestions of high ideals.

If your local day school has not introduced some such plan as the Golden Hour, let us send you gratis a copy of Golden Hour program and take it upon yourself to become a missionary of this most important work.

This issue is ten pages longer owing to the numerous tributes to Theodore Presser.

From the Laboratory of
Thomas A. Edison,
Orange, N. J.

November 14, 1925.

Mr. James Francis Cooke, Editor,
ETUDE MUSIC MAGAZINE,
#1710 Chestnut St.,
Philadelphia, Pa.

Dear Mr. Cooke:

Your letter of November 10 is at hand. It was with sincere regret that I learned of the death of the late Theodore Presser, one of the monumental figures in the realm of music.

Mr. Presser was unique in the great work he did in bringing music to the masses, and in the promotion of musical interests, through the various national organizations that he founded, and through the establishment of THE ETUDE.

In view of his great and practical achievements, he has received but scant public recognition, but I trust that his merits may be given more prominence than they have heretofore received, to the end that the American people may give honor to his memory.

Yours very truly,

Thos A Edison.

MR. THOMAS A. EDISON'S BEAUTIFUL TRIBUTE TO THEODORE PRESSER

MRS. H. H. A. BEACH | DR. WALTER DAMROSCH | OWEN WISTER | DR. HUGH A. CLARKE | LT. COMM. J. P. SOUSA | ARTHUR FOOTE

Tributes from Eminent Men and Women to Theodore Presser

MRS. H. H. A. BEACH

Distinguished Composer

A great benefactor to music and musicians all over America was taken from active service when Mr. Presser left us. His work has extended over such wide fields and been of such permanent value that one wonders how one man could have accomplished it all. We are thankful that in many respects it will continue through the years to come, but his genial, helpful presence will be sadly missed by everyone who had the good fortune to know him.

JOSIAH H. PENNIMAN

Provost, University of Pennsylvania

Theodore Presser was a very remarkable man, inspired by high ideals, generous in every way, unselfish and constantly thinking of the comfort and happiness of others. The entire world of music, as well as the wider world, is richer for his having lived in it, and poorer by his death.

W. J. BALTZELL

For Many Years Editor of The Etude, Prior to 1907

Theodore Presser was a builder in the music publishing business. Beyond that, and more significant, he was a builder of service to the music-teaching profession and the music-buying public. He was a captain from the ranks of American music teachers, with wide personal experience and intimate knowledge of their ideas, their ideals and their capacities. Thus he was in advance of the average but never so far as to lose insight into their needs or to fail to keep touch with them. "I want to publish for the masses, not the classes in music," was a saying of his.

Gifted by nature with a tenacious and assimilating memory and with a wide knowledge of musical publications, European and American, he had no equal in the publishing trade in the evaluation of teaching material. THE ETUDE is a monument to his memory.

HOLLIS DANN

Head of the Music Department of New York University

The passing of Theodore Presser is an irretrievable loss to the musical world and a real personal loss to each of his host of friends.

Throughout his long and unique career, Theodore Presser combined remarkable business ability amounting to genius, with a self-sacrificing generosity which took form in the Presser Foundation and other equally beneficent services. The influence of his vigorous personality and of his princely generosity will continue to grow as the years pass.

WALTER DAMROSCH

Eminent Conductor

I had always had a great admiration for the late Theodore Presser; and what I have read since his death, in the press, of his career and ideals, has still further increased my feelings for this remarkable man.

I think he was fortunate, not only because God gave him a very high sense of responsibility and a beautiful ideal for which to work, but also because he was enabled to live long enough to carry them out and to see them bear fruit a thousandfold.

I think that his name will be revered and held in affectionate remembrance for many generations to come.

OWEN WISTER

Eminent Author and Publicist

No longer to have Theodore Presser living among us is a loss both to the community which he benefitted locally, and the larger community which also for so many years felt the good effects of his stimulating intelligence and his beneficent activity. Many who never had the pleasure of knowing him will miss him nevertheless.

ARTHUR FOOTE

Eminent American Composer

For his part in the founding of the Music Teachers' National Association I shall hold Mr. Presser in grateful memory; through the concerts of that association I (as was the case with other young American composers) was given an opportunity to be heard at a time when such chances were rare. And, as an officer of the Oliver Ditson Society for the Relief of Needy Musicians, I have had especial reason to know the splendid work of the Presser Foundation. What a happiness this must have been to him.

C. M. SCHWAB

Eminent Industrialist and Music Patron

Theodore Presser was an unusual combination of an idealist, a musician, a philanthropist and a practical business man.

Through his very great initiative and the enormous number of his publications, including THE ETUDE, he rendered a service of unquestionable importance to the entire musical world through the dissemination of the materials for a musical education.

ERNEST HUTCHISON

Eminent Piano Virtuoso

Permit me to express to you my sincerest sympathy with yourselves and my own sorrow at the loss of one whose memory will long be treasured by all who had the privilege of knowing him. Mr. Presser nobly served the cause of music, and his steadfast idealism and large-hearted generosity left us all his debtors.

FELIX BOROWSKI

Eminent Composer

It was with the keenest regret that I read of the death of Mr. Presser. His passing will be a great loss to musical art and, indeed, to the community at large. He has always been to me a unique figure, combining in himself, as he did, the qualities of the thoroughly equipped musician and those of a singularly successful business man. And he possessed, too, what not all musicians and not all business men possess—a warm and kindly heart. The Presser Foundation is probably the best evidence of the latter, and it will be, I think, Mr. Presser's most enduring monument.

ERNEST R. KROEGER

Eminent Composer and Educator

Theodore Presser was a great force in the development of musical education in this country. Having been a teacher, he understood the needs of both pupil and teacher. As a composer, he comprehended well the requirements of studies and pieces necessary to interest the pupil as well as to further his progress. As a publisher, he was mainly interested in issuing compositions of a practical nature, which would develop both the technical capacity and the artistic impulse of the pianist.

His great success lay in this combination of an understanding of both the practical and artistic sides of musical instruction. As publisher of THE ETUDE, he was able to bring to the teacher the valuable experiences and authoritative views of the leaders of musical thought. Mr. Presser's name will go down to posterity as one of the foremost men who were influential in shaping the musical destinies of the teachers and students of his generation.

THOMAS TAPPER

Formerly Editor of "The Musician"

It is now more than thirty-five years since I had the pleasure of meeting Mr. Presser for the first time. In fact, it is just thirty-five years since "Chats with Music Students" was published by Mr. Presser, the first of a long line of publications which I had the pleasure of working out with him.

I recall my first visit at his then very humble office in Philadelphia and the enthusiasm with which he discussed plans for the development and expansion of THE ETUDE. I remember that he gave me, at the time, three or four odd numbers of the first volume—modest pages indeed, compared to the splendid press work and general set-up of the magazine today.

DR. THOMAS TAPPER | ERNEST R. KROEGER | WINTON J. BALTZELL | NICHOLAS DOUTY | WILLIAM ARMS FISHER | FELIX BOROWSKI

I have known few men whose habit it was to go so directly and stay so persistently upon the matter under discussion. In fact, I have often wondered, in my many meetings with him, when his consciousness drifted away from business to roam sometimes at freedom, as it does with most men. He seemed almost monastic in his adherence to the rubrics of business; yet one had not to go far with him to discover many an attribute that most hard-shelled business men count not among their assets, though certainly with him they were ever active and admirable. I refer to his sympathy, his kindness, his helpfulness (never conceived by him in terms of charity), his consideration for others and, above all, an earnestness that reigned supreme not only over his business but as well in the realm of his ethics of brotherly relationship.

The business must have been small when I first knew him; but the man was big and therefore it was only a question of time when the business should grow to the proportions of the man. I shall never forget his words to me on the occasion of my visiting him not so very long ago. When we had finished the business under consideration, he said, "Now, Mr. Tapper, I hope there will come a time when you will come in and we can have a visit together entirely free of any consideration of business. Just come in and see *me* sometime!"

And I am glad to have had the privilege of having seen him "sometime."

JOHN PHILIP SOUSA

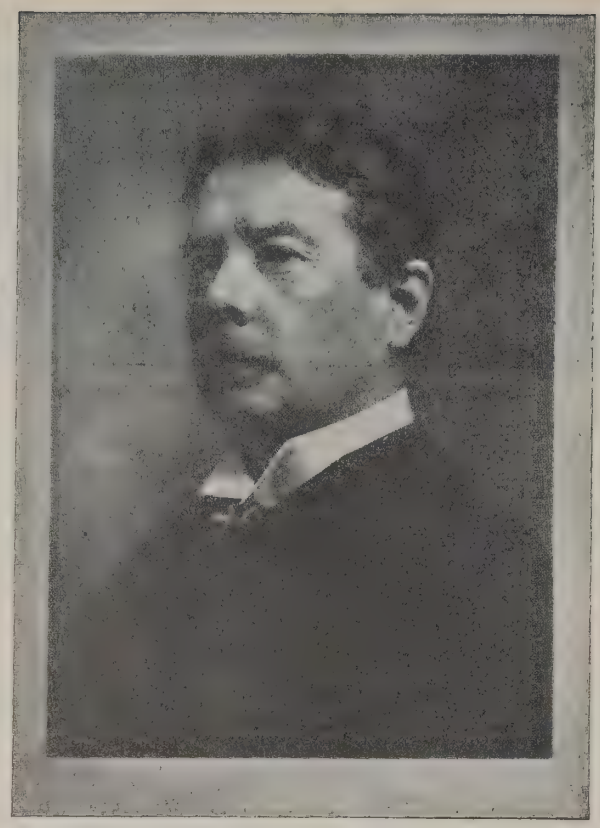
Famous Composer and Band-Master

The life and career of Theodore Presser is an example of what energy, fidelity and singleness of purpose will accomplish. Starting as a music teacher, he ended his career by being one of the most important figures in advancing the curriculum for the proper study of music. No copy of THE ETUDE that I have read but what contains invaluable advice, alike to the teacher and the student. And wherever the source of this information was imparted, the guiding mind of Theodore Presser was the motive power that put it into circulation. Those that knew him, knew his purpose, his philanthropy and his splendid business acumen will always revere his memory and cherish his work.

WILLIAM ARMS FISHER

Composer and Editor

The great majority of mankind follow the herd instinct and go through life with eyes on the crowd lest they be considered peculiar and out-of-step; but Theodore Presser was a man who thought for himself, who had the courage of his own convictions and with eye on the goal he sought never swerved to the right or left in pursuit of it.



He was markedly individual and differed from all other music publishers in a most important respect. Other publishers have also begun their careers as music teachers, others have become distributors of music because they loved it, and other houses have issued more or less successful music magazines; but Mr. Presser was unique in that he started the publication of his magazine, not as an adjunct to music publishing, not as a house-organ, but as the main thing, with the central dominant idea of helping teachers meet their practical daily problems. The publishing of music grew out of the necessities of the magazine. He had to have new music for its pages, music that would meet the working teacher's needs. He began by publishing a magazine and later discovered that he had become a music publisher as well. The magazine, which grew amazingly beyond his first picturing, was ever the principal thing, the very core of his business; for he built up his great establishment around it, and when he finally had the satisfaction of knowing that THE ETUDE had the largest circulation of any music magazine in the world, he also discovered, if he ever took the time to look up the figures, that he was publishing more music each year than any other publisher in America, and those who looked on knew that this notable achievement was the outcome of a purpose that never wavered and an energy that never faltered until his summons came.

LEON R. MAXWELL

President Music Teachers' National Association

The Music Teachers' National Association owes its founding to Mr. Presser; and he has always been a friend ready to give his time and advice. The members, many of whom knew him intimately, will feel his loss deeply.

My own personal contact with Mr. Presser was very brief; but in the few hours in which I talked to him, I discovered a most lovable old gentleman.

GEORGE W. CHADWICK

GEORGE W. CHADWICK

Eminent Composer, A Lifelong Friend of Theodore Presser

My acquaintance with Theodore Presser began in 1874 when he came to Boston to study at the New England Conservatory of Music. I was at that time clerk in my father's insurance office in Lawrence, and I found Presser's lodgings very convenient whenever I stayed in Boston for an evening concert.

He was full of enthusiasm, very friendly, and we speedily became intimate. In 1876, he was at Greenwich, Rhode Island, in Dr. Toujee's Summer School, a branch of the New England Conservatory. To this place came Dr. Butterfield, the President of Olivet College, Michigan, looking about for a director for his musical department. He offered the place to Presser who was already engaged for another place, but on the strength of Presser's warm, and perhaps too warm, recommendation of me, Dr. Butterfield came to Boston and engaged me for the position.

He was rather aghast when he first saw me, as my face was innocent of any hirsute decorations; and I probably looked younger than my real age which was twenty-one. But Presser's enthusiastic endorsement got me the position through which I was able to save enough money to go to Europe the next year, which was the principal inducement in accepting it.

In December, 1876, he carried out the great idea which had long been in his mind, of organizing an Association of Music Teachers. This was held at Delaware, Ohio, where he was teaching, and was attended by quite a number of the western teachers. On this occasion, I delivered my maiden speech in the form of an address on Popular Music. I was perhaps rather too much in earnest, although there was nothing in the address which does not apply with even greater force at the present time. Dr. George F. Root, whose patriotic and other songs during the Civil War attained a great vogue and are still sung, made a very courteous but effective reply, which I confess, modified my opinions to a certain extent. He was one of the finest gentlemen I have ever met, and a real folk-song composer.

Presser had the foresight to realize that the National Association of Music Teachers would grow to great power and influence of which in later years he was able to take full advantage. In 1878, without any warning, Presser turned up in Leipzig, and entered the Conservatory as a piano student. He immediately became a great favorite with the American and English boys, and was a ringleader in all sorts of practical jokes, some of which recoiled on his own head.

He practiced faithfully on elementary Sonatinas and studies which did him very little good. He was too old to acquire the necessary technique even for easy music.

We went to many concerts and rehearsals together, although he would never allow them to interfere with his pianoforte practice. He had a little card at the side of his piano on which his occupation for the day was spaced out, hour by hour, and he did not often allow his schedule to be interfered with. He lectured me faithfully for not adopting this method, as well as on other subjects, and as I seldom practiced if I could go to a rehearsal or a concert, he often said to me, "Chadwick, you cannot pick up music on the fly," in which of course he was entirely mistaken.

In the summer we made a walking trip of a week in company with some other students, through the romantic region of the upper Elbe, known as Saxon Switzerland. Presser was the life of the party. He was so irrepressible that on one occasion, the landlord of a little inn threatened to eject us. He had some peculiar ideas. He would not go to the opera on a Sunday evening, but he would sit in a cafe and play chess all the evening! At one time, he was all for making a search for Bach's burial place. Singularly enough, it was afterward found in a church in Leipzig.

When I was working on my Overture to Rip Van Winkle, which was to be played at the Annual Conservatory Concert, he was full of interest and enthusiasm, even predicting great success for me. He heard a private rehearsal with a local orchestra whom I induced to try the piece over, and at the Conservatory rehearsals he was equally enthusiastic; but when it came to the performance, he disappeared, and I did not see him for several days afterwards.

I was very much hurt by this, because the competition was very keen, and I wanted his moral support as my principal backer. When I finally saw him, and demanded an explanation, he shrugged his shoulders and said, "You have enough friends without me." Peculiarities of this sort occasionally developed in him; and none of his friends could ever understand them.

After my return to Boston in 1880, he came to see me, and occasionally we met in Philadelphia. He was so absorbed in his particular line of work that possibly he did not follow the progress of musical art in this country with the same interest.

His was certainly a remarkable career, and he has left a monument in the Presser Foundation, which is entirely characteristic of his interest in the workers for musical education.

There is no class of musicians so deserving of assistance as the faithful and conscientious teachers who through accident or illness have become unable to support themselves. The Presser Home is a practical illustration of his sympathy with these worthy teachers.

O. G. SONNECK

Noted Critic and Musicologist

On the few occasions that it was my privilege to chat undisturbed with Mr. Presser and frankly to discuss matters with him that interested us both, I gained an insight into the idealistic side of Mr. Presser's character that was stimulating.

His eminent place in the history of musical life in America is secure. No future history of music in our country would answer its purpose, unless it informed the student of Theodore Presser's contributions to the organization of the teaching profession and his constructive efforts in other directions, including his interest in the establishment of a real National Conservatory. For all of this the magnificent Presser Foundation is a fitting symbol, frame and crown.

WALDO S. PRATT

Treasurer, Music Teachers' National Association

I have just been startled to read of the death of Mr. Presser, for which I was quite unprepared. I feel that I must at once send a line to express my sympathy for you and all your large circle of fellow-workers, and also for the family circle.

I think that everyone who knew Mr. Presser must have come to have a peculiar regard and esteem for him. He had a remarkable personality in many ways, a warm heart and a fine desire to be of service to others. And no one can consider the great business and the princely fortune that he built up without recognizing how keen was his practical skill. All these things, and many more, you know better than anybody else. But I cannot forbear speaking of them as I set down these hasty words of my instinctive personal feeling of loss.

CLARENCE G. HAMILTON

With Mr. Presser a landmark in American music has slipped away; and I am sure that his death will be keenly mourned by the thousands of musicians to whom his name has been a household word. No doubt it will mean much to you, especially, and added responsibilities.

(Continued on page 14)

How to Teach the Major and Minor Scales

BY JOHN M. WILLIAMS

WHEN to teach the scales might be a debatable subject; but that they should be learned, and with as little effort as possible on the student's part, is generally admitted.

The following presentation of the subject has been found beneficial, whether introduced in the second or the sixth month of the pupil's study.

First Lesson

Thoroughly drill the pupil on Whole-steps and Half-steps and allow at least the time from one lesson to the next for this to be thoroughly assimilated.

Definition: From one key to the next, if there is a key between (either black or white) is a whole-step; if there is no key between it is a half-step. (The words whole-step and half-step are preferable to whole-tone and half-tone as the word "interval" means "distance"; and the idea of distance is better suggested by the word "step" than "tone.")

Second Lesson

Definition: The major scale is a series of eight tones; the last tone being the same as the first. Make a diagram in the pupil's note book, thus:

1 Whole Step 2 Whole Step 3 Half Step 4 Whole Step 5 Whole Step 6 Whole Step 7 Half Step 8

From the first to the second tone is a whole-step.
From the second to the third a whole-step.
From the third to the fourth a half-step.
From the fourth to the fifth is a whole-step.
From the fifth to the sixth is a whole-step.
From the sixth to the seventh is a whole-step.
From the seventh to the eighth is a half-step.

In other words all the intervals are whole-steps except from 3 to 4 and from 7 to 8. These are half-steps.

This may be demonstrated on the black board by drawing a ladder, or, if a small child is being taught, by "walking" the scales, that is, two whole-steps, a half-step, three whole-steps, and a half-step. Two tetrachords, joined by a whole step, is also an excellent way to teach them.

Drill the pupil thoroughly in the building of the major scale beginning on each of the 12 keys (black or white). Assign the building of all scales for an entire lesson. (Caution: Do not allow the pupil to confine his efforts to building the C scale, or the scales starting on the white keys only. And remember, the pattern remains the same, the keys must be made to fit the pattern, not *vice versa*. The pupil should be taught to count aloud; thus: One whole-step, two whole-steps and a half-step, one whole-step, two whole-steps, three whole-steps and a half-step.

Third Lesson

If, at the third lesson, the pupil can build the scale beginning on any key (while building them allow him to use the fingers of both hands when playing them), he may be assigned C G D A and E major scales at one lesson for practice. As there are 8 keys to be played, and we have but five fingers, we must finger R.H. 1 2 3 1 2 3 4 5 and L.H. 5 4 3 2 1 3 2 1.

Important: Before each scale is played the pupil should be taught to recite the signature aloud thus:

C major scale—signature no sharps or flats
G major scale—signature one sharp; F sharp
D major scale—signature two sharps; F and C sharps
A major scale—signature three sharps; F, C and G sharps
E major scale—signature four sharps; F, C, G and D sharps

The hands should be practiced alone. In ascending, when the second finger of the right hand plays its note, the thumb should move under the hand quickly and thus be prepared to play its note when needed. Likewise the left hand, when descending. The preparation of the thumb does away with the ugly throwing out of the wrist in which some pupils indulge each time the thumb is put under.

Fourth Lesson

Assign F major, B-flat major, E-flat major and A-flat major, for practice at this lesson.

Rule for fingering: Right hand, the fourth finger always plays B-flat. Left hand, the fourth finger goes on No. 4 of the scale, except in F-major scale (which is fingered the same as C major).

Perhaps the first group may be studied with the hands together for this lesson, while the flats are being practiced hands alone.

The pupil should recite before playing, thus:

F major scale—signature one flat; B flat
B-flat major scale—signature two flats; B and E flats
E-flat major scale—signature three flats; B, E and A flats
A-flat major scale—signature four flats; B, E, A and D flats

These four scales with flats frequently require two lessons to learn instead of one. Do not attempt the hands together until they can be played separately easily.

Fifth Lesson

When the fourth lesson can be done well, assign B-sharp, F-sharp, D-flat and G-flat, to be practiced with the hands alone; the remainder to be practiced hands together.

The pupil should recite before playing, thus:

B major scale—signature 5 sharps; F, C, G, D and A sharps
F-sharp major scale—signature 6 sharps; F, C, G, D, A and E sharps
D-flat major scale—signature 5 flats; B, E, A, D and G flats
G-flat major scale—signature 6 flats; B, E, A, D, G and C flats

When to Give Two Octave Forms

WHEN ALL the major scales can be played perfectly one octave, hands together, with correct and rapid recitation of the signatures; then the two octave forms may be given.

NOTE: This last group is the easiest to play and these scales should be the first ones to be assigned for two octave practice.

When B and F sharp and D-flat and G-flat can be perfectly played two octaves, assign B-flat, E-flat and A-flat, hands together, two octaves. These are decidedly easier for the pupil than the first group. Later assign the first group (C, G, D, A, E); and, if any difficulty is experienced in getting these, have the pupil practice the nine-tone scale first. This gets him over the crossing spot and into the second octave. Later they should be extended to two octaves.

"Dromedary" and "Merrily"

Play all scales in quarter, eighth and sixteenth notes, also 1, 2 and 3 notes to a count.

When counting sixteenth notes use the word "Dromedary," accenting the first syllable.

When playing three octaves, if you want triplets use the word "Merrily," accenting the first syllable.

Caution: Do not continually assign new material. When the pupil can play all scales one octave, do not rush immediately into the two octave forms; let him "camp" on the one-octave scales for a few weeks. Likewise, when he has learned the two-octave forms, do not rush into the minors, "camp" on these until they are played without hesitancy and with ease. One of the secrets of getting good scale playing from pupils is never to leave one group for another until each is thoroughly learned. Half-learned work is the cause of much trouble later on.

The Minor Scales

In teaching the minor scales it is preferable that the pupil learn A, E and B minor and D, G and C minor before taking up the more difficult keys like F-sharp minor, C-sharp minor, and others. It is more desirable that the pupil be thoroughly at home in these six keys than to have a hazy knowledge of the 12; hence, in some cases it is better to work on these six for an entire year, rather than assign the more remote and difficult keys.

Formation of the Minor Scales

The minor scales may be explained thus:

Just as every child has "relatives," likewise every major scale has a Relative Minor Scale. This minor scale "lives" or "starts" on the sixth note or "house" of the major scale. In other words the Relative Minor begins on the sixth note of the Major Scale.

There are three forms of the minor scale:

1. The Natural or Pure Minor.
2. The Melodic Minor.
3. The Harmonic Minor.

The ability to recognize the key in which a piece or exercise is written will be greatly enhanced if before playing the minor scale the pupil is taught to recite thus:

A minor scale, relative of C Major scale, signature no flats or sharps.

E minor scale, relative of G Major scale, signature one sharp, F sharp; and so on. Pupils should recite quickly and accurately.

In the natural minor scale the notes are identical with those in its relative major; the only difference is that the minor begins on the sixth note of the major (thus giving it a minor third).

In the beginning it is much better to have the pupil count all minor scales 1 2 3 4 5 6 7 instead of 1 2 3 4, 1 2 3 4, and so on.

After playing the pure or natural minor, show that in the Melodic Minor the sixth and seventh tones are raised ascending and canceled descending. (Hence the importance of counting seven instead of four.) In the Harmonic Minor the seventh tone is raised both ascending and descending.

Have the natural minor played one octave only, as it is a "theoretical minor" from which we build the others.

Stories That Help

IN explaining the melodic minor you may tell a story something like this:

"You go up town by one street, and come back by another." Or, if it is C minor, for instance, "the two black birds (A-flat and B-flat) fly away and then come back," and similarly with other advanced keys. Points driven home with a story always lodge better in a child's mind.

One new minor scale at each lesson is quite enough; and on the more difficult ones, like F-sharp minor and C-sharp minor, it frequently takes several lessons each. But no matter how many, make it a rule never to leave one scale for another until it is perfectly and easily played; and remember, the pupil should do the reciting and without assistance from the teacher.

NEW FINGERING OF SCALES

Do you know the fingering of the scales advocated by some of the world's greatest masters? Richard Epstein, Moszkowski, Jonas, Stokowski, and most of the great virtuosi, advocate the following:

Scale of G major, left hand, begin with the third finger. The fourth finger will go on F-sharp.

G major scale is fingered 3 2 1 3 2 1 4 3.

Begin the scale of D major and A major (left hand) with the second finger. In each case the 4th finger goes on F-sharp.

D major scale is fingered 2 1 4 3 2 1 3 2.

A major scale is fingered 2 1 3 2 1 4 3 2.

F major scale is the only one of the flats that is changed. Begin with the third finger of left hand. The fourth finger goes on B-flat.

F major scale is fingered 3 2 1 4 3 2 1 3.

Important Constructive Work

Mr. John M. Williams has conducted classes from coast to coast which have been attended by hundreds of progressive teachers who have been glad to pay generous fees for just such practical information as he gives in this lucid and interesting article. Mr. Williams has written many highly successful elementary instruction books including:
"First Year at the Piano,"
"Tunes for Tiny Tots," for the Pianoforte,
"What to Teach at the Very First Lessons,"
"Book for Older Beginners,"
"John M. Williams' Very First Piano Book,"
"Nothing Easier" or "Adventures of Ten Little Fingers in Mother Goose Land,"
"Child's First Music Book."

PRESSER HOME FOR RETIRED MUSIC TEACHERS, IN GERMANTOWN, PENNSYLVANIA

(At the left is seen Mr. Presser's residence which he transferred to the Home prior to his death. The grounds comprise upwards of three acres of Gardens and Park)

Minor Scales

THE HARMONIC FORM of the F, C. G. D and A minor scales, left hand, all begin with the second finger and are fingered in each case:

2 1 3 2 1 4 3 2.

The only scale changed in the right hand is C minor, which is fingered:

2 3 4 1 2 3 1 2.

This fingering is generally supposed to have been discovered or "invented" by Moszkowski; but Alberto Jonas, in his celebrated *Master School of Modern Piano Playing and Virtuosity* gives the credit to a Frenchman named Charles Eschmann-Dumur.

Undoubtedly this fingering has great advantages. Try it and see. For instance, in the standard fingering of the D major scale, the fourth finger of the left hand goes on E, with the thumb crossing under to D. In the new way descending (from F sharp to E), the player has a much easier crossing (from a *black* key to a *white* key), as it is less difficult to put the thumb under to a white key when the long fingers are over the black ones. The short thumb naturally falls on a white key. Experiment with this and observe the results.

The teacher's first impulse is to ask, "If this is the better way, then why teach the old way at all; why not teach the new way from the beginning?" A matter like this will have to be decided by each teacher for himself; but the writer has found it rather useful to have pupils learn and practice the old fingering for the first five or seven years and then learn the new. This has several advantages, a few of which are here enumerated:

First, in *practice* we frequently finger things in a difficult way so that when we try the less difficult, the latter will seem quite easy by comparison. For instance, a pupil who can finger the scales in the more difficult way will have little or no trouble in the easier crossing of the new manner.

Secondly, if the pupil cannot play the scales with the standard fingering, all the sonatines, pieces and usual works that he uses in his earlier grades would have to be re-fingered for him. This would take a great deal of the lesson time and is hardly advisable, is it?

A splendid book that is widely used by progressive teachers, and one of the standard works on the subject is "Mastering the Scales and Arpeggios," by Mr. James Francis Cooke.

The following exercise called "Radiating Exercise," has been found very beneficial, particularly for pupils who have difficulty in remembering the note on which the fourth finger goes.

These have been given the name of "Radiating Exercises," because radiating from a given center note they ultimately touch the limits of the two-octave scale. By means of this exercise, we go from the *known* to the *unknown,* step by step, until the fingering becomes second nature.

Radiating Exercise—Section A

This exercise is designed to fix the fingering in the mind by advancing the fingering step by step.

Play each exercise separately eight times, or until the fingering of each exercise becomes as second nature, or until it is not necessary to have to think about the details of fingering. In other words, the little exercises become automatic. Proceed in the same manner with all the scales.

A Suggestion for Orchestra Goers

By Leonora Sill Ashton

In that very discerning volume, "The Lore of Proserpine," Maurice Hewlett says:

"If during an orchestral symphony you look steadily enough at one musician or another, you can always hear his instrument above the rest, and follow his part in the symphony."

This is an interesting and beneficial thing to do. In the mere act of using one's eyes as well as ears, concentration is increased and deepened.

I follow this advice when listening to a new, or unfamiliar composition; for it is the best way possible to become conversant with obscure parts. It is also a very valuable aid to ear training.

To come right down to actual teaching, however, this is a good principle to apply to both the practice and instruction hour.

Expressing it simply, one might use the well-worn phrase, "Take one thing at a time."

It may be a little hard to explain this to your pupils at first, but they will soon learn your meaning, which would be something like this:

"In each repetition of an etude or piece, instead of aiming in a haphazard manner at the whole, try to concentrate upon one separate part, with a view to making that part perfect."

Of course, there must be a good general idea of the whole at the outset.

This is obtained by reading over the music carefully, away from the piano. In this process many details of time, rhythm and expression are seen and noted, which might be overlooked in the interest of the music itself when played.

In actual practice, try to concentrate upon one portion of the music at a time.

A practice record of this sort would read somewhat as follows:

Watch especially—
1st time—Melody,
2nd time—Phrasing,
3rd time—Pedal,
4th time—Expression.

One of the great lessons for scholars and self-seeking musicians to learn is that of not spending too much time on useless work.

The farmer, the housekeeper, the business man, all have had their work enlightened and enlarged and benefitted by "labor-saving devices."

The actual processes of the hands at the piano will always remain the same. It is for each one of us to quicken and enliven the *mental* processes which go with our practicing, which are going to free us from the long-called "drudgery" of piano work.

Clear thinking and vital concentration wait upon this end; and you will find that these two, persevered in faithfully, will enhance the beauty of music as a whole, when you give yourself up to the enjoyment of listening or performance.

MR. PRESSER'S BIRTHPLACE IN PITTSBURGH, PENNSYLVANIA

(The building is now demolished)

"He is dead, the sweet musician,
He is gone from us for ever,
He has moved a little nearer
To the Master of all music,
To the Master of all singing!
O my brother, Chibiabos!"—*Longfellow.*

Some Aspects of America's Advance in the Musical Art

An Interview With the Eminent American Author and Publicist

OWEN WISTER

Biographical

[Mr. Owen Wister was born in Philadelphia, June 14, 1860. His family is one of the most distinguished of the Quaker City. The biographical dictionaries make mention of the fact that he received his A. B. degree from Harvard University in 1882, followed by A. M. and L. L. B. in 1888; that he was admitted to the Bar in 1889; that he has been engaged in literary work since 1891; that he is an Overseer of Harvard University; that he is author of a long list of notable novels, including "The Virginian;" that he has written a number of important political essays, such as "The Pentecost of Calamity;" that he is a member of many learned societies; that he has received distinctions innumerable, but no mention whatever is made of the very significant fact that Mr. Wister's training and ambition up to the time he commenced his legal studies were focused upon becoming a professional musician, a composer; that he won the enthusiastic praise of world-famous music critics, and that he still retains a deep interest in the art. His own relation of the incidents of his musical activity makes one of the most interesting and surprising stories of the annals of our complex musical life. We prefer to have him tell this in his own words. The number of distinguished men and women in America who are fine musicians is a source of great satisfaction to eager music workers.]

"WHEN WE speak of the musical advance in our country, we must not forget that there were over fifty years ago, in America, certain roots of musical culture which, however attenuated, were nevertheless active forerunners of the present notable and widespread interest and enterprise in the music art of to-day: Numerous American families had representative members well versed in music; and it was my privilege to have been born in a family where music was hereditary, as it also was in my wife's family.

"My mother and I used to play four-handed arrangements upon the pianoforte—Haydn, Mozart, Beethoven, Schubert; she formed my taste.

"Once when in late years I was playing Mendelssohn's charming overture, 'Die Schoene Melusine' (Opus 32), with my eldest daughter, I was able to tell her that from those same pages I had played the same overture with her great-grandmother Fanny Kemble, who was the daughter of a well-known musician named Decamp, with her grandmother, Mrs. Owen Jones Wister, her mother, and my own great-grandmother, Mrs. Charles Kemble. My great aunt, Adelaide Kemble, was a singer of note, and her favorite rôle was *Norma*.

"My earliest musical recollections are those of hearing my mother play Beethoven Sonatas and some of the works of Chopin. My lullabies were played upon the piano rather than sung; although my mother did sing Schubert and Franz, as well as cradle songs. The piano fascinated me. It seemed a very wonderful thing to be able to make one's fingers fly over the keys and produce beautiful music. My mother's playing has been unforgetable. Why is it that the music one's mother plays seems so different, so distinctive from that of all others? The mother influence in art is always a vivid one, and many an artist of the past has merely translated into his own career the ambitions and impulses of his mother.

"Fortunately at about the age of seven or eight I was started in the study of Solfeggios under a Mr. Bishop, of Philadelphia. It is hard to imagine a better foundation of ultimate musicianship. Before one can get very far in music one must learn the keys, the intervals and the chords. These are the vocabulary of the art. I have a strong feeling that one can learn them better by singing them than in any other way. Singing seems to fix the relation of the notes in the mind as nothing else does.

"At the age of ten, I was taken to Hofwyl, a school near Berne in Switzerland. There I was given my first lessons in pianoforte playing. These continued in other places for some three years. Coming back to America I went for five years to St. Paul's School at Concord, New Hampshire, where the organist and choir director was James C. Knox, writer of much excellent church music and composer of the well-known anthem, *O Pray for the Peace of Jerusalem*. His musical taste was like my mother's—perfect. It was from them I heard the first strains of Wagner, when Wagner was almost unknown here.

"At eighteen I went to Harvard where I became the pupil of the well-known American composer and educator, John Knowles Paine. Paine was an admirable musician who was sometimes given the name of being more erudite than practical. This, however, was not the case; he was a splendid performer upon the organ and produced many works for chorus and orchestra. He gave many organ concerts in Germany and in the United States. He went to Harvard as a teacher of Music in 1862, and became Professor of Music in 1875. He, like scores of teachers of theory in that bygone era, refused to recognize as legitimate, many harmonies which to-day seem like Sunday School commonplaces, and which I was rather prone to use in the exercises I wrote for him. The musical receptivity of the public the world over has advanced enormously during the past fifty years. Sometimes I feel that this advance is more notable than the progress of the art itself. Music, in order to develop, must depend upon the ear and upon the trained intelligence of listeners. Paine, who died in 1906, went through a period of strict classicalism followed by an indulgence in romanticism. He would probably, nevertheless, enjoy as little as most of us some of the orgies of cacophony which are brayed by orchestras continually in this day. His music for the Sophocles trophy, *Œdipus Tyrannus*, was his highest achievement and deserves to be revived more frequently .He wrote the words and text of a Grand Opera, 'Azara,' which was published in 1901.

"It should be remembered that when I was at Harvard, music in this relation to University life was still regarded by many as something of an experiment and by others as an intrusion upon the conservative academic plan of study. Professor Paine, and Professor Hugh A. Clarke, at the University of Pennsylvania, were the first University professors of music in America; and both were appointed as recently as 1875. In the English Universities the post of Professor of Music has existed for hundreds of years. Among Harvard students, Arthur Foote, Converse, Carpenter and Hill are well-known musicians to-day. Foote preceded, the others followed me. Frederick Russel Burton was in my class. Burton received his entire musical education at Harvard. He later became conductor of a notable Choral Society in Yonkers and also a music critic for the New York *Sun*. He published an excellent work on the Songs of the Ojibway Indians and in 1898 produced a dramatic cantata, 'Hiawatha,' employing real Indian themes.

"Upon graduation in music from Harvard, I took highest honors in that course with a Sonata, a comic opera in three acts, and some fugues. During college, I wrote three comic operas with Thomas Whaton. I have written eight altogether, none ever offered to a manager, three privately performed. In my senior year I wrote the text and some of the music for our Hasty Pudding Show, 'Dido and Æneas,' the first Hasty Pudding opera which had an orchestra. It was played in Boston, New York and Philadelphia. Some manager made us an offer to go on 'The New England Circut,' but we had our degrees to get. I also had two or three things published at that time, one of which I remember was a dance of the semi-popular sort. I was very proud to have this become one of the favorites at the dancing class.

OWEN WISTER

"At twenty-two came one of the great events of my early life. I went to Europe and it was my wonderful fortune to come to know Franz Liszt. Imagine my excitement and my trepidation when I learned that the great master had consented to have me play for him one of my own compositions and that the audition was to occur in Wagner's home, 'Wahnfried.' To see Liszt once was to remember him always. I was lucky enough to see him several times. I played for him, at Wahnfried, an operatic duo, 'Merlin and Vivien.' He was most encouraging and said in French that I had *'un talent prononcé pour la musique.'*

"He advised me to continue my studies, and I then went for one year to Paris where I studied with Ernest Giraud. At that time my sole thought was that of making music my profession. Circumstances called me back to America, and I returned to Harvard where I entered the Law School. Upon graduation I was admitted to the Bar in Philadelphia. My practice was short-lived, because I soon found myself writing stories. The public and the publishers demanded more and more of my writings, and since that time music has been compelled to step to the background. Nevertheless, I have never lost my great love for the art and myself continually writing music. Indeed I have just completed another comic opera, 'The Honey Moonshiners,' which will be given by the Tavern Club in Boston this year.

"It is a great gratification for me to see the vastly different attitude of the public towards music in this day. At Harvard, for instance, there is a totally different sense of appreciation of the art. This is in a large measure due to the very liberal attitude of President Emeritus Dr. Charles W. Eliot. In Paine's day, whenever Harvard was poor the corporation said, abolish the Music Department. To this advice Mr. Eliot never listened. To-day the Music Department stands Dean, Premier and Consulting Engineer for all others. It has drawn students from all over the country. The methods of Professor Walter R. Spalding have been widely adopted, even in France at the University of Toulouse. Music in university work is of course largely theoretical; but I cannot see why there should be any legitimate objections to the study of practical musical work in the modern university. The world cries for trained men. The universities are supposed to furnish them. The modern university without fine equipments for practical study of chemistry, engineering or medicine would feel itself woefully behind the times. Why should not the musician have every possible facility for practical study of the instruments as well as for theoretical study? The chemist has his laboratory, the athlete his gymnasium, the doctor his hospital.

"Of course some universities, such as Harvard, are so located that there are fine adjacent conservatories where piano and other instruments are taught and there is really no need for creating a 'musical laboratory' on the campus to teach these instruments.

"IN THE field of composition America unquestionably suffered from the Puritan pall which shrouded so much of our early creative work. In music the effect was terrible. The English have never been a profound musical race; and even at that time, some fifty years after the landing at Plymouth Rock, when England was reveling in the beautiful music of Purcell, our blue-nosed Pilgrim and Quaker forefathers were finding in music the double-distilled quintessence of fire and brimstone. It is difficult to estimate the damage done to music by the Puritan commonwealth. The genius of Purcell was one in which the British people have reason to glory. Unfortunately, they were in poor position to promote it; and when the overwhelming genius of Handel arrived, the native composer was neglected—a misfortune for which Britons even today are trying to atone.

"In America the situation, in so far as composition is concerned, is most hopeful at this time. We have our men of Anglo-Saxon heritage such as John Alden Carpenter, Foote, Hadley, Converse, all musicians with most excellent technical training. We have had the Celtic MacDowell. Now we may expect a great admixture of blood of many different nations; and already in the works of younger composers, such as Sowerby and Hansen, this new note is to be heard. Have no fears about the music of the America of to-morrow. The whole world will listen to it.

"Our equipment in music will excel that of the world. I refer to the schools cropping up in many parts of the country, with endowments which would have seemed enormous if they had come from an imperial hand instead of that of American manufacturers, merchants and publishers. Our orchestras command world attention. Charles Martin Loeffler, of Boston, told me that he considered the Philadelphia Orchestra the finest in existence. I certainly have heard nothing to equal it. I have heard the great orchestras of Europe, and there are many magnificent ones. I remember a particularly beautiful performance of the G Minor Symphony of Mozart, by the excellent orchestra of Barcelona, conducted by the brother of Pablo Casals.

"The nations of Europe have long recognized the value of music to the State. To me this value seems enormous, because music adds greatly to the Joy of Life. It gives all an additional reward for existence. Its appeal is so broad and its effects are so exhilarating that its importance is immense. In religion it is indispensable, if only because it appeals so definitely to the emotions. A religion without emotion is worthless.

Why the Pianoforte is the Most Important Instrument

"MUSIC, as an art, may be best approached through the pianoforte; that is, unless one is preparing to make a specialty of some other instrument, it is perhaps a mistake to inaugurate a musical education with another instrument. There is nothing in the literature that cannot be explored through the piano. It is for this reason that I feel very strongly that everyone who desires to study music, whether the design is professional or amateur, should at first strive to gain a certain pianistic facility. The piano is easily the most practical instrument for this purpose, and the average student gets more from it.

"The ability to play the piano, if merely for exploring purposes is a valuable possession for anyone in these days when there is such a world interest in music. I rather pity the man or the woman who has not this ability, just as one is to be pitied who cannot read. The further this ability is developed the more interesting the subject becomes—precisely as the acquisition of the ability to read in foreign tongues widens and deepens one's outlook in literature.

"This is peculiarly true in its relation to the American people. Probably we work harder and longer than most peoples. The strain is often terrific. The American man deeply engrossed in business, has scant variety in his life. If he has learned to turn to music, he finds a precious relief from the grind. The turning toward music in this country has become very marked in recent years. It seems to have come almost like a phenomenon. Certainly the interest in 1880 is not to be compared with that of today. The occasional concerts given at the Philadelphia Academy of Music, by Theodore Thomas and his wonderful orchestra, were played to half empty houses. Now there are queues around the whole square an hour before the doors open on orchestral nights.

"Except drama, music is the only fine art which can be recreated wherever there is the right medium. By this I mean that in order to see the 'Sistine Madonna' or the 'Descent from the Cross' one has to travel to Europe. Photographic reproductions leave a great deal to be desired. With music, however, one may recreate a Beethoven Symphony in the backwoods, if one but has a proper instrument. I have been told that Handel's 'Messiah,' for instance, is given in the little college town of Lindsborg, Kansas, in remarkable fashion, by a large chorus and orchestra. The St. Olaf Chorus of a small college town of Minnesota tours the East, singing the masterpieces of the early church composers in a fashion that wins the enthusiastic applause of great critics. The girl in the country town, with a little library of Bach, Beethoven, Haydn and Mozart, can get just as much joy from playing these works as if she lived in a great metropolis. Thus music grows daily more an American possession, instead of being, as it used to be, an American importation."

Tributes to Theodore Presser

(Continued)

ERNEST R. KROEGER

Noted Composer

Theodore Presser was a man of sterling integrity, with high ideals, and he was in a position to carry out his plans. It is a fine thing for a man to see in his lifetime the maturing of such plans as Mr. Presser had. It must have given him great gratification. The musical world loses much by his death. I feel a sense of personal loss, because of our close friendship extending over many years.

WALTER T. FISCHER

Music Publisher

Mr. Presser was one of the most respected figures in our national musical life and, through many years of earnest endeavor succeeded in winning not only unusual material success, but also a guerdon of widespread admiration even from those who did not always share his point of view.

He was one of the last of the "grand old men" of the music industry and his passing brings to each of us a deep sense of irreparable personal loss.

GUSTAVE SAENGER

Editor of The Musical Observer

In summing up the careers of those who have gained unusual prominence in either a business or professional vocation, we must be guided by the personal character of the individual, his aims, and methods of arriving at whatever goal he has set for himself.

The outstanding qualifications which helped to distinguish the late Mr. Presser, and which made of him a personality which had become an established factor in his particular sphere of activity, are to be sought in the indomitable energy he displayed at all times, his ceaseless attention to large or small business matters, and his generosity in having provided for at least a part of the needy musical profession through the Presser Foundation, which will remain a perpetual monument to his kindly and charitable human traits.

BOSTON MUSIC PUBLISHERS ASSOCIATION

November 7th, 1925

It was with deep and sincere sorrow that this Association learned, on October 28th, 1925, of the passing from this life of Theodore Presser, one of the outstanding members of the Music Industry of this country and of the world.

While not unexpected, the announcement of his passing came as a severe shock to all of us.

As founder of THE ETUDE and of the honored house which bears his name, he made a reputation for himself which will endure. Truly may it be said of him: "Gone is the living but his works remain."

Uncounted thousands have blessed him for the helpful inspiration put forth month by month for more than forty years in the columns of THE ETUDE; and countless unborn thousands, and thousands now living, will revere his memory because of his benefactions to be wisely distributed to deserving music students and retired music teachers, by the Theodore Presser Foundation, a wonderful dream of Mr. Presser's life fulfilled.

The world is poorer by the loss of such a valued life cut off at the very acme of its usefulness. Our heartfelt sympathy goes to his relatives, friends, and business associates in this their hour of trial; and it is directed that this minute of respect to his memory be spread upon our records and a copy of it suitably engrossed and sent to the President of the Theodore Presser Co. and the Theodore Presser Foundation.

BOSTON MUSIC PUBLISHERS ASSOCIATION,
By F. E. BURGSTALLER,
President.
HAROLD E. ROBINSON,
Secretary-Treasurer.

W. DEANE PRESTON, JR.

A Practice Hour for the "Rusty" Housewife

By Mabel Blair Macy

How many a busy mother and housewife has suddenly realized that she no longer can play the Beethoven "Apassionata." No longer can she play the Hungarian Rhapsodies as she once did, when fingers were accustomed to hours of practice and, perchance, little dish-washing!

Take heart, Weary One! Don't be a "has been!" Don't admit that you haven't been able to keep up your practice. Rather, say that you certainly have continued your music—and not only say it, *do it.*

Take an hour early in the morning, and practice. Concentrate on that one hour. You have no idea how much can be accomplished, nor what a wonderfully free feeling will result. Once more you are developing your own individuality. And it is surprising how much more easily the day's work can be finished. It seems to go faster. If it doesn't, what matter? Much better to have had that hour of freedom in the morning, and to do the dusting in the afternoon.

Now for the practice itself! Hunt up the old studies —Czerny, Hanon, Cramer—any of them. Start out with finger exercises, and go *slow.* Think of each finger; don't let it bend in; strike on the tip; play very legato; make each tone *sing.* Listen! Do special exercises for that weak fourth finger. Do stretching exercises. Watch your thumb; see that it passes under the other fingers easily and smoothly. If your wrists or fingers are fatigued, or stiffen, take your hands from the keyboard and shake them limply from the wrist. Relax!

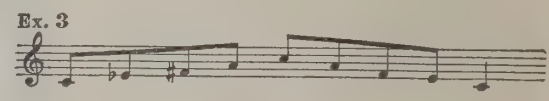
If you have worked slowly and carefully your hour has probably been consumed in this. Just to see if your practice has been to some purpose try the first or second of the Chopin Etudes or whatever has been your former technical tool. Does it not go a little easier than the last time you tried it?

The second morning you will probably do finger exercises for only about twenty minutes. Concentrate on those twenty minutes, however. Then pass to scales! Just to renew your memory of the different scales, try the "cycle" first. Do C scale up and back four octaves, ending up with

Ex. 1

That brings you to A, for your minor scales, Harmonic and Melodic. Finish them with

Ex. 2



and you are ready for F scale. Go on around the cycle of scales. Then try them a different way. Take each scale up and back four octaves, counting four, first with one note to a count, then two notes to a count, then three, and then four.

Try scales in thirds and sixths for a change. Do not forget the Chromatic Scale.

As you do the different scales, work on the corresponding arpeggios, one, two, three, and four notes to a count. It is interesting, too, to do the arpeggios without stopping, four octaves up and back, in the keys of C, D, E, G and so on, through the octave. Then, for stretching the fingers and "limbering up," an excellent exercise is the diminished seventh chord. For example,

Ex. 3

practiced similarly to the arpeggios.

I believe it is a good thing to pass on to some octave practice now. Look up your octave exercises. Do them slowly, keeping your wrist relaxed. Practice, first with the weight of your touch coming only from the fingers, then with the weight from the forearm, and finally the weight from the whole arm. Try octaves in scales, in arpeggios, in diminished sevenths. Do them *forte,* and *pianissimo.*

Every day do some finger exercises, scales, arpeggios, and octave work. Look up exercises on trills, thirds and sixths. After you have your fingers fairly well "limbered up," divide the practice hour thus: twenty minutes for exercises of all kinds, twenty-five minutes on "pieces," and fifteen minutes on memorizing. By that method you will always have something ready when you are asked to play.

Do not lose your enthusiasm; and *do not* "fizzle out!"

A Character Study of Theodore Presser the Man

By WILLIAM ROBERTS TILFORD

Biography of Theodore Presser as it appears in Who's Who for 1925

Theodore Presser, music pub.; b. Pittsburgh, Pa., July 3, 1848; s. Christian and Caroline (Dietz) P.; student Mt. Union (O.) Coll.; studied music, N. E. Conservatory of Music (Boston, Mass.), 1873-4, Leipzig Conservatory, 1878-80; m. Helen Louise Curran, of Phila., Pa., 1890 (died 1905); m. 2d, Elise Houston, of Phila., 1908. Entered retail music business Pittsburgh, Pa., 1864; teacher of piano, Ohio Northern U., Ada, O., 1869-71, Smith Coll. and Conservatory, Xenia, O., 1872-5, Ohio Wesleyan U., 1876-8; prof. music, Hollins (Va.) Coll., 1880-3; founded "The Etude," monthly music jour., at Lynchburg, Va., 1883, removed to Phila., 1884, and continued as editor "The Etude" until 1891; head of Theodore Presser Co., music pubs. Erected and endowed, 1914, the Presser Home for Retired Music Teachers; founded, 1916, Presser Foundation; founder Music Teachers' Nat. Assn., 1876; a founder and hon. pres. Phila. Music Teachers' Assn. Author: School for Pianoforte Playing; School for Four Hand Playing; Polophony Playing; also numerous ednl. studies, piano pieces, etc. Presbyn.

Theodore Presser died October 28, 1925, of heart failure, after an operation at the Samaritan Hospital, Philadelphia.

DURING THE course of several years it was my very great privilege to know Theodore Presser and to observe him in his daily life "in action." Only those thus situated could understand just what the words, "in action," meant in reference to this most remarkable man in his many faceted life. So numerous have been the biographies that have been printed during the last few months that it is not worth while in this article to recount chronological facts. The biographies, however, give a very scant and imperfect glimpse of his real greatness. It is only by regarding psychologically and analytically the outstanding traits of his character that we may discern those factors which entered into the greatness of his soul and the success of his achievements.

Capacity for Work

LIKE most men of large accomplishments he possessed an uncanny capacity for work. During the forty-three years he was engaged in music publishing, no man in his business equalled him in this respect. Coming from strong stock and blessed with a vigorous frame, which in later years actually became bent with labor, he had the additional asset of a youth spent partly in very hard manual work. In fact, he made cannon balls during the "War of the States," though the work in a foundry proved too much for his very youthful ambitions. Later, as a music clerk, then as a music student, as a music teacher in colleges, as an organizer of notable musical associations, and finally in the publishing business, he left a trail of records for hard and unremitting work, which is extraordinary in every way. For years, after a severe day's labor at his business, he would take home great bundles of work and spend his evenings investigating manuscripts, signing checks, auditing bills, and so on. In addition to this he wrote at home instruction books, and edited works which have been used by hundreds of thousands of students. His instruction books were partly original and partly compilations. It is safe to say that he created and assembled educational material that has been used by more people than the works of any other musical educator, with the possible exception of Carl Czerny.

This capacity for work, combined with his great determination and strong will, became an excess in his last days. His best friends and counsellors found it impossible to prevent him from doing things which were obviously injurious and liable to shorten his life. In order to get physical exercise, he persisted in sawing heavy logs, clearly a dangerous exertion for a man of seventy-seven with an uncertain heart. He never rode when he could walk, and only in his very last years could he be persuaded to use the elevator except when a climb was too high. His mentality was exceedingly virile and he would be found "on the job" long after younger men were tired out.

A Friend of the Teacher

HIS interest in his business, and particularly as it related to the promotion of the interests of the music teacher, impelled him to be at his desk at times when his medical advisors insisted he should be in bed. He was at his office four days before his passing; and only a few hours before his death he was struggling valiantly in behalf of a plan he had to help the teacher of music.

Many of those who for years had known of the enormous accomplishments of Theodore Presser were surprised when they met him; and often they would exclaim, "Is that really Theodore Presser?" This was largely because of his great simplicity. He hated affectation and complexity of any kind. A bombastic person amused him greatly. Few men have ever retained so little of their worldly goods during their lifetime and given away so much. He had a fine home in Germantown adjoining the far more expensive building he erected for retired music teachers. For a man of his means he lived very simply and without ostentation. In his business house he lunched daily with his employees, making little distinction between them as to their position in the business. He disliked display and it distressed him to stand in the lime-light. Many Universities proffered degrees to him; but these were always refused, because he insisted that he was not really entitled to them. Always a champion of the highest in education and a strong advocate for the best materials in the curriculum of the universities, yet he was a great admirer of the young person whose education was acquired as the result of long, weary hours of work at home. To such he longed to make his own life an inspiration.

MR. AND MRS. THEODORE PRESSER IN THE GARDEN OF THEIR GERMANTOWN RESIDENCE, MRS. PRESSER (ELISE HOUSTON) DIED NOVEMBER, 1922.

Musicianship

THE MUSICIANSHIP of Theodore Presser was far better grounded than most people realized. Fifteen years in actual teaching, plus many years of study under such really eminent teachers as B. J. Lang, Stephen A. Emery, G. E. Whiting, Zwintscher, Jadassohn, Reinecke, and others, gave him an excellent background of the art. His knowledge was fundamental and practical. This inclined him toward educational music; and his grasp of the requirements of a good educational piece was uncanny. As a composer his works were not representative of strikingly original creative powers; and he realized this. As an editor he was most careful and painstaking. His great fondness was for the works of Bach and Schumann.

He was known to have been a most excellent and exacting teacher of pianoforte; but his own playing in later years was often inaccurate. Strangely enough he had an aversion to certain instruments, which was due to a peculiar sense of hearing. Any sound that was very strident or very high seemed to pain him. For this reason he had a great antipathy to certain string quartets and always avoided a string quartet performance when he could possibly do so.

Human Qualities

THEODORE PRESSER was one of the most clean-minded men I have ever known. In long years of association I never heard him relate an objectionable story. Although he could be vigorous and emphatic, he had no use for profane or coarse language. On the other hand, he was far from being a sacrosanct prude. Adhering to a strict moral code himself, he was at the same time very tolerant and "long suffering" in his aspect of the frailties of others. In the cases of unfortunate girls whose hearts had gone up the wrong lane, the little Magdelens of life, he was most considerate, often extending financial help. In one case he wrote a pathetically naive letter to parents, assuring them he was certain that the world's judgment of their erring daughter was untrue and unjust.

While unostentatious, he was extremely social and dreaded to be without congenial company and companions. A conventional, old-fashioned picnic to the woods gave him far more delight than anything that pretended to be formal, and a hike with a group of boys was a special diversion. In a small group he was an extremely animated conversationalist and enjoyed humor immensely. He dreaded public speaking; and although, when inspired, he could make a very excellent talk upon subjects in which he was interested, he had a fear of audiences and frequently confined himself to notes.

He had a habit of expressing himself in a peculiar and emphatic manner which he understood perfectly himself, but which was often misinterpreted by others. This sometimes led to misunderstandings in later years, and to the sacrifice of friends, which pained him greatly. It thus often became necessary for those who did understand him to interpret his meaning; and this he appreciated greatly if accurate, but detested when it became apparent to him that he was in the least falsely interpreted. He was always most anxious to have his meaning perfectly clear and would struggle for hours with letters, documents and circulars, until there could be no doubt as to what he wanted. On the other hand, he was ready when necessary to change his mind; and this, indeed, he frequently did.

His methods of work and his persistence were also highly individual. His enormous "stick-to-it-iveness" in securing what he believed to be right, his extreme caution, and his huge energy, wore out the patience of strong men. This was particularly the case with men of active, "rapid-fire" minds. Time and again conferences have broken up largely because those concerned

could not realize the laborious and "agonizing" processes with which he scrutinized what to others seemed a very simple problem.

His love for animals was very great and he looked forward to the end of the day when his little dog would romp joyously to greet him.

At different times he possessed many kinds of animals—crows, parrots, rabbits, pheasants—and he once acquired a bear which he kept until it became too strong for any domestic confines. He gave the bear away and shortly after the beast was found strangled at the end of his chain. Mr. Presser always insisted that the bear committed suicide because he had lost a good home. He reproached himself for giving the animal to others, who, he feared, had been unkind to it.

Flowers were a passion with him, and his gardens and greenhouse were a constant source of delight. Every new and rare plant was a treasure. He continually wrote to distant points for new specimens. Once, when returning from a trip to Bermuda, I brought him a small collection of tropical plants. His reception of the plants so overwhelmed him that he quite forgot the donor.

In sports he retained to his very last days the naive enthusiasm of a child. At a football game he was a delight to see. He frequently attended professional baseball games and his usual inquiry at the end of the day was, "What's the score?" He enjoyed playing games himself and eagerly hunted companions to play with him. His complete democracy is shown by the fact that in his last years he spent much of his time in the Home for Retired Music Teachers which he built, enjoying conversations with the teachers and joining heartily in their games. He was a teacher right to the end and never forgot it. In the Philadelphia Music Teacher's Association, of which he was a founder, he was a regular attendant for years, caring little for the huge formal banquets which enlisted such speakers and artists as James M. Beck, John Luther Long, Henry Van Dyke, Henry T. Finck, Owen Wister, Josef Lhevinne, John C. Freund, Rudolf Ganz, John Philip Sousa, Reginald de Koven, Mrs. Edward MacDowell, Cyrus H. K. Curtis, and others, but prefering to take actual part in little meetings, with a few earnest teachers, comparatively unknown to the world at large, debating practical problems.

His Americanism was intense. This was shown in the construction of his catalog, in which he favored American composers on every possible opportunity. During the great war his antagonism to German militarism was bitter and unrelenting. This was a relic of his own student days in Germany. But he was none the less opposed to any show of militarism in France, England, Russia or in his own country. He believed emphatically in peace and in arbitration. He was a strong advocate of prohibition and in his last years eschewed tobacco.

After the Great War the Presser Foundation sent thousands of dollars abroad to Germany, Austria and other countries to help musicians in distress.

Merchant and Publisher

THEODORE PRESSER was a hard, fearless and tenacious fighter in his busness life. Every business move was made upon principles that he first of all assured himself were necessary and right. Thousands, who have profited through his enormous commercial initative, learned that in making a bargain with him success was conditioned by two outstanding factors. If Theodore Presser found the bargainer liberal and willing to do more than his share, he would go to an even greater extreme of generosity. On the other hand, if he found that the bargainer was trying to take an unfair advantage, or attempting to do something that he felt was not for their best mutual interests or for the ultimate advantage of the music teaching profession which he so valiantly championed, no shrewder, harder, stronger bargainer could be found than Theodore Presser. More than this, the moment he suspected trickery, or what is known as "sharp practices," he stopped the deal immediately.

In his relations to his customers he believed in the very greatest liberality. "The customer was always right." Orders had to be filled on the day received, whenever possible. Breaches of courtesy, direct or through mails, were unforgivable, as was inaccuracy in filling orders. All these principles he instilled into his large corps of faithful employees, until they became the habit of the entire establishment.

He feared entangling alliances, as much as did George Washington. He frequently said, "What you keep out of is quite as important as what you go into." He proceeded with extreme caution; but, once assured he was right he was unusually bold in his attack of a new venture. Every business problem was considered down to the smallest details; and his habit of literally "drenching" a new proposition with thought was most interesting to observe. Snap judgments he abhorred. He had a habit of saying that "I am big in big things and small in small things." This was not quite true, because his real bigness often came out into boldest relief in the smallest details, whether the detail was the selection of a first grade teaching piece or in the performance of some slight kindness. If, during a conversation, someone were prompted to criticise another for a seeming fault, invariably he would advise caution, with the admonition that "we can never tell what we would have done under similar circumstances."

Despite his advanced years he was systematic and orderly in his work. Before dictating he would spend a long time in reading and sorting his mail, so that the stenographer's time might not be wasted. He took delight in clearing his desk of the day's work each day.

His investments were made with remarkable understanding. He had no thought of speculation at any time, whether the investment was in stocks, bonds or real estate. Only a very small fraction of the investments he made proved unprofitable. He attributed this to the fact that he invested only after careful personal analysis and then enlisted the advice of brokers of unquestionable integrity. One firm of brokers served him most of his business life.

Despite the fact that he became a rich man, money in itself interested him very little. He did not enjoy the expensive things that money can buy and thought of money largely in terms of how advantageously it might be used for others, particularly in the direction of music education. When he was engaged upon the preparation of a notable series of books, such as his *The Beginner's Book, Student's Book* and *The Player's Book,* which ultimately had a very large sale, he had no thought of their commercial possibilities, only of the position they might acquire in real practical study of the piano.

Altruist and Philanthropist

THE altruism and philanthropy of Theodore Presser are hard to describe and still more difficult to understand. In the first place, he shunned praise for his philanthropies. He did not even expect praise and sometimes would quote the old German saying, "Undank ist der Welt Lohn." (Ingratitude is the world's thanks). His desire to do good was like an uncontrollable passion. Although he could be extremely severe in his discipline, when he thought it necessary, his great joy was to see people happy. The annual Christmas gatherings of his employees were marked by generous gifts and festive ceremonies. These delighted him through and through.

He loved to perform little kindnesses unostentatiously. His left hand rarely knew the good deed of the right. Time and again the writer has visited department stores with him when he has been in the quest of gifts to make others happy. Sometimes it was a warm overcoat for a poor boy; sometimes it was caps for poor children; sometimes it was booties for a new baby—anything to express his desire to be kind to others.

In so far as his benefactions were concerned, he was inordinately modest. In fact, it was only with great difficulty and with great persuasion that the Trustees of the Presser Foundation were able to get his consent to the use of his own name with the Foundation. His own choice was "A Foundation for the Promotion of Musical Education."

For many years prior to the establishment of the Foundation he had assisted students in securing an education. He always refused to help the individual, as he said that he had not the time and the machinery to determine the worthiness of the student. Therefore he made provisions that the grants should be made to colleges and that the entire matter of the selection of the student should be in the hands of the college. This provision still exists. The Presser Foundation does not give money to individuals direct. The students are selected by colleges. This illustrates the very remarkable manner in which he apportioned labor that otherwise might have centered upon him personally. In this manner, he assisted thousands of students whom he never even saw. Many of them had no idea of the source of their scholarships; and there are hundreds of letters on record, written by students to the college authorities, headed, "To my unknown benefactor."

It was his desire that the operations of the Presser Foundation should be controlled by boards of directors with a sufficient number in majority to act in every way independently of the business, in making philanthropic grants. This is distinctly the case, and the grants of all kinds are and have been made without any relation whatsoever to the business of the Theodore Presser Company.

In the Department of Relief for Deserving Musicians the same spirit of tolerance was invariably preserved. Help was given in emergency without regard for creed or country. The only questions were, "Does the applicant really need and deserve help as an actual case of a music teacher in hard straits?" In one case an elderly Protestant teacher, long an invalid, was in the care of Sisters at a Roman Catholic Hospital in the far west. She proved very ungrateful and a great trial to the Sisters which they bore with patience and fortitude. Because of this the stipend she had been receiving from the Presser Foundation was withdrawn from her personally and given over to the Sisters for her care.

His philanthropy was deep, fundamental and genuine, and by no means an expedient for disposing of superfluous wealth. An incident illustrates this. In the eighteen-seventies, Karl Merz, teacher and musical philosopher, whom Theodore Presser admired greatly for his altruism and lofty spirit, was publishing a musical paper in an Ohio town. He advertised for assistance for an aged music teacher in distress. Later Mr. Presser, then a poor and struggling music teacher himself, called for the first time upon Merz, who greeted him eagerly and said, "I always wanted to see you because you sent me two dollars for that poor old music teacher; and you were the only contributor."

In the contemplation of such a genius as Theodore Presser, called by some "the Horace Mann of Music," by others the "Andrew Carnegie of Music," and by still others "the John Wanamaker of Music," it is difficult, in anything less than a volume, to comprehend with words the fullness of his life. Those who knew him and associated with him daily were so impressed by his simplicity that they hardly realized the greatness of the man. To them Theodore Presser will remain forever in their memories as a virile but gentle friend, an exacting but wise mentor, and as a benefactor whose vision will become more remarkable as the years pass.

His funeral was one of the largest ever held in Philadelphia. The room was flooded with floral tributes. Educators, musicians and publishers came from all of the country. The officiating clergymen were Dr. E. Ladd Thomas and the Reverend John Parks, the latter having been for twenty years a regular employee of The Presser Company. The singing was by a double male quartet of employees of the Theodore Presser Company. The interment occurred during a severe snow storm, nevertheless one hundred mourners went to the cemetery.

In religious matters he was thoroughly tolerant, and he made a provision that "creeds" should not be considered in any way at the Home for Retired Music Teachers. This has been followed and the Home has been opened to all creeds. His father, Christian Presser, was a devout member of the Christian Brethren Church. For many years, Mr. Presser attended the Presbyterian Church. He was, however, a member of the Methodist Church and shortly before his death took his letter from the Church at Delaware, Ohio, and joined the First Methodist Church of Germantown. His late wife, Elise Houston Presser, was an enthusiastic worker in "New Thought," and after her death, Mr. Presser published her inspiring book, "Fruits of the Spirit." The last words of this great man were:

"Saviour, You are right."

THURLOW LIEURANCE

Composer and Eminent Authority on Music of the American Indians

Theodore Presser was my great benefactor and friend. For twenty years he has ministered and advised. He has passed; but we will still be guided by his kindly and sincere advice.

Inspirational Moments

"Don't always bring me the 'standard' things—Chopin, Beethoven, and so on. Try to develop Americanism in your piano repertoire. If you will search for good American piano compositions, you will develop an originality and a force which you will never get from foreign works, which, of course, you do not understand racially."

—Percy Grainger to His Class.

"Music should be to language what language is to thought, a kind of subtle expression and counterpart of it. It should range over the wordless region of emotions, calling up images of beauty and power, at other times giving an inexpressible relief to the heart by clothing its aspirations with a certain harmonious form. This salutary state of affairs will arrive when music is felt here as it is felt in the various countries of Europe, to be a kind of necessity—to be the thing without which the heart pines and the emotions wither—a need as of light and fire and air."

—Mrs. Edgar Stillman Kelley.

What Part Has Modernism in Present Day Piano Study?

By the Well-known Pianist-Composer

LEO ORNSTEIN

Biographical

Leo Ornstein was born at Krementchug, the birthplace of the famous author, Gogol, Little Russia, December 11, 1895. He studied at the Petrograd Conservatory. In 1906 he came to America, where he continued his studies at the Institute of Musical Art, becoming the pupil of Bertha Feiring Tapper, to whom he gives the credit for the greater part of his pianistic training. His early appearances as a pianist attracted wide attention because of his brilliant technic and his warm, sensuous tone-color. Subsequent appearances in all parts of the country have won him the regard of critics and pianists alike, ranking him with the foremost pianists of the day. His interest in ultra-modernistic music and his radical compositions have won him the reputation of an iconoclast. His concert programs, however, have been unusually orthodox; in part; and Mr. Ornstein in the following article has indicated why he returns to the classics even on his fiery Pegasus of musical anarchy. Mr. Ornstein has taken up his residence in Philadelphia, conducting "Master Classes" at the Philadelphia Musical Academy.

"IN THE art of music there can be no such thing as perfection. There is always room for further development. Merely to admit the contrary would be to proclaim that the art is dead. Therefore, the attempts of the "so-called" modernists are to be regarded as efforts to carry on the development a little farther. This is the obligation of every age in which real artists work.

"We must remember that, when all is said and done, no composer has really surpassed Bach, although he may have carried the art into a different avenue. The *Chromatic Fantasia* of Bach is in itself a monumental evidence of the greatness of the art of music over two centuries ago.

"From Bach to the present time there have been numerous steps in different directions made by many outstanding composers. Each one in his day has been a modern, whether it was Haydn, Gluck, Schumann or Wagner. In the latter part of the last century we find men of the ilk of Franck, Moussorgsky, and others of even more iconoclastic tendencies, coming into evidence. Franck with his version and superior scholarship represents one type. Moussorgsky, infinitely less skillful technically, with shortcomings that demanded the posthumous revisions of Rimsky-Korsakoff, represents another.

"Eric Satie is reputed to have been the first to employ the whole toned scale extensively.

"This scale has been known since the earliest times; but its beauties were foreign to the average ear. Satie was a far more voluminous worker than most Americans are aware.

"Satie and Debussy met about 1890 when the latter had returned from Rome; and the two men became intimate friends. There can be little doubt that the extremely radical Satie had a very strong effect upon his older contemporary.

Debussy's Limitations

"DEBUSSY had very great limitations and seems to me quite distinctly a descriptive composer. In his pianoforte works his greatest charm is indicated in such compositions as *Reflections in the Water* and *The Gold Fish*. His use of arpeggios and consecutive fifths is distinctive. There can be no question that Debussy's talent is individual. To me a very much greater talent is that of Ravel. His numerous compositions should be better known in America. I consider him organically superior to most of his contemporaries. His works are well-knit and have a virile kind of musical logic which falls refreshingly upon tired ears. He possibly excels in the smaller forms. His works have not, however, the barbaric, exciting character of those of Stravinsky.

"Here again we do not seem to meet with the organic, structural musical evolution of ideas such as we find in Ravel. Stravinsky's works seem like a succession of tableaux. This effect of a series of snatches does not impress me so deeply as does a work with a definite organic structure.

"Skriabin was a man of tremendous talent and great musical gifts.

"With such wide differences in technic and æsthetic viewpoint, there can hardly be said to be a modernistic school of music. Most of the modern composers constitute individual schools in themselves. There are too many theories floating around; and there is too little real music. The main point is that the composers have tried to go ahead. Some may be utterly wrong; but it is better to be wrong than to stagnate. The work has always advanced and it always must. Most of all we must realize that we must build upon the foundations of the past. All life is evolution. New forms do not spring into existence without relation to that which has passed.

"For this reason the musical education of the child must be chronological. This is obviously the process of nature, from the first germ cell. The human being develops and passes through all the stages of the evolution of the race. We cannot afford in musical education to disregard this imperative sign post. By this I mean that the child, after being taught the elements of music and trained to love simple melodies of the folk song type, should be brought up in music chronologically. He should hear the music of the earlier composers and climb up step by step through Bach, Handel, Mozart, Haydn, Beethoven, Chopin, unto the present day.

"My own works have always been an expression of moods and ideas. I have written in many different idioms.

"The subject matter requires appropriate setting; and, where simple means suffice, I do not see any reason for artificially complicating the treatment.

"Comparatively few people are aware that a very little-known pianist was responsible for what amounted to a revolution in piano playing. How it came about makes a very interesting story. The pianist was Julius Schulhoff, who was born at Prague in 1825 and died in Berlin in 1898. He is little known in this generation, in America, because most of his works were largely in a type of Salon Music, which seems to have passed. His arrangement of the Mozart *Minuet in E flat*, is, however, widely known. Schulhoff was a friend of Chopin, who acted as a patron for Schulhoff's concerts in Paris. For many years he was a popular teacher of pianoforte playing in Paris, Dresden, and in Berlin, where he became Royal Professor.

Schulhoff's Luscious Tone

"TECHNICALLY, Schulhoff's playing was very much restricted. It is said that the most difficult piece in his limited repertoire was the *Rondo Capriccioso* of Mendelssohn. Yet he was immensely popular in his day as a pianist, because of the magical charm of his tone. Once he was playing in Vienna when Leschetizky was present. Up to that time, practically all pianists played the piano 'on the surface of the keys.' Although Leschetizky himself was one of the most remarkable technicians of the day, he was immediately impressed with the luscious tone of Schulhoff. Here was a pianist who seemed to have fingers as strong as iron, but who really played with his shoulders, elbows and wrists entirely relaxed. His efforts never sounded hard, although the volume of sound was full and strong.

LEO ORNSTEIN

"Leschetizky, with his quick mind, noted this at once, and spent days and weeks trying to achieve similar effects. It was from this that the main principle of the Leschetizky method was evolved, if, indeed, one can say that Leschetizky had a method at all. Later Leschetizky met Rubinstein in Petrograd and asked him to play something. Rubinstein played and Leschetizky at once noted that he had adopted Schulhoff's methods of touch. Rubinstein was reticent on the subject, but Leschetizky always insisted that Rubinstein's playing was greatly improved.

"The whole idea is exceedingly simple. The hand is curved much after the plan generally used by the best teachers. The fingers themselves are held strong as steel. That is, they do not break in at the joints at any time. The remainder of the arm is relaxed at the wrist, the elbow and the shoulder.

"The trouble with most pupils is that they have good fingers; that is, fingers that are capable of playing rapidly and accurately, but which do not play with good tone because a beautiful tone cannot be produced by the fingers alone. It comes from the whole, relaxed arm, and a pressure touch. To secure tone the fingers must not 'get into the keys' too fast. That expression may seem enigmatical, but it is full of meaning. If a slow-moving picture were to be taken of the fingers of the novice playing a passage that calls for tone, and this compared with the fingers of a virtuoso noted for beautiful tone, the result would be highly instructive. What one would see would be that the fingers of the novice reached the bottom of the keys in about half the time taken by the virtuoso. In one case, we have fingers working spasmodically; and in the other we have fingers controlled by the brain of the player. The novice makes the stroke so quickly that it is all done before the mind has had time to consider what is happening.

"This control of tone and the study of the pedal are the two things which make for big distinctions in pianistic work to-day. As for what was formerly known as technic, one has but to stop and marvel at the achievements of the boys and girls of America of to-day. They accomplish prodigious things, with an ease which would have been quite a shock to virtuosos of other days. It is in the realms of beautiful tone and pedalling (to say nothing of superior musicianship) that they fail to advance. The pedal deserves long and careful study. I spent months in Paris, working the pedals with my hands while others played, so that I could sense the pedal effects more readily. Let five pianists of equal skill play a given measure equally well without the pedal. Let the same five pianists repeat the same experiment with the pedal, and the difference will be astonishing. With such a group the master pianist will be the one who best knows how to control the pedal. If the pedals were played with the hands instead of with the feet, it would be possible to operate them with greater sensitiveness. What must be studied is to make the foot as deft as the hand.

Expensive Leaps

"ONE OF the reasons why the modern piano student lacks the niceties of touch is that too little attention is given to the works of such composers as Haydn, Mozart and Schubert. The modern student wants to leap from Bach to Liszt and Debussy, playing just as little of the intervening music as possible. This is a very great mistake. The Sonatas of Mozart and those of

Haydn will amply repay close study. Haydn particularly seems to develop a kind of clarity and definiteness in playing that is hard to acquire otherwise. I would strongly recommend the study of the sonatas in D major, in E-flat major and in C-sharp minor. Later, the famous *Variations in F minor* may be studied. Schubert is a greatly neglected composer for pianoforte. Many teachers never seem to have investigated the Schubert pianoforte literature; and to my mind he has written numerous compositions which should not be omitted from the educational repertoire. Such music enables the student to give expression to tonal and other effects which are likely to be treated in slovenly fashion if employed for the first time in music of some of the later composers. It is the old story. One does not become an artist by accident nor by mere inspiration. Work, and work of the hardest kind, is the only thing which can produce a powerful style as well as an exquisite finish.

"When the student becomes sufficiently advanced, he may learn a great deal by doing a little teaching. I was amazed by this experience during my later student days. I found that I could readily discover in the work of the pupil certain faults that I was committing, although I had not been conscious of them. I believe that the thoughtful pianist can find in teaching an infinite opportunity to discover new possibilities in his own work."

Editorial

THE foregoing interview with Mr. Ornstein is possibly quite different from that which many people who have associated extreme radicalism with Mr. Ornstein might expect to read.

"It is easily conceivable that a portion of the general public may look upon the efforts of certain so-called modernistic composers as deliberate attempts to do things in an eccentric fashion, with the possible aim of attracting publicity. Publicity earned in such a manner is extremely expensive and very short-lived. Mere eccentricity, mere desire to do things in a different manner, without any artistic design, can never hope to produce results that are worthy to remain in the literature of music.

"Many people seem to regard the work of modern composers as something exploited to take the place of the older art of music. This is absurd. The immortals have given us classical foundations upon which we must build everything, lest the whole structure will fall to the ground."

In view of the fact that some of the works of the composers mentioned by Mr. Ornstein may be entirely new to many ETUDE readers, we are giving herewith a few biographical notes:

Erik Satie was born at Hanfleur, Eure, France, May 17th, 1866, died in 1925. After some elementary instruction he studied for a short time with Guilmant. In 1879, he entered the Paris Conservatoire, but took such scant interest in his work that the authorities of the institution regarded him as a student with small talent. He left the Conservatoire and became the pianist in a cabaret on Montmartre, that peculiar butte in the heart of Paris where artists of somewhat restrained habits make their lives enjoyable for themselves through misery or through hilarity. There he remained as one of the enthusiasts in a mystic order known as the "Salon de la Rose Croix." After some years he realized that he did not have technic sufficient for what he desired to accomplish and he became a student of the Schola Cantorum. His compositions, particularly those for piano, are called extravagant; but they have been played by many fearless artists, including Ravel.

Unlike Satie, Debussy was very thoroughly trained from the academic standpoint. Taken all in all, there was a certain popular appeal to his works which made him a little more acceptable to the general public; and for this reason he probably did more to break down certain conventions than any of his contemporaries.

Claude Debussy was born at St. Germain en Laye, August 22nd, 1862, and is thus only four years older than Satie. His work, however, gained wide recognition years before that of Satie; and he thus seems to many a composer of a much earlier period. In his childhood he studied with a pupil of Chopin (Mme. de Sivry). This may account for the Chopinesque character which some of his works possess. He was admitted to the conservatory of Paris at the very early age of eleven, studying with Marmontel, Lavignac and Guiraud. He repeatedly won medals, and in 1884 he won the Grand Prix de Rome. Although his first works did not attract wide attention, he completed, eight years after his departure from the conservatory, what still remains his most famous opus for orchestra, *L'Apres Midi d'un Faune.*

During the following ten years he devoted his serious attention to his greatest work, "Pelleas et Melisande."

Maurice Ravel, like Debussy, had a most excellent technical training. He was born at Ciboure, Basses-Pyrenees, March 7th, 1875. At the conservatory Ravel was the pupil of de Beriot, Pessard, Gedalge and Faure. He won the *Grand Prix de Rome* in 1903. Without frequent resort to the whole tone scale and the chord of the ninth, he establishes a new idiom quite his own.

Igor Fedorovitch Stravinsky was born at Oranienbaum, near Petrograd, June 17th, 1882. As early as ten years of age, he exhibited great talent as a pianist. His father wished him to follow law. It was Rimsky-Korsakoff who dissuaded him from a legal career and who taught the youth the fundamentals of composition and instrumentation. Sergei Diaghileff, the director of the famous Ballet Russe, commissioned Stravinsky to write a ballet. This resulted in the fanciful "L'Oiseau de Feu (Fire Bird)" through which Stravinsky was introduced to America. This was followed by many works revolutionary in character.

Many of the modernistic composers started innocently enough but became dissatisfied with stale effects and sought new means for expression. Moussorgsky, for instance, was at one time a parlor pianist, playing the anaemic arrangements of Italian operas, for piano. Compare them with the later Moussorgsky speaking in his own natural idiom. Again, Alexander Nikolaievitch Skriabin, the Russian composer, who was born at Moscow, January 10th, 1872, and died April 27th, 1915, began his career as a composer writing in a kind of Chopinesque idiom. Later he became very radical in his style, endeavoring to devise a new musical system based upon what he termed "mystic chords." Eventually he wrote his "Prometheus" (Opus 60), which called for a color-producing instrument to be played synchronously with the orchestral score. At the end he was devising combinations of colors, music and perfumes.

Do You Know—

THAT many of the folk-songs are not folk-songs at all, in the sense of "having no composer, but having just grown"; but that they are melodies of definite authorship, which the people of a nation or of the world have taken to their hearts?

That Mme. Schroeder-Devrient, the great German soprano, was credited by Wagner as being the inspiration of much of his best compositions?

That Mme. Adelina Patti, "The Queen of Song," made a distinct failure as *Carmen,* a rôle requiring a style of singing and acting quite at variance from that for which she was world-famous?

That the first mention of the word "Piano Forte" was in a Covent Garden (London) poster which declares that in a special performance of the "Beggar's Opera," in May, 1767, "at the end of the first act Miss Brickler will sing a favorite song, accompanied by Mr. Dibdin on a new instrument called 'Piano Forte'."

Teaching Old Pianists New Tricks

By May Hamilton Helm

FAR be it from a music teacher to dispute the truth of the old proverb, "You can't teach an old dog new tricks;" for music teachers abundantly realize the power of habit.

But there is quite a difference between teaching new tricks to one who has known no tricks, and improving upon those already learned.

Every teacher has heard the cry, "I had to begin all over," but students whose technic is founded on correct principles seldom complain of having been put back, when changing teachers or methods. The great pianists do not all agree on a certain hand position, so it would be dogmatic to assume that there is but one correct way to hold the hand. In my student days I recall being horrified at the high-wrist of a very fine pianiste, as I had been told that Liszt held his hand so flat that he could place a glass of water, level full, and play the piano without ever spilling a drop. Later, the low-wrist succeeded the flat-hand, yet I found no difficulty in changing. Any position that cramps hand or arm is bad—no matter what label the system advocating it bears.

If one carefully observes the artists heard, it is not necessary to try to imitate their mannerisms, but to see how much better he can play the piece, in his own way, after having listened to a superior performer.

It is often helpful to test one's self in the mechanics of playing, by Handel's three simple (yet difficult to follow) rules: The right tone, for the exact length, with the right finger. The importance of the last is never appreciated by beginners; but adults should not fail to grasp these self-evident truths; correct fingering is a great time-saver, a great aid in memorizing (as one "engraves tracks" in the muscular-fibres by correct repetition) and it is also helpful in sight reading, as there is always a finger free to take the next note.

The writer has found that in reading new music if she plays softly as well as slowly the first time, it seems to make a more lasting impression than loud playing does. "I love you" is much more impressive (and convincing) when whispered in the ear, than when shouted from the house-top.

Listening to one's own playing has been advised and re-advised, but until this excellent advice is acted upon, one cannot expect much improvement in tone quality. If we could hear ourselves as others hear us, we would not need a teacher. We would be self-regulating. But, since we are not, let us not be smug and too easily satisfied. Let us sincerely try to be more critical of our own playing than we would dare to be with a pupil's.

For those who are trying to teach themselves, or to improve upon what they already know, there is no better motto than, "Plan your work, then work your plan." If a piece is worth memorizing, "go to it" with a will, and force yourself to finish it. On the other hand there are many pieces one wants to play, just as a well-loved book is re-read. In that case, all the attention should be focused on the interpretation, so that each reading brings out new beauty.

Touch

By S. M. N.

THERE are three methods of evoking sound from the piano with the fingers, each very useful in its place: (1) The key may be forced down by the velocity of the finger as it descends—this is attack by stroke; (2) it may be pushed downward by the weight of the arm—this is attack by weight; (3) it may be pressed downward by the muscular tension of the finger—this is attack by pressure.

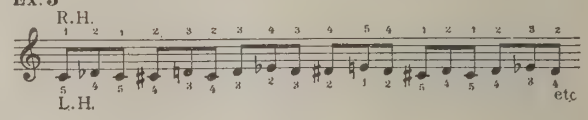
Touch by stroke produces a tone brilliant, firm and carrying. It is used principally in rapid passage-work and staccato playing. The fingers should be curved so that the fleshy ball of the finger-tip is in contact with the key. The fourth finger should be curved more than the others, on account of its weakness. The knuckle-joints should never be depressed below the level of the wrist.

The fingers should be prepared for stroke long in advance, and not raised at the moment of attack. The muscles which support the finger in the air should be relaxed at the moment when the opposite muscles bring the finger swiftly down upon the key. The wrist should be held perfectly loose and quiet in stroke-playing by the finger. The higher the elevation of the finger at the moment of attack, the louder will be the tone.

The following exercise has been found very helpful in gaining velocity of execution.

Ex. 1

If the fingers are not free and independent, the following exercise may be practiced thus,



Ex. 2

holding down all unoccupied fingers, and with a loose wrist and arm!

To obtain an equal touch on all keys, practice this exercise:

Ex. 3

The secret of acquiring a good tone lies in slow practice.

Utilizing Sensations

By Melvin Ahlert

HERE is something which I have found to be a great help to "weighty tones," that beacon in the art of piano playing.

When one acquires weight in his touch he becomes aware that at first the "trick" of keeping it depends a great deal on his ability to call it forth, by means of the physical sensations which accompany it and which introduce the touch while he puts his fingers down and up.

Therefore, the secret lies in consciously summoning those sensations again and again, and not merely waiting until they appear again or racking one's brain for the cause of the lack of weight.

When a new piece is to be learned, I memorize, along with the notes, the physical movements, the relaxations and the rhythm of the thing, in such a thorough manner that all becomes united and inseparable.

Thus the physical "feelings" are made a part of the piece, and, if one feels those while practicing, they will bring the weight in very short time, and with the weight comes tone color, and all from the mere fact that since the weight is a material, corporal thing, to produce that weight one must use things that are likewise corporal.

"If the intensity of a musician's art approaches the point of reality, almost of a sense of perception, he is usually regarded as one of those 'crazy musicians,' whereas he is merely a musical mystic in the same way that religious people are mystics."—MAX ROSEN.

Life Appreciations of Theodore Presser from Those Who Knew Him

MRS. FRANCES E. CLARKE

Educational Director Victor Talking Machine Co.

Theodore Presser has gone.

We who knew him personally find it difficult to adjust our thoughts to his absence from our inner circle. Kindly, keen, interested in many subjects within and without the music world in which his life so signally centered, he was the dominating figure and factor in our informal councils. His major purpose in life was the improving, developing, culturing, and finally nurturing of the music teacher.

His life-long devotion to this single idea is unique in music annals. He amassed a great fortune, not for the sake of self-indulgence or enjoyment, but only to pour it out in the service of his ideals. Yachts, private cars, regional residences, collections of art, pottery, antiquities, and so on, all were within his reach; but no, the one general idea was ever uppermost. He toiled like a very slave to the inner drive of it, as if it were a holy order and he the one High Priest of abnegation and sacrifice.

Theodore Presser has received his "Well done" from the Master who set the stars singing and all nature in tune with the Infinite.

Music alone can harmonize the jarring cacophony of the clashing factions of our present life. Theodore Presser's life work is one of the foundation stones in the history of American music.

HUMPHREY STEWART

Famous Organist and Composer

It is difficult to express in words my appreciation of the late Theodore Presser, or to speak of the loss which the musical world has sustained by his death.

Theodore Presser was a kindly, lovable man, whose personality invariably attracted those with whom he came in contact. His goodness and generosity will ever be remembered by all who knew him, and his thoughtful care for those in need of assistance will be an imperishable monument to his memory. As the Psalmist says: "The righteous shall be in everlasting remembrance."

JOHN LOUIS HANEY

President of the Central High School, Philadelphia

I consider it a privilege to set down a few words of personal appreciation of the late Theodore Presser. Others who knew him longer can testify more fittingly as to his commercial genius and the indefatigable industry that enabled him to build up the splendid enterprise that bears his name.

Theodore Presser combined the vigorous, dominating personality of a self-reliant business man with an unexpected spiritual humility and an alert mental attitude that covered a wide range of human interests. Even in the complicated mazes of modern life, most men are likely to be content with a few restricted activities when they pass the allotted age of three score and ten; but to the end Mr. Presser amazed his associates by the scope of his intellectual curiosity. He delighted in learning the views of those who were leaders in their respective fields. By his questioning, often adroit and ingenious, he acquired an unusual fund of knowledge and developed his own distinctive philosophy of life. He revealed to a remarkable degree the inquiring spirit of the earnest seeker after truth.

Civilization has its innumerable dreamers of vain dreams who can never bring their fantastic ideas to shape and substance. It has others who conceive quite reasonable schemes for human betterment, but who, because of some serious defect in plan or execution, fail to achieve their worthy purposes. Relatively few are those who can formulate large projects for the well-being of others and in due course establish their philanthropic plans upon a successful and enduring basis. Among such Theodore Presser will be remembered in years to come as a practical, broad-minded man of vision, imbued with a sincere zeal to further the welfare and progress of his fellow-men.

KARL MERZ, Educator
Whom Theodore Presser Greatly Admired for His Wisdom and Altruism

FLOYD W. TOMKINS

Distinguished Clergyman

Mr. Theodore Presser, who has lately passed to his reward, was one of those rare men who did great things and said very little about them. His quiet earnestness, his musical knowledge, which was unusually great, and his strong persistence in urging forward excellent things, made him a citizen of whom Philadelphia may well be proud, and a worker in the advancement of art for whom we may thank God. I doubt whether any man in our country has done as much to advance the real musical interests as Mr. Presser. His publication of THE ETUDE, the largest musical paper in the world and the best, and his establishment of the beautiful Home for Aged Musicians, which it is a benediction to visit, prove the unselfishness and the zeal of our lamented friend. All who love music and are trying to make it more and more useful in human life must thank God and take courage because of what Mr. Theodore Presser was and did. The benediction from on high is certainly his: "His works follow him."

MATTHEW H. REASER

Founder of Beechwood School

It was my great privilege to know Theodore Presser, not only as a music publisher and very successful business man but also in his home; as a ship companion; in the hunting camp; with rod and reel on Florida waters; and before an open fire on winter evenings.

These were some of his characteristics: A mind constantly inquiring into things big and little, worrying over disappointing details but with a never failing optimism as to the large outcome; a consuming love of his business as a service—a service to those whom it employed and to those it touched; an abiding faith in humanity, with a keen joy in everything that justified this faith; and always, everywhere, a desire to help when and how he could and an equal desire to be unknown in the helping.

"Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto Me."

DR. HUGH A. CLARKE

Professor of Music, University of Pennsylvania

From my earliest recollection of Mr. Presser he was a man full of energy, with a consuming desire to help his fellow-musicians. This ambition, as he became more and more successful, took the form of a resolve to endow a home for aged music teachers. He always contended that musicians were fundamentally unfit to earn their livelihood, that they were too great artists to have to contend with the world in their struggle for material existence. With this understanding of them, he determined to found his home and kept to his great purpose until, in 1906, it was realized in the institution which bears his name. Not only those brother professionals who were aided by him through this channel, but also many others who were helped more personally, can bear witness to his large generosity.

Mr. Presser was one of the few men in any generation, whose generosity not only has helped his contemporaries but also will help the needy of generations to come.

JAMES H. ROGERS

Eminent Composer and Critic

Theodore Presser was my friend for many years; and the news of his passing comes to me bringing with it a deep sense of personal loss. Though I have seen Mr. Presser a good many times, our acquaintance, since he lived in Philadelphia, and I in Cleveland, was chiefly one of correspondence, but none the less cordial because of that. Quiet and unassuming to the last degree, Mr. Presser was yet a man of very strong and very marked individuality. The sort of man you are pretty sure to remember, even though you meet him casually and but once. To those who knew him well, then, an unforgettable personality. His success in business was great, as everybody knows, and it was achieved by distinctly original methods.

Mr. Presser had not a few imitators; but he imitated nobody. He built up a publishing business of the first importance. His heart was in it. But still more, I believe, his heart was in the doing of good deeds to his less fortunate fellow beings. The home he founded and supported in Germantown for elderly and needy musicians—really a pleasant and well equipped hotel in appearance—is one of the finest philanthropies of which I have knowledge. Its future is amply provided for in Mr. Presser's will. And that is a fine thing, too.

CHARLES WAKEFIELD CADMAN

Famous American Composer

Am only too glad to add my humble tribute to Theodore Presser, whose demise has brought forcibly before the American musical public the greatness and usefulness of this big man—big in every way.

One cannot adequately estimate his accomplishment, and while our own generation does appreciate it, it will be the succeeding generations which shall feel the full effect of his constructive work. His humanity and kindness are evidenced on every hand through his benefactions, which speak for themselves.

Personally, I shall ever hold in tender memory my personal acquaintance with Theodore Presser. My little dinner with him and your editor, last Spring, touched me greatly, and also reminded me of the fact that it was Theodore Presser who actually purchased my first composition, and "broke the ice" in the *early marketing* of my compositions.

Theodore Presser lived a useful life, an eventful life, a strenuous life, but above all, an *unselfish life.*

NICHOLAS DOUTY

Member of The American Academy of Singing Teachers

In the Presser Building, which is partly given over to studios and offices, Theodore Presser established a cafeteria where his employees and his tenants enjoyed a clean, substantial meal at a ridiculously low price.

Here, each working day, seated at the head of a plain, undecorated table, innocent of cloth, surrounded by the heads of his departments and such friends and guests as he chose to invite, he ate his simple, abstemious luncheon. Others knew him as a wealthy publisher, as a philan-

thropist, or a prominent figure in the musical life of America. We, who had the inestimable privilege of breaking bread with him, saw a side of his nature seldom shown to the public. We touched the heart of the man as well as the hand. He radiated there kindness, generosity, good humor and that deep wisdom which comes alone to those who have lived a long and useful life. This is the picture that I shall ever retain of him; of a quiet, modest, soft-spoken, almost patriarchal figure, seated at his simple meal, surrounded by those who worked with him and loved him.

W. J. HENDERSON

Eminent Musical Critic

I believe that the late Theodore Presser was one of the strongest and most beneficial influences in the musical life of this country. His organization of the teachers of the United States, his persistent upholding before them of high artistic ideals and his success in inducing them to formulate their own views and to publish them in THE ETUDE, created a vast and irresistible force which operated always for the good of music. I have for years felt that I owed him my personal gratitude; and his loss brings to me a real sorrow.

J. LAWRENCE ERB

Musical Educator

In Mr. Presser's passing, music in America has lost one of its great leaders. The Presser Foundation and all that it stands for is still largely an unrealized dream; but the great educational work to which Mr. Presser devoted his life has borne golden fruit. He was thoroughly American in his every view-point, and for that reason, no doubt, was able to sense and later to a large extent to supply the needs of the American people along musical lines. He was of the race of pioneers in many of his undertakings and had as well a good deal of the statesman in his outlook. He was one of the most dynamic men I have ever met, but kindly as well. Hence it is not to be wondered at that he accomplished so much. He will be sorely missed. It will take more than one man to take up and carry on his work.

WASSILI LEPS

Noted Conductor

In the death of Mr. Presser all of us musicians lose a very good friend.

IN GRATEFUL MEMORY OF THEODORE PRESSER

By the Well-Known Composer

MATHILDE BILBRO

We shall miss his kindly smile;
And yet we know
That smile beams just as kindly now
As in the days ago
When he was here.
We shall miss his words of cheer,
His never-failing sympathy,
And gentle understanding;
And yet that voice is heard,
His very word
Speaks all around in signs we see
Of countless deeds of kindness.
So how can we
Say that our friend is gone,
While his great works and greater heart
Live on and on?

Age 17

Age 21

EARLY PORTRAITS OF MR. PRESSER

GEOFFREY O'HARA

Composer-Lecturer

And now Theodore Presser is history. Posterity alone will know really what he did to advance the greatest of the fine arts. His was a big task, a large undertaking; and he did it with a will. He was the friend of the teacher, and the teacher is the hope of the ages, the moulder of destiny, the preserver of mankind. No greater work than this, to teach the teacher to teach. He did it and did it well.

MRS. FREDERIC W. ABBOTT

Director, Philadelphia Music League

During the last eleven or twelve years the friendship of Theodore Presser has been one of my valued possessions. This is not lightly said; for it is indeed an assumption to claim the friendship of a man of Mr. Presser's ability and accomplishments. His comments, criticisms and friendly advice on my varied efforts in behalf of the advancement of music in Philadelphia were always of practical value. Whenever Mr. Presser believed in an individual and in that one's efforts he made that belief mean something. Never did he fail in backing up his words with action whenever action was required. His indefatigable efforts proved an inspiration to all of us; and the cumulative wisdom of his many years made his kindly personal contact a stimulation and an inspiration.

WILLIAM C. CARL

Famous Organist

A man of great ability; a man who worked unceasingly to bring the best in music before the musical public; an educator, and a man beloved throughout the broad expanse of this great country of ours. His work will live and be an enduring monument to his memory.

Opus-Numbers

By Ardale C. Cross

THE following incident shows quite a common oversight on the part of most music teachers and students:

While trying a strange piano, a young musical acquaintance entered the hall. Upon completing the piece, I turned and asked her how she liked it.

"That was very pretty," she replied, "what was it?"

"That was Chopin's *Prelude, Opus 28, No. 20,*" I answered.

"Oh, I never bother with the opus and number of a piece," she boasted.

Do you, my reader, "bother" with the opus-number? It is to be hoped that you do. Is it enough for you to say, "That was a Prelude by Chopin"?

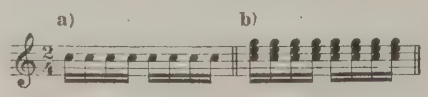
"Why is it not?" you ask.

"Because it is too indefinite. There are many other pieces by the same name and by the same composer. How are they to be distinguished except by opus number?"

"By the key," you say.

"Very good, but what would you do if there were several pieces in the same key? The safe and sanest way is to give the opus number. Beethoven wrote several sonatas in the same key."

It would be just as sensible to leave out the composer's name as it is to omit the opus number! It takes both to identify such a composition.



Yes, it will take some effort to remember these details; but anything not hard to attain is scarcely worth the having.

The "Adaptable" Wrist-Action

By Sidne Taiz

WE spend hours and hours working to acquire "wrist-action for octaves" and then overlook the application of this facility to many other musical forms.

How valuable this use of the wrist becomes when single notes are wanted to be repeated in a round, ringing tone as at (a) in our example.

For repeated chords, as at (b), the wrist-action is precisely the same as in playing octaves. Is there any good reason why the use of the wrist should vary just because three rather than two fingers are in use?

THEO. PRESSER AS A TEACHER

By Miss Mattie L. Cocke

President, Hollins College, Hollins, Virginia

I note that the January, 1926, issue of THE ETUDE will be devoted largely to tributes to the memory of its creator and guide—Theodore Presser.

It was in 1880 that Mr. Presser first came to Hollins College, having accepted a professorship of Piano and Theory of Music. He was connected with this college for three years, and during that time became a vital part of its academic life, commending himself to both faculty and students as a man of sterling worth, untiring energy, an inborn loyalty, a love of truth, and a consecration to duty. As a teacher, he inspired in his pupils a love for honest work, and as a man he demonstrated in his own work all that he taught. A warm friendship existed between Mr. Presser and the president of Hollins College, the late Dr. Charles L. Cocke, and at the time of his resignation, when unfolding to Dr. Cocke many of his plans for the future and a need of a broader field in which to carry out and promote his desires and aspirations, Dr Cocke said to him, "You will succeed unless you kill yourself with over-work."

Forty years later, Mr. Presser came to Hollins again, a man crowned with success, his life work having touched its zenith, his eyes looking, with modest pride, upon his great work of love and philanthropy, and his success along many lines. His friend, Dr. Cocke, had crossed over the border, leaving his own great monument—the fruition of his dreams. As Mr. Presser grasped the hands of his many friends, we felt that he missed the commendation of the one whose faith in him had meant so much.

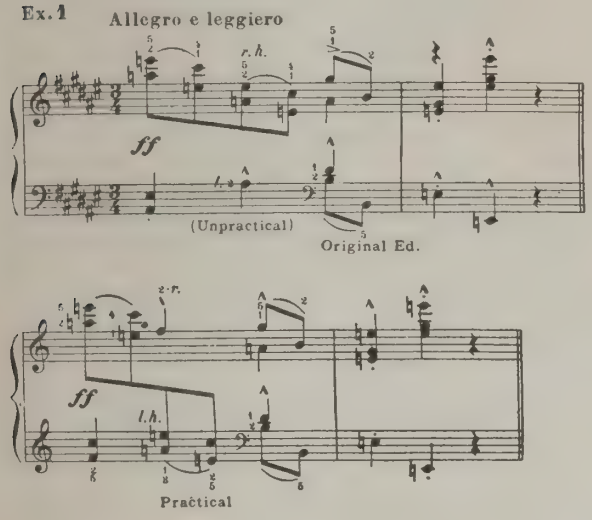
The handsome music building for which he provided last January, and which will be known as the "Presser Music Hall," will be ready for occupancy in a few weeks.

In this generous gift, so lately made, we feel that Mr. Presser has paid a tribute to his friend and to his students of earlier days, and, at the same time, has provided broader facilities for students of music.

New Presser Music Building Just Completed at Hollins College, Virginia, by the Presser Foundation

Practical Fingering Illustrated For Individual Needs

A Self-Help for Advanced Students—Tone Color, Temperament and Its Development



By MRS. NOAH BRANDT

IT IS customary for students to accept as final all standard editions, regardless of adaptability to individual requirements; therefore the ensuing article will serve to emphasize the importance of self-reliance, plus expert guidance, to instruct the student, as he advances, to study his individual needs, never considering any edition infallible.

The examples given below are taken from medium and advanced grades of familiar piano compositions. One shows the original fingering; the other a practical fingering.

No. 1. Seguidilla, Albeniz.

Ex. 1

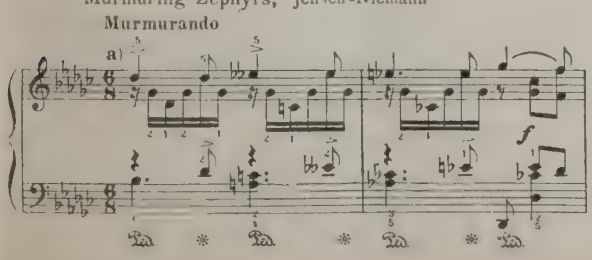
In crossing over, the right hand must be placed under the left, the latter crossing over to take the f-sharp with the second finger. Extreme accuracy of attack is necessary when making the shift, as the speed and brilliancy is not to be diminished. It is far less awkward to reverse the positions, playing the f-sharp in the right hand, and chords in the left, as in the illustration.

This is accomplished without altering a single note and places the hands in a playable position, assuring security, smoothness, and freedom from blurring, which is almost unavoidable for large hands in such close proximity.

The reader will at once see in the following example from MacDowell's *Witches' Dance* how much simpler the second fingering is.

Example No. 2:

Ex 2



Here (a) presents the notation of the original edition, while (b) suggests a practical execution which avoids the unnecessary shifting of the fifth finger.

The alteration of one finger in the foregoing example, placing the last two notes in the left hand, avoids an unnecessary shift, allowing greater speed and security.

In the following example from *Murmuring Zephyrs* by Jensen-Niemann, the reader may see how readily a passage may be improved in fingering to suit smaller hands.

Ex. 3

Murmuring Zephyrs, Jensen-Niemann

By a division of fingering, using both hands, the fingers remain directly over the note, assuring repose, the requisite accentuation and also avoiding unnecessary rotation.

The fingering in the following difficult passage from Chopin's *Phantasie,* Op. 49, is practical and free from difficulty *only* after a thorough training of the thumb and a perfect understanding of relaxation and weight, as equality and a sustained legato are absolutely essential to an even performance.

Ex. 4

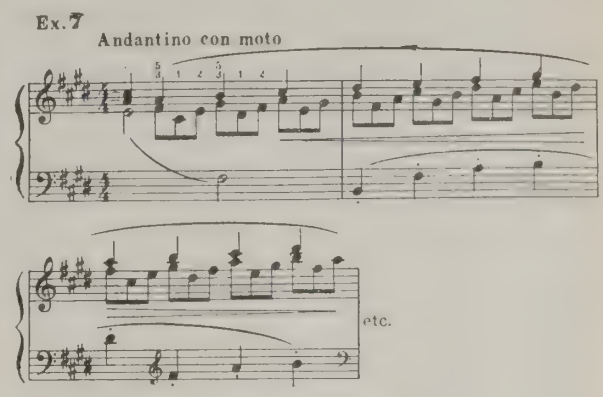
The interval B-flat to G-flat, indicated by an asterisk (*), must be accomplished in a connected legato by the use of weight.

In the Schubert-Liszt *Hark, hark! the Lark* is the following:

Ex. 5

Unless the hand is unusually wide and flexible the foregoing fingering of (a), for the left hand, is impractical and the execution will be much facilitated by employing the change made in (b). Even the smallest hands are assured cleanliness, purity of tone, and speed, by the use of the first finger of the right hand at the point indicated.

In the *Venezia e Napoli (Gondoliera)* of Liszt is the passage which is reproduced in Ex. 6.



Ex. 6

Here the part assigned to the left hand is quite difficult for the left hand, when executed as at (a). The change used in (b) greatly simplifies this and allows the left hand to maintain a pure legato.

The next example, from the *Arabesque, No. 1* of Debussy, is a perfect instance for students in the art of developing tone by means of relaxation and weight.

Ex. 7

In the right hand the notes of each beat-group will be similarly fingered, employing weight; all quarter notes will be held, maintaining a pure legato, thereby sustaining the melody. Thus the muscles at the right side of the hand will be strengthened by the continuous use of the fifth finger. This is accomplished by a perfect connection of the value notes, using the same set of fingers throughout the passage. If this is invariably accompanied by a distinct finger staccato in the left hand, and a gradual crescendo in the ascending passage, the effect will be startlingly beautiful, especially as *ff* is immediately followed by *pp*. The same set of fingers throughout the passage enables the performer to concentrate his attention exclusively on the musical effect. If the preliminaries are not carefully observed, the musical progression and rhythmical perfection will be ineffectual.

Hundreds of similar passages may be thus simplified and perfected by a study of individual requirements and perfection of detail as the slightest flaw in the preparation mars the musical performance.

When students encounter great difficulty in developing tone and technic by means of relaxation and weight, they lack the necessary temperament, and are devoid of a sense of color; therefore, after careful preparation the result is a perfect mechanism only, which is very disheartening and unsatisfactory to the instructor. A sense of color is almost invariably accompanied by a magnetic personality, charm and brilliancy; therefore, an experienced conductor senses the temperamental student almost immediately by his manner of grasping the keys.

The phlegmatic student (totally devoid of temperament) is a great trial to a magnetic instructor. Therefore, it is advisable to explain to him his shortcomings and dismiss him, in preference to attributing his listless, indifferent attitude to anything but lack of temperament, thereby doing him a grave injustice. He simply can not give what he does not possess.

Many students are gifted with natural musical intelligence; and, if added to that the temperament is also of a high order, the advancement is exceedingly rapid. This class of student instinctively feels and controls the key without effort, grades his weight, produces every variety of tonal color to meet each musical demand, as music is a part of his nature. Failure would be impossible to this class, if scientific methods and musical guidance accompanied these gifts.

Students may be classified as follows:

First—Exceptionally gifted type (found not very frequently), with ability to rise to any height by possession of every musical requisite for success.

Second—The emotional type, often extremely poetical, lacking in intellectuality and imbibing very slowly.

Third—The brilliant, intellectual type, quick to learn, but not so temperamental.

All these classes are successful; but the first class is head and shoulders above the others and should be the recipient of every advantage in training to perfect his art.

The student not classified in the foregoing is the timid, shrinking kind, lacking self-confidence. This type (often exceptionally musical) requires judicious treatment, tact and ability in his training, as the instructor must gradually draw the music from him by constant encouragement. A nature so sensitive shrinks from severe criticism, and only by patient perseverance are artistic results as-

NOTE—Observe the thumb, preserving unusual lightness. The weight must be on the right side of the hand, as the melodious progression is on the fifth finger. The lightness is on the thumb, therefore it springs back instantly when interfering with the melodious progression on the fifth finger.

sured. When once accomplished, this class of student is enthusiastic in his gratitude and appreciation.

All far-advanced pupils require a perfect model and must constantly listen to the difficult classics they are studying, therefore the instructor should be a virtuoso as well as a teacher (never neglecting his own music). Listening at recitals broadens and develops the musical instinct, but the student is entitled to know:

First—How to perform a difficult passage musically.

Second—Why it should be performed thus, to produce a musical effect, and given a scientific demonstration to prove it. Then he must be trained to do it.

Third—What to do, and exactly when to do it.

After thorough initiation, constant association with artists in every line of endeavor is necessary, to obtain breadth and vision in every form of art.

Students most musically inclined are given to the greatest distortions, ridiculous sentimentality and mannerisms. They give vent to their feelings, regardless of rhythm, phrasing, or any of the laws governing real art; therefore, they require a rigid foundation in early youth, as otherwise they drift hopelessly from one instructor to another, ending in mediocrity.

After careful preparation by a preparatory instructor, capable in every way, a gifted child (regardless of his youth) is entitled to the attention of a master-teacher, as it is nothing short of criminal to place a budding genius in the hands of an incompetent one, often affecting his entire musical future.

MRS. THOMAS FRENCH

Editor of The Musical Leader

News of the death of Theodore Presser will be received with regret and sorrow by thousands of musicians and students who knew him as the founder and editor of a great paper. THE ETUDE: Mr. Presser was a remarkable character. A music lover, he labored long and earnestly for art in this country. He founded his paper many years ago and grew rich, but during his later years used his wealth to benefit deserving musicians. In death as in life, he has continued to contribute to their needs, for his fortune of two million dollars is to be used for the maintenance of the home he built a few years ago which is to be used exclusively for needy musicians. Theodore Presser was a great man, a great soul, and the home he created is an enduring monument.

PAUL KEMPF

Editor of The Musician

Theodore Presser, who died in his seventy-eighth year, on Oct. 28, had, through his own initiative and talents, established himself as one of the most vital forces in the musical life of America. He was essentially a practical man; both in his splendid magazine, THE ETUDE, and in his music publishing business, he sought to serve his patrons with the kind of materials for which he so successfully sensed their demand. This policy brought him rich returns, as is shown by the large fortune he had accumulated. But his astuteness in business matters did not stultify his philanthropic and humanitarian instincts. The Presser Home for Retired Music Teachers, which now enjoys even greater bounties through his bequests, will long remain a fitting monument to his life work.

Why not Develop the Left Hand First?

By Fanny G. Eckhardt

IN teaching new pupils, why not stress the development of the left hand before that of the right? How many times have we heard the remark, with reference to a trill or run, "Oh yes, I can do it all right with my right hand, but somehow or other I cannot seem to manage it with my left!" And yet, how many compositions there are which require equal and sometimes more dexterity with the left hand than with the right!

With most people (excepting those who are left-handed) the right hand is naturally capable of greater possibilities because, from the moment a child becomes conscious of the ability to hold or reach out for an object, he is taught to hold or reach out for that object with his right hand. Later he is taught to write with his right hand;—in fact, to do everything with his right hand instead of with his left hand. Thus, with the early and continual use of the right hand, the muscles of the arm, wrist and fingers begin to develop even before the child has given thought to the study of music. And yet, when he is ready to put his knowledge of signatures, notes and rhythm into actual use, both hands are given equal attention.

Try the simple act of snapping the fingers, with the right hand, then with the left hand. Which is clearer?

Seeking Perfection

By Kenneth M. Hart

ALL great things suffer the pangs of birth, so if you are seeking to be a great player you must bear the pains of conquering faults you may have. Be ever on the alert, watching every chance of improvement. Form the highest ideals, seek inspiration in poetry, books, art and the playing of others.

Be sure your playing is well rounded and not cold and mechanical. Strive for beautiful legato and staccato, from exquisite *pp* to tornadic *ff*, on billows of crescendo and diminuendo. Scales played this way are most important, also in double thirds. Practice the Forty Daily Studies of Tausig; observe every detail and practice slowly; watch that every slight hitch is overcome.

Have a repertory of at least fifty numbers of various moods. Constantly make self-examination; and remember you make yourself.

First Lessons in Scale Playing

By Alice M. Steede

THE wise music teacher of today does not ask a young beginner to attempt scale playing until some facility has been gained in the five-finger position, not only in the key of C, but also in the keys of F and D.

The teacher can then point out that we frequently want to play more than five notes in succession that for instance we often play from C to C.

"Now, tell me how many notes there are in the octave?"

"Eight, of course; and you have only five fingers; so we need three more fingers to finish the scale, downwards."

It is well to confine the scale to one octave for some time; and, of course, the hands should play separately. When the time comes to play a scale in two octaves, the one in D or B♭ will be found best. The C scale has no black keys to stop the fingers and make the brains behind them think?

The ascending scale requires some preparatory work for passing the thumb under. For this the exercise known as the "scale walk" is one of the most useful and may be given to quite young children. It has been already described in the pages of THE ETUDE; but for new readers it may be explained that it consists of playing the C scale in one or more octaves with the thumb and one other finger. It can be made quite interesting to little eight-year-olds by telling them that the thumb is the father of the family and he is taking the fingers out for a walk one at a time, 1st and 2nd, 1st and 3rd, 1st and 4th.

Occasionally the 1st and 5th fingers may make the attempt; but as the 5th finger is the baby of the family, not very much can be expected from it. However, with the other fingers, a fairly even scale can be obtained, and any lameness in the walk should be pointed out and remedied as soon as possible.

Compelling Results from Your Practice

By Harold Mynning

WE are told that practice makes perfect; but, alas, we know that it is but a half truth. The late Teresa Carreno used to say that well directed work would bring success. But the trouble with so much work done on the piano is that it is not well directed.

The violinist, Jacques Thibaud, says that if one plays a passage over fifteen times a day for fifteen days, it ought to be mastered. But we can easily imagine that a passage could be practiced in this way and yet fail to lay well under the fingers. The following mode of practice has been proven to bring results.

Let us suppose that you wish to master a passage; and of course all pieces contain passages big and small. First decide on the fingering. Careless, or perhaps we might better say undecided fingering, is a great time waster. Sometimes Paderewski marks the fingering of every note in a new piece he is studying. In the long run it would prove to be better to do this than to go ahead with the piece, uncertain as to its fingering.

After you have decided on the fingering, play over the left hand part first. Most students learn the right hand part first. It would seem natural to do this, but it is a serious mistake and is one of the main reasons why we hear so much poor playing. Always start with the left hand.

For the Young Church Pianist

By Eutoka Hellier Nickelsen

TEACHERS, who have pupils playing for the Sunday evening church services, should suggest appropriate selections for the offertory, also a few measures of soft, solemn chords to play while the minister offers the short prayer that generally precedes this part of the service. These few measures may be smoothly modulated into the offertory that is to follow.

For the inexperienced player of church music it would be well for the teacher to include a hymn each time in the lesson assignment, not neglecting to explain that if the distance between the bass and tenor is too great a reach for the hand, play the tenor note with the right hand. When the tenor note is more than an octave from the bass, it is rare indeed that it is not within an octave of the soprano, thus making it possible to combine the tenor, alto and soprano in a three-note chord for the right hand.

A Student's Courtesy

By Gertrude G. Walker

VERY few music students realize that there is more or less obligation to the teacher who regularly reserves a specific hour for them. It is quite a difficult proposition for the teacher to arrange a convenient hour for each student. Knowing this, in planning a new season's program most teachers look over the schedule of the previous year and, for those pupils who have given any indication of continuing lessons, keep a reasonable length of time the reservation they had previously.

Therefore, students, who find that, owing to stress of high school studies, business ties, or whatsoever reason, they temporarily at least have to discontinue their lessons, should telephone or write the teacher of this fact, fulfill a more or less moral obligation but cement the friendship made in the studio.

This courtesy, which is too little practiced by the general public, is of inestimable value to the conscientious teacher who not only has the musical education at heart but also is a personal friend interested in each and every life placed under her tutelage.

How Do You Listen to Him Play?

By Sarah Alvilde Hanson

How do you listen to a person playing for you? Do you keep quiet or do you talk a "blue streak" when he is performing? Only stopping for breath between his pieces—of course you urge him to play more than one—which he, perhaps cynically, does, apparently himself sole audience and playing under decided difficulties.

Do you ask him to play for you at all times, in or out of season, without regard to his wishes, or whether he is tired or really unwilling to play, amiable though he usually is about offering his music and efforts for you?

How about applause in public places? There are times and not times for this also, you know, or perhaps you do not know.

Do you stamp your feet "in time" with the music; comment on it during its rendition, and ah, oh, hum—do you—hum? Perhaps we'd better not pursue this further.

What the Piano Teacher Should Know

By T. S. Lovett

That relaxation is a preventive and not a propulsive.

That friction is the only active or propulsive.

That in all of nature's activities there is repulsion as well as attraction, tension as well as devitalization, energy as well as conservation, friction as well as lubrication.

That it is the proportions that count, not merely the ingredients.

That a principle must be understood and a sensation sensed before either or both can be applied.

That the amount of friction necessary is measured by control.

That more friction than is necessary to control is an unnecessary amount of friction.

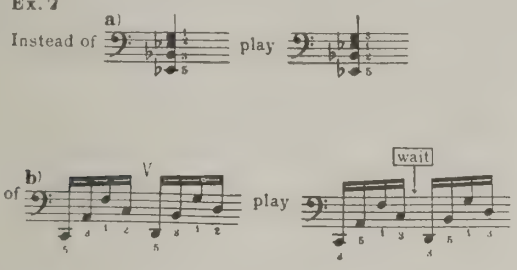
That a balanced action means a balanced tone.

New Ideas on Study and Practice

An Interview Secured Expressly for THE ETUDE With the Eminent Concert Pianist and Composer

PERCY GRAINGER

This Interview Was Secured by Leslie Fairchild



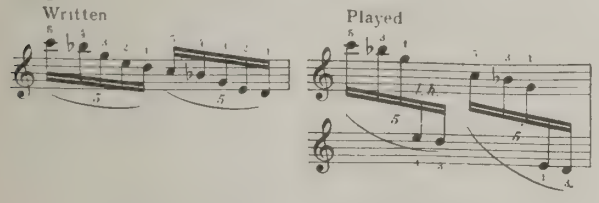
Part II

This section of Mr. Grainger's interview may be read independently of the First Section, which appeared in "The Etude" for December, 1925.

How should one adapt fingerings, chord divisions and passage divisions to the limitations of small hands?

"By dividing up passage work, chords, arpeggios, and so forth, in closer (more frequent) divisions than those normally used. For instance:

Ex. 7



"In such a chord as is shown in 7a, it should be rolled very rapidly.

"In a passage like 7b, one may hesitate just a little between the two groups of four notes, to allow the hand to travel down to the low D.

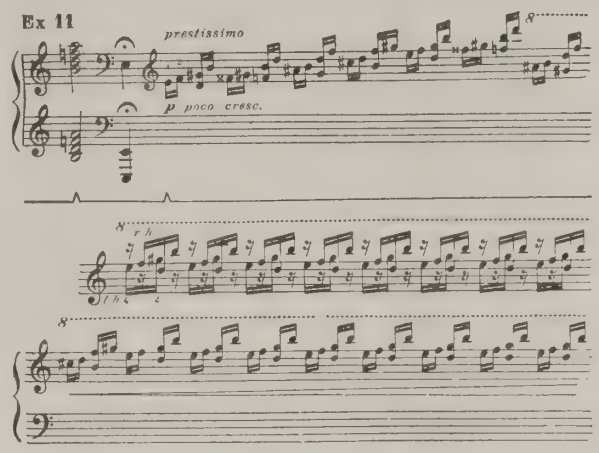
"Many passages for one hand involving uncomfortably big stretches can with advantage be divided between the two hands, thus avoiding the element of stretch:

Ex. 8

"Even players with big hands should divide up passages and chords more than they do. Stretching lessons accuracy (because a stretched position of the hand is always accompanied by a certain degree of cramp—of lessened acuteness of position sense) and should, therefore, be avoided *by all hands,* small or large, as far as practicable, as in the following from Liszt's *Liebestraume, III.*

Ex. 9

"In my edition of the Grieg Concerto will be found several instances of passage work divided up to suit small hands and to ensure greater accuracy for large hands, as in 10,



Ex. 10

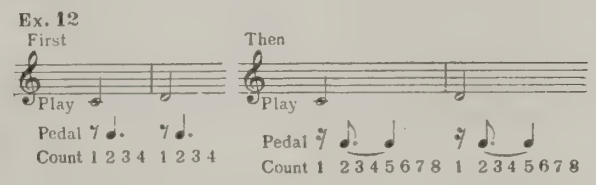
or in the following from the same work."

Ex 11

How should one study chords, octaves and heavy attack in general?

"This is partly answered under our earlier discussion of stiff fingers, position of greatest resistance, wrist and arm action.

"In practicing heavy attack raise the arm (in arm action) about one foot above the keyboard, between each blow. The fingers must be trained (by continued heavy practice) to stand a lot of pummelling, otherwise they will not stand the strain of concert playing.

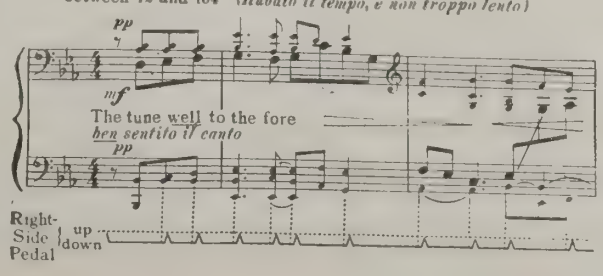


"When finger tips or nails crack and break badly, cover with plently of adhesive plaster and play with it on (also in concert) rather than with colodium or newskin."

How should one study pedalling, including the sutaining pedal?

Damper Pedal

"Legato pedalling is the backbone of all pedalling and can be practiced as follows:



Ex. 12

"In legato pedalling the pedal should never descend *with* the note, but always immediately *afterwards.*

"'Irish Tune from County Derry' is an example of legato pedalling. The tune is throughout printed in bigger notes."

Ex. 13

Sustenuto Pedal

(As described by Mr. Grainger in his edition of **Grieg's** "Norwegian Bridal Procession"—published by Theo. Presser Co. Mr. Henry T. Finck, the eminent critic and author, says of this edition that it exemplifies like nothing else he has ever read for mixing brains with music and also calls attention to the ravishing use that Mr. Grainger makes of the sustenuto (middle) pedal.)

"The growing realization of the advantages to be derived from the liberal use of the sustaining (or 'sustenuto' or 'middle') pedal has, during recent years, developed, extended and perfected piano playing more than any other single factor; so much so that in the near future a pianist not availing himself of the advantages of this truly wonderful American invention will be as much out of date as the dodo—as much of an anachronism as is to-day a pianist making no use of the damper pedal.

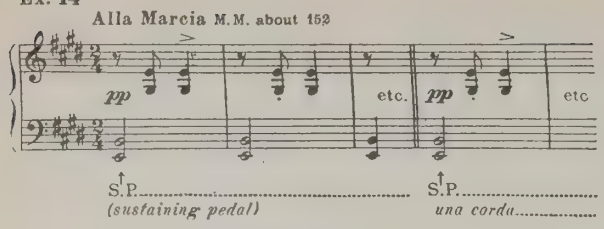
"A properly functioning sustaining pedal will, as long as it is pressed down, clearly sustain any note or notes the keys of which were pressed down prior to the depressing of the sustaining pedal, and will not (as with the damper pedal) sustain any note or notes played after the depression of the sustaining pedal, provided the following three rules are faithfully carried out:

(*1*) The note or notes to be sustained by the sustaining pedal must be pressed down *before* the sustaining pedal is depressed, otherwise the sustaining pedal will not take affect upon the note or notes.

(*2*) The note or notes to be sustained by the sustaining pedal must be held down by the fingers until the sustaining pedal is fully depressed, otherwise the sustaining pedal will not take effect upon the note or notes.

(*3*) The damper pedal must always be *fully raised* at the moment of pressing down the sustaining pedal, otherwise the sustaining pedal, as it is held down, will "sustain" the entire damper system and a complete blur will result, thus defeating the whole object of the sustaining pedal. Immediately the sustaining pedal is *fully* depressed, however, and at any time during its retention, the damper pedal may be freely used and delightful new effects produced by the co-operation of these two pedals.

"The object of a lavish use of the sustaining pedal is the attainment of greater tonal clarity, and the result of this clarification is a strong influence in the direction of greater refinement and subtlety of performance, purging the student's playing of 'banging' no less than of 'blurring,' if rightly understood and applied.

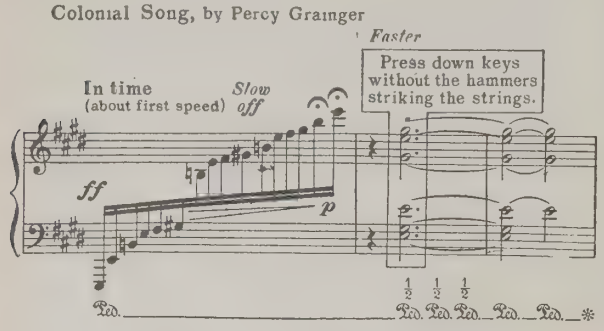


"Enlightened pianists employ the sustaining pedal almost as extensively as they do the damper pedal; and I would strongly advise all pianists hitherto unfamiliar with its technic to acquire the 'sustaining pedal habit' as soon as possible.

"The left foot must be able to negotiate both the soft pedal (*una corda*) and the sustaining (middle) pedal at the same time. He who lacks this technic of the left foot (double pedalling) cannot claim to master modern pedalling.

"In order to accomplish this the sustaining pedal should be held down by the tip of the left shoe, while the heel is raised upwards and outward (the left knee turning inward towards the right knee) until the ball of the left foot is able to rise above the soft pedal and press it down. When both soft and the sustaining pedals are thus held down by the left foot the position of that foot will be nearly at right angles to the position of the right foot (which retains its usual position) with the toe of the left foot turned in towards the right foot and the heel turned outward towards the bass end of the piano. Though this position seems very awkward at first, it can readily be acquired and effortlessly controlled with a few weeks of practice. This branch of technic should not be neglected by the student, since the simultaneous use of the soft and the sustaining pedals by the left foot is a constant necessity in modern music and an indispensable adjunct to mature pianism.

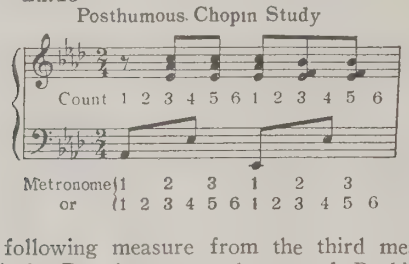
"In the Norwegian Bridal Procession, by Grieg, at measures 13 and 116, the *una corda* pedal is used simultaneously with the sustaining pedal.



Ex. 14

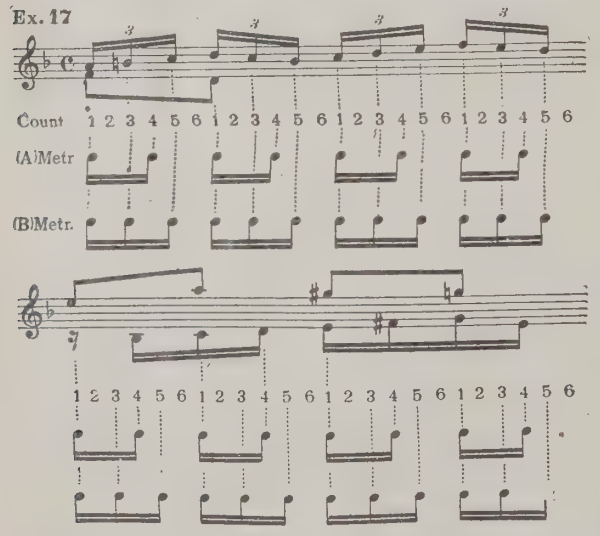
Half Pedalling

"By 'half pedalling' is meant lifting up the right foot pedal just so high that the dampers only partially arrest the vibrations of the strings. Beautiful diminuendos and many other charming effects can be made by the use of the vibrating pedal."



Ex. 15

How should one study to gain rhythmic accuracy and consciousness?



"By using the metronome *largely* when practicing (both in slow and fast practice) and by counting the *smaller sub-divisions* of rhythm.

Ex. 16

"The following measure from the third measure of Fugue 4, in D minor, second part of Bach's 'Well-Tempered Clavichord,' should be practiced in both the ways here given (A and B).

Ex. 17

"The *whole* Fugue should be practiced in these two ways, counting aloud, and using the metronome throughout as at A, and then throughout as at B.

"There are *no* rhythmic combinations that cannot be accurately controlled by counting the smaller sub-divisions plus metronome. Players and teachers should be able to handle and *explain* all sub-divisions of rhythm. Rhythm is not a 'heaven-born gift' or a 'feeling.' It is the result of *knowing* the sub-divisions, *counting* them faithfully in practicing and even in performance, and plenty of rhythmic self-criticism through the impartial metronome."

How Should One Study to Gain Reliability of Memory?

(1) By memorizing each hand separately.

(2) By slow playing, *thinking of each note as one plays* at the keyboard.

(3) *By unconscious physical memory,* reading a book or holding a conversation while playing from memory (in some respects this is *the* most important side of memory).

(4) *By conscious no-physical memory.* Think a piece out, away from the keyboard, accounting for *every note* in the imagination, recalling such details as fingering, passage divisions and pedalling as minutely as possible.

(5) By selecting in each piece as many "starting points" (points from which one can start afresh, with calm certainty, at a moment's notice) as possible, to the nearest of which one can return in the event of a sudden lapse of memory.

(6) By thinking out each piece according to its harmonic procedure and formal structure.

The Presser Foundation

What it is. How it was Founded. What it Will Mean.

UNLIKE other great philanthropies created entirely through bequests, the Presser Foundation has been in active existence, functioning through many departments, for nearly two decades. The Founder was thus able to determine with care just how he desired to have his fortune dispensed for the benefit of the followers of the art through which he acquired his means and to which he always had a very deep sense of gratitude.

The Foundation is the outcome of Mr. Presser's fundamental principles of philanthropy. He always gave in far greater proportion to his earnings than the average man. In his youth he was inspired to help others.

The Foundation itself was the outgrowth of his established practice of helping aged musicians, musicians in distress, and musical education.

Accordingly, in 1893, he reported to the Music Teacher's National Association, in convention assembled, that he had visited the Home of Rest for Musicians, founded at Milan, by Giuseppe Verdi, and proposed that such a home be established in America. In 1907 he endowed and opened such a home in Philadelphia. This was moved later to a larger building in Germantown, a beautiful suburb of Philadelphia, and in 1914, a much larger home, accommodating sixty residents, was built adjoining his own dwelling. The home is a fine modern building in every respect. The principal conditions of admission are that the applicant shall be between the ages of sixty-five and seventy-five, in reasonably good health, shall have taught music at least twenty-five years in the United States of America, and shall pay an admission fee of four hundred dollars. A booklet giving pictures and full detailed information about the Home will be sent upon application to the Presser Foundation, 1713 Sansom Street, Philadelphia, Pennsylvania.

In 1916 the Foundation itself was established to consolidate Mr. Presser's existing philanthropies and to make possible the creation of other branches. Up to the present time the Foundation has adhered strictly to one policy, that of limiting its grants to the existing branches. Money is not disbursed through any other channel. In the future the Foundation may establish other channels.

For instance, help has not been administered to individual pupils, because the Foundation has never had the proper machinery for the adequate musical examination of individuals. The scholarships, therefore, are granted only to colleges which are doing a specific work in music, and even then the students must also be pursuing a general course in education.

The general channels of the Foundation are at the present time represented in the following departments:

The Home for Retired Music Teachers;

Department for the Relief of Deserving Musicians;

Department for Scholarships;

Department of Grants for Music Buildings at Colleges.

The work of these departments may be thus briefly described:

Department for the Relief of Deserving Musicians

THIS Department was organized in 1916 for the purpose of administering *emergency* aid to worthy teachers of music in distress. Those needing assistance are required to fill out an application blank. This is forwarded to the Board of Directors, who make proper investigation and then take prompt action on the case. Every effort is made to do away with "red tape" and to bring relief as quickly as possible. All correspondence is regarded as strictly confidential.

The activities of the Board of Directors are supplemented by those of a Board of Non-Resident Directors, who have kindly consented to act in their respective localities, informing the Foundation of cases of real need that may come to their attention and obtaining supplementary information concerning cases that may be referred to them by the Foundation. Small pensions have been granted in a few extreme cases.

Department of Scholarships

THIS Department, inaugurated in 1916, grants to universities or colleges where music is taught, an annual sum of $250.00 to provide one or more scholarships for students taking music as part of their college work, especially those who aim to become teachers of music.

Institutions desiring such scholarship grants are required to make formal application to be included in the approved list, and to make the award of scholarship aid in accordance with the regulations governing the activities of this Department. The students recommended by them must be young persons of good character and ability, who, without such assistance, would not be able to carry on their studies. Moreover, the students recommended for aid must include at least six hours per week, throughout the academic year in non-musical collegiate subjects.

During his life the Founder insisted that no mention of the Foundation or of the Founder should appear in any catalog or other publication of the institution. All grants are made directly to the institution, not to the indivdual students.

Department of Grants for Music Buildings at Colleges

THIS is the most recent branch of the Foundation's work. By this it is planned to help colleges which have been conducting thriving musical departments, but which have no suitable buildings, by assisting the college to secure such a building. The conditions under which such grants may be obtained, as funds become available, will be furnished upon request. These conditions were familiar to Mr. Presser, and he was engaged upon the active consideration of them within a few days of his death. The first building to be erected under the new department is the Music Building at Hollins College, Hollins, Virginia, where Mr. Presser was at one time a Professor of Music. The next will be erected at Mt. Union College, Alliance, Ohio, where Mr. Presser was both student and teacher.

Other departments of the Foundation doubtless will be established in the future, to embrace other phases of musical philanthropy, as the needs become apparent.

The grants of The Presser Foundation are made through the decisions of Trustees and Directors of the various Boards of some thirty members. Only six of these are on Boards of the Theodore Presser Company. Thus all grants are made independent of the Theodore Presser Company and upon the advice of a majority of Directors representing various musical, philanthropic and educational interests. This plan of independent decision upon the merits of all applications was fostered by Mr. Presser during his lifetime.

THEODORE PRESSER ON GRADING TEACHING PIECES

By C. A. Woodman

Managing Director, Oliver Ditson Company

Shortly before the completion of The Presser Home for Retired Music Teachers, I spent a week-end with Mr. Presser, who was a delightful host and companion. One night, after the household had gone to bed, he said to me:

"One of the secrets of my success is the perfect grading of every teaching number published by me. Did you ever see a little child go out to coast with his sled on a slide used by older children that had a big jounce right in the middle of it? That jounce was a source of delight to the older children but terrifying to the young child. Did you ever see a first-grade teaching number that flowed along so easily and smoothly just like a slide and then suddenly there appeared a measure of third or fourth grade that was just as terrifying to the child as the jounce in the slide? I make it my particular business to see that all "jounces" are removed from every teaching number. A first-grade number is first grade from beginning to end and that is why teachers like THE ETUDE and why they have such success with their pupils; for in addition to the perfect grading every number has a pleasing little melody running through it."

No one but a broad gauge and generous hearted man ever would have thought of confiding a secret of this kind to a business competitor.

R. G. McCUTCHEN

Musical Educator

A great and good figure has been lost to American music, I have admired him from boyhood, because of his high character, the things for which he stood, and those he did.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries

The Work of the First Two Years

What would a reputable teacher expect a child to know who has two years of piano instruction?—E. A. S.

Doubtless the question refers to that hypothetical creature, "the average pupil." Practically, as Betsey Prig would put it, "there ain't no sich thing." For every pupil has his peculiarities, some of them to the good and some to the bad. So any scheme must be more or less modified to suit the particular case.

Let us then consider the following as merely an approximate statement of the work, which can be adapted as much as is necessary:

FIRST YEAR

1. THE INSTRUMENT: how the piano is constructed, and what happens when a key or pedal is depressed.

2. NOTATION: The staff, clefs and all characters used in connection with the staff; the notes, at least including sixteenths, and their location when applied to the keyboard, also rests and accidentals; the definition of the most common musical terms.

3. TECHNIC: the study of touch and technic through elementary finger exercises; the major scales of C, G, D, F and the minor scales of A, E, D at a moderate pace through two octaves, in parallel and possibly contrary motion; simple arpeggios on the tonic chords of the above keys.

4. THEORY: intervals between the notes of the scales, and the structure of the tonic chord.

5. EAR TRAINING, on the above intervals.

6. TRANSPOSITION of simple finger exercises into nearby keys.

7. PIECES AND STUDIES OF THE FIRST GRADE, with explanation of their forms and some knowledge of their composers.

SECOND YEAR

1. NOTATION: Sixteenth and thirty-second notes and rests; further definitions of words encountered in the music studied.

2. TECHNIC: the remaining major scales and the addition of B, G and C minor, through three octaves, in parallel and contrary motion and in canon form, still in moderate tempo; arpeggios through two octaves, founded on the three principal triads of each key studied; finger exercises on varied rhythms, the trill, mordent and other embellishments.

3. THEORY: the consonant intervals; the three principal triads in root position and inversions, cadences.

4. EAR TRAINING: writing from audition of melodic fragments derived from music that is studied.

5. TRANSPOSITION of exercises and simple pieces into familiar keys.

6. STUDIES AND PIECES OF THE SECOND GRADE, with analysis of their forms, principles of interpretation, and study of composers.

Advance Materials

Can you suggest material for a girl of sixteen who has studied Czerny, Op. 299; Heller, Op. 47; Bach, Three-voiced Inventions; some of Chopin's Preludes and Impromptus, and who has also played such solos as Grieg's *To Spring* and Rachmaninov's *Prelude in C♯ Minor*. Of course, she has had scales, arpeggios, and so on. She has done a few Beethoven Sonatas. She loves it all, and I think she is a wonderful student, having had her as pupil for four years.—MRS. O. B. G.

For studies, I suggest the first book of Moscheles' Op. 70, and, in modern vein, *Nine Etudes*, Op. 27, by Arthur Foote, or *Twelve Etudes*, Op. 39, by MacDowell.

For pieces, try the following:

Moszkowsky: *Gondoliera,*
Schütt: *A la bien aimée,*
Alabieff-Liszt: *The Nightingale.*
MacDowell: *Polonaise.*

More elaborate compositions may include Bach's *Italian Concerto,* Schumann's *Papillons,* Op. 2, Mendelssohn's *Rondo Capriccioso,* Op. 14, and Grieg's *Sonata in G minor.*

High Wrists

My pupil holds her wrists too high and, as a result, her arms are stiff, making her tones forced. She insists that she cannot relax when her wrists are slightly lower than her knuckles. After proving to her that this is not the case, she argued that I was not correct, since she has been told to raise her wrists.—V. L. F.

Perhaps your pupil sits on too high a stool when practicing. If you are careful in prescribing just the right height for the piano stool, the first condition for a correct hand-position is assured.

Anyway, it is much better for her to hold her wrists too high than too low, since high wrists give a better command of tone-qualities than low ones. Don't bother too much about the matter, but stress rather the principle of *relaxation,* and the wrists ought eventually to adjust themselves properly.

It looks as though your pupil were too much inclined to dictate to you. Why does she study with you, if she thinks that she knows more about the matter of playing than you do? Wrong or right, the teacher is the one to prescribe how the pupil is to play, and not the pupil. I should say that she needs a little judicious "sitting on."

Touch and Technic

Please give a definition of the two words, *touch* and *technic*, which will show the difference between them: for example, in Dr. Mason's *Touch and Technic*.—F. J. T.

As applied to piano playing, the word *touch* refers to the different ways by which the keys may be depressed: *i. e.,* by striking them, by pressing them with the fingers in contact with the keys, by *"caressing"* them (*caressando*), and other variations.

On the other hand, *technic* refers to the various uses of the playing muscles, by which different kinds and degrees of touch are secured.

In other words, touch is the *end* to be attained, while *technic* is the means of attaining that end.

Extemporization

As piano teachers, we are of course occupied mainly with the interpretation of written music. If, however, we could transport ourselves back to about the year 1800, we should find that the necessary equipment of a professional pianist included the ability to extemporize upon any theme that was given him for the purpose. Mozart, when a small boy, for instance, won his chief laurels for his marvellous extemporizations.

In the subsequent glorification of technic, however, this power of expressing one's self directly on the keyboard has well-nigh died out; so that many proficient players are now quite unable to perform even the slightest chord progression without the backing of written notes.

True, too much rambling about on the piano is apt to make a budding pianist careless when it comes to accurate interpretation; but, given a pupil who has acquired careful habits, would it not be a good idea to encourage him, out of practice hours, to browse about on the keyboard and to taste some of the joys of self-expression in music?

I am led to these reflections by a correspondent in the far West who makes a plea for this kind of work; apropos of the subject of "chording," she says:

> Too many teachers teach about chords, but not how to put them to practical use. If more were taught to find the three principal triads in each key and to use these in any position, they would enjoy and learn music much sooner and train their fingers better than by any other means, even if they had not an ear true enough to enable them to "chord" in accompanying.
>
> I have a young son who saw no use in practicing chords, preferring to spend his time in playing given compositions. But one day, when we were snowed in with others, and had plenty of time on our hands, we discovered in the crowd a violinist and a pianist, but no music! I offered to play with the violinist, with the result that we gave so much pleasure that everyone asked, "How do you know how to do it?" I told them that I learned how when a child, and that it had been years since I had had anyone to play with. I had to hustle, especially to find out the minor chords that are occasionally necessary!
>
> When we arrived home my son got busy, and pressed me to sing all the old songs for him, while he learned to "chord!"—MRS. E. R. O.

I wonder if any of our Round Table members give to their pupils any instruction in extemporization. If so, will you not send us an account of your experiences, or how you go about teaching it?

The Pedal, and First Pieces

When and how should the use of the pedal be taught? When should a beginner be given his first piece, and what would you suggest that I give?—F. Z.

Don't be in too much of a hurry to introduce the pedal, as it is a disturbing factor for a beginner. It had better be avoided entirely by children whose legs are not long enough to reach it, except, perhaps, in the case of the "infant prodigy," when a special attachment to raise the pedal may be employed.

For larger children or adults, wait till the fundamentals of notation and touch are well understood, and then occasionally introduce a pedal effect, marking it carefully on the music by the sign |_____| , in which the first down stroke shows just where the pedal is to be depressed, the horizontal line how long it is to be kept down, and the final vertical line where it is to be released. Exercises in depressing and releasing the pedal promptly should be previously given. For some time, do not allow the pupil to use the pedal except where you distinctly mark it.

It is often a marvelous inspiration to a child to have a "real piece," just like the grown-ups. So it may be wise, if the pupil is an apt one, to give, even as soon as the fifth or sixth lesson, a little piece in the treble clef, such as:

Dance of the Fairies—BUGBEE
My First Waltz—ENGLEMANN.

These may be followed by

In the Boat (Waltz)—NORRIS
Melodie, Op. 68. No. 1—SCHUMANN
Little Drum-Major March, Op. 3—ENGEL.

Cabinet Organ Practice. Materials

(1) I live in a country town where a box-shop and blanket mill are the chief industries. Among my pupils are several who have cabinet organs. These pupils do not continue lessons very long, but go to work as soon as they are able. But they want to play for their own pleasure. They practice on an organ, but take their lessons on my piano, and, of course, make technical mistakes, such as playing too staccato, making breaks in arpeggio work, and so on. Is it best to be particular about these mistakes? It seems to me best to overlook some of these, and to let them go ahead as far as possible, learning scales, chords, sight-reading, and plenty of pieces that can be played on an organ. Is this right?

(2) What exercises should be given to a thirteen-year-old girl who plays 3½ grade pieces very nicely? She has had Czerny-Liebling, Book 2; Presser's *Album of Trills,* and a few octave studies, which seem to be too hard for her hands.—M. T. S.

(1) It is practically impossible to make a pupil into an expert pianist who practices only on a cabinet organ. But such a pupil can yet learn to read fluently and correctly and, above all, can cultivate a knowledge and love of good music which will enrich his whole life. I should not allow these pupils to play in a slip-shod way, but, on the other hand, should not expect them to cultivate much of a distinctively pianistic style. Emphasize, however, the structure of the music itself; interest the pupil in musical history and the master composers, explaining why their music is considered of supreme merit. Thus they may be led to a real appreciation of music, which is, after all, the best thing you can do for them.

(2) I should give her Heller's Studies, Op. 46. These may be followed by Cramer's Selected Studies.

Third Grade Studies

What studies may be used after Bilbro's *Second Melody Lessons*?—A. M.

For technical studies, use Berens, *New School of Velocity,* Op. 61, Book 1.

For interpretative studies, use Heller, *Twenty-five Studies,* Op. 47, Lazarus, *Style and Technic,* Op. 129.

"Of what value is all this talk about dissonance, digital dexterity, polytonality and double stops? Composers of today seem to have lost track of the innermost quality of music, the expression of the soul."

—MAX ROSEN.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

THE COMPOSING OF "DIE MEISTERSINGER"

WAGNER was fifty years old, broken and defeated when he undertook to write "Die Meistersinger." Broken and defeated, he wrote this lovely music in a fit of absolute despair. He was in debt and homeless, his wife had left him, and he was even thinking of becoming a tutor to an English family about to leave for India. In his extremity, he took refuge at the house of friends in Mariafeld, and it was the hospitality of Frau Wille that made this glorious music a reality.

"He wanted to work, to be undisturbed, and I had even given him servants for his own use. Many visitors from Zurich, brought here by curiosity or sympathy, when the news spread that the famous man was at Mariafeld, were turned away by me; Wagner was not in a mood to submit to such interruptions. He wrote and received many letters; he begged me to pay no attention to him, to let him eat alone in his room, if that did not disturb my domestic arrangements too much."

And in the end the good lady received her reward. "One morning," she writes, majestic chords came to me in my sitting-room from the salon. Opening the door softly, I held my breath to hear what came, as it were, directly from the master's first cast. Nothing could have induced me to interrupt him. It was as if I felt directly the power of a great artist's mastery over refractory material. What was it that so mightily agitated my fancy and spirit? First darkness—suddenly a ray of light—then, like a flash of lightning, joy illumines the soul. Silently as I had come, I went. I never told Wagner of the impression made upon me by what I had heard."

CHABRIER'S LIVELY PARTIES

SOME interesting facts about Chabrier and his "Spanish Rhapsody" are given in the notes on this French master and his work in a Boston Symphony program. We give somewhat abbreviated excerpts.

Chabrier, we learn, had uncommon mechanical skill as a pianist and his left hand was marvelous. In his later years, however, he said, "When a man has little hair left, and that is white, he should stop playing the piano in public."

He is described as having been exceedingly fat until disease shattered his body and brain. His eyes were bright, his forehead unusually well developed. He delighted in snuff-colored waistcoats. Hugues Imbert describes him as amiable, gay, fond of a joke.

Chabrier gathered about him artists and amateurs, for whom he provided curious entertainment. There were Saint-Saëns, with prodigious musical memory and true Parisian gaiety; the actors Grenier and Cooper; Manet, the painter; Taffanel, the flute-player. There were performances of Schumann's symphonies; there were also delirious parodies, as when Saint-Saëns impersonated Gounod's *Marguerite*. There were strange instruments, such as a queer organ with strange stops, which set in motion drums, cannon, and so on.

Chabrier went to Spain to get the material for his "Spanish Rhapsody," which is based on old Spanish dance forms, particularly the *Jota Aragonesa* and the *Malaguena*.

The *Jota* is said to have originated in the 12th century and is attributed to a Moor named Aben Jot, who, expelled from Valencia, on account of his licentious songs, took refuge in Aragon, where his songs were well received.

The *Jota* is frequently accompanied by verses, of which this is a brief sample: "Your arms are so beautiful, they look like two sausages hanging in winter from the kitchen ceiling."

THE UNWRITTEN SYMPHONY

ONE of the most tragic pages in Berlioz's "Memoirs" is that in which he had the inspiration to write a symphony, but was compelled to let it go unwritten for purely financial reasons. The beginning of it, an Allegro in A minor, two-four time, got him out of bed one night and he began to write it, but, on second thoughts—

"If I begin this bit, I shall have to write the whole symphony," he confides to his diary. "It will be a big thing, and I shall have to spend three or four months over it. That means I shall write no more articles and earn no money. And when the symphony is finished I shall not be able to resist the temptation of having it copied (which will mean an expense of a thousand or twelve hundred francs) and then of having it played. I shall give a concert, and the receipts will barely cover half the cost. I shall lose what I have not got; the poor invalid will lack necessities (this refers to Berlioz's wife, who was ill at the time); and I shall be able to pay neither my personal expenses nor my son's fees when he goes on board ship. . . . These thoughts made me shudder, and I threw down my pen, saying, 'Bah! tomorrow I shall have forgotten the symphony.' The next night I heard the allegro clearly, and seemed to see it written down. I was filled with feverish agitation. I sang the theme; I was going to get up . . . but the reflections of the day before restrained me; I steeled myself against the temptation, and clung to the thought of forgetting it. At last I went to sleep; and the next day, on awakening, all remembrance of it had indeed gone forever."

MENDELSSOHN'S "OVERTURE TO THE DRAMATIC FUND"

Mendelssohn did not want to write his Overture to "Ruy Blas," yet it is a masterpiece. He wrote it in less than four days, yet it shows no signs of hurried workmanship. He considered Victor Hugo's play of that name "of no value," yet it inspired in him some fine melodies splendidly and vigorously treated. Here is the whole story as Mendelssohn told it in a letter to his mother, written March 18, 1839:

"You wish to know how it has gone with my overture to 'Ruy Blas.' Merrily enough. Between six and eight weeks ago the request came to me to write something for the performance connected with the Theatrical Pension Fund, a very excellent object, for the furtherance of which they were going to play 'Ruy Blas.' The request came to me to write an overture, and in addition they besought me to compose a *Romanza*, because they though the thing would succeed better if my name were connected with it.

"I read the play; it is really of no value, absolutely beneath contempt; and I told them I had no time to write an overture, but I did compose the *Romanza*. Monday (a week ago) was to be the day of the performance. On the Tuesday before, the people came, thanking me warmly for the *Romanza*, and said they were sorry that I had written no overture, but they saw perfectly that for such a work time was needed, and next year they would be more thoughtful and would give me more time. They stirred me up; I took the thing at once in hand, that same evening, and blocked out my score; Wednesday morning was rehearsal, Thursday was concert, and yet on Friday the overture was ready for the copyist. Monday it was given three times in the concert room, then rehearsed once in the theatre, and in the evening was given in connection with the wretched play, and has made me as much fun as anything I ever did in my life."

Ever afterwards, according to Grove, Mendelssohn called this work "the Overture to the Dramatic Fund."

SCHUBERT AS A STUDENT

"SALIERI was the first to recognize Schubert's supreme gift," says Duncan in his biography of this composer. "He placed him with Ruczizka for lessons in composition. Before long the pupil so astonished his teacher that he reports to his chief—Salieri—that 'the boy knows everything already; he has been taught by God.' Salieri himself then took Schubert in hand. The accomplished Italian was a handsome man, with an expressive eye, a quick temper and a great reputation.

"He soon perceived that in *Hagers Klage* (March 30, 1811) and some string quartets, there was genius of an unusual order. 'He can do everything,' exclaimed he of Schubert, 'he is a genius. He composes songs, masses, operas, quartets—whatever you can think of.' Schubert used to go to his house in the Seilergrasse, carrying a large roll of MSS. under his arm, for the master's verdict and advice.

"The lesson over, he would then commonly steal into a neighboring wine-shop, where he would chat for hours over a glass with his friend Doppler. These lessons extended over the five years in 1813-17, and were thus begun in the last year of Schubert's stay at the Convict, and continued long after.

"On Sundays and holidays, the boy commonly took part in quartets, some of which were of his own composition—'taken scarcely dry from his desk' says Kreissle. It is a pleasant picture of home life to see father Franz seated at his 'cello—earnest enough but none too accurate—with brother Ferdinand as leader, and Ignaz taking the second violin, while Franzl (in his spectacles) cleverly handles his viola, keeping a sharp eye on his father, whose slips, if recurring, would be gently pointed out with, 'Herr Vater, there must be a mistake somewhere.'"

"Music is a moral law. It gives a soul to the universe, wings to the mind, flight to the imagination, a charm to sadness, gayety and life to everything. It is the essence of order and leads to all that is good, just, and beautiful—of which it is the invisible but nevertheless dazzling, passionate, and external form."—*Plato.*

WHEN TOLSTOI SAW "SIEGFRIED"

TOLSTOI and Wagner had nothing in common, and the great Russian was merciless in his criticisms of the equally great German. Here is an account of a performance of "Siegfried" taken from Tolstoi's "What is Art?"

"When I arrived, an actor in tight-fitting breeches was seated before an object that was meant to represent an anvil. He wore a wig and a false beard; his white and manicured hands had nothing of the workman about them; and his easy air, prominent belly, and flabby muscles readily betrayed the actor. With an absurd hammer he struck—as no one else would strike—a fantastic-looking sword-blade. One guessed he was a dwarf, because when he walked he bent his legs at the knees. He cried out a great deal, and opened his mouth in a queer fashion. The orchestra also emitted peculiar noises like several beginnings that had nothing to do with one another. Then another actor appeared with a horn in his belt, leading a man dressed up as a bear, who walked on all-fours. He let loose the bear on the dwarf, who ran away, but forgot to bend his knees this time. The actor with the human face represented the hero, *Siegfried*. He cried out for a long time, and the dwarf replied in the same way. Then a traveller arrived—the god *Wotan*. He had a wig, too; and, settling himself with his spear, in a silly attitude, he told *Mime* all about things he already knew, but of which the audience was ignorant. Then Siegfried seized some bits that were supposed to represent pieces of a sword, and sang: 'Heaho, heaho, hoho. Hoheo, haho, haho, hoho!' And that was the end of the first act."

"The majority of musicians nowadays expect a maximum of fame from a minimum of effort."

—*Musical News and Herald.*

MUSICAL PARIS

THOUGH written before the war, when all things were different, Romain Rolland's "Musicians of Today" gives a vivid word-picture of the part Paris plays in modern musical art, that is still fundamentally true:

"The nature of Paris is so complex and unstable that one feels it is presumptous to try to define it. It is a city so highly-strung, so ingrained with fickelness, and so changeable in its tastes, that a book which truly describes it at the moment it is written is no longer accurate by the time it is published. And then, there is not one Paris only; there are two or three Parises—fashionable Paris, middle-class Paris, intellectual Paris, vulgar Paris—all living side by side, but intermingling very little. If you do not know the little towns within the great Town, you cannot know the strong and often inconsistent life of this great organism as a whole.

"If one wishes to get an idea of the musical life of Paris, one must take into account the variety of its centres and the perpetual flow of its thought—a thought which never stops, but is always overshooting the goal for which it seemed bound. This incessant change of opinion is scornfully called 'fashion' by the foreigner. And there is, without doubt, in the artistic aristocracy of Paris, as in all great towns, a herd of idle people on the watch for new fashions—in art, as well as in dress—who wish to single out certain of them for no serious reason at all. But in spite of their pretensions, they have only an infinitesimal share in the changes of artistic taste. The origin of these changes is in the Parisian brain itself—a brain that is quick and feverish, always working, greedy of knowledge, easily tired, grasping today the splendors of a work, seeing tomorrow its defects, building up reputations as rapidly as it pulls them down, and yet, in spite of all its apparent caprices, always logical and sincere."

Keeping Your Piano in the Best Possible Condition

By STEPHEN CZUKOR

The Author of this Article has been Connected with a Leading Pianoforte Manufacturer for Many Years

I SHALL TRY in the next few minutes to tell you just exactly how to take care of your piano.

As we all know, climatic conditions play havoc with any sort of musical instruments, especially so with a piano. The average piano owner is always in doubt as to just exactly what to do during the different seasons of the year; whether to keep the piano open, keep the piano closed, what to polish it with, etc. The majority of piano owners pay no attention to their piano for several reasons, some through ignorance and others through carelessness.

When you purchase a car, you buy it with the full knowledge that service and up-keep is absolutely essential. When you buy your piano and after you have had your free tuning and polishing, unless you are a musician using the piano constantly, you neglect attention to your piano. This is one of the reasons many people are dissatisfied with their piano. During the Spring when we have cold and wet weather, you open your windows without any regard to the consequences upon your instrument. During the summer, the windows are naturally open. Should a squall or rainstorm happen along, you close your windows and as soon as it is over you open them, and all the moisture and dampness that is caused by the rising vapor swell the keys, rust the strings and do untold damage. But, of course, many people go away during the summer and say "Well, our piano needs no attention, because we do not use it."

Send for a Good Tuner

IN THE FALL you are busy arranging your home and quite likely wait until the heat is turned on. Then you send for a tuner. If he is a good, reliable and thorough man and understands repairing, he will tell you just what is wrong with the piano. If he is just merely a tuner, he will simply tune the piano, collect his fee and you will be no wiser as to the condition of your piano. In many cases a good reliable man tells you about the condition of your instrument and the answer he gets is, "Oh, it is good enough, I only have the children study on it."

This goes on year after year when the children have learned to play really well, they'll start to complain about the piano. You again call your tuner in and he will probably tell you it will cost you anywhere from $40 to $80 to repair the piano, whereupon you ask for smelling-salts. For this is what you say, "Why, I have taken the best of care of this piano, and had it tuned regularly and I don't see why there should be so much trouble with it." Then you call another tuner. This man immediately realizes that you know nothing about a piano and says, "Oh, I can fix this piano up for about $15 or $20." As a rule this is the man who gets the job and when he is through with it, the piano is no better and at times worse than when started. But your mental condition does not permit you to admit this until two or three weeks after the work has been done.

To avoid this sort of thing call up some reliable concern who specialize in this sort of work or better still let the concern from whom you have purchased your piano do the work, for they have more interest in the instrument they manufacture or sell than anybody else.

Spring Cleaning for Your Piano

You have a spring cleaning in your home and you take down your draperies, your curtains, pick up your rugs, dust the furniture, in fact you do everything possible to make your home clean, but you give absolutely no thought to the piano. This piece of furniture, as some people term it, requires more attention than anything else in the house; not only from a view point of being clean, but also from the investment point of view. You may buy a new rug for $100, a new chair or curtain for $15 or $20, but you cannot buy a real good piano for many times that sum.

Cleaning the Piano

AFTER you have your spring cleaning, call in your piano man and have him clean the inside of your piano thoroughly so that when the summer months come along and bring with them the moths, they should not have an opportunity of eating the delicate felts inside of the instruments.

There are many opinions as to just exactly what to do in order to keep the ivory keys from turning yellow. We all know that ivory turns yellow with age, but there is a way of retarding it by giving them careful and constant attention. The fallboard of the piano, or the front piece which covers the keys, should be kept open at all times, except when sweeping or dusting, at night and during rainy weather. A great amount of uric acid exudes through the finger tips and when this is permitted to stay on the keys it gradually turns them yellow. The best way to wash ivory keys is to use alcohol, wood alcohol preferably. Take a small piece of rag on the tip of your index finger and just moisten it the least bit, taking great care not to touch any of the black keys or any of the varnished surface of the piano. Another way to help keep the ivories white is to purchase a piece of good quality felt, the length of the keyboard. This is best when it is white, as the dye of any other color may be injurious unless it is of exceptionally fine quality.

Some apartments are very damp and while you may not feel it physically, the piano being very delicate, shows it by having a bluish hue over the varnish work constantly. Dampness in the apartment will also take immediate effect upon the steel strings and cause a great deal of corrosion. A good way to prevent the strings from rusting is to place about one half pound of unslacked lime in the bottom of the piano, when it is a grand piano you may place one quarter of a pound in the back of the plate and one quarter of a pound on the plate on the righthand side of the piano.

Never put anything on the sounding board, as this will cause a buzz or jingling sound, or possibly muffle the tone.

Polishing the Piano

THERE are many chemical preparations on the market for the purpose of polishing furniture and also recommended for pianos. These polishes, while they really put a gloss on the instrument, in the end do untold damage to the delicate varnish work. To recommend anyone of these would be a rather difficult thing, but a simple and inexpensive polish that anyone can use, is ⅞ lemon oil and ⅛ turpentine. This is for high polished surfaces. For dull finish or semi-gloss finish ⅔ crude oil and ⅓ turpentine. The process is as follows:

Take a small piece of cheese-cloth and apply this oil sparingly. Take about one yard of cheese-cloth and wipe the oil off until it is thoroughly dry. Whenever purchasing cheese-cloth try and get the very best. This should not cost any more than 12 cents or 15 cents a yard. Always rinse out the cheese-cloth in lukewarm suds in order to remove the starch therefrom. When through polishing the piano, the cheese-cloth may be washed and used several times. Never leave oil soaked rags in the closets as the lack of oxygen may cause spontaneous combustion. Many fires start from unknown origin that can be traced to these kitchen closets where you have old oil soaked rags laying around from time to time.

Preserve This Article

Here is an article by a real piano maker. It is one of the very best of its kind we have ever read. It should be preserved by ETUDE readers for future reference. A cheap piano is always an expensive investment. A fine piano may become likewise if you do not take care of it. The article is reprinted from THE MUSICAL ADVANCE, by permission of that publication.

Just to give you an idea of how some people neglect their pianos through sheer ignorance; not ignorance through lack of education, but through ignorance of not knowing just exactly what to do.

Not Tuned in Eighteen Years

WHILE TRAVELLING through the south some years ago, I had occasion to visit a well-known family. After dinner they requested that I play the piano. When I sat down to play I found that the pitch was over a tone flat. Not only that, the keys went all the way down on the frame and were striking the woodwork. I asked the hostess when she had this piano tuned last, as I saw it was in pretty bad condition. This is the answer I received. "Well, that certainly is very surprising. I have had that piano eighteen years and it has never been tuned and I don't see why it should be giving trouble now."

Now can you imagine, my dear listeners, what would happen to your automobile or any other mechanism if you had given it no attention for eighteen years? Then the hostess remarked, "Well, it is really surprising that you should find any fault with it. Why, everybody that comes here just simply raves about the beautiful tone of the piano." This of course, is the big fault of our so-called friends. They naturally will not come to you and knock your piano for fear of incurring your ill will. It is only in rare occurrences where a person will take the responsible task of telling you that your piano is in a poor condition, and the only person who will really tell you this without hurting your feelings is the piano man. Teachers as a rule know something about a piano. They all know tone quality, but only a few of them really know piano construction.

Whenever there is something wrong with the piano, the teacher immediately suggests a tuning. This gives an opportunity for the piano tuner or repair man to tell you the exact condition your piano is in. Take advantage of his advice and keep your piano in good condition so that you may have plenty of pleasure and good music for many years.

Helpful Piano Rules

NOW LET US go over in detail of the most important features of "How to take care of your piano" properly.

1. Keep your piano open at all times except when sweeping or dusting and at night or during rainy weather.
2. Wash the keys with alcohol, taking care not to touch any of the black keys or varnished surface of the piano. Also keep a strip of felt on the keys.
3. To avoid corrosion of the metal parts place ½ lb. of unslaked lime on the bottom of the piano, when it is a grand piano place ¼ lb. of unslaked lime on the plate.
4. Do not use any of the so-called furniture polishes, but instead take ⅞ lemon oil and ⅛ turpentine, for high polished pianos and ⅔ crude oil and ⅓ turpentine for dull finished pianos. Take a dry piece of cheese-cloth that has been previously rinsed in lukewarm suds and dry thoroughly.
5. Have your piano tuned at least twice a year.
6. Have your piano cleaned every year during your spring cleaning.
7. Make sure that the piano tuner or repair man is really an expert in his line. If in doubt phone your order to the company of whom you have purchased your piano as they are really best qualified to give your instrument the proper attention.

If you keep these points in mind, the average good make piano should last from twenty-five to thirty-five years.

Forward—March

By Sylvia Weinstein

STUDENTS having difficulty in playing marches at the proper tempo may simplify this problem as follows:

Set the metronome at the speed the composition is being played; then leave the piano and march around the room, singing to the beat of the metronome. If this test indicates that the tempo has been incorrect, regulate the metronome to a comfortable march time, and practice the piece with it, at the newly acquired tempo.

CHOOSE YOUR PIANO AS THE ARTISTS DO

FOR A GENERATION DE PACHMANN HAS USED THE

Baldwin

"THE BALDWIN responds, like a human being, to every mood. It sings joyfully when I feel like singing. It cries when I feel like crying," exclaims *VLADIMIR DE PACHMANN*, great interpreter of Chopin, unrivalled lyric pianist.

For its enduring purity and resonance, for its perfect concord of tone and action, the *Baldwin* is the choice of exacting musicians the world over—on the concert stage and in the home.

A SUGGESTION

Choose YOUR piano as the artists do. The book, "How Artists Choose Their Pianos," will help you in selecting the instrument for your home. We will be glad to send you a copy free. Address

THE BALDWIN PIANO CO.
CINCINNATI, OHIO

In any *Baldwin* you will find a new revelation of your musical dreams. Visit the Baldwin dealer near you.

BALDWIN Uprights, $850 and up; Grands, $1400 and up; Reproducing Models, $1850 and up.

Convenient payments if desired.

The Brunsw

The FIRST purely electrical reproducing instrument

Now On Exhibition

PANATROPE—The joint achievement of the Four World Leaders in musical and electrical acoustics—The Radio Corporation of America, The General Electric Co., The Westinghouse Electric & Mfg. Co., and Brunswick.

ELECTRICITY, the force that has changed civilization; that has captured the hidden tones of melody from the air; that has given man light, transportation and power; the force on which the greatest age of human progress is largely built; has now been harnessed to bring you music incomparably different, wondrously beautiful, gloriously inspiring, without parallel in musical history.

This achievement is the result of the joint effort of four of the world's leading electrical and acoustical laboratories—The Radio Corporation of America, The General Electric Co., The Westinghouse Electric & Mfg. Co., and Brunswick. Only so imposing an effort could have achieved so inspiring a result.

Thousands have waited to hear this remarkable instrument . . . *and now it is actually here!* You just must hear this epoch-making Panatrope, which has commanded front-page attention for weeks in the great metropolitan newspapers of the United States.

The world's first electrical reproducing musical instrument

It is the FIRST purely electrical reproducing instrument as yet known to the world. *There is no other like it.* It is rated by world's musical authorities, critics and publicists the most remarkable musical instrument known to man.

Compare any musical reproducing instrument you have ever heard, no

THE BRUNSWICK-BALKE-COLLEN

music the world has ever heard

ck Panatrope

wn—the most remarkable of all musical achievements

matter how impressive that instrument may seem, and the Panatrope will excel it in every standard of musical perfection.

Weigh any musical entertainment for the home that you have ever known against it . . . and in fairness you will say this instrument is far beyond even the imagination of yesterday.

It is an electrical achievement. All future reproducing instruments must come to this principle . . . this electrical principle . . . to survive. All music will be weighed against it.

In fairness to yourself, buy no reproducing musical instrument without first hearing the Brunswick Panatrope. For what you buy today . . . regardless of how wonderful it may seem to you . . . may fall obsolete tomorrow before this amazing instrument.

Your favorite music dealer has the Panatrope on display. Right through the day—every day—he is demonstrating it. It will prove a revelation to you. You really can not afford to miss it. It will take but a few minutes of your time. Truly the Brunswick Panatrope marks a new era in musical history.

Pianologues and Musical Recitations

Many Elocutionists, Pianists and Singers Enjoy Great Success in the use of Recitations with Pianologue Accompaniments as Novelties on the Entertainment or Recital Programs. Here are a number of such Offerings including the Humorous, Characteristic, Dramatic and Sacred. Some few of these are Songs Adaptable to use as Pianologues.

Now is the Time to Work Up Novelties for Spring Programs

Cuddles
By Clay Smith
Catalog No. 19743 Price, 30c

The audience gets keyed up to an interesting love story only to laugh at their own disappointment in the identity of "Cuddles."

Fishin'
By Clay Smith
Catalog No. 19744 Price, 35c

A cunning tale of three Fishers, one being Cupid. The audience will laugh, but there will be some cynics in it who will question as to who did the angling.

Was, But Isn't
By De Loss Smith
Catalog No. 18925 Price, 35c

The futility of racing at right angles to an express train is briefly expounded in this clever little encore recitation. The simple, but nevertheless effective, piano accompaniment completes the mental picture created by the verse.

Ol' Man Conshunce
By Jessie L. Pease
Catalog No. 18811 Price, 60c

The "bogie-man" of all evil-doers is discussed and his mysterious power over the human mind is fully described. May be used as a dialect recitation or as an encore song for alto or bass voice.

A Home Run
By De Loss Smith
Catalog No. 18924 Price 35c

Thrilling ninth inning in the ball game, a home run needed to win. Of course, Our Hero is at bat. Unlike "Casey" of immortal fame, however, he accomplishes this sensational feat. This phenomenon is succinctly explained in the very last line.

Toy Shop Heroes
By H. Wakefield Smith
Catalog No. 18545 Price, 60c

Love finds heroes in a toy shop as well as in palaces of the mighty. The tragic fate of the tall tin soldier and wee French doll are here related with the assistance of a quaintly descriptive piano accompaniment.

Crossing the Bar
By W. H. Neidlinger
Catalog No. 12533 Price, 60c

Tennyson's immortal lyric is most appropriate for a quiet reading or recitation and will prove a splendid contrast to a heavy dramatic number.

The Dachshund
By Thurlow Lieurance
Catalog No. 13176 Price, 30c

A very short poem describing a very long subject.

Daddy
By A. H. Behrend
Catalog No. 13484 Price, 35c

This beautiful old English song of Mary Mark Lemon's, set to music by A. H. Behrend, is an excellent subject for a recitation.

A Fable
By I. Oliver
Catalog No. 13515 Price, 30c

A conversation between two of our most domesticated animals and the "hired man" discloses some quaint philosophy on the part of the latter, who preaches the doctrine of contentment in a rather humorous manner.

A Wise Bird
By Thurlow Lieurance
Catlog No. 17054 Price, 30c

Not the owl, as one might suppose, but the woodpecker is eulogized herein for extraordinary intelligence.

A Dear Little Goose
By August Halter
Catalog No. 19980 Price, 35c

Here is a darling little girl soliloquizing on her future years, even reconciling herself to growing a little fat.

De Hoot Owl
By Shirley Dean Nevin
Catalog No. 19884 Price, 30c

A delightful dialect number, giving a little philosophy in a quaint comparison. The conceits of the Hoot Owl and the Whip-poor-will as shown in their discussion certainly are equalled in the vanities of men.

A Good Girl
By Mildred Adair
Catalog No. 18277 Price, 30c

The story of a maiden who eschewed even the mildest forms of dissipation. Proudly she reiterates, "I don't" when each vice is suggested. The climax in the last line is sure to "get a laugh" from the audience.

Retribution
By De Loss Smith
Catalog No. 18923 Price, 35c

Wherein the "fresh" clerk's audacious proposal is accented by the fair young maid—to his ultimate chagrin. This number is also suited for use as an encore song for medium or high voice.

Ain't You Got Me?
By E. R. Kroeger
Catalog No. 14337 Price, 60c

A cute little colored dialect number with a quaint touch of pathos.

April First
By Thurlow Lieurance
Catalog No. 13188 Price, 30c

Will "catch" the audience every time.

The Boston Cats
By Edgar A. P. Newcomb
Catalog No. 5412 Price, 40c

A musical feline abandons his concert tour to live the life of a gentleman of leisure. All art (?) has its recompense.

Fair Warning
By Jessie L. Pease
Catalog No. 16594 Price, 50c

A small boy "tired of being bossed" asserts his independence, and gives "fair warning" to everything and everybody. The dire threats he utters are very serious—to him.

Food for Gossip and The Loyalty of Men
By Walter Howe Jones
Catalog No. 17146 Price, 40c

Two recitations to the same musical setting; the first about a little girl who is familiar with the failing of her sex, the second illustrating the fidelity of male beings to one of their number when marital storms threaten.

The Foolish Little Maiden
By Carlos Troyer
Catalog No. 3509 Price, 40c

A vain little maiden receives quite a shock when she enters the church on Sunday morn, late, as usual, and hears the choir sing, "Hallelujah," which she mistakes for "Hardly knew you."

The Lord is My Shepherd
By Phyllis Fergus
Catalog No. 22525 Price, 30c

This gives a most acceptable musical background to a reading of the 23rd Psalm.

Kids
By Phyllis Fergus
Catalog No. 22747 Price, 30c

Just as cute and as humorous a little child story poem as one can imagine. Even old "Scrooge" before his Christmas Eve experiences would have been mellowed by this number.

The Night After Christmas
By Frieda Peycke
Catalog No. 18366 Price, 50c

A cute recitation for "Kiddies" or "grown-up" in which the scene of desolation following Christmas Day is depicted. The text was selected from a poem by Mrs. John T. Van Sant in St. Nicholas Magazine.

Cured
By Mildred Adair
Catalog No. 18379 Price, 40c

With the advent of vacation time Willie miraculously recovers from a most mysterious malady that had seriously interferred with his studies and caused him to lose many days during the school term.

The Bow-Legged Boy
By Carlos Troyer
Catalog No. 2861 Price, 40c

A setting of Eugene Fields' well-known poem, written as an encore song, but suitable for use as a recitation.

By the Zuyder Zee
By Louis F. Gottschalk
Catalog No. 4136 Price, 30c

A demure Dutch fishermaiden abandons her occupation at the approach of a bigger "catch."

A Child's Philosophy
By Walter Howe Jones
Catalog No. 17260 Price, 30c

Wherein the young philosopher reaches the conclusion that he must make sacrifices for the future generation.

Foolish Questions
By Deems Taylor
Catalog No. 12816 Price, 50c

Some of the thoughtless, as well as the downright foolish, questions that you hear many times a day are answered in a most effective manner.

George and His Father
By Thurlow Lieurance
Catalog No. 13211 Price, 30c

A very new and very short version of the celebrated cherry tree episode—a version that places the parent in a new light and the son in an uncomfortable position.

The Gipsy Trail
By Tod B. Galloway
Catalog No. 14738 Price, 60c

Judge Galloway's setting of Kipling's lilting Romany lyric has enjoyed most wonderful popularity as a vocal solo, and recently has been used as a musical reading with great success.

The Good Little Boy
By Jessie L. Pease
Catalog No. 13513 Price, 40c

The subject of this sketch has some doubt as to his status, but offers some convincing arguments during his discourse to prove that he is not as black as he is painted.

I Doubt It
By R. Jefferson Hall
Catalog No. 2418 Price, 30c

A monologue by a skeptical coquette. The lines are bright and witty.

I Know a Cave
By Mathilde Bilbro
Catalog No. 17085 Price, 30c

A clever little encore recitation with a suggestion of the ghostly. May also be used as a piano solo.

I Wonder Why?
By Thurlow Lieurance
Catalog No. 13119 Price, 30c

A very short, but effective encore, suitable for a Leap Year Girl.

Katy Did
By Walter Howe Jones
Catalog No. 16291 Price, 40c

Has no reference to the well-known insect. Merely a recitation of the adventures of a young lady who always said she would not, but "Katy did."

King Solomon and King David
By James Francis Cooke
Catalog No. 15420 Price, 30c

May be used as a song or recitation. Enlightens us as to the motive that inspired the literary masterpieces of the above-named gentlemen.

Lissen Ter Dis Story
By Jessie L. Pease
Catalog No. 13514 Price, 40c

A splendid dialect recitation or encore song. Has a descriptive and effective piano accompaniment.

Little Boy Blue
By John Lilley Bratton
Catalog No. 8265 Price, 50c

Among Eugene Fields' charming stories of child life, Little Boy Blue probably has the greatest appeal as a recitation. The musical setting is rhythmically accurate and requires an accompanist of only average ability.

A Man's Song
By Reginald Billin
Catalog No. 14002 Price, 40c

A virile recitation with a spirited musical accompaniment. The poem is short and the musical setting of moderate difficulty.

O Mary, Go and Call the Cattle Home
By C. S. Briggs
Catalog No. 13092 Price, 40c

The composer of the well-known sacred song, "Hold Thou My Hand," has furnished this descriptive setting to Charles Kingsley's beautiful poem, "The Sands o' Dee."

The Morning Call
By Walter Howe Jones
Catalog No. 16290 Price, 40c

"Willum" doesn't pay much attention to mother's call, and even the buckwheat cakes arouse only a passive degree of interest in the young hopeful, but when father calls—!

Woes of a Boy
By Frieda Peycke
Catalog No. 17233 Price, 50c

This little chap has no use for grown-ups and doesn't hesitate to express his opinions.

Mother o' Mine
By Bertha Remick
Catalog No. 6884 Price, 30c

Rudyard Kipling's gripping poem of mother love makes an excellent subject for a short dramatic encore. While this setting was originally written as a vocal solo, it may be used for a pianologue or a musical recitation with good effect.

Nuthin' but You
By Jessie L. Pease
Catalog No. 17523 Price, 30c

An amorous negro dialect number in philosophical vein, by a very successful writer of humorous songs of a type suitable for use as encores or musical recitations.

Of Course She Didn't
By Geo. Lowell Tracy
Catalog No. 6557 Price, 30c

Offered such an opportunity, few maidens would. Suitable for an encore song or musical recitation.

Paying More for It
By Thurlow Lieurance
Catalog No. 17053 Price, 30c

Two short parodies on the ancient Mother Goose rhyme about "the old woman who lived in a shoe," in which it is shown that the high cost of everything has effected some remarkable changes in living conditions.

The Peanut Vendor
By Geo. L. Spaulding
Catalog No. 17364 Price, 30c

A unique little pianologue relating the rise of an humble street merchant through the use of meagre musical talent such as a fair voice and the ability to whistle.

Peer Gynt
By Edv. Greig
Price, 10c

A condensed version of Ibsen's world-famous drama, to be used as a musical reading with the music of Edv. Greig. A very effective dramatic recitation.

Predicaments
By Thurlow Lieurance
Catalog No. 13984 Price, 40c

A musical monologue in three very short parts, describing in turn a funeral idiosyncrasy, the contrariness of the world and the doctrine of good cheer. All of which is accomplished in less than five minutes.

There, Little Girl, Don't Cry
By Homer A. Norris
Catalog No. 5325 Price, 50c

Many settings of James Whitcomb Riley's poem have been made, but this one by Mr. Norris seems to be the best suited for recitation.

'Um, Not Me!
By Thurlow Lieurance
Catalog No. 17055 Price, 30c

The dizzy altitude attained by the greatest of modern inventions, the aeroplane, holds no attraction for the young Senegambian relating this tale.

Willie's Nightmare
By A. Louis Scarmolin
Catalog No. 16881 Price, 30c

After giving a short description of his exciting Experiences, from which the origin of his difficulties can be gleaned, Willie gives us a remedy that never fails.

Willie's Prayer
By Mrs. E. L. Ashford
Catalog No. 17084 Price, 40c

May be used as a song or recitation. A plaint of a boy with a little baby sister.

Fascinating Tasks for Tiny Tots

By Rena I. Carver

CHILDREN like these ways of learning note and rest values and thus never find time notation confusing.

Buy two large sheets of cardboard in each of these colors—red, blue, green, yellow, pink and purple; also three large sheets of black cardboard and one of white.

Lay aside the black and white sheets and cut the others into circles eight inches in diameter. Draw a line through each of the blue circles dividing it into two equal parts. Divide the green circles by lines into four equal parts; the yellow circles into eight; the pink circles into sixteen; and the purple circles into thirty-two equal parts.

Draw the outlines of whole and half notes on the white sheet and cut out. On one of the black sheets draw and cut out quarter, eighth, sixteenth and thirty-second notes. From the other black sheet cut all the rests. These cardboard notes and rests may be secured from some supply houses.

See that the children are provided with paste and scissors. Taking a red circle, tell them that this whole circle may represent (or stand for) a whole note or a whole rest in music. Let each choose a whole note and paste it in the center of a red circle. Do the same with a whole rest.

Then explain that the blue circle has a line dividing it into two equal parts, each part being called one-half. Have each child select two half-notes, paste one in each part in correct position, and cut the circle at the indicated line.

At each lesson explain a new note and rest value. Let them keep the work which they finish each lesson.

Prepare the Great Staff with enlarged spaces on white cardboard and divide it into long measures of equal length. Cut at each bar line and place the Base and Treble Clefs on each measure card. Place the time signatures, as 4-4, 3-4, on separate cards.

Using 4-4 time let each child select a whole note and paste it on Small C and One-line C of the Great Staff. Continue this work until each child has a measure of every note and rest value in every time signature, including the dotted notes and rests. (It is understood that the children are being trained to distinguish by ear the different kinds of time and rhythm.)

In connection with this call at random for different note and rest values, which they may pick up from the loose pile. With these separate notes, rests and time signatures they love to construct measures on Great Staff cards.

By this time they are usually familiar with their notes and a charming variation may be instituted.

Let each child think of a little melody that he has learned to play and permit him to construct it with these movable notes. They may have wide-spaced music paper on which to paste some of these melodies. This work trains their powers of observation and attention, besides being an aid to memorizing.

How One Teacher Treats the Missed-Lesson Problem

By Marie M. Lyon

I am giving below a copy of the notice which I send on a card five by three inches in size.

It has produced fine results with my clientele and is passed along with the hope that it may do the same for others.

According to my custom each parent receives a written statement of my only rule.

All lessons missed must be made up. Absence (due to sickness of more than two weeks) is excepted.

If for any reason a lesson cannot be taken at the appointed time, please notify me before the lesson period so that the time will not be held open for you. Failing to comply with this request, the pupil is subject to dismissal.

Tardiness is not excused.

Parents are asked to keep a careful report of pupil's practice time, and sign report before each lesson. Reports on pupil's work will be made at each lesson.

Pupils who fail to show interest in the work after a reasonable period of time wil be reported to their parents for special consideration.

I am sure you will see the justice of this, and co-operate with me in making it effective.

Musical Smiles

Stopped the Chin Music

Nodd—"How is the music in the Bing-bang Restaurant?"

Todd—"Splendid! I was in there with my wife for an hour the other evening and couldn't hear a word she said!"

Hopeless

"Copy of 'Pansy Faces,' please, miss."

Assistant—"In what key?"

Youth—"Key? She didn't say nothin' about keys."

Assistant—"Do you know if the lady is a soprano or a contralto?"

Youth—"She ain't neither of them—she's the dishwasher at the cafe!"

The Only Drawback

"Only one thing kept my daughter out of opera," said the proud father.

"Yes, I know," said the weary one. "I've heard her sing."

Equipped

"Is your son going away to college?"

"He hasn't said, but he's bought a second-hand ukulele."

Should Be a Leader Too

Subhead—"Sousa sues cigar manufacturer for giving his name to a 3-center."

The Sousa cigar should have a band, of course.

Muchly Musical

Tim—"A pretty girl is like a melody."

Jim—"Yes, I saw one the other night that looked pretty sharp, and she knocked me flat, so I sent her a note."

Tim—"What did she write?"

Jim—"Oh, she told me not to play around."—*California Pelican.*

No Good

"Madame, the children won't go to sleep!"

"Tell them to come here and I will sing to them!"

"I've already threatened them with that, but it doesn't help."

Optimist—"Harmony exists everywhere for him who would find it."

Pessimist—"Sorry to disagree with you, but how about the Clasher family? They are eternally scrapping."

Optimist—"Well! That's modern harmony, isn't it?"

Mr. Newrich wished to give a concert in his splendid *salon,* and so consulted a musician about the necessary arrangements.

"You will need two first and two second violins," said the musician.

To which Mr. Newrich sniffed offendedly, "No second violins for me, sir! I am rich enough to have only the first."—*London Musical Mirror.*

IVERS & POND PIANOS

Five Foot Colonial

Daintiest of all our Grands. Smaller Grands are built, but at a sacrifice of tone, touch and line incompatible with *Ivers & Pond* standards. Large Grands require money and space your needs may not call for. Send for our catalog describing this and other Grands, Uprights and Players.

Ivers & Pond PIANOS

are used in over 500 Educational Institutions and 75,000 homes. Built today, as from the first, in *but one quality—the best*—with continuity of proprietorship and of artistic ideals, they represent the farthest advance in fine piano building. For catalogue and valuable information to intending buyers, *write us today.*

How to Buy

Where no dealer sells IVERS & POND pianos we quote lowest prices and ship from the factory tho' your home be in the most remote village in the United States. Attractive, easy payment plans. Liberal allowance for old pianos in exchange.

Ivers & Pond Piano Co.

The Singer's Etude

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

Edited for January by MAUDE BARRAGAN

Can the Voice be Self-Taught?

THERE is much to be said in favor of summer work at a conservatory bearing a high musical reputation. Its credentials are honored over the States; its certificate is proof that the singer has studied, not only his or her individual subject, but also harmony, theory and piano. One lives for the time in a musical atmosphere; credit is for home study; and if one passes a good test it increases self-confidence. There are opportunities to hear good artists almost free of charge.

Then, too, conservatorial training is cheaper than gipsy-study with first one teacher and then another; the reputation of one's teachers is learned from constantly revised catalogs.

If a conservatorial course is elected, there is one feature, often overlooked, that proves of incalculable value to the singer who does choir work, and that is directing.

Those who have studied harmony and theory are equipped to study directing. It steadies rhythm; it gives practical experience in ensemble; it makes sight reading easier; it places the singer in a position to add ten or fifteen dollars a month to the income. Churches and Sunday schools are always looking for leaders. It is a field of certain remuneration and added prestige.

A French Maxim

An old French lady used to say, "Self-taught is poor taught." Self-taught is better than total ignorance.

Ambitious singers do not need to be told that they can not approach real artists for musical instruction without a background; and the background must be colored with pigments of knowledge. Artist teachers ask pertinent and occasionally impertinent questions and soon find out the exact extent of the pupil's studies.

Singers and teachers sometimes remark, "Why should I rack my brains studying harmony? Singers do not need it."

There is more to singing than keeping on the key. Teachers who know their business require diversified knowledge. Students have a right to expect that the teacher will be able to correct their French and Italian diction, give them interpretive colorings, explanations of famous songs, hints on how to study and what to study. Pupils who expect to become teachers should never venture into the ranks of professionals until they have grasped the cultural ideas they expect in their own artist teachers. When the embryo teachers realize how quickly students catch up with the teacher, they have to dig in and get the requisite knowledge to keep ahead of their pupils!

It is easier to build the foundation when the house is begun; the most impalpable sort of a career is one where the foundations are poked in from underneath after the career is in full swing.

Harmony Without Teacher

It is possible (but difficult) to study harmony and theory without an instructor—but it can be done. The main difficulty is the lack of dictation. Singers go gaily off to summer school, expecting to put in six weeks hard work, only to find upon arrival, that they are ignorant of the elementary knowledge to enter classes, and their advancement is delayed. The wise pupil is not caught this way again.

It is possible to teach one's self piano—but it takes work. The pupil who has grit and persistence to study outside subjects without teachers will *retain* knowledge thus acquired. It has been bought with soul struggle; and what we buy with our souls is our inalienable possession.

If a French teacher is unavailable, the following method will give results, provided the pupil has a bowing acquaintance with French as it is "spoke" by natives.

Arnold's "French Diction for Singers and Speakers," gives phonetic rudiments. Never attempt actual reading until every rule for pronunciation has been mastered. When this book is completed, follow it with a phrase book giving conversations and vocabulary and picturesque pronunciations. Along with this take a good French grammar course as taught in the local high school and study rules and regulations. This self-taught course takes two years concentration; but, if in the meantime the earnest pupil has listened to the very excellent French sung by native American artists on phonograph records, and has applied himself diligently to acquiring the easy, tripping roll of the French "r" and the proper understanding of the rules, the resultant power is full of thrills. One may translate with a dictionary; but one cannot speak without the rolling of the "r."

No writer wishes to disparage the value of phonograph records; but it is well to warn aspirants that it is possible to Italianize one's French by listening to a French air by an Italian artist. Phonograph records are meant to be illustrative, not instructive.

Piano knowledge acquired by persistent work becomes a liberating power to the voice student. It is necessary to have a knowledge of harmonies; and, if one can read at sight the close harmonizations in modern church music, one has gained a living fire in one's work, a soul alight with understanding, fingers alert with skill, and a voice attuned to life.

The Vocal Battle

THE ramifications of musical knowledge extend into all branches of the musical arts. A painting without a background is incomplete, mponderable, without substance or setting. The singer without a background of diversified reading is only half a singer; a butterfly of song.

The public library is an excellent place in which to obtain a background of diversified reading. There are shelves of musical books, biographies of operatic stars, books on orchestration and symphonies, books of folk-songs and pagentry, books upon chorus work and books by famous teachers explaining their methods.

Library Scores

Many libraries, under the persuasive influence of some opera study club or music club, have installed sets of operatic scores obtainable on membership cards. One may keep these books a month or two. The pleasure of working them out is keen. The music lover may work out the score of "Carmen," "Madame Butterfly," "La Giaconda" or "La Tosca," realizing that the expense is nothing! Concentrated work like this stimulates the brain, gives singers an intelligent comprehension of opera, makes them knowledgeable to the highest degree of understanding of the strength or weakness of a particular score. Enjoyment upon performance is doubly enhanced; the opera is drawn out like a pattern; one has guide-posts of familiarity to mark the way; not an emotion is lost.

Who has not studied the life of a composer or pianist, placing him on a mental music shelf, only to come across him in some historical novel and thereupon feel entranced to discover the connection between a stirring historical event and a tremendous musical epic!

When one reads in the life of an oratorio composer that he worked with the fluid conditions of boy choirs, and perforce wrote his scores for youthful voices, new features in the peculiarities of oratorio music are seen.

There are elementary descriptive books on symphonies, and more than one publication gives details of symphonic construction comprehensible to the lay mind. If the actual symphony orchestra is beyond reach, one may buy symphonic records for the phonograph and sit absorbed while the symphony unfolds itself to an enlightened brain.

Music is largely mental. That which we put into our brains in the way of knowledge is translated into actual technic, but we never obtain musical prestige from what we know—we derive it from the manner in which we use our knowledge.

The Prima Donna's Origin

When we read the life of a prima donna, sparkling with triumphs, do we reach back to her humblest beginnings and read how she starved in Germany, wore frayed clothes, went hungry, sang in beer gardens to obtain her education? Do we see how she swapped English with a German girl for fundamentals of German history, folklore and language; how she played accompaniments for a French singer in order to be taught French without cost? *These* are the inspirations of careers—not the printed records of triumphal concert tours or operatic high lights.

Recently the musical journals carried the story of a well-known soprano's sister who stepped back from a career, devoting herself to lucrative vaudeville engagements, in order to let the younger sister achieve grand opera. On a Sunday afternoon this vaudeville mezzo-soprano, now an artist after years of hard-won tuition, appeared in concert with her famous sister, reaping her delayed triumph. Does not that make one's heart lift with emotion at the realization that the elder sister's sacrifice had not been in vain?

Have you watched an opera company perform some well-known opera, singing fluently in a language not their own? Then have you seen them the next day, going through a new opera, repeating, to the point of desperate weariness, phrases that will not go right, their bodies limp with fatigue, their voices climbing up into regions where it hurts one to think? That life is not easy.

Have you heard a coloratura dazzling an audience with ecstatic, bird-like trilling? Have you heard her the next morning beginning vocal gymnastics? You marvelled, "Why, it is almost as hard for her to get up there to-day as it is for me!" She does that every day—you may bank on it, her work is *harder*. Each day she fights a new battle; each day she fights to sustain her pinnacle of art. The vocal battle is not something to be taken up and laid down at the whim of the will; it is a strenuous, day to day grind, a never relaxing watch upon one's habits, diet, thought and will.

The Singer Must Have a Definite Aim

ARTISTS have definite aims; one is seldom an artist without knowing it. Artists mature with a consuming ambition which they gratify because it is their nature to achieve first place; but average singers derive from music a quality of satisfaction that is more than food or drink, it is a completing spiritual experience. Realizing that they may never become artists in the professional sense of the word, they work with music not for money compensation—of which they receive little—but because they have a talent, and the urge to sing is within their hearts.

Singing is as spontaneous as prayer; and songs are mostly prayers. Those who have savored grief know that without the desire to sing there can be no song. Music expresses love; and if love, either for our Creator or fellow mortals, goes out of the heart, the gift of song departs.

The Science of Singing

Because the science and study of voice is such a serious thing, and its consequences so far-reaching in physical results, spiritual growth and mental capacity, the teaching of voice should be approached with respectful hesitancy. Only one well qualified should teach. By "qualified" is meant that state of education resulting from musical cultivation of one's intellect, a scientific understanding of body processes, languages, and music in all its details.

Smaller cities have many "teachers" whose only qualification for the profession is a desire to make money. Some of these charlatans are not even tone-conscious, nor have they any respect for accepted standards of voice production.

Is your voice teacher a real teacher or a charlatan?

The word charlatan means "quack." The definition of quackery is "boastful pretension; false pretensions to any art. Imposture."

Can you assure yourself that your teacher is intelligently directing your voice the way it should go?

Voice teaching is not standardized like piano technic. Any individual can teach voice and get away with it, as long as there are ignorant pupils. In selecting a teacher the aspiring student should be satisfied that the teacher possesses a fundamental musical knowledge and more than average intelligence, for it takes intelligence, keen musical sense, and a competent conscience to be a good teacher. The teacher's work should be musicianly and authoritative. By their breathing shall ye know them; for, as they sing, so shall they teach.

Never intrust a good voice to a teacher unless you can assure yourself that the teacher's pupils exhibit the proper grasp of primary elements. Do they sing with bright, clear voices? Can you hear the "ping" of resonant tones? Have the pupils body poise? Is their repertoire standard?

Tone by Listening

Learn to listen to tone production. Mark whether the tones are breathy, sustained in the cheek, or thinned by a tight throat and tensed muscles. One sure proof of proper voice production is tone quality. If the pupil's tone becomes clearer and more

forward, acquires carrying power, grows in volume and strength, then the pupil is progressing in a satisfactory manner. However, if the larynx shows strain, if one becomes hoarse after lessons, if the tone is quavery and far back in the throat, the pupil is singing erroneously and needs correcting. And the *teacher* needs more knowledge!

"Madame" bore her title by selection. Her musical and physical antecedents were clothed in impenetrable mystery.

"Zing ze phrase again," she directed her pupil. "Now—draw ze tone up from ze feet. Young man, you are to make yourself a mental idiot—nobody needs brains to sing—ze voice comes from ze feet nawt from ze face."

Her die-away words were accompanied by a twisting and contortioning of a lithe body; her eyes opened and closed mystically. Her pupil, an Italian boy of great intelligence, looked vastly perplexed.

"But what sort of acoustics is it you use, Madame?" he asked with innocence. "I cannot sing without my brains!" he added indignantly. "If I do not think what I am doing I cannot put the tone out."

"I use ze best methods," Madame drew herself up with offended dignity; her words cracked like a whip. "Ze best!" Languor was gone from her demeanor. "Ze sound-box is your spine," she enunciated carefully, "resonate your voice there, not in the face—only dumb teachers say the voice is resonated there. That is nonsense—be an idiot, I say—relax—you do not need brains to sing."

Spinal Singing

The boy relaxed and lost all control of his vocal organ. His lesson was a failure.

Madame's method produced a hollow, empty, chesty tone, with no insides. After a few years it shattered into particles like bits of glass. Madame was a better actress than teacher. Her pupils stood with closed eyes, drowsily stumbling behind the accompaniment—panting for breath, protesting that they could not sing unless "relaxed." They relaxed, incidentally, all hold upon musical careers.

The other teachers said of "Madame" that she might know, indeed, where voices came from but she didn't tell her pupils where voices should go.

The Singer's Musicianship

ALL SINGERS should have an accompanist-coach.

A musically equipped companion is a necessary feature to every ambitious student. An accompanist who combines, in addition to thorough musical knowledge, a working knowledge of French and Italian, or either, is invaluable to the earnest student whose language work needs supervision.

In vocalizing it is necessary to watch one's tone. If the tonal attack is not correct the tone should be stopped. It is not necessary to sing yards of exercises, and it is unwise to do so with improperly placed tones. See that the tone is placed forward into the cavity back of the teeth; make sure of its resonance; never entirely exhaust the breath; leave hearers under the impression that the tone could have been held another beat or two.

Working Alone

Difficult numbers should be worked upon by one's self. The motto of a fine teacher, frequently quoted to aspiring pupils, is:

"At sight of new music the amateur begins to perform, but the musician begins to think."

Study the work alone; mark the rhythms in your mind; circle the rests. Study the contour of the number, as an artist studies a picture; work it out slowly, carefully, sketching it mentally until you have made a picture of it. Now that you know what it is about, you may sing the words, beating precise tempo. If you are able to accompany yourself you may work the accompaniment out separately. Now combine voice and piano. Single out difficult passages where syncopation makes the rhythm tricky. Never perform the number until you have mastered outstanding difficulties. Then you may present it to your accompanist-coach. The accompanist must be alert to catch shadings off the key, to snap time into rhythm, to criticize your diction and pronunciation of foreign languages, to nod to you when to come in on the beat.

Bad spots appear in every voice, certain vowels that are flat, some that are sharp. Watch these points.

When you are singing against the accompaniment, allow yourself *no liberties*, which are only an excuse for mental sluggishness, but there are certain points in oratorio and dramatic work where the orchestration is silent and the singer may sustain a note. Learn, above all, what you can *not* do.

Consult Teacher

Ask your teacher to edit oratorio scores for you and to mark traditional changes which are observed by the artists. If a trill appears in a measure, say four whole notes and one half, actually trill the note, noting whether the trill goes up or down; do not merely shake the voice. Be sure to end the trill upon the proper beat.

Raif, in his "System of Piano Playing," says that "technic in piano playing is correct timeliness of movement. Technic is the correlation of nervous action rather than flexibility." The same words apply to singing—technic in singing is correct timeliness of attack, the correlation of piano and voice, rather than flexibility. Some naturally beautiful voices have great flexibility, but their owners are not *musicianly* singers, due to ignorance and deficient training.

Remember that when we sing before real musicians we show them not how much we can do, but what we can *not* do—and what we do *not* know.

Lesson Tablets

TO THE ETUDE:

A recent issue of THE ETUDE contains a valuable hint to teachers relative to fastening an assignment slip of each lesson to the instruction book. I have found an even better plan. Every pupil is provided, at the first lesson, with an ordinary five-cent composition book marked with his name and the date of the lesson. The first page contains our rule for correct position:

Body—Straight, comfortable.
Arms—Quiet.
Wrists—loose (most important).
Fingers—Curved, each raised in its turn.

Below this are quotations from eminent authorities, advising very slow, careful practice.

If the pupil is a beginner, the next page contains a description of the keyboard:

C—First key at left of group of 2 black keys.
D—Key at centre of group of 2 black keys.
E—Key at right of group of 2 black keys.
F—Key at left of group of 3 black keys.
G—Key at left-centre of group of 3 black keys.
A—Key at right-centre of group of 3 black keys.
B—Key at right of group of 3 black keys.
Middle C—C nearest the name of the piano.

The book is now ready for "active service," and the date of the next lesson appears at the top of the next page. Here under scales, technical studies, etudes and pieces, the new lesson is outlined and special points stressed.

The advantages of such a book are obvious. The student not only remembers what to practice, but the teacher sees at a glance just what should have been accomplished. Such a book is valuable when assigning reviews, and is presented to a new teacher when making a change of instructors. Much valuable time is sometimes lost when making such a change, for the new teacher must often do much questioning and testing to find out just where the pupil's knowledge begins and ends.

MRS. WM. C. BUDGE.

A piano that's amazingly dainty and small

Just what is needed for homes, apartments or bungalows, where space is a problem

ONLY 3 feet 8 inches tall is this remarkable Wurlitzer Studio Piano. Diminutive enough to go almost anywhere—even in the smallest room. Light enough to be carried by two people. Yet, it is wonderfully well built and exquisitely designed.

Perfect in Tone

This tiny instrument possesses all the bell-like clarity of tone for which Wurlitzer has always been famous. It has, too, the deep, rich volume heretofore associated only with much larger pianos. There is the full 88 note scale, of course.

So at last, the problem of piano space in bungalows, summer cottages, conservatories, nurseries, school rooms, and dozens of other places, has become a thing of the past.

Cost is Low

The matter of price too, is now solved for many. The Wurlitzer Studio Piano costs only $295 and up. With player action its price is $445 and up. Prices are F. O. B. factory.

See these remarkable little pianos at any Wurlitzer store. You'll be astounded at their mechanical perfection.

Will conduct NORMAL CLASSES FOR TEACHERS OF PIANOFORTE *in the cities given here*

SALT LAKE CITY, UTAH (January, 1926)
DENVER, COLO. (February)
DALLAS and FORT WORTH, TEXAS (March and April)

FREE.—Send name and address for keyboard chart—for correlating the keys of the pianoforte with the notes on the grand staff—sent absolutely free on request.

Places where classes will be held in different cities and booklet describing the course in detail sent upon request.

JOHN M. WILLIAMS, P. O. Box 216, Trinity Station, New Yo.k City

NEW YORK SCHOOL of MUSIC and ARTS

824 West End Avenue Cor. 100th Street Ralfe Leech Sterner, Director

New York's Oldest Music School

Many new and wonderful features planned for the coming season by this institution

Same celebrated faculty headed by Ralfe Leech Sterner, Arthur Friedheim, Paul Stoeving, Frederick Riesberg and other celebrated masters.

Individual Instruction. Entrance at any time.

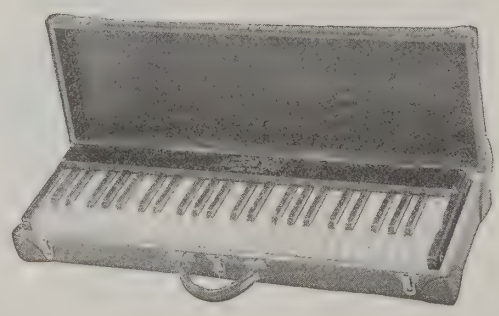
SEVERAL FREE AND PARTIAL FREE SCHOLARSHIPS OPEN FOR COMPETITION

Dormitories in School Building. A real home for music students.

Many Free Classes and Lectures. Diplomas and Teacher's Certificates. Public Concert every Thursday night Vocal, Piano, Violin and all Instruments. Public School Music Dept. Dramatic Art, Drawing and Painting, Interior Decoration, Dancing and Languages.

ILLUSTRATED CATALOGUE ON REQUEST

VIRGIL PORTABLE KEYBOARD



For Pianists and Piano Students

Invaluable to Traveling Pianists and Indispensable to Pianists and Students Living in Apartments, Hotels or Small Rooms.

Excellent for Perfecting All Phases of Technic and for Strengthening the Fingers. Weight of touch can be varied from 2 to 12 ounces.

Catalog on Request

Business Hints for Singers

TEMPERAMENT, in the average singer, is nothing but temper.

It is a jealous apprehension that some singer will be honored above one's self; it shows in a lifted eyebrow, muted criticism, withheld praise.

Do not shrug and say, "That does not apply to me!" It applies to all singers and musicians. Each musician thinks, upon hearing a favorite number performed, that they could do it twice as well; forgetting how hard the performer has worked to acquire his knowledge of the piece. Self-control is good manners publicly exercised.

The singer who is afraid of losing prestige is not exhibiting "temperament"; he or she is giving tangible proof of a jealous nature. One never loses prestige by working with singers who know less than one's self; one loses prestige by doing poor public work.

Artist; Amateur?

Unless one is an artist, one is perforce an amateur; but there are artistic amateurs. Some work for a perfection attainable only to artists with broad knowledge, thus becoming discouraged. Perfect the works that lie within your range; work at higher things because it is beneficial to aspire; but do not perform difficult things without proper coaching or there will be betrayal marks in your work.

Amateurs may do musicianly work; they may have pure vocal tone, authoritative execution; they may avoid singing rests (to sing a rest is the unmistakable mark of an amateur) they may have a diction so clean that there is no doubt of the song's text.

When the average singer comes in contact with a jealous rival, it is well to remember that the rival does not hurt the one attacked, only himself.

The most effective defense in choir work is *silence*. No matter what the insult, no matter what the hurt, be silent. Silence can be thunderous. Silence creates a mental clamor. It quells disturbers and squelches the belligerent member into muted grumblings. It gives the silent one the upper hand. The attacker hunts new victims.

This seems difficult when one's soul is torn with unwarranted hurt, when one is boiling inwardly, seething with words one dares not speak; but words will become a boomerang, and silence stops everything instantly.

The Stranger in Your Midst

Is there a musical stranger in your town?

It is a wicked thing to push aside, through unfriendly jealousy, a talented stranger. The average singer is probably a hard-working, hopeful musician, constantly improving technic, repertoire and interpretation. Why force her to wait a year to win what local singers could grant in the beginning after the first exhibition of the stranger's skill? Why not be the first to welcome her, to give her opportunities? The established ones cannot possibly be hurt by admitting a stranger. The new musician has come to your town to build along with you; she must grow into community life. Why not assist her in becoming assimilated before she tastes the bitter bread of loneliness and selfishness?

The new-comer is prepared to give you her best; if her gifts are rejected she loses interest in her work. Open your musical doors; treat her as you would wish to be treated in a strange town. Afford opportunities to display, to market her wares. Talents that are not used soon become rusty. It is not fair to push a gifted stranger into obscurity.

Singers without audiences soon cease to sing. They cannot market their songs without a music club—and the city without a music club is musically dead.

It is so easy to have a club; federations are eager to help; libraries are ready to co-operate; singers are *always* anxious to sing! Let us grant that the average small town is not only unacquainted with, but even actively antagonistic to classic music. How shall we overcome ignorance and prejudice?

Canvass the town for names and addresses of people who like to sing and play; put down on your list violinists, 'cellists, saxophonists, every musically inclined person. Canvass a subsidiary list of those who only love music, for you need patrons, inactive members who will supply the funds. Approach social workers and community leaders, club people and church people. Sound everybody on the subject—and collect $1.00 each, which will give you a nucleus fund to build upon. Give these funds into the keeping of a patron well known to all prospective members. With a healthy list and a small treasury, prepare to hold a meeting of representative musicians and talk the matter over in an informal manner. Write the president of the federated music clubs of your state and ask her to send the chairman of your district to your city on a certain date when you will hold an organization meeting. Write a circular letter and explain your plans; broadcast them in the newspapers through friendly society reporters. Have a rousing big meeting, and put it through with enthusiasm. Elect officers; incorporate; have monthly concerts and give your 400 members two guest tickets each. *Advertise!*

"Mob Personality"

Now get one of the choir directors to go in with you—be sure he has "mob personality." Write to one of the musical libraries in New York or Philadelphia for quotations for a costumed concert of a popular musical play—one that will never die. The scores are complete, the music easy to direct, the costumes reasonable to rent, and the royalties not exorbitant. The library is eager to assist in every way.

In assigning your singing rôles be certain that the soprano part goes to a "high C" soprano; you will need climaxes. Never assign a rôle to a singer simply because of local prestige or preference. Have your baritone rôle in capable hands, sung by a man who can make a rousing effect; give the tenor rôle to a tenor who can be heard without throaty quavers. If possible, hold a symposium for the selection of singers, letting all the applicants try big solos. Never assign a high tenor rôle to a medium baritone or you will lose your climactical effects. Do not assign a high soprano part to a low mezzo-soprano.

Figure your expenses and put your ticket price within popular reach. Remember, you are trying to give a prejudiced public a sugar-coated pill; you are trying to make them swallow music, and it must be pleasant to the taste, eye and pocketbook. If your preliminary skirmish is a success in October and you have won public confidence, you will have no difficulty in making your people listen to a symphony and a big local chorus in March.

* * *

"Let the American learn to sing his own language, and eventually English will be as popular in singing as are the foreign languages. The thing to do is to give opera in our language; and our language is English."—MARK OSTER.

The Etude Music Lover's Memory Contest

Answers to Puzzle in the December, 1925, Etude

(1) Second Rhapsody (or Rhapsody March), Liszt; (2) Valse in E, Moszkowsky; (3) Rosemund Air, Schubert; (4) Slumber Song, Schumann; (5) Last Hope, Gottschalk; (6) March from Capriccio in B-minor, Mendelssohn; (7) Witches' Dance, MacDowell; (8) Fantasie Impromptu, Chopin.

Because of the great labor required for this special issue the Music Lovers' Memory Contest is omitted this month. It will be resumed in February.

The Coat and the Cloth

By Ethel F. Boak

How many young players have heard the old adage: "Cut your coat according to your cloth"? Even though they may have heard it, how many have thought of applying it to the management of the bow? Rough bowing is not always caused by lack of control, but often by not heeding this ancient proverb.

Many a violin student has had the uncomfortable experience of arriving at the end of his bow before he expected, finding himself stranded, with no bow left for the finish of his phrase. His sensations are much like those of a singer who, for one reason or another, has exhausted his breath before his phrase is ended; and the effect on the performance is the same. A violinist must manage his bow quite as carefully as a singer his breathing, always arranging to have ample reserve to sustain his tone at the required volume.

Some of us may have had that very trying experience of catching the point of the bow between the strings; this is a real catastrophe, and is a case of being stranded with a vengeance. The speed of his bow has not been correctly gauged by the player, consequently he has not enough left with which to finish. If this once happens in public it is a lesson in accuracy in dividing the bow not easily forgotten. The result of the same fault at the heel of the bow is that horrid little click one sometimes hears, which is certainly not a musical sound, or one to be found on the printed page.

On the other hand, a player sometimes finds himself in the opposite predicament: that of having too much bow remaining, and has to hurry to the end. Instead of being stranded, he is in danger of being swamped in a sea of bow; in order to avoid this he rushes full steam ahead, and ends by scuttling his craft. The little click aforementioned may also be caused by this rush.

Attention should be drawn to a point that is often not clearly understood by beginners; namely, it is not the number of notes to be played in one bow that signifies, but their time-value. For instance, suppose there is a whole note in one bar, and next a bar of sixteenth notes; the speed at which the bow travels at every portion of its length should be quite the same when playing the whole note as when playing the sixteenth notes. Perhaps it may be said, "Of course, we all know that." But one often finds that a pupil will save the bow carefully if he sees a bar of sixteenth notes, whereas if he sees only one note in a bar he will use his bow up too quickly. It is a case of the eye confusing the mind. The value of the notes should be considered, not their number.

"Handel's Forgotten Operas"

By Alanson Weller

HANDEL'S tremendous fame as a composer of oratorio, in which field he is practically unrivalled and certainly unsurpassed, has somewhat dimmed his undoubted gifts as a composer of operas. As is well known, the composer of the "Messiah," "Saul," "Israel in Egypt," and other celebrated oratorios wrote a great many operas in the Italian style of the period and was in fact one of the earliest operatic composers.

His rivalry with Buononcini, and his failures in this line, are now matters of history. It was this failure which proved the turning point in Handel's career and led him into the field of oratorio. Had he been more successful in his operatic ventures, the world might have been denied the beauties of his long list of sacred compositions. Nevertheless these early operas, though not dramatic enough for the modern stage, contain many lovely melodies of which the *Largo* from "Xerxes" is but one. A few of these airs have become popular, but the vast mine has scarcely been tapped as yet.

Among the numbers which have attained at least a small measure of success are *Where'er you walk* and *O! Sleep why dost thou leave me?* from "Semele," the *Care Selve* from "Atalanta;" and the *Lascia ch'io Piangia* from "Rinaldo." Best, the celebrated English organist, has made an arrangement for organ of the exquisite minuet from "Berenice," which was published in the ETUDE some years ago.

There are also arrangements, most of them quite old, of various other airs from these old works. What a pity that more interest is not taken in them! A few years ago Walter Damrosch brought out the long forgotten "Acis and Galatea," with pronounced success. Why do not some other enterprising conductors and singers revive at least portions of the Handelian operas? They would certainly be a novelty and probably a very delightful one to most concertgoers.

UNIQUE VOICE TRAINING
By W. P. Schilling

A NEW book just off the press, different from anything ever published. Unexcelled—Unequalled—In advance of all competitors. This new system will make reputation for Teacher and Singer. *Save Time—Save Money.* Secure a beautiful voice within a shorter time than ever attempted. Special exercises for acquiring high tones easily, without strain. "Unique Voice Training" has merited the hearty approval of teachers, singers and music lovers, everywhere. **Price, $5.00.** Other books by the same author, "*Ear Training,*" *15 cts.*; "*Sight Singing,*" *50 cts. etc.*

THE PIANO OF ENDURING TONE

Josef Hofmann

FIVE MINIATURE MASTERPIECES

By **THIS MASTER PIANIST**

(Mignonettes—The Children's Corner)

Cat. No.	Title	Grade	Price
18690	**Lonesome,** *Song Without Words*	3	$0.30
18691	**Wooden Soldiers,** *March*	4	.30
18692	**Lullaby,** *Berceuse*	3	.25
18693	**Sister's Dolly,** *Polka*	4	.30
18694	**Nocturne,** *Complaint*	5	.30

These numbers are big enough musically for the recital programs of the greatest pianists and yet "easy" enough for pupils in the medium grades. They will prove a source of delight to all pupils or pianists playing them. Each one is of an engaging character with clean melodic outline.

A Little Lecture for Little People

By Browne Brearton Cole

[Author's Note.—In this "Little Lecture" I am showing a bit of the primary instruction which all of my pupils receive.]

I—We are studying Music. Now, little people, just what do we mean by *music?*

Ans.—We know that music is one of the Arts, just as painting, sculpture, and the writing of wonderful stories. Someone has even said that "Music is the only Art of Heaven given to earth, the only Art of earth we take to Heaven."

Music, little folks, is the Art which enables us to tell beautiful stories by means of musical sounds.

A "Lullaby" tells us the story of a mother singing and rocking her babe to sleep. "The Dance of the Goblins" tells us of the queer little fairies playing grotesquely in the moonlight. A "Military March" tells us of the soldier boys marching bravely off to war. And all the time that music is telling these stories to us it is fulfilling one or more of its missions, which are:

First, to please the ear,
Second, to touch the heart,
Third, to stimulate the imagination,
Fourth, to appeal to the intellect.

II—Stories are built of words, many hundreds of words. Musical stories, or *compositions,* as they are called, are built of *tones.* How many musical tones do you think there are?

Ans.—I am afraid, little folks, you can scarce believe me; yet *all* our musical stories are told with only *seven tones;* and they are named by the first seven letters of the alphabet,—A, B, C, D, E, F, G.

III—But *how* can music tell us such wonderful stories with *only* seven tones?

Ans.—Listen carefully and I'll tell you the secret. These seven tones may be repeated higher and higher,—and lower and lower. Also there are five secondary tones that may be put in between the principal ones by means of flats (♭) and sharps (♯). Then we can always vary our stories by playing loudly or softly. When we become more accomplished musicians we may, by our manner of playing, make our music brave and martial, solemn and sweet, mysterious and weird, and so on, as we wish.

IV—And now you ask, what is a tone?

Ans.—A *tone,* little folks, is to music what the *spoken* word is to language. You will remember that I have already said, "Music is the Art which enables us to tell beautiful stories by means of *musical sounds.*" And again, "Musical stories are built of *tones.*" Ah, *musical sounds* and *tones* are one and the same thing. Hence, a *tone is a musical sound.*

V—Are not all sounds musical?

Ans.—What a foolish question! Is the filing of a saw musical?

VI—When is a sound musical?

Ans.—Touch a key of the piano. You will hear a tone. What actually happened was that the stroke of the hammer set the string in motion. That motion is called its *vibrations,* and it *vibrates evenly.* These vibrations produce little sound waves that tap our ear drums *regularly.* It is a musical sound. The filing of a saw produces sound waves, too. But the vibrations producing them are irregular. Therefore they make only a noise.

VII—How does a tone differ from a note?

Ans.—In the same way that the *spoken* word differs from the *written* word. The note is the written character which represents the tone.

VIII—What is the difference between *harmony* and *melody?*

Ans.—Harmony is the *sounding together of a number of tones* which please the ear. Such tones played together are called *chords.*

The melody is simply the "tune." It is made up of *single tones,* one following another, governed by certain laws of rhythm and theory.

IX—But what is rhythm?

Ans.—Rhythm is just a bit difficult to define for little folks. In a sense, rhythm is *moving in time.* Anything which moves *evenly* and *regularly* possesses rhythm. There is rhythm in the regular hoof-beats of a running horse, or in the regular ticking of the clock. And in music *there must be rhythm,* a regular grouping of notes into measures, each containing the same number of beats or counts. It is the rhythm, the regular beat, beat, beat, beat, that we hear or feel, throughout the entire composition, that enables us to understand it.

X—And what is theory?

Ans.—Theory may well be called the grammar of music,—for it has to do with the laws, principles and rules that govern the teaching and studying of music.

When Lully Burned His Masterpiece

By S. A. Lito

Lully, the founder of French opera, lived a life that was none too virtuous, yet when he lay dying, like many a better man, he repented of his evil ways. According to Lecerfe, however, even his death-bed repentance was accompanied by a certain cunning not very much to his credit. As everybody knows Lully met his death as the result of an abscess on his toe, caused by striking himself with the stick he used in conducting a rehearsal. His death was long-drawn-out and painful. The confessor who came demanded that he should destroy the manuscript of his new opera, *Achille et Polyxène.* Apparently accepting the verdict in all sincerity, Lully permitted the priest to throw the offending manuscript on the fire.

Presently, however, his health improved. One of the royal princes came to visit him, and Lecerfe records the following conversation between them:

"'What, Baptiste,' said the prince, 'you have thrown your opera into the fire? Good Lord! Were you foolish enough to believe the idle talk of that Jansenist, and go and burn your fine music?'

"'Gently, sir, gently,' whispered Lully. 'I knew what I was about—I had another copy.'"

Compare this episode with the grandiose epitaph on his tomb in the Church of Saints Péres:

"God, who had given him a greater gift of music than any man of his century, gave him also, in return for the inimitable chants he composed in His praise, a truly Christian patience in the sharp pain of the illness of which he died....after having received the sacraments with resignation and edifying piety."

"We are in the midst of the vital period of musical development. This country is the place for the student of to-day. He can get everything here, and more than he can get abroad. He can hear the music he needs, the unusual music, the variety and interesting music that he should hear."

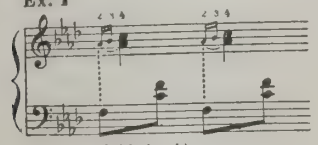
—Olga Samaroff.

Question and Answer Department

Conducted by ARTHUR DE GUICHARD

The Primitive Sonata Form—Its Different Periods and Composers.

Q. Kindly give some idea of the primitive Sonata Form. (ii) State briefly the different periods. (iii) With some of the chief composers, all before Beethoven.—DOROTHY, Pawtucket, R. I.

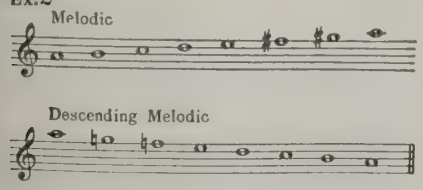


A. The Sonata and, indeed, all instrumental music of every form, is a direct descendant of the popular songs and the popular dances of the Middle Ages: Folk-songs, Motets, Madrigals, Canzona; Pavane, Gaillarde, Allemande. The grouping of these last three formed a Suite—variously known as Suite, Sonata, Exercise or Partita. They were in what is termed the Binary form, comprising some four to nine pieces, but never less than four, consisting of an Allegro, a slow movement, a moderate movement and a rapid movement. The slow movement is also in the binary form, as seen in the Saraband, the Courante, the Sicilienne and the Aria. The rapid movement, also binary, is generally represented by the Gigue. Out of these movements of the Suite came the Sonata, but mostly written in the Ternary form, although a few of them, before the time of Beethoven, are to be found with only two movements. The primitive German composers of the Sonata: Dietrich Becker (1554), Kuhnau (1660), Mattheson (1681), Telemann (1681), Graupner (1683), Handel (1685), Bach (1685), K. P. E. Bach (1714), J. H. Rolle (1718), J. G. L. Mozart (1719), G. Benda (1722), J. C. Bach (1735), J. W. Haessler (1747), P. Domenico Paradies (1710), an Italian domiciled in London, Eng.; F. Joseph Haydn (1732), Wolfgang Amadeus Mozart (1756), F. Wilhelm Rust (1739). The primitive Italian composers of the Sonata: Legrenzi (1625), Vitali (1644), Bassani (1657), Corelli (1653), Geminiani (1680), Veracini (1685), Tartini (1690), Locatelli (1693), Pescetti (1704), Galuppi (1706), Nardini (1722), and Pugnani (1731). It should be noted that the ternary style, the chief characteristic of the Sonata form, owes its origin to the repetition of the first plan of the Suite in its second part, when it returns to the chief key.

Concerning Various Musical Matters.

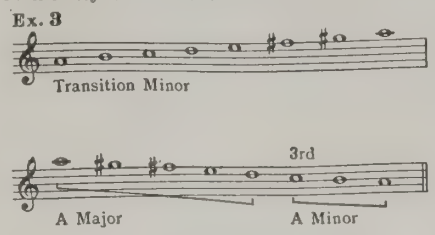
Q. (i) In "Schubert Album," page 38 (Moment Musical), fourth measure, should grace note Ab be taken with accented bass note and held until C is reached, or should grace notes precede the bass note and the second Ab be sounded, as the fingering $\overset{4}{C}\ \overset{}{Ab}\ \overset{}{1}$ seems to indicate? (ii) In June, 1920, THE ETUDE, page 384, should the three grace notes be played with the bass or accented note, or before the accent? (iii) In Chopin Nocturne, Op. 32, No. 1, how should the group of five notes *be accented? like 12345, or 12345? (iv) Is the melodic minor ever used in a descending scale? (v) Please describe this cadence: I—VIb—I, so often used in the so-called "popular" music of the day*—N. B. Mc., Mt. Carmel, Ill.

A. (i) Your first supposition is correct. The notes should be played as follows:



Ex. 1

Hold the Ab



In further answer to this question as well as to (ii) you should observe the general rule for the performance of all grace-notes in all classical compositions, *i. e.*, in compositions by all classical composers), namely, the first note of this embellishment (whether consisting of one note or more), is played with the bass or the beat, not before it unless so directed. It is quite a modern practice to play the grace-notes before the bass, or beat; and this is not permissible in the classics. (iii) The accent occurs on the first of each group, whether of 3, 4, 5, 7 or 11 or more notes. (iv) This question is very imprecise, because the descending scale is an integral part of the melodic minor.

Ex.2

You probably mean: "Is the ascending half of the melodic minor scale (with the semitones between the 2nd and 3rd and the 7th and 8th) ever used in descending?" Yes; this minor scale, having the 6th and 7th degrees shaped, is often found in the works of Beethoven, Mendelssohn and many other composers. This scale, ascending and descending by the same notes, was in use before the melodic form was adopted. It received, later, the name of "transition minor;" that is, a transition from the natural minor to the melodic minor. The latter was adopted because of the ambiguous sound of the former which, in descending, could not be distinguished from a major scale until the third of the key was reached.

Ex. 3

(v) It is a chromatically altered form of a plagal cadence, keeping the tonic in the bass and flatting the 6th.

The Ear's Capacity for Musical Sounds.

Q. How many notes can the human ear distinguish? That is to say, what is the compass of human hearing.—CONDON, Auckland, N. Z.

A. About 88 notes or the extent of the modern piano.

Signatures in Music.

Q. What is a signature? Are there more than one?—ADELARD, New Bedford, Mass.

A. A signature is a sign placed on the staff at the beginning of a piece or movement. There are three kinds of Signatures: The Clef Signature, which determines the absolute pitch of the notes; the Key-Signature, the group of sharps or flats which determines the key; the Time Signature, which determines the time and the rhythm.

The Value of Study of Harmony.

Q. My teacher insists upon my studying Harmony. I find it very arid and don't like it at all. Do, please, tell me if I must learn it? Cannot I become a good pianist without it?—MARIE C., Pittsburgh, Pa.

A. It is just as essential to good playing that you study harmony, as the study of grammar and spelling is to one who would be a good speaker and public reader. The speaker, reader and player have to interpret another person's thought so that an audience may succeed in understanding the author or composer's deepest meaning. This cannot be done (except superficially) unless the interpreter understands the construction of the work. Therefore, to be an adequate interpreter the pianist must delve into the composer's inmost intentions by studying the harmonic structure. Study your Harmony faithfully and you will discover all kinds of hidden or suggested beauties of expression that the player who is ignorant of harmony never even imagines to be there.

A Canzonetta.

Q. What is the exact meaning of a Canzonet, or Canzonetta?—VIOLINIST.

A. Canzonet, English, from Conzonetta, Italian, means a little song.

Signs for Repetition.

Q. In using "D. C." I am told you start in at "M. F." and omit the introduction. Please give me the right rule about it. I know it means to go to the beginning, but does that include introduction? Also, when beginning has 1st and 2nd endings, should the repeat with both endings be used up to the sign "Fine?"—MRS. F. E., Vestaburg, Mich.

A. "D. C." is a direction to repeat from the beginning, introduction and all. If the latter were to be omitted the sign would read *Dal Segno*, or "D. S." Where two endings are given, marked respectively "1st" and "2nd," the first ending only is played before the repeat; after which the "2nd" ending only is played (the "1st" being omitted) right up to the sign "Fine," which means "end." The other questions cannot be answered, because they refer to hymns and pieces which are not in the possession of the writer. If the questions are of general interest, it would be well, another time, if you copied and sent the passages you might wish explained.

Bass or Base?

Q. What is the correct way to spell the lowest part in music? Should it be "bass" or "base?" I have seen it spelled both ways, and it seems to me that the second is more correct, for is it not the foundation upon which the entire superstructure of harmony is built?—MALEMBERG, East Greenwich, R. I.

A. From the point of view of the integrity of the English language, "base" would seem more correct. Shakespeare and many other writers of his time so wrote it. However, the musical use of the word has become altogether obsolete. It gave way entirely to bass (English), basse (French), basso (Italian), bass German). For the bass clef the German name is "bassschlüssel"—a curious looking word with its agglomeration of sss-ss! Therefore general custom imposes the use of "bass."

PROFESSIONAL APPROVAL

The Premier Aristocrat Model

5 feet, 3 inches long. Price, $725. f. o. b. New York

The institution that made the Small Grand Piano the instrument of universal appeal is back of this quality Small Grand.

The Premier Aristocrat Model is the product of the largest institution in the world concentrating on the production of Small Grand Pianos only.

This instrument, then, is a combination of quality and price without equal.

Before selecting *any* piano, see and hear the Premier—sold nationally by leading Dealers. If unable to obtain locally, kindly advise promptly.

Every teacher, student, studio, conservatory and music lover should send for *"The Magic of Music"*—it tells the Premier story most interestingly and convincingly.

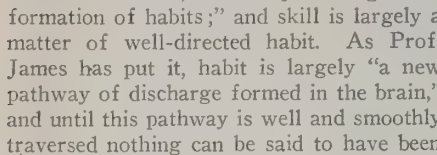
The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Edited for January by GORDON BALCH NEVIN

Rational Treatment of Some Organ Problems

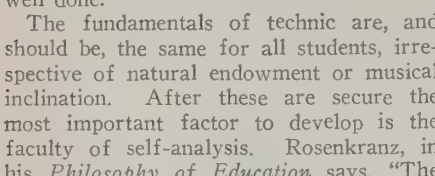
THE best advice that can be given any student is: "Get the Fundamentals!" The accepted routine, individual manual and pedal work, then two parts combined, then trio studies, cannot be supplanted by any short-cut. Education is, as Rousseau said, "certainly nothing but a formation of habits;" and skill is largely a matter of well-directed habit. As Prof. James has put it, habit is largely "a new pathway of discharge formed in the brain," and until this pathway is well and smoothly traversed nothing can be said to have been truly learned. It will be well for all of us to realize that a thing that is negotiated only by straining concentration and high nervous tension is really not mastered; only when it is done with ease is it truly well done.



The fundamentals of technic are, and should be, the same for all students, irrespective of natural endowment or musical inclination. After these are secure the most important factor to develop is the faculty of self-analysis. Rosenkranz, in his *Philosophy of Education* says, "The power to break up habits, as well as to form them, is necessary to the freedom of the individual." It should be obvious that in the case of an instrument which has undergone a tremendous evolution during a period of a few decades, as has the organ, there are not a few points in its technic that are certainly debatable.

Organ Evolution

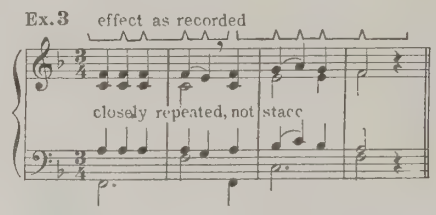
In this article we are calling attention to several matters that are obviously by-products of this recent evolution in organ design and construction. And the first is the need for greater *accuracy and exactness in the repetition of notes.*



It is truly a cause for thanksgiving that the earlier fetish for promiscuous tying-over of notes, which from the printed page called for repetition, is fast giving way to better things. That fetish was indubitably a by-product of the tracker action. With a depression resistance running into *pounds* for each key, who could blame the player for dodging as many key strokes as could be done? All this has been swept away by the modern light action. Where we formerly heard a familiar hymn announced as in Example 1,

Ex. 1

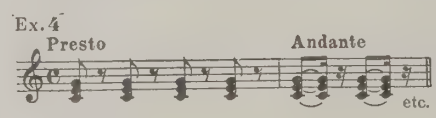
the tendency has swung nearly as much too far on the other side, and we now hear the same hymn from some organ lofts as notated in Example 2.



Ex. 2

The most casual diagnosis will show that this is a case of the pendulum swinging too far in each direction. The first example destroys the rhythmic pulse, the second mimics the exaggerated *staccati* of the jazz band. One is as much an error as the other. The organ is capable of sharp rhythm, but it is not the percussive beat of the banjo!

The example just given, when properly treated, calls for exact and precise repetition of all of the quarter notes, with the exception of the bass notes in the first measure; the slurring in the second measure must be observed, but not over-done, and in the fourth measure the "line-phrasing" will shorten the note to a half-note followed by a quarter rest. The propulsiveness of the rhythm also may be heightened by repeating the bass notes *on the octave* at the accent points, rather than repeating them on the unison. It then takes the shape given in Example 3.



Ex. 3 effect as recorded

When correctly played, with clean-cut, precise repetition of the indicated chords, this last example will be entirely satisfying to the critical ear. And when we do it so, what is the essence of it all? Simply that we are playing chords as they are intended to be played by the composer. The organ is inherently a "chord instrument," and yet it is peculiarly in chord playing that the greatest errors have been made. The older school killed rhythm by promiscuous tying, the younger school has mistaken staccati for repetition. The latter fault came about through an attempt to sum up a complex matter in one short rule. The old pianistic rule was carried over to the organ, and the pupil was informed that repetition meant shortening the sounding duration of the note by one-half.

Now repetition and staccato are two very different things. For staccato we can make rather accurate rules, rules that are apparently broad in scope. But precise repetition demands that three factors be considered. The tempo of the composition, the sensitivity of the action of the organ used, and the degree of connection (legato) desired.

Ex. 4

Example 4 shows this as applied to chord repetition (mere repetition desired, not a staccato effect) at two widely varying tempos. The first measure, at a very rapid tempo, will call for practically a one-half shortening of the touch upon the keys, the second measure, at a slow tempo, will produce an equally perfect and clear repetition of the chord. The point to be gathered is this: Do not confound the actual length of sound with the processes of the fingers upon the keys! Only those of us who have studied these things from the viewpoint of a recording laboratory have any conception of the tremendous variance between what the player thinks he is doing and what he actually does! Train the ear, first, last and always. When the ear hears clearly, the hand soon gathers skill to satisfy the demands made by the ear.

The benefits of a common-sense viewpoint may also be derived from a rational treatment of the theory of correct pedaling. It is almost absurd to plead for equal dexterity in both feet; the need is so obvious that we all accept the principle. And further, this equal dexterity should apply to the matter of using the swell-pedals with either foot. The day of expressionless playing has gone, and will never return. Only those players whose dynamic range and treatment of shading are at least correct will merit approval. All of which leads directly to the question of a modified treatment of the earlier laws of pedaling.

A good deal of water has gone under the bridge since Gustave Merkel spoke of the use of toe and heel as "artificial" pedalling! We no longer accept the continual use of alternate feet as the "natural" or "principal" method of pedaling. In fact the best pedagogy has swung over to the principle that the maximum use of heel and toe is preferable, giving the greatest possible security. And the element of expression has become so vital that it cannot be disregarded when a choice between two methods of pedalling is under consideration. Take for instance such a passage as is shown in Example 5.

Ex. 5

This passage is susceptible of straight alternate pedalling, but we have shown a marking that would probably be given by most teachers of the present time. This is the form marked *a.* It is a comfortable and safe marking. Well and good. But let us suppose that the passage occurred in a composition at such a point that an increase of volume by swell-pedal or crescendo register was necessary; then what? If we fit our crescendo control around our pedalling, a disjointed increase will result, as is shown by the gaps in the swell mark. In fact, instead of a smooth crescendo, the very best the player will succeed in doing will be a series of three rather violent increases. But, if we consider the two factors as part of one problem, and treat the passage as at *b,* we do violence to neither of them. We then have our legato in the phrases, and we also have a "sure" method of pedaling. But, of equal importance, we now have the road clear so that the shading may be artistically controlled.

The student should give thought to all problems arising in regard to preference of shading over traditional pedalling, and *vice versa.* In many cases a preference must be given one or the other. The historical factor may be included also. Swell-boxes are of comparatively recent invention, and the use of many of them in one instrument is strictly a modern development. Therefore, we may in older organ music assign them a position of less importance than in modern compositions. But when a passage confronts the player in which strict two-foot pedalling conflicts with plentiful shading marks, a challenge is thrown to the player and study must be given to "rationalizing" the pedalling to be used.

And now for a few general thoughts on improvement of effect. Young players are prone to neglect the opportunities for featuring the organ afforded by the interludes occurring in anthems and other choir numbers. We need not here repeat the fine advice given by other writers in this department regarding the use of the organ as an accompanimental instrument. But we have observed so many instances of the dramatic force of an interlude being weakened by a neutral treatment that a word in this connection is permissible.

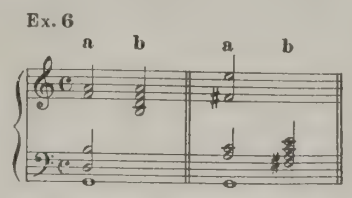
Getting Variety

Variety can and should be obtained in interludes by some of the following methods:

1. By an increase in volume.
2. By a complete or partial change in tone-quality.
3. By a combination of these two methods.
4. By change in tempo, whether indicated or not.
5. By use of solo stops, where chord-distribution permits.

And by various combinations of the above instances.

Probably the most often heard error is that of continuing an interlude with the same tone and volume that has been in use in supporting the vocal passages immediately preceding. This invariably gives the organ a weak and neutral effect. The stops most suitable for use in accompaniments are the less assertive, more neutral ones, such as the Salicional and Stopped Diapason, Melodia or Concert Flute, Clarabella, the softer Diapasons, and these are wonderfully valuable for just such use. But the very nature of an interlude relieves the organ for the moment of its accompanimental duties and allows it to stand squarely on its own merits as a solo instrument. The organist then must adopt a different viewpoint and strive to give all legitimate importance, musically, to the interludes. More assertive strings, 4 ft. Flutes, the inclusion of soft reeds in mezzo passages, and the use of brass imitations when indicated by the nature of the music, even the use of percussion effects such as harp or chimes; these help in lifting the organ to a plane of equal prominence with the voices. At these times it should have this prominence.



The Octave Couplers

Many students, and some older players too, need a word of caution regarding the use of sub and super octave couplers. These couplers, especially when used on the manual on which chords are being played, are a dangerous proposition. Their combined use may be possible on melodies (although even that is open to question), but on chord work it is hardly possible to think of a single instance where both sub and super may be legitimately or artistically used. Either sub or super, individually, may be used at times to good advantages; but the use of both violates all the principles of chord balance. Players upon small instruments are most prone to fall into this error—doing it in an attempt to get more volume from a small instrument than is there to get. The story of the little darky who was asked if he had had too much watermelon comes to mind. His reply was that there was "not too much of watermelon, but too little of boy!" So with this coupler question—there is generally too little of organ proper, and no dosing with the couplers will change that condition. Couplers, when all is said and done, are

only an accessory, sometimes of great value for increasing brilliancy; but they introduce an element of distortion in chord balance which must be taken into consideration. For this reason we urge that sub and super couplers be never used at the same time. The day of loud 2 ft. stops and thick, tubby 16 ft. Bourdons is evidently past; but we must be careful that we do not fall into a worse condition with over-use of octave couplers.

One more detail remains. Let us have more thought given to the smooth turning of pages so that elimination of stumbling or uncertainty may be had. "Getting the pages over" is one of the terrors of the beginner; and yet it is a matter that can be solved in nearly every instance by one of two methods: Alteration of the arrangement of the notes of the chords preceding the turn of the pages, or memorizing of a measure or two on the following page. The first method compresses all of the notes of the chords preceding the turn into one hand, leaving the other hand free for the actual page turning. It will be best done by the student who has had (as should all students) some harmony study; but is not impossible to those who have not had this subject. Chords such as those in Example 6, *a*, become compressed as in Example 6, *b*, thus freeing one hand for page-turning.

Ex. 6

The "purist" may object to the alteration of structure so imposed, but the practical man, placing continuity of rhythm above all else, uses such methods, when necessary, as being the least objectionable of two difficulties.

The second method, much preferable when it is possible to use it, is to memorize a few measures either before or after the end of the printed page, and then to do the actual turning at a point between two phrases where either hand can be spared. This method should be adopted wherever time will permit and certainly should be applied to all solo organ selections. In either event no break or pause of any kind should be tolerated in turning pages. The demands of rhythm are inexorable and the player must work accordingly to overcome mechanical obstacles.

Some Things the Organ Tuner Can Do for You

THE organ contains a greater number of what engineers call "variable quantities" than does any other musical instrument. Pipes, pneumatic mechanism, electric mechanism, wind-supply, console action—all are a mass of adjustable construction. We have often noticed that organists as a class are likely to forget this nature of the mechanism, and more or less patiently "to put up with" some annoyances that could be easily remedied. Here is where the organ tuner enters.

As a class, organ repair men are splendid fellows and more than ready to accommodate an organist whose wishes are reasonable. This is particularly so when the player is obviously one who takes pride in the condition of his instrument and earnestly strives to get the possible maximum out of it. Such a player will find most organ tuners quite willing to aid in making improvements which can be brought about without too great loss of time.

Quick Adjustment

One quickly adjustable detail is the touch resistance of the pedal clavier. After a quite busy recital period we would not hesitate to say that fully fifty per cent. of all organs over one year old are out of adjustment on the pedal key-board. And with older instruments we opine that the percentage would run closer to seventy per cent. There is absolutely no reason for this condition. Pedal claviers are invariably constructed with a spring tension that is made variable in some way; and there is no good reason for tolerating a broken-down, weak tension in the lower half of the pedal-board—just because that happens to be the locale where most of the playing is done! Ask your tuner to regulate your pedal touch so that it is even throughout the compass; and then note how greatly your comfort has increased, and how much more clean-cut your execution has become. Then, too, in the older organs we frequently run across (no joke intended) boards that have become very noisy. This, too, can be remedied, although it is more of a time-consumer than weak spring resistance. The remedy is re-bushing with felt and leather. This takes time, but in many cases your repair-man will eliminate the knock and rattle from one or two exceptionally noisy keys in a few minutes. It is amazing how restful to the nerves such a slight operation can be.

The manuals, as a rule, do their work for many years before re-felting becomes necessary; and by that time a general overhaul is usually in order.

Swell shades (the shutters on the swell-boxes) are one of the components of an organ that most frequently call for adjustment. Either they stick, due to warping or expansion from climatic changes, or they "slam" from wear on the buffer-mechanism provided. Sticking, unless caused by utterly bad design in the first place, can usually be cured with a carpenter's plane at the proper points, aided by a moderate application of grease at the bearings where the connection rods transfer the motion of the pedal, and perhaps on the shade-pins. The actual treatment should be left to your repair-man; but the thing can be done. It might be whispered, however, that one player temporarily cured several squeaking shades by softening a cake of hand-soap in hot water and rubbing the soap on the ends of the shutters at the points where they were chafing against the frame of the box! And he played a pleasant recital instead of a most painful one by five minutes' work with the soap-cake.

Shades that Slam

Shades that slam when opened or closed indicate among other causes a breaking-down of the means provided for stopping the travel of the shutter-mechanism when completely open or closed. Pneumatic "shock-absorbers" are provided by some builders, others use a simple bumper of felt to take up the blow when the shutters are moved quickly. The remedy in the latter case is obviously the same as with noisy pedal keys—renewal of the soft material used as a bumper. The pneumatic or other mechanical absorbers usually suffer from mis-adjustment and can be put back to their original degree of effectiveness—whatever that may have been. A completely noiseless shade-action is almost unattainable, but much can be done to eliminate objectionable noises.

Then consider tremolo troubles! A perfect tremolo is not only "as rare as a day in June," as sang the poet, but even more rare than "roast biff" in a Greek restaurant. We think a lot of many of our American organ builders; but there are a number of them who should be hung, drawn and quartered for using three dollar

"Jesse French, a name well known since 1875."

Mahogany, Polished or Art Finish

Jesse French & Sons Grand

For those who demand tonal supremacy; for those who want an instrument worthy of interpreting the most artistic music, here is unquestionably the ideal piano.

The Jesse French & Sons Grand represents an honest and successful endeavor to produce an instrument as near artistic perfection as is possible of attainment.

Liberal exchange offer on your old piano. Send for illustrated catalog.

tremolos when a good one can be installed for about fifteen dollars! Your tuner can soon tell you which class you have in your organ, and if you have the cheap "box type" the best thing to do is get your church to authorize its replacement by a good one. An organ tremolo has no earthly business to produce anything but a moderately slow wave, of very moderate intensity. Some of the cheap tremolos reproduce the tonal effect of a tonsolitis sufferer earnestly gargling the throat! In fact all too many tremolos are set to beat too rapidly and with too violent a shock to the organ wind. This has no artistic grounds for existence and should not be tolerated, if possible to remedy. However, even with a poor tremolo, a clever organ-man can sometimes reduce either the speed of the beat or its violent effect; even that much change helps matters a good deal. Sometimes moving the tremolo into an adjacent room by inserting a few feet of connecting pipe helps matters tremendously. The writer of these lines has directed that this be done in several cases in late years, and much was gained by the removal of the noisy members.

Finally, surprising improvements can be made, even with few hours of work, in smoothing up the "regulation" of the pipes. It of course would be absurd to expect an organ-tuner to do much tone-regulating when he is employed on the usual type of contract for tuning services; these contracts are usually far from profitable. But often a church can be wheedled into parting with a few dollars extra for special overhaul work, or a little can be done on each visit of the tuner—all leading to a smoother balance of the tones of the instrument. It can truthfully be said that many organs are not correctly regulated, that is, each stop given a perfectly even scale from top to bottom, at the time of installation. Good organ tone-finishers are rare; and the good ones are sometimes hurried by church officers anxious to dedicate on a set date. Pity the player on such an instrument! As time goes on he becomes more and more conscious of the loud spots and the soft spots present in some of the stops, as well as the single notes that "stick out" from their adjacent neighbors. This sort of thing can be gradually eliminated by steps if not at one complete job. And it must be admitted that the player who succeeds in bringing such a thing about takes a real and personal pride in the instrument that he did not and could not have done before the improvement. The wise organist keeps a sheet of paper handy to jot down notes of possible changes. These notes can then be discussed with the organ repair-man and as many things improved as time and circumstances allow.

Unaccompanied Choir Practice

METHODS of rehearsal offer a field for careful study; the young and inexperienced director of choral bodies is usually confronted with problems more difficult of solution than have been any others of his musical life. One error that is frequently made is that of depending too much upon repetition, and more repetition, with a forceful player hammering away at the piano or organ. This is one way of teaching a chorus the notes it is to sing; but it is not one that tends to any real growth in skill as a singing ensemble. Something else, and different, is needed.

In recent years we have heard marvelous effects from a number of fine choral organizations, choirs that had their inception and growth in the singing of *a capella,* or unaccompanied, compositions. It is obvious to any unprejudiced observer that there must be a cause and effect relation between the virtuosity of these ensembles and the type of music used and method of rendering it. Consequently we are led to study the unaccompanied routine of choir practice.

Depending on Instrument

It must be admitted that at the outset such practice, to a choir which has been depending upon an instrument for guidance, will be exhausting both to the singers and the director. That faithful prop, the piano, will be acutely missed! But if the plan is carried on for six rehearsals a change will be noted. Perhaps the greatest benefit of all will be the almost incredible gain in blend of tone; unisons which have been an unblended mixture of conflicting qualities, will pull together into a coherent and firm composite tone. Snappier attacks, cleaner phrasing, more pliant shading, and a far better response to the director's indications, will be speedily noted.

Precisely the same improvements in technic will be noticed in the training of quartet choirs; and the method of rehearsal is equally valuable with all types of choral bodies. Omission of the faithful old piano places a new responsibility upon every singer and gives the ears of each a chance to hear more than the pitch only.

In urging this method of practice upon directors, we would not, however, be understood to be pleading for indiscriminate use of *a capella* numbers before the public. It is primarily urged as a method of rehearsal. There is no denying the fact that the general public is not yet ready for heavy doses of unaccompanied choral work. The thing is a bit rarified for the ordinary audience, as, for that matter, is string quartet and other chamber music.

Time and Care Needed

It takes time and careful approach to develop an appreciation of these things, although it is certainly coming. But, as matters now stand, the public likes to hear and is rested by the instrumental background and interludes of accompanied choral music, just as it gains more from the shifting strands of color in the symphony orchestra than it does from the tonally limited weavings of a string quartet. Musicians must bear in mind that the untrained listener progresses slowly from appreciation of rhythm and melody to an interest in harmony, and much more slowly to an enjoyment of counterpoint. The enjoyment of tone quality, in and for itself alone, is truly the final step in a growing musical perception—and the mass of humanity never get anywhere near to it. Consequently, if we wish our music to be a factor for good in the lives of more than a few of the cognoscenti, we must keep within a range that will permit enjoyment and comprehension.

But as a routine of choral practice, *a capella* rehearsals are of the greatest value. Generally matters are aided, in taking up a new selection to be learned, by having the singers hum their parts softly with the instrument, this more to give them a mental picture of the work as a whole than for any other reason. Then go at it with two parts only, then the other two parts, then combined. The wise director will not always take adjacent parts, that is, soprano and alto, tenor and bass, but will take soprano with any one of the other three parts, and "rotate" them all in like manner. And if he has throaty altos and thin, strident tenors, he will tend to work these parts together rather often, for it is a well-known principle that *a capella* practice tends to an amalgamation of the tones of both, a paring-off of the undesirable traits of both, and leads to homogeneity of the whole tone mass.

Almost needless to add is the fact that in no other way can a true *pianissimo* be obtained. All choral conductors agree on

this matter. Many of the leaders of the greatest choirs demand from their choirs a rehearsal of from a half-hour to an hour, softly and without accompaniment, preceding each public appearance. They well know what they are doing and why! The young director who introduces this system will encounter some obstacles at first; but a little persistence will soon show the benefits of the plan.

This Was a "Laughing Chorus"

ALL the churches united in a temperance meeting at the church where I was chorister, and the house was packed. We had a "Union choir," and our pastor forgot to announce the closing song until after the speaker, an imposing-looking stranger, had announced his text: Matt. 24: 28—"For wheresoever the carcass is, there will the eagles be gathered together." Just then the pastor called the choir's attention to the closing number on the little memorandum slip I had given him before the service began, and the speaker stopped courteously. "Our closing hymn should have been announced," he said, "No. 112, in the new Hymnal." Quickly we all turned to No. 112—"All things are ready, come to the feast."

The Crescendo Pedal

By Marcus A. Hackney

THIS device, which is found now in practically all modern organs, is still viewed with somewhat qualified approbation by many organists of high standing. A *crescendo* produced by its means, is not, and cannot be, a perfectly smooth and artistic swelling of tone, like that produced by the skilful use of the ordinary swell-pedal which opens and closes shutters. No matter how judiciously the order of entry of the various stops has been planned by the builder, there will be decided jolts in the increase of tone as the different registers come into action. Then, too, although it acts on all the manuals at once, the increase in the pedal registration is made to match that of the *Great* manual in particular, and cannot possibly be in proper balance for the weaker ones.

Notwithstanding all these drawbacks, the present writer has found it a useful adjunct to the mechanical equipment of the organ, if treated in the following manner: Accustom yourself to advancing it by quick little short impulses, choosing the time of those impulses to coincide with natural breaks in the phrasing of the music. In other words, use it at such places as you might properly add or subtract stops by hand, if you had a hand at liberty.

Another very important use for it, is in the sense of a less violent "Sforzando pedal." Nearly every modern organ has a pedal which will throw on suddenly the full power of the organ, or again throw it off as suddenly, leaving only what is set by the stops. This effect is so violent, however, as to be of very limited practical use, though Pietro Yon applies it with fine effect several times in his *Romantic Sonata*. Where one desires an effect of this nature, but the full power of the organ would be too intense (the case in nineteen out of twenty times), a quick touch on the Crescendo pedal will answer the purpose exactly. Of course, it is necessary to have some practice with it, in order to feel by instinct just how far to advance it, but this power can be acquired with a little patience.

Another use of it, which I have often found very effective, is where a piece, or a portion of a piece following a rest, begins with a chord which one wishes to make *sforzando*. In this case, set the pedal slightly open, and having the foot already on it, close it with a very quick motion the moment after the chord is struck. This is specially useful in certain orchestral arrangements, putting immense vitality into the effect, if well done.

I have spoken of the inartistic effect of this pedal, if used simply to make a crescendo. There is another grievance which many organists have against it, namely, the great risk of using it by mistake for a swell-pedal, especially in a strange organ. I know of one quite eminent organist who, for this reason, will not use it at all, when giving a recital on a strange organ, but has it detached or fastened shut. Of course, it may be argued that one may make mistakes in the regular swell pedals, where there are more than one, but the evil of such an error is very trifling compared to that of opening the "Crescendo" when one does not mean to do so. It would really be well if builders, instead of putting this pedal in a uniform row with the swell pedals, should separate it slightly and distinguish it by an entirely different form and construction, so that an organist could not help both seeing the difference and feeling the difference with his foot.

"There are several J. S. Bachs. Do you not find it irritating to hear people speak of the immortal master's work as if they were all on one plane of significance? You'd think to hear some of the talk about "Bach" that his music was a standardized product, never varying in its excellence, always of one emotional quality and power."

—HAMILTON C. MACDOUGALL.

"Choir Helps"

By Eutoka Hellier Nickelson

1. Arrange the choir as a "V", with the instrument placed at the furtherest point of "V."

2. Endeavor to select voices that blend nicely, especially should this be applied in quartette, trio and duet singing.

3. There are two tempos for the church hymn.

a-Tempo for Congregational Singing.

b-Tempo for Funeral Singing.

4. A definite time to rise.

5. Have a definite understanding as to the observing of a Pause—whether one or more counts will be allowed. This will preserve the rhythmical flow.

6. Begin on the first word.

7. Mark your anthems, by translating the musical terms into the English language.

Note: This applies to the volunteer choir, as some of the members may not understand all of the musical terms.

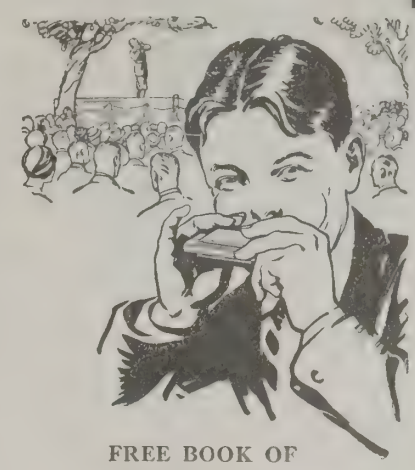
8. Mark the breathing places.

9. Counter melody should be expressive, but kept beneath the voice singing the obbligato.

10. Let us strive for dignity among our choir members, which will add so much to the church service. This will perhaps help to do away with the excessive use of rouge and, too, vanity cases will invariably drop on the floor just at some inopportune moment.

"It is the business of the musician to satisfy his public. His purpose should be to give his hearers pleasure, not to educate them; and I do not believe that a soloist is 'playing down' to his audience if he includes arrangements of works which possess the so-called 'heart appeal.' I do not consider that an arrangement of 'Mother Macree' or of the 'Barcarolle' from 'Tales of Hoffman' reflects upon the taste of my audiences. . . . Such works often touch the heart, and is not that, after all, the purpose of music?"—ALBERTO SALVI.

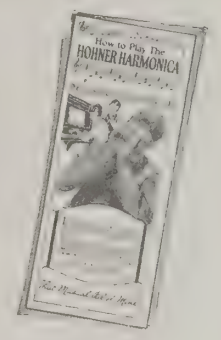
The Child's Approach to Music Study



To win the enthusiastic interest of the boy or girl at the very outset has always been one of the biggest problems in music teaching. Leading educators agree, today, that this can be best accomplished by enabling the youngsters to *make music in their own way* with the aid of that universal musical instrument—the Harmonica. After they have become proficient on this instrument they will take naturally and enthusiastically to the study of the piano, violin and other musical instruments.

A Hohner Harmonica for the boy or girl will help solve the problem. With the newly perfected Chromatic Harmonica they can play the complete chromatic scale. It is not a toy, but a real musical instrument which will promote self-expression, rhythm, and accuracy, and lay the foundation for serious musicianship.

Hohner Harmonicas are endorsed by such prominent group educators as—



Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

FREE BOOK OF INSTRUCTION

CHICAGO, ILL.

Why Was She the BRIDE?

At last the hour arrived, the hour she had long dreamed of—just a few minutes, a few words and he was hers forever. He chose her, in spite of the fact that there were many others more beautiful and talented. Her secret was simple. Thirty days ago she had read an amazing new book entitled "Fascinating Womanhood," which shows how any woman can attract men by using the simple laws of man's psychology and human nature. She could just as easily have fascinated any other man. You, too, can have this book; you, too, can enjoy the worship and admiration of men, and be the radiant bride of the man of your choice. Just cut out this ad, write your name and address on the margin, and mail to us with 10 cents. The little book outlining these revelations will then be sent you, postpaid in plain wrapper. Knowledge is power. Send your dime today.

Organ and Choir Questions Answered

By Henry S. Fry
President of the National Association of Organists, Dean of the Pennsylvania Chapter of the A. G. O.

QUESTION. Where was the first organ in the United States located? Where did it come from? Who built it?

ANSWER. The history of the organ in America probably begins with the importation of the instrument known as "The Brattle Organ," so called after Thomas Brattle, Treasurer of Harvard College, who willed the organ to the Brattle Square Church, and who died in 1713. The donor feeling that there might be opposition to the acceptance of the instrument, attached a proviso to the bequest that the offer be accepted within a year after his death. In the event of its not being accepted by the trustees of the Brattle Square Church, the instrument was to be offered to King's Chapel, the Boston representative of the Church of England. The donor also stipulated that an organist should be secured, a "sober person to play skilfully thereon with a loud noise." The Brattle Square Church having rejected the instrument, it was accepted, after some hesitation, by the congregation of King's Chapel, Boston, and erected in 1714, when a Mr. Enstone, an Englishman of Tower Hill, London, was invited to become organist at a salary of thirty pounds a year. The instrument remained in use in King's Chapel until 1756 when it was purchased by St. Paul's Church, Newburyport, where it was in use for eighty years. It was next purchased by St. John's Church, Portsmouth, N. H. In 1901 the instrument was brought to Boston and placed on exhibition with other musical instruments in the new Horticultural Hall. We do not have at hand information as to the builder of this organ, but it was imported from England and was first installed in the home of Thomas Brattle. We cannot give exact date of its original installation; but, under date of May 29, 1711, the Rev. Joseph Green notes in his diary: "I was at Mr. Thomas Brattle's; heard ye organ."

QUESTION. Is the Austin Organ of 283 speaking stops in the Public Ledger Auditorium (Philadelphia) completed? Could you give the important facts of the construction, and the names of the stops and couplers?

ANSWER. This organ has never been completed. The original intention to place the instrument in the Public Ledger Auditorium was abandoned and it was offered to the City of Philadelphia, but up to the present time no "home" has been provided for it, which accounts for its non-completion. Since it has not been completed, the final details of construction could not be given accurately, as the "lay-out" would undoubtedly be different from that originally planned.

QUESTION. Please send me a list of the best organ builders in the United States. Name and underline the very best or put the names in a row, the best at the top and the rest following as to their quality of work.

ANSWER. Obviously the Editor could not give the list you request in the columns of this department. There are a number of good builders in the United States, each differing in details of construction, tone quality, and so on, but excelling in certain points; and, as organists differ in their preferences, it would be unfair to the builders of the country for the Editor to express his personal preferences, and arbitrarily name any one as the very best instrument. Would suggest your investigating the products of the various well-known builders and forming an opinion based on your experience.

QUESTION. Will you kindly give a list of the terms frequently used in French Organ Music, together with the equivalent in English?

ANSWER. Directions for the registration of French organ music cannot always be literally transferred to the organs in this country, with good effect. A knowledge of French organs will be of much assistance in adaptation to American instruments. We will, however, give a list of some of the more frequently used terms and their meaning in English:

Positif. (Pos.)	Choir
Récit. (Réc.)	Swell
Grand Orgue (Gd. O.)	Great Organ
Pédales (Péd.)	Pedals
Anches (Anch.)	Reeds
Fonds	Foundation Stops
Grand-Chœur	Full Organ
Hautbois	Oboe
Jeux Doux	Soft Stops
Jeux Forts	Heavy Stops
Montre	Open Diapason
Octavin	Harmonic Picolo, 2′
Plein Jeu	Mixture
Tirasse (Tir.)	Coupler
Ajoutez	Add or Draw
Boite Fermée	Swell Closed
Boite Ouverte	Swell Open
Mettez	Draw
Otez	Put In
Accouplé	Coupled

The term "Anches préparées" meaning "Reeds ready" (or Reeds prepared) will also be found frequently; but the term is not often applicable to American organs, as it indicates the use of the Ventil System, used in French Organs, whereby the stops are drawn in advance, but are not effective until the Ventil pedal is put down, releasing the air necessary to make them speak.

Much information in reference to French organs may be found in the excellent book *The Organ in France* by Wallace Goodrich.

QUESTION. I think that it would be a good idea to publish in each issue of "The Etude" a certain number of the most common organ stops, stating very briefly their shape, size and construction. Also give good substitutes.

ANSWER. The matter of including details of construction of organ pipes in this column will be given consideration.

Q. In the November ETUDE you named some synthetic stops found in the Atlantic City High School organ. Are there any other synthetic stops besides those named?

A. The list given did not include *all* the synthetic tones available in the Atlantic City organ, the following additional ones also having been found in that instrument:

Clarinet—Vox Humana (Echo) 8′ and Spitz Spitz Flute 12th (unit).

Saxaphone—Clarinet 8′—Open Flute 8′ and Kinura 8′.

English Horn—Violoncello (String Organ) and Tibia Minor 12th (unit).

Cor Anglais (pp.) Viol Sordo (Echo) 8′ and Spitz Flute 12th.

Quintadena—Any Flute and its own 12th.

Orchestral Oboe—Violin (String Organ) 8′ Tibia Minor 12th and Viol 17th.

In the production of these synthetic tones the unisons (8′) must have considerable harmonic development, while the off unisons (12th -17th, etc.) must be free from harmonics. The scales of the component ranks influence the effects, which are best obtained when the unisons and off unisons are in separate swell boxes, but placed close together.

"Anthems are sometimes introduced into church because they keep the choir in a good temper."—*Mr. Sydney Nicholson.*

Beautiful Lips
Always proclaim the fact that their possessor gives thought to her personal appearance and helps Nature by the judicious use of a pure lip pomade.

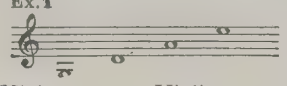
The Violinist's Etude

Edited by ROBERT BRAINE

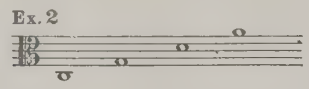
It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"



Accordatura and Scordatura

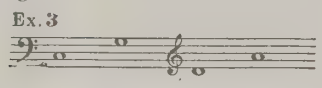
By Orlando A. Mansfield, Mus. Doc.

ONE of the most interesting points in the study of words is the difference caused by the omission, addition, or alteration of a letter, or letters, in a given term. For instance, by the first-named process revolution is reduced to evolution; by the second method aught is changed into naught; while the final procedure is abundantly illustrated, so far as the Italian language is concerned, by the title of this short article.



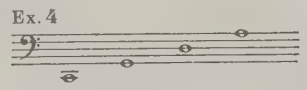
Accordatura, or, to give the term an Anglicized form, Accordance, has been well described by Dr. Theodore Baker as "The series of tones according to which a stringed instrument is tuned." As most of our readers are aware, the Accordatura for the Violin is

Ex. 1



for the Viola or tenor Violin,

Ex. 2



sounding

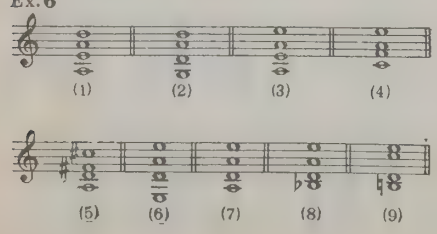
Ex. 3

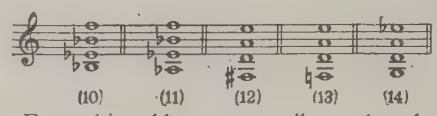
a perfect 5th lower than the Violin; for the Violoncello.

Ex. 4

an octave lower than the Viola; and for the double bass of four strings,

Ex. 5





all of which later strings sound an octave lower than the notes written, the double bass being what is known as a transposing instrument, one in which the sounds produced differ from those actually written.

To some of our readers it may come as a surprise to learn that any other tuning has ever been employed since the accordatura of the stringed instruments of the modern orchestra was fixed at the time of their establishment, early in the 17th century. But while it is true that the accordatura previously quoted has remained the general rule, there have been occasional departures therefrom. In all but two or three instances these licenses have been taken in the accordatura of the Violin, and here almost always, for solo purposes and effects. This somewhat irregular method or alteration of the regular tuning has been termed *scordato,* an Italian term meaning, primarily, discordant or out of tune; but, secondarily, tuned contrary to orthodox procedure. Then the substantive *Scordatura* would signify "the alteration of the ordinary accordatura of a stringed instrument for the attainment of special effects" (Dr. Baker).

The fact that the Scordatura has been more frequently employed in violin tuning that in the case of any of the graver stringed instruments is due to the lighter construction and greater elasticity of violin strings as compared with those of the violoncello or double bass. Perhaps our best plan will be to show, in fairly correct chronological order, the *scordature* which have been adopted by some of the older and of the more modern writers, numbering these in order to facilitate reference.

Ex. 6

From this table we can easily see that the fourth (or G) string of the violin is the one most frequently altered—eleven times out of thirteen; that the E (or first) string exhibits less than half this amount of departure from normal tuning, being altered only five times out of thirteen; also that the other strings show still less variation, the D (or third) string being altered only four times out of thirteen; while the A or second string displays the least change of all, or three times out of thirteen.

Assigning each of these abnormal tunings to one or more composers, we find the *scordature* Nos. 1 and 2 employed in two of the Sonatas of Heinrich von Biber (1644-1704), the first German composer "of violin music of any artistic worth at all," a man of such extraordinary prominence in his profession that, in 1681, he was raised by the Austrian emperor to the rank of nobility. Some authorities have asserted that he was the inventor of the scordatura on his instrument, but most probably it is derived from the tuning of the treble or discant viol, the six strings of which were tuned thus:—

Ex. 7

The third method of scordatura shown in Ex. 6 was very popular in some of the old Scotch reels and dance tunes and was probably utilized because affording additional facility in playing in sharp keys and adding more brilliancy of effect to the lowest notes of melodies written therein. Giuseppe Tartini (1692-1770), the founder of the Paduan school of violin playing, and the discoverer of what are known as combinational tones in musical science, employed this tuning in at least one of his sonatas; while his fellow countryman and contemporary, Pietro Castrucci (1689-1752), a pupil of Corelli, who is supposed to have died in Dublin and was at one time the leader of the orchestra in Handel's theatre in London, introduced this scordatura in a fugue from one of his violin sonatas.

An examination of the fourth tuning of our series clearly shows, from the introduction of the interval of a third—from F to A—and the placing of the other strings a fourth and fifth apart, the lingering influence of the old viol accordatura. This raising of the G string to C—a perfect fourth—is the sharpest tuning of that string. This particular one is from the so-called *Enigmatic Sonata* of Pietro Nardini (1720-93), the devoted pupil of Tartini, and the greatest of the Tuscan violinists.

In our fifth example we again see the viol influence in the interval of the third, from D to F sharp, between the middle strings, and in the lowest depression of the E string—a minor third, to C sharp, while only the D string remains unaltered. This example is from the pen of one of Nardini's contemporaries, Emanuele Barbella, a Neapolitan composer who uses this scordatura in his *Serenade.* It is also employed by Bartolomeo Campagnoli (1751-1827), a pupil of Nardini, and afterwards a friend of Cherubini, in his *Notturno,* a movement written in imitation of the Viola d'Amore, a tenor viol of six strings tuned to the chord of D major and furnished with what were known as "sympathetic strings," that is, strings which were not played with the bow but merely employed to reinforce by their vibration the sounds produced by the normal strings of the instrument.

The Sixth Tuning

The sixth tuning of our series is remarkable for the depth to which it carries the G string—right down to tenor E in the third space of the bass clef—a minor third lower than normal, the largest depression of the fourth string our series supplies. It would require a very stout string to produce anything like the bass effect intended by the composer who employed it, Antonio Lolli, an extraordinary performer of the eighteenth century who "appears certainly also to have been," says Herr Paul David, "the type of an unmusical, empty-headed virtuoso, and in addition a complete fool." Lolli employed this scordatura in one of his show pieces, of which only the violin part was his own composition, and this was "corrected, furnished with accompaniments, and brought into shape, by another hand."

We next find, in No. 7 of Ex. 6, a scordatura favored by several writers of the nineteenth century, among them, De Bériot (1802-70), the husband of Malibran and the teacher of Vieuxtemps, who enployed it in his second *Air Varié,* Op. 2; Mazas (1782-1849), pupil of Baillot at the Paris Conservatoire; F. H. Prume (1816-49), a Belgian violinist, sometime a professor of the violin in the institution last mentioned. The scordatura we are now discussing requires but the alteration of the G string, and that only raised a tone. Its use would facilitate execution in sharp keys, and give brilliancy to melodies lying within its compass.

(To be concluded next month)

Nomenclature of Strads

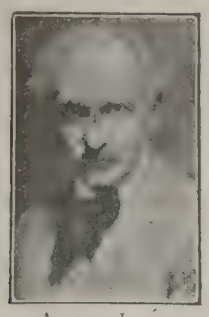
THE exquisite grace of outline of the violin, as perfected by the masters of Cremona, as well as its marvelous coloring and limpid varnish, to say nothing of the almost miraculous tone effects possible, have resulted in the violin being invested with a halo of romance, as is the case with no other musical instrument. Innumerable legends and fanciful stories have sprung up about the violins of Cremona, many of which are pure fiction.

A subscriber writes: "I have heard that someone wishes to recover three genuine old Stradivarius violins, with certain names, as I believe; in fact, I know that he named his violins, or some of them at least. Do you know who it is that wishes to recover these valuable old specimens of Antonius Stradivarius, and by what name they are known, if they were named by the old master? I do not know whether this party lives in this country or foreign lands. If you know or can find out for me, will you please let me know as soon as possible?"

Our correspondent is respectfully informed that not one party alone, but the whole world is looking for genuine Stradivarius violins, and they are looking not only for three, but also for as many as they have money to pay for. In other words, violinists, collectors and dealers are combing the whole world with fine tooth combs for "Strads," which are not only the finest violins, from a musical standpoint, yet made in the world, but which have also a stable and constantly increasing value. A "Strad" in good preservation is worth on the American violin market today, from $10,000 to $25,000; and I know of owners of some of the greatest Strads who hold the instruments at from $50,000 to $100,000, although I have heard of no sales at that price.

Earlier Prices

When I was a boy a good specimen of Stradivarius workmanship could sometimes be bought as low as from $2,500 to $5,000, with other Cremona violins at similarly low prices. One of my violin teachers during my boyhood bought a splendid Carlo Bergonzi in Berlin for $800. I find a similar specimen of Bergonzi listed in a recent American catalog at $12,000. Makes one think of the advance in corner lots in Chicago, does it not?



There is an unlimited demand for Cremona violins of the first rank; but they must be undoubtedly genuine, and in good preservation. The demand comes not alone from violinists, who wish to use the violins professionally, but from dealers who expect to sell them again at a profit, and from collectors, who love them for their beauty, rarity, and value. These collectors hunt for old violins as other collectors collect rare stamps, coins, pictures, books, tapestries, and objects of art of all kinds. There are many private collections of rare old violins, scattered all over the world, the values of which range from $100,000 to $300,000 or more. These collectors are constantly on the lookout for rare specimens made by the great masters of violin-making. They seek especially for violins in a perfect state of preservation, and which have been owned and played on by famous violinists, or which have been at one time in the possession of royalty, or famous personages. The late General Hawley, of Hartford, Conn., and D. J. Partello, of Washington, were two of the leading American collectors who had world-famous collections of violins, which have since been sold to dealers.

Prices on the Rise

The prices of Cremona violins of the first rank have been constantly mounting for the past fifty years.

The most famous violins of Stradivarius and Guarnerius have been named by their owners at various times. Thus we have the "Dolphin" Strad, the "Betts," the "Duke of Edinburgh," the "Messiah," the "Spanish," the "Ludwig," and so on, all Strads. Of the Guarnerius, we have the "King Joseph," the "Duke de Campolice," the "Jarnowich," the "Spanish Joseph," and others. These names were not given the violins by Stradivarius and Guarnerius, but by comparatively modern violinists, collectors and dealers. As far as known the makers did not give special names to their violins.

So it would seem that the story that our correspondent has heard, about some party who is searching for three Strads with special names given them by Stradivarius himself, is simply one of the fanciful stories which are so often heard.

GUSTAV V. HENNING

2424 Gaylord St., Denver, Colo

The Conductor

By Dr. Perry Dickie

To drill and conduct an orchestra composed of amateurs instead of professionals requires a person of an entirely different temperament. In the former the display of diplomacy and tact are essential at all times, and any loss of patience must never be shown. the amateur musician stands high on a pinnacle of dignity and is quick to resent anything savoring of disrepect. It is necessary for the conductor of an amateur orchestra to understand fairly well every instrument played in his organization, so that corrections or suggestions are backed by a knowledge that will carry weight when they are made.

To be a musically successful conductor of any orchestra, in fact, be it professional or amateur, requires far more than an ability to wave a stick, no matter how gracefully or energetically it is done. In fact, the conductor must be willing to carry on a never-ending work of preparation "behind the scenes" if artistic results are desired from the organization.

We have always favored and advised as preferable a talented amateur for conductor for an amateur orchestra. Such a one may not in all cases possess the ability of a first-class professional conductor, still he would have more of this than a poor one of the latter. However, the amateur would be more likely to sympathize with his environment and would regard it from an aspect that a professional would not be likely to do. Furthermore, we have always been partial to a pianist for conductor of the orchestra, not only amateur but professional as well, as being better fitted to carry on this work. The study of the piano gives one a far broader knowledge of music than is possible with any of the one-part instruments, with which the horizon is of a necessity more circumscribed; unless it is a case of one playing the piano as well as another instrument. It is a matter for congratulation that in some of our first-class music schools the study of the piano is required for all pupils of orchestral instruments.

The Composer's Orchestration

A point that the conductor should bear in mind is that the composer or arranger has spent more of his time over the orchestration than on the writing of the composition with the intent that certain instrument or their combinations are to be heard; hence it should be his aim to follow this out and give them prominence. It would seem that too many of our orchestral conductors, and not all amateurs either, do not realize this fact, from the tone monotony they manage to instill into their conditions and interpretations of orchestral works. This is especially noticeable in the music of our theatres, where the 'cello—when they have any—are never heard and the clarinet—if there is one—is only detected by a few occasional notes heard above the others. We have in mind a prominent opera orchestra in this city, many years ago, where the oboes were placed under the stage and never a note could one hear from them even when called for solo parts. This was the most striking display of an orchestral homogeneity with which we have ever met. When it is forgotten that the main charm of the orchestra is the variety of tone qualities that are obtainable from it, we have that which is not a bit better than an automatic machine. To our mind, in the matter of strong orchestration we would much rather hear even too great a prominence of such parts as the 'cello, oboe, clarinet, bassoon and horn, than not at all or even indistinctly, and thus perhaps lose what might be most delightful bits of orchestration, which are present in the classics as well as music of the higher class of the present day.

Of course, it should be realized that to show off orchestration to its best advantage is an art not possessed by all and which probably accounts for the reason why it is not more often heard. We would say, however, that, in rehearsing, to obtain the full orchestral effects, except in the case of an experinced conductor, one can never intelligently distinguish the orchestration when standing in the midst of the players. We therefore advise the non-experienced leader to stand away at some distance from the orchestra, having someone else to beat time—to criticise and direct and thus have some idea of the results.

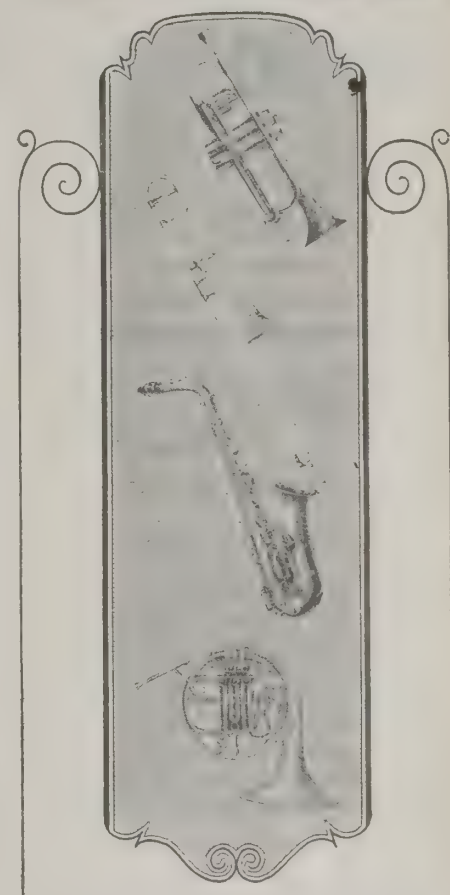
The Choice of Music

Choosing music for the amateur orchestra requires a far greater amount of judgment and discretion than for a professional organization where the players—at least in the better class—are to play any part put before them, no matter how difficult it may be.

It is a very bad policy, with amateurs, to attempt music that is technically beyond their ability to play; since, no matter how much it may be rehearsed and worked over, it never will improve beyond a certain stage and that not very high. Neither, on the other hand, should a too simple class of music be played, as it will fail to give an incentive to work. We would suggest that, as the orchestration of a piece plays a most important part in its effectiveness, when the music be procured of publishers of high standing—even if it costs a little more—who employ musicians for this work who are paid prices sufficient to insure musically artistic arrangements. It should be borne in mind that when an article is too cheap there cannot be afforded a fair price for its production. This applies to music as well as to anything else. It is always well to have music sent on approval, to be tried over with the orchestra before accepting it.

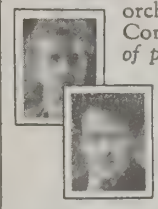
Upon the class of music to which an amateur orchestra aspires depends to a very great extent the artistic success of the organization.

Playing popular trash is destructive to all possibilities of any artistic future for such an organization. In fact, we invariably refuse to give any attention to an orchestra that contemplates playing this kind of music, as unworthy of any trouble; as the kind of people who listen to it will never know the difference between good and bad playing, and therefore it matters not what they do.



In the music chosen we would suggest a certain number of pieces containing long-sustained notes, as it is from this that tone quality is derived, which is so important in all orchestral music and the first aim of all musicians. We have always advised a thorough study of waltz movements as a very valuable means of bringing about a unanimity of playing in the ensemble. It is, however, rather a difficult matter to specify what music an organization should play, without knowing and judging of their ability. The advice we give must be on general principles. Much must be left to the judgment of the conductor; if he is a good one then is the orchestra thrice blessed.

Rehearsals



We are opposed to taking up time at the regular rehearsal for any individual or group drilling or coaching. The usual amount of time for rehearsing by the amateur orchestra—barely two hours a week—is little enough and too little to spare any of it for work which should be done at another time. The whole period should be devoted entirely to the ensemble.

Symphony

Conductors Choose Conn Instruments

You will profit by following the example of the foremost symphony leaders, a few of whom are pictured here, as well as the concert band and popular orchestra players who prefer Conns for *beauty of tone, ease of playing, and reliable action.*

LOWELL L. TOWNSEND, Director.

Faulty intonation is a very common weakness with amateur musicians and is largely due to insufficient scale practice, which is a most effective means of overcoming this trouble.

Vacations

The question of vacations for music students has been agitating the minds of some of us with the usual differences in opinion.

In regard to this matter we would say that, granted that some reasonable let up in the work of a student practicing five or six hours a day during the year is advisable and should be availed of when possible, when this idea is advanced for the average child laboring from half an hour to one hour a day, with usually generous periods of rest during this time, surely there could not be any very alarming conditions arise from such strenousity even if the practice were continued throughout the whole year, of course allowing resting on Sundays.

Vacations, such as are advocated by the pros on this subject, are never conducive to progress; and if for any too great length of time—especially as in the case of laying off for the whole summer as is indulged in by children and unenthusiastic amateurs —are positively disastrous to any future possibilities of ever attaining to anything in music. We grant that, in the case of one who has acquired a perfect technic and reached a high stage of musical ability, such a laying off for even very long periods, years in fact, they can take up their work again and, after a certain amount of brushing up, show no signs of rustiness. Sometimes it would seem that they can even do better than before their rest. This, however, is not a safe precedent for the amateur to follow.

It may not be known to all, but is a fact, nevertheless, that the best results from musical practice are obtainable in warm weather when all the tissues of the body muscles, tendons and ligaments are in a state permitting of a greater flexibility and therefore capable of receiving the greatest amount of benefit from practice. This is a point to be borne in mind by the advocates of complete summer inactivity.

This idea has been largely adopted and carried out by many of our amateur orchestras, in discontinuing their rehearsals of a scant two hours a week, during the summer months, laying off entirely, some even going so far as not even to practice. This is, of course, absolutely stultifying and it is no wonder that the emanations from such cannot properly be characterized as "the harmony of the spheres," to express it mildly. Our advice to the members of such of these organizations as wish to become really musical is that they keep up their rehearsals, even if only two or three attend; as they will be the gainers every time.

We suggest that no further time should be spent on a piece at rehearsal, whenever there is any sign of its becoming monotonous to the players. It is very hard to be interested in what one has had enough of for the time. Therefore, stop when interest seems to be flagging; lay the piece aside and take it up another time.

In taking up a new piece we advise playing it through by the whole orchestra at first, in order to give them an opportunity to obtain some idea of it as well as for the conductor to ascertain the weak points to be given attention at private drills. We advise at rehearsals always starting with something well known to all—so to express it, for limbering up purposes as well as to give an impetus of a good beginning. This same applies to closing with a piece with which they are familiar. Whatever new work is to be undertaken should be at times between the above. It is well to make it a point at each rehearsal, when new pieces are not taken up for study, to read at least several, say of those sent on approval and which if satisfactory can be retained and laid aside for future study.

The Ensemble Orchestra (So-Called)

We receive frequent inquiries as to the advisability of the amateur orchestra being formed on the lines of the so-called "Ensemble Orchestra" of the music catalogues, inasmuch as we advise the omission of brass. This combination is composed, when in its theoretical entirety, of first and obbligato violin, 'cello, double bass, piano and harmonium (reed organ, which is usually omitted). In our opinion we would say that in most cases we have found them to be most decidedly monotonous to hear, even when composed of good professional players; and with amateurs they would be naturally still more so. However, where the 'cello part in these is permitted to be prominent, these combinations can be pleasing for a time; but ultimately the monotony of tone palls on the ear and enough becomes as good as a feast, in this particular. It is a modification of this combination that we hear so frequently in our theatres, and it is probably due to the dullness that we can bless the wisdom and good tastes of those of their managers who have abolished music entirely from their theatres, some giving as a reason that it was destructive to the illusions on the stage. It has always been a theory and presumption that the drama and music went hand in hand; but we must agree with the above parties that this is not the case with what is now dished up to us as dramatic music.

However, the "Ensemble Orchestra" can be made interesting and even enjoyable by adding to it some new tone qualities. A clarinet, alone, will make a change that one would hardly believe possible without trying it. In addition to this a flute and pair of tympani as well as using the organ, as it is intended it should be, would convert a very monotonous affair into a very pleasing orchestral combination.

Sight Reading

A valuable measure for improving the intonation, for not only amateurs but professionals as well, is by learning to sing from note. This would apply to all in-instruments and especially those in which the note is formed by the player. Thus, by singing it before playing the part on the instrument—although some can do so mentally, simply looking at the music—so impresses it on the mind as to enable a much more intelligent rendering than in simply making it a mere mechanical process, as some are apt to do. We would say that while this is most effective in promoting the ear perception of the player, of a necessity one must be able to distinguish the difference of tones to obtain any benefit from it.

Over-Time

By Edmund Lucaszewski

When sitting down to practice, have a sheet of paper and a pencil for convenient use. Allot a half-hour of work.

In the course of practicing, none of "us humans" is perfect enough to do one-half hour straight without an error in time, notes, expression, fingering or some feature of playing. So, for each little mistake jot down a mark. Each mark is equivalent to one minute of practicing. If you are not careful, an hour and half of practice will be necessary and not all the minutes yet made up. This to promote watchfulness.

Pianologues

The clever pianologue merits a place on every entertainment program. For either stage or home use, we especially recommend the following as *musical readings* or as vocal solos.

Dreamin' in de Twilight	(Negro)
The Half O' Me Kingdom	(Irish Dialect)
Hats	(Humorous)
Keep a Smilin'	(Inspirational)
The Ladies' Aid	(Humorous)
The Lady Who Lives Next Door	(Humorous)
The Missionary Barrel	(Humorous)
A Perfect Little Lady	(Humorous Juvenile)
Speak for Yourself, John	(Swede Dialect)
Style	(Humorous)
Tony on da Phone	(Italian Dialect)
The Youngest in the Family	(Humorous Juvenile)

In full sheet music form—price, postpaid, each **35c.** The set of "Etude 1926 Collection," **$3.50.** Large catalogue of entertainment material on request.

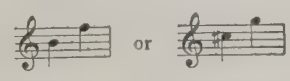
Touch In Violin Playing

By Charles Knetzger



We hear much about touch in piano playing; but to the violinist a sense of touch, or muscular feeling, is of equal importance. For the violinist the eye cannot serve as a guide, and his movements are directed entirely by the sense of touch or feeling. After he has acquired a correct position of the left hand, the fingers must be trained to fall automatically on the right spot. At first the ear must determine whether the pitch of the tone is correct; but a student who is being correctly trained will soon acquire the habit of placing the finger on the right spot without necessitating a backward or forward shift.

For this purpose the pupil must have an accurate knowledge of whole and half-steps, and intervals of all kinds, so as to be able to measure distance from one tone to another accurately. If, for example, his first finger is on B flat on the A string, and the next note is D on the same string, he would instinctively place his finger higher for the D than he would if his first finger were on B. So also if F natural on the E string is followed by B natural, he will stretch his fourth finger so as not to produce B flat.

In shifting from one position to another it is particularly important to train the fingers so that the movement will be neither more nor less than required. This will necessitate much practice, until finally the movements become more or less automatic.

The piano player has a much larger area for measuring distance than the violinist, but in both cases the sense of feeling as to how much movement is to be made is of equal importance.

In order to learn to gauge intervals correctly the first requisite is that the pupil keep his fingers, especially the first finger, on the string, unless there is a reason for raising it. One of the chief reasons why beginners play out of tune is that they have their fingers up in the air instead of on the strings. Consequently they do not learn to measure distances, nor do they distinguish properly between whole steps and half-steps. The interval of a diminished fifth, for example,

in which the same finger executes the two tones on adjacent strings, is very often a stumbling-block, because the pupil does not move the finger up or down a half-step as the case may be. Beginners should have special drills on these diminished fifths, which so often mar a piece which is otherwise creditably played

Violin Questions Answered

By MR. BRAINE

Farming and Violin-Playing

A. F. O.—You do not state exactly the nature of the farm work you are obliged to do. However, if it is of such a heavy character that it stiffens the muscles of the fingers and arms very badly, it would no doubt interfere with a successful performance of difficult technical passages in violin playing. However, as you say you expect to play only light music of no great difficulty, you might succeed in playing music of that character well enough to get a good deal of pleasure out of it.

"Strads"—Zanetto

V. W. Z.—There are millions of violins scattered all over the world, with Strad labels pasted inside, exactly like the one in your violin. All but a few hundred of these violins are imitations of the original. Genuine Strads are worth a large amount, and good imitations made by artist violin makers are somewhat valuable. It is impossible to give an opinion on your violin without seeing it, just as it would be impossible for a banker to give an opinion as to whether a bank note was genuine without seeing the note.

Peregrino Zanetto was a violin maker of the Brescian school (Italian) who worked at Brescia from 1530 to 1610. He made some excellent violins, which of course are not to be compared with those of the great Cremona makers. 2—Bauer's *Practical History of the Violin*, is published by the H. Bauer Music Co., New York, N. Y.

"Ole Bull" Violin

R. A. M.—I do not think it would be possible to trace the maker of your violin, solely on the strength of the fact that it has the words "Ole Bull" stamped on the back. "Ole Bull", the name of the distinguished Norwegian violinist, is used simply as a trade-mark, and the violin is evidently a factory fiddle such as are turned out in vast numbers by obscure German makers in the Mittenwald.

Tone Improves.

G. S. B.—A violin made out of proper wood, by a first rate violin maker, according to the correct principles, as worked out by the great violin makers of Cremona, is reasonably certain to improve very greatly, if played by good violinists, after one hundred years of use. The theory is that age and constant playing produce a beneficial change in the structure of the wood, although some authorities deny this. The violin should at all times be kept in its case, in a dry place and carefully protected from great extremes of temperature. 2. Maybe the little work, *How to Choose a Violin*, by Honeyman, would interest you. 3. There is no reason why well-made violins should suffer a loss of tone, and every reason that they should improve with age and by being "played in" by a good violinist who plays in good tune.

Beautiful Melodies.

J. K. F.—*Traumerei*, by Schumann; *The Swan*, by Saint-Saëns; *Largo*, by Handel; *Adoration*, by Borowski the *Broken Melody*, by Von Biene; *Song of India*, by Rimsky-Korsakoff; are all beautiful melodies well adapted for solo violin playing. Successful rendition of these compositions depends on a beautiful tone and fine bowing; and they are marvellously effective if well played.

Violin Obbligato.

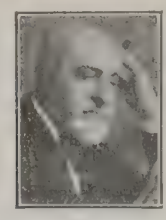
G. N. J.—A violin obbligato part is one which is arranged to be used as an accompaniment to a solo voice, or another instrument, in duet style. Obbligato means that this obbligato part *must* be used to produce the proper effect. A violin part, *ad lib.*, means that the part may be either played or omitted.

Instruction Most Important.

G. T. C.—From what you write of your circumstances, I think it would be much wiser for you to pay $100 for a violin, and $400 for lessons, than to spend your entire $500 for a violin, and to try to learn without a teacher. Good instruction is the most important thing during the first few years.

Get Dictionary.

J. K.—Get a good musical dictionary, and make it a point to look up all the words in your music which you do not understand. Do not depend on your teacher for everything.



Identifying Makers.

D. F.—It is quite impossible to tell you in a few words how you can distinguish the violins made by the great violin makers from skilfully made imitations of their handicraft. It takes years of experience to qualify as a good violin expert, and one must have had the opportunity of handling and studying hundreds of genuine old violins by the various great makers. An expert judges by the wood, the varnish, the model, the cut of the scroll and sound holes, the purfling, the general workmanship, the tone, and many other things characteristic of the maker. 2—Buyers and collectors of old violins, if they know their business, are not often "taken in" when they buy valuable old violins; for if they have not sufficient knowledge of the instruments themselves, they get the opinions of good experts before buying. 3—Yes, a violin branded on the back with a trade mark, "Hopf," "Sarasate," "Stainer," "Ole Bull," "Conservatory," and so on, is invariably a factory fiddle of doubtful value.

Genuine Gagliano.

J. W. C.—Your violin is no doubt a genuine Ferdinand Gagliano, since you have a guarantee from W. E. Hill & Sons, of London, to that effect. It is impossible for me to set a value on your violin without seeing it, since of two violins by the same maker one may easily command two or three times the price of the other, because of superior tone, preservation and so forth. I find two specimens of this maker listed in recent catalogs of leading American violin dealers. One dealer offers a specimen of 1781, for $1500; another dealer a specimen made in 1757, for $2200. Your best course is to have your violin appraised by a well-known expert.

"Everything technically which develops *freedom, case, delicacy,* and *strength* of the bow arm works toward *beautifying the tone."—Paul Stoeving.*

LEOPOLD AUER GRADED COURSE *of* VIOLIN PLAYING

By LEOPOLD AUER

The sensation of the year! At last the teacher of Heifetz, Elman, Zimbalist and many other celebrities, has written a violin course, the most important of its kind ever issued.

In Eight Books, Each $1.00

Book
I —Preparatory Grade
II —Pre-Elementary Grade
III —Elementary Grade (First Position)
IV —Elementary Grade (First Position—continued)
V —Medium Advanced Grade (Higher Positions)
VI —Advanced Grade (Higher Positions—continued)
VII —Difficult Grade (Advanced Bowing)
VIII —Virtuoso Grade

In preparation: Leopold Auer Graded Course of Ensemble Playing

Another Road to "Letterville"

By Sylvia Weinstein

BEGINNERS are more interested in the keys of the piano than the pages of the music book. So the keys may be used to fix in their minds the letters and their proper use.

First teach the names of the keys in their regular order. Then have the pupil to place the right thumb on E of the first line of the Treble, the second finger on the G just at the right and the other fingers on B. D. F. Have the pupil to do this as she repeats E-G-B-D-F, F-D-B-G-E, several times; and then as she says E, first line; G, second line, and so on. In this way, if the names of the lines are forgotten their position on the piano is remembered.

When the Treble lines are learned the spaces may be done in like manner, and then the lines and spaces of the Bass The same plan may be carried to the added lines.

When this has been practiced at home and at the lesson, I test the pupils by asking them to play the third line of Treble, first space of Bass and others, not bothering with the letter names. Learned in this way, it is seldom that notes are played on the wrong part of the keyboard.

Danger of Musical Indigestion

By Robert Haven Schauffler
(In Atlantic Monthly)

THE man who supposes that he has digested music before devoting as much time to thinking about it as he has devoted to hearing it, is not only fooling himself and ruining his digestion but also is absolutely affronting the creator of this beauty, and the player who has been re-creating it, and the creative listener in the row behind who has been re-creating it. The sooner people discover that the musical world was never exempted from the primal curse —or blessing—of toil, the better. In the sweat of thy brow shalt thou become musically well bred.

In order to achieve this end the first thing to do is to restrict yourself to hearing no more music that you are sure of being able to digest. Until program makers have learned to send their audiences away still ready for one more course, it might be a wise plan to begin by leaving the hall in the middle of every concert and taking yourself on a quiet, musical walk in order to reconstruct as best you may what you have just heard.

Titles for Children's Exercises

By Alice M. Steede

WE all know the immense importance of creating and maintaining interest in the mind of the pupil, the only difference of opinion is as to how it is best done. In the Normal Training School this will probably be called an idea in psychology; and, building on it, the teacher will try to connect Geography and History with such of the every day facts of life as are already familiar to the child mind. It is somewhat more difficult in the study of music, as even the simplest terms are more abstract and transient than the facts and figures of the school books.

The publisher of so-called 'popular' music is well aware of this method of enciting interest, and takes care to adorn the covers of his masterpieces (?) with a drawing which strives to atone for paucity of ideas by brightness of color; but I have known more serious students of music, who were rather ignorant of its literature, to choose music from a catalogue guided solely by the titles of the pieces.

In teaching fairly advanced pupils, the music let us hope, makes its own appeal, and providing that the teaching is good, no adventitious aids are necessary. But with the little ones it is different. Frequent appeals should be made to the imagination, and any attempt on their part, however grotesque it may seem to the grown-up mind, to link the music with the sights and sounds of life as they know them should be carefully fostered.

Prima Donnas Change Not

By Lynne Roche

THOUGH their methods of exhibiting temperament have known many changes, the real nature of the *prima donna* seems almost as permanent as Gibraltar.

Diverting, if not ingenuous, as some of the modern operatic felinities have been, the most spectacular could scarcely provoke the spicy quip with more piquant method than in Handel's days.

In 1703, Signora Francesca Margarita l'Epine gave a series of "positively last" appearances in London, throughout the summer season; though, with the *prima donna's* capricious purpose, she was to remain in England for many years as one of the brightest stars of Handel's early operas.

At Drury Lane Theater (probably a concert), on February 5, 1704, a servant of Mrs. Tofts, a rival singer, hissed and threw oranges at Signora l'Epine, for which she was taken into custody by the police. Though Mrs. Tofts attempted to exonerate herself of complicity, through a letter to the *Daily Courant* (how very original are modern singers and press agents!), the public seems to have been little convinced. This is probably one of the earliest displays of operatic jealousy, at least in England.

About Musical Instruments

THE Hunting Horn, now appearing as the French Horn, was not used in orchestras until the beginning of the eighteenth century.

* * *

A figured bass, that is, a bass part with figures below it to signify the harmonies to be inserted or improvised, was used for all keyboard instruments playing in the orchestra, until the opening of the nineteenth century.

* * *

The Boehm flute, which was perfected in 1847, by Theobald Boehm, marked a revolution in flutes. The holes were drilled acoustically correct. Flutes are now made of cocus wood, ebonite or metal. Each material has its champions among the players.

* * *

At one time (about 1760) it was not unusual to employ two or more keyboard instruments, such as the piano, in the orchestra as orchestral instruments.

* * *

At one time conductors were known as manuductors, that is, the individual who led with his hand.

On the Waiting List

"WELL, sir," asked the musician, "what do you think of my compositions?"

"What do I think of them?" said the critic. "Well, they will be played when Gounod, Beethoven and Wagner are forgotten."

"Really?"

"Yes, but not before."

Friendly Letters to the Editor

The Helpful Pupils' Club

To THE ETUDE:

I have found that a music club is of great benefit to my pupils. First, because it trains them to play before people; second, it encourages them to practice because they understand that unless a piece is well prepared they will not be given the honor of playing at the club; third, they learn so much of musical history and harmony.

The officers and chairmen of the program and entertainment committee are selected from the pupils by the pupils. The teacher stands ready to help and advise in every way and gives the names of the pupils who are ready to appear on the program. After the President has called the meeting to order each member answers to roll call with a sentence or two about the composer or topic selected for the afternoon. Then follow the Secretary's report, Treasurer's report and business.

The programs are varied. Sometimes it is devoted to one composer; then again we have a miscellaneous program; an afternoon of living American composers; instrumental selections from an opera; scales; sonatas; hymns and old songs. The papers on the program are written by the pupils and are about the composer or subject of the afternoon.

The program is followed by musical games, most of which are original. The Scale Program is very much enjoyed by all the pupils. A paper on the history of scales is read; then there is a playing contest by the pupils in each grade. A vote by ballot is taken after each group has finished playing, to determine which member of the group has played the best as to clearness of tone, correct fingering, speed, and so on.

Between each group of players a paper is read, giving more information concerning scales and the various ways of playing them. Two or three afternoons are devoted to Major scales; and later in the year the same number are devoted to Minor scales. The games for these afternoons are scales, intervals, chords, ear training.

Each pupil has the privilege of inviting two guests to a club meeting. Once or twice in the year a musical afternoon or evening is given to which tickets are sold. The money is devoted to charity.

HELEN DOUGLAS.

The Adult Beginner

To THE ETUDE:

I am, in a way, an adult beginner. When between the age of 12 and 15 I took lessons during the summers on a cottage organ, and although fond of music, like most children I was lazy and did not realize the importance of practice; and, perhaps not being duly urged by my over-busy mother, the technical part of my work suffered severely. Being capable to grasp the theoretical side readily, I acquired a little insight into the rudiments of music; and, had I continued, I eventually would have taken more interest and advanced rapidly. But the only available teacher left the village where we lived and my lessons came to an end.

Some few years later I left home to enter a business life, and, often being able to hear good music, I was seized with a desire to take it up again.

I secured the consent of the lady with whom I boarded to have a piano in the house; but my next difficulty lay in securing a teacher who was willing to give me lessons in the evening. I finally found a good one; but soon discovered that I had started on an uphill road.

My business demanding long hours, the end of the day found me exhausted both in mind and body, so that, before beginning practice, I was simply obliged to rest. Thus the evenings became very short and entailed the giving up of all social life; but this was a small matter compared with the satisfaction of making a little progress in music, even though slow. The household not being early risers, I have used the early morning hours for reading THE ETUDE and studying over the pieces in my mind.

As is the case with most adult beginners, it has been a battle with stiff muscles and nervousness. Often, after playing a piece very creditably by myself, before my teacher it would be a complete failure and I would go home from the studio much discouraged. Added to this, there have been many missed lessons from seemingly unavoidable causes; and finally, when having reached about the fourth grade, my teacher became ill, and gave up her work for over a year. It was during this time that I decided to study alone, and have kept at it persistently, never allowing a day to pass without a little practice, if only to go over my scales and arpeggios; and I am sure my technic and ease in playing have improved one hundred per cent.

It has been during this time that THE ETUDE has become so indispensable to me, the various helpful articles and suggestions all serving to take the place of a teacher; and when I opened the May number and found the wonderful lesson on "The Harmonious Blacksmith," by Mark Hambourg, I was simply overjoyed. It is all explained in such a simple and understandable way that the wayfaring "girl," though a fool, cannot err therein. When passing through our town last winter Mark Hambourg gave a concert, and his wonderful playing has been an inspiration to me ever since; and I have re-read with keener interest some of his articles in back numbers of THE ETUDE, and this same quality of clearness seems to pervade them all. I am now hoping that the other lessons you have promised during the year by eminent pianists may be within my grade and be explained as well as this one.

With best wishes for future success.

MYRTLE BERNICE FOSTER.

Music and Medicine

To THE ETUDE:

Your editorial in October ETUDE, headed "Musical Patent Medicines," just came to my attention; and, while usually nothing is gained by one's criticisms of editorial expressions, yet I cannot let this go by without a word of protest.

Granting that your comparisons of some nostrums to the mail order music lessons are correct and justifiable, why "drag in" all patent medicines and make your comparison so general? By so doing you express only your lack of knowledge of many of the best remedies manufactured for human ills.

Don't you know that many medicines prescribed and given by the medical profession are nothing more than the same prescriptions that go to make up many of our best package medicines, whose formula has been patented?

Leaving out that phase of the argument, I don't know why the intelligence of some of your subscribers should be insulted by such a thoughtless comparison.

In our own city it is noticeably true that good music is fostered and promoted to a great extent by people engaged in the manufacture of proprietary medicines. The foremost piano teacher of this city is the wife of a man engaged in the manufacture of patent medicines. The writer, himself, is at the head of the Civic Music Association, an organization seeking to foster and promote good music, by bringing the best artists before all the people in our city.

Therefore, we resent the antiquated slur at patent medicines; for there are good as well as bad patent medicines, the same as there are good and poor music magazines.

Yours very truly,

H. N. MCCANN.

[EDITOR'S NOTE:—The above letter, from the Dr. Miles Medical Company, is printed in justice to our subscriber and admirer. We have no doubt that many remedies sold commercially have the same ingredients as those contained in physicians' prescriptions and would be equally valuable if scientifically administered to the ill at the right times for the right maladies. THE ETUDE, in keeping with other high-class magazines, does not accept advertisements for so-called "patent medicines," largely because some of the manufacturers have been proven over and over again to be dispensing concoctions which are impositions upon the public.]

What Are Scales Good For?

To THE ETUDE:

Is that not a familiar question to all music teachers? There should be no real reason why pupils so dislike to practice scales. Many times students come who have practiced and know all the scales but do not know why they have studied them. They have gone over them "every day in every way;" and yet all they have accomplished is just working their fingers.

Of course, scales are a valuable asset to technic; but is this their one and only purpose? Certainly it is not, and if the student has a real conception as to why he is studying the scales they are not so distasteful.

Every selection played on any instrument is written in a certain key and there is a scale to correspond and illustrate that particular key. It shows just how many sharps or flats are necessary and where they are placed, and then it shows the proper and easiest way to finger in that key. The melody in the majority of pieces either follows the line of the scale or the line of some chord in that key. If the scale has been well mastered the piece is more easily read, better fingered and more quickly memorized.

Then the accompaniment to a number of pieces contains the principal chords of the key and is more quickly and accurately played, all because of the work expended on the scale.

Scales are more than a treadmill for the fingers. They are the very foundation upon which all is built, and will surely benefit the head as well as the fingers, if understood.

R. BASSETT.

To THE ETUDE:

My parents and I have enjoyed Mr. Finck's article so much that we have read it or loaned it to most of the neighbors. As a child my father aroused my interest in the stars, but because of a delicate constitution I could not pursue the subject very deeply. From the very first I was much impressed and thrilled and have never ceased to have the same feeling. "The Music of the Spheres" will be a comfort and an inspiration when I am weary. It is a noble discourse and you did a great service to all by presenting it to the public. When I become humbled and discouraged I shall read it and I shall rejoice that I at least have great thoughts and feelings, even though great deeds are absent.

Very truly yours, RENA I. CARVER.

Earn a Teacher's Diploma

or

Bachelor's Degree in Music

In Your Spare Time at Home

YOU can secure that coveted Diploma or Degree right in your own home, as many other established teachers have done by taking our accredited extension courses.

THE PROOF OF THE PUDDING!

Praises Advanced Composition Course

With your course the intricate mysteries of music have been very plainly unfolded to me. I have taken tunes, sometimes original, harmonized them, juggled them about in various forms, with so much ease that it seemed almost unbelievable, thanks to your instruction and instructors. In my work as orchestra leader and teacher of violin I find the work indispensable, and cannot recommend it too strongly to both student and advanced musician—professional as well as amateur.

JOHN FEGUERAS, 65 East Avenue, Rochester, New York.

Sherwood Normal Course Systematic and Complete

I have never taken anything so clear, systematic and perfect as the Sherwood Normal Course. I congratulate any teacher who has the privilege of studying with your wide experienced teachers.

MRS. H. T. BINNS, Music Studio, W. O. W. Bldg., Bakersfield, Calif.

Compares Cheap Course With Our Course

A niece of mine paid $25.00 for a Piano Course with another school. No personal help was given, but the school mailed her the entire course. All she received for her money, paid in advance, was an unbound book of Piano instructions (her lesson sheets) which she could have bought bound for not more than $3.00.

I feel that *satisfaction* is your greatest advertisement.

Every time I send my Normal Piano exams and they are returned to me graded, I feel new inspiration and courage with which to go on with the succeeding lessons, finally to win a diploma—one that is accredited and worth while.

GRACE E. BRIGGS,
Director, Conservatory of Music & Art,
Home Theatre Bldg., Hutchison, Kans.

Public School Music Graduate has Just Secured Life Certificate

I am now a full-fledged director of the Melvin Community High School Orchestra, having received my certificate from our superintendent on the recommendation of the State Board after presenting my credits received through my studies with your institution.

PROF. F. W. REUTER,
Violinist, Dewey, Ill.

Couldn't Have Taught Without Mrs. Clark's Lessons

I have the highest opinion of Mrs. Clark's Course. I don't believe any course can excel hers. I hold a good position here in the city schools and the Public School Music Course helps me wonderfully in presenting the work in my classes. It has benefited me greatly, and I only wish I had known of it sooner.

LUCILLE KEY, Columbus, Miss.

Clear Tone—Result of Weldon Course

The Weldon lessons have benefited me much. My tone is clearer and better, and the attack has greatly improved. My breathing has also improved to a great extent, and I notice that the high tones are much easier for me than ever before.

PAUL BLOEDE, 615 R. 124th St., Cleveland, Ohio.

Teacher in Convent Praises Courses

As a graduate of your Harmony, History and Advanced Composition Courses I want to say that I think your courses cannot be improved upon. While they are not in any way a *short* road to success, they surely are a most *safe* one. I trust that this year will bring you a large class of eager new students, and that they will enjoy the work as much as I did.

SISTER M. AGNITA, 60 Broad Street, Providence, R. I.

Always Ready to Praise the School

Many people do not know that your school gives credits for the study. This should be stated in your ads. and you should give the names and addresses of your graduates to those who are doubtful. I am glad at any time to give a good word for you, as I have received untold benefit by taking your courses, even though I had played professionally for 15 years. I am a member of the Teachers' Association and know how great a need there is for teachers to take Normal Courses. Your courses have been of value to me.

LEWIS G. HUNTER, 723 East 35th St., Tacoma, Wash.

It is Different Now

For the last 28 years I have written marches and other compositions. They have been played by the best professional musicians and I have had the pleasure of hearing them over the radio, but with that uncertain feeling—"I wonder what a first-class arranger thinks of the arrangement." Now I can arrange a melody that will stand criticism. Your Harmony and Composition Course has given me that thorough training I needed. I recommend yours as an outstanding school of music.

MR. CHARLES FREMLING, Band & Orchestra Director, Buhl, Minn.

Use Lists of Teachers

The Normal Piano and Harmony Courses which I have taken are the best that could be procured. They are making me an authority, as for before I felt just half way sure of myself. You should use lists of teachers in the various States and show them what your courses are. Every teacher needs them.

MR. CLAUDE C. BRANT, 198 Butler Court, Akron, Ohio.

Impossible to Appreciate the Value of the Harmony Course

In my previous study of Harmony I got along nicely, but when I was through I didn't seem to be able to use the knowledge. I have not found it so with your Harmony Course. Yours is far superior to anything I have had.

There are some people who are prejudiced against a course of this kind, but I'll say—if it were of no more value to me than the understanding I have gained in analyzing the little pieces I use in teaching children, it is well worth while.

MRS. VERDA BROTHERS, *Piano Teacher*,
2000 2nd Street, N. E., Canton, Ohio.

Has Diploma Endorsed by Secretary of State

Thank you for the diploma. It was immediately endorsed by the Secretary of the State of Illinois. I have taught for six years before studying with your school, but had not found a good systematic course to follow. Your course has solved my problem.

BERTHA GUERRERO DE RAUDALES,
38 S. Dearborn St., No. 1438, Chicago, Ill.

Uses Sherwood Course With Her Pupils

I began study with your school in 1915 and have finished three courses. Some of my friends rather thought I was a victim of fakirs, but they are willing now to concede their mistake. Your courses have given me individual knowledge and each pupil who completed the course with me has found it valuable.

I am Director of Music and Dean of Fine Arts in college.

MRS. W. E. CARTER, Lafayette, Tennessee.

These teachers and thousands of others testify for the Courses we offer. Your experience should be the same as theirs.

Don't merely WISH for a larger class and for greater financial gain—but resolve today at the start of the New Year to make the moments count which so often go to waste. For 23 years we have furnished teachers with preparation which enabled them to earn more. The details of the Course with sample lessons will be sent you for the asking.

Check the coupon and get it in the first mail. Write a letter about your own problems—perhaps we can help you solve them.

The Tune That Sherman Loathed

General Sherman's emphatic, definite and extremely accurate description of War is well known. The gallant officer seems to have been fond of music, but there was one tune about which he felt much as he did about war, according to Clara Louise Kellogg.

After the Civil War, General Grant and General Sherman went to Chicago and attended a gala performance of "The Daughter of the Regiment," with Clara Louise Kellogg in the title rôle. In a chapter of her *Memoirs of An American Prima Donna,* she has this among other things to say about Sherman:

"In recalling General Sherman I find myself thinking of him chiefly in the later years of my acquaintance with him. After that Chicago night he never failed to look me up when I sang in any city where he was and we grew to be good friends. He was always quite enthusiastic about operatic music, much more so than General Grant. He confided to me once that above all songs he especially disliked *Marching Through Georgia,* and that, naturally, was the song he was constantly obliged to listen to. People, of course, thought it must be, or ought to be, his favorite melody. But he hated the tune as well as the words. He was desperately tired of the song and, above all, he detested what it stood for, and what it forced him to recall."

The fighting Generals are not always the fire-eaters. It would be interesting to learn General Pershing's private opinion of *Over There.*

New Music Books Reviewed

"The Master Singers" of Wagner. By Cyril Winn. Paper bound; fifty pages; illustrated. Published by the Oxford University Press, at fifty cents.

A recent world-contest resulted in a decisive vote in favor of "The Mastersinger" as the present favorite of the great masterpieces. Consequently this little volume is most timely, with its clear outline of the story of the plot and guide to its leading motives, which are not only identified with their characters and parts in the score, but also are given in notation, so that the student may thoroughly acquaint himself with them so as to recognize and follow them in the performance. Written in a most interesting and readable manner, the small book is a valuable addition to this type of musical literature.

Musical Taste and How to Form It. By M. D. Calvocoressi. Bound in boards; eighty-eight pages. Published by the Oxford University Press, at eighty-five cents.

The long apprenticeship of the author as a student of public taste in music and as a writer on the subject has prepared him for a most valuable service in the preparation of this small volume. Pleasant in style, it is full of key-thoughts which will stay with the reader for future pondering. Not one of its ten chapters but will be read with relish by those interested in this important theme.

Weber. By Sir Julius Benedict. Cloth bound; 176 pages. Published by Sampson Low, Marston & Co., Ltd., at $1.25 per copy.

Long acquaintance with the "founder of the romantic school of music" equipped the author of this volume to treat its subject in a most sympathetic manner. Throughout the work there is an intimacy and personal charm which intrigues the reader. The sources and history of the operas which have had such enormous influence on the trend of modern music are told in fascinating style, as well as the triumphs which awaited the composer on the public presentation of these works. Among all these is woven the life story of the brilliant but early-doomed composer. It is a vivid picture of the professional and social life of the early part of the last century and more than worth the reading.

Orlando Gibbons. By Edmund H. Fellowes. Cloth bound; 116 pages; illustrated. Published by the Oxford University Press, at $2.00 per volume.

The recent Gibbons Tercentenary Celebrations make this volume most timely. Too often considered a subject for the antiquarian, the perusal of these pages will surprise the reader with the amount of real interest they contain for the current reader. The accomplishments of some of these early English writers have been overshadowed by the vogue of the great German composers who followed; so that this modest volume will well repay its investigation.

Arnold Schönberg. By Egon Wellesz. Cloth bound; 159 pages; illustrated. Published by E. P. Dutton & Co., at $2.25.

The author, himself a composer of distinction, has given a biography and a study of the works of his master, who is not only one of the outstanding personalities of the present time, but also one of the most arresting figures in musical history. In the pages of the book one finds both the story of the discovery of new paths by this very original musical thinker and creator, and a guide to the understanding of the creations of his genius. The student of modern tendencies in music will find its reading not alone enjoyable, but most profitable as well.

The Term's Music. By Cedric Howard Glover. Cloth bound; 176 pages. Published by E. P. Dutton & Company, at $2.00.

A book primarily intended for use in schools, with the work so divided as to accommodate itself to four years of three terms each. Its real object is to further the cause of "Musical Appreciation," which is usually interpreted to mean the study of the music itself as distinct from the study of an instrument. The work is the result of practical experience in presenting the subject to a group of school people, and for this reason should be of much use to such as are interested in a similar line of musical endeavor. A comprehensive consideration of the entire practical musical literature is planned and materials and works of reference suggested for the accomplishment of this end.

Debussy and Ravel. By F. H. Shera. Bound in limp paper; 58 pages; illustrated. Published by the Oxford University Press, at fifty cents.

An introduction to the works of these two modernists of French composers. The treatment of harmony, scales, chords, consecutives and pedals, gives a welcome insight into the use of these devices by these "free-thinking" composers. Numerous notation examples guide the reader to a better understanding of the structural outlines of the compositions.

Beethoven—I. The Pianoforte Sonatas. By A. Forbes Milne. Paper bound; 66 pages; illustrated. Published by the Oxford University Press, at fifty cents.

A guide to the structure of Beetboven's Op. 7; Op. 28; Op. 31, No. 2; Op. 57 ("Appassionata"); and Op. 109. Each of these works is analyzed in a manner to give to the student a key to its proportions and content. Historical comments increase the interest; while the many notation illustrations increase the value of the pages.

The '48', Bach's Wohltemperirtes Clavier, Book II. By J. A. Fuller-Maitland. Paper bound; 38 pages; illustrated. Published by the Oxford University Press, at fifty cents.

A chart to guide the uninitiated through the mazes of these intricate tone-gardens. Many useful hints for the development of the voice leadings. The short historical chapter with which the book opens is very engaging to the Bach student of any age.

The '48', Bach's Wohltemperirtes Clavier, Book I. By J. A. Fuller-Maitland. Paper bound; 38 pages; illustrated. Published by the Oxford University Press, at fifty cents.

In an introductory chapter the Tempered Scale is made clear to the reader; while the outline of the fugue-structure will be most welcome to the one unacquainted with its intricacies. Incisive comments and textual illustrations will lead many to a clearer conception of the beauties and wealth of materials which go into the building of these magical tone structures.

The Opera. By R. A. Streatfield. Cloth bound; 402 pages. Published by E. P. Dutton and Company, at $3.75.

This is the fifth edition of a work which was something of a pioneer in its field, and which has now been enlarged and revised by Edward J. Dent. Departing from the methods of the usual books of the plots of operas, this volume adds greatly to its usefulness and appeal by the happy device of combining these with an outline of operatic history. All this is done in a style at once attractive and fitted to place the information before the reader in a manner most impressive to the memory. The work could scarcely have been better done, though our readers may raise the question whether there have not been at least a few American operas worthy of a place in such a work.

The Margin of Music. By Edwin Evans. Oxford University Press (American Branch); 71 pages; bound in boards. Price $1.20.

A collection of essays upon music reprinted in part from the *Musical News and Herald.* written when the author was editor of that excellent English musical publication.

Music and Boyhood. By Thomas Wood. Bound in boards; sixty-six pages. Published by Oxford University Press at $1.20 per copy.

The author has put into this small volume the results of five years of special investigations which he conducted in connection with his teaching music to boys in the public schools of Tonbridge, England. Mr. Wood evidently is one who understands boys, and his suggestions as to methods for holding their interest and for securing the most satisfying results from work with them are most practical. The chapters on Musical Clubs and "The Technique of Concerts" are worth the attention of all engaged in public school music.

TWENTY-FIVE MELODIES FOR EYE, EAR AND HAND TRAINING. By Mathilde Bilbro. Price, 75 cents

These little pieces may be regarded as second grade studies. They are intended to aid in establishing the position of the hand upon the keyboard, attaining freedom, training the eye, especially in leger lines, in staff positions and cultivating a musical ear. These studies are all tuneful and interesting to practice. Altogether this set of study pieces promises to become popular with teachers as well as students well in the second grade.

THEODORE PRESSER CO. PHILADELPHIA, PA.

SUMMY'S CORNER

New Piano Pieces which present productive teaching material with charm and interest

MINUET - by Buenta Carter - Gr. 2—3 - $ .30
A graceful composition. For smoothness and evenness of tone and skillfull phrasing for both hands

THE BANJO PLAYER - by Buenta Carter - Gr. 2—3 - $ .40
In mastering this little piece the pupil will have a selection worthy of his best efforts. Highly characteristic, it affords study in grace notes, broken two and three-note chords and staccato dexterity.

HANSEL AND GRETEL - (Ländler) by Joseph N Moos - Gr. 2 - $ .30
A country dance in waltz time. To be played slowly in well accented rhythm. Good teaching values, one being early pedal training.

DEAR OLD MADRID - by Joseph N. Moos - Gr. 2—3 - $ .50
A stimulating number with Spanish coloring, the distinct feature of which is its rhythm. Excellent and novel material for this grade. Enjoyable for recital.

IN THE SHEIK'S TENT - by James H. Rogers - Gr. 2 - $ .30
A smooth singing melody in minor mood to the accompaniment of two-note chords in steady rhythm characteristic of Oriental music.

THE FLIVVER CHASE - by James H. Rogers - Gr. 2 - $ .30
Diverting and humerous. Its study will help to develop flexibility of wrist and finger agility.

ALBUM OF SHORT EASY PIECES - - by Florence A. Goodrich
Vol. 1 - Summy "Edition" No. 116 - Gr. 1 - $ .75
Vol. 1 - Summy "Edition" No. 117 - Gr. 1—2 - $ .75
Educational numbers, thoroughly pianistic and attractive, written with rare talent and understanding of teaching needs.

The most important work on the study of Harmony (Musical Theory) published in years is

Piano Teaching Material

Recently Issued Study Material of Various Grades

As it is our desire to aid every progressive teacher who wishes to become acquainted with these excellent works, we will gladly send any or all of them for examination.

To assist our patrons in the selection of music, we have catalogs covering every classification. Tell us the branches in which you are interested and we will send catalogs.

BILBRO'S KINDERGARTEN BOOK

By Mathilde Bilbro **Price, 75 cents**

This is not a theoretical work for the teacher but a real valuable method for the very first instruction of young children at the piano. It is hard to imagine a better work for this purpose. The tiniest tots, not even knowing the alphabet, can be acquainted with the piano keyboard very quickly through the use of Miss Bilbro's unique and practical ideas and attractive easy study material.

SHORT STUDY PIECES

IN THE SECOND AND THIRD GRADES

By M. Greenwald **Price, $1.25**

Each one of these pleasing study pieces covers some particular phase of technic—one is a scale study, another a wrist study, another covers crossing the hands, and others treat with repeated notes, triplets, legato, chromatic scale, perpetual motion, velocity, broken octaves and broken chords. Truly a wealth of exceedingly fine study material here, pieces that will attract and hold the pupil's attention.

TEN BUSY FINGERS

NINE MELODIOUS STUDIES FOR THE PIANOFORTE

By Mabel Madison Watson **Price, 60 cents**

Little studies or pieces that combine melodic, rhythmic and dramatic interest with finger training. Delightful, practical material to prepare the pupil for easiest velocity studies of Gurlitt, Czerny, etc.

ETUDES DE STYLE

By E. Nollet. Op. 25 **Price, $1.25**

The grace and refinement, found in the writings of all modern French composers, are particularly well exemplified in these studies. Although in point of difficulty they do not proceed beyond grades 4 and 5, nevertheless, they are real artist studies, each one being well worth playing as a separate piece. They are ideal studies to follow Czerny, Op. 299, and could very well take the place of Czerny, Op. 740. Edited and fingered by Louis Oesterle.

TOUCH AND TONE

SHORT MELODIOUS EXERCISES

By Ave Corbett **Price, $1.00**

There is always room in the teacher's list for an additional set of studies suitable for the earlier grades. One tires of teaching the same things all of the time and students, too, are greatly helped by variety. These short and tuneful studies begin in the first grade and gradually progress to a point where the student is ready to enter the third.

FIRST PIANO LESSONS AT HOME

Piano Book I—75c. Writing Book I—25c.
Piano Book II—75c. Writing Book II—25c.

By Anna Heuermann Hamilton

Although designed especially to assist mothers and older sisters in teaching their little ones, this work may also be used to good advantage in some cases by the regular teacher. The writing book and the piano book go hand in hand and must be used together to obtain the best results.

SHORT MELODY ETUDES

WITH TECHNICAL POINTS

By Mathilde Bilbro **Price, $1.00**

These studies afford a beautiful combination of melody and technic. They range from grade one and a half to grade two. Miss Bilbro is a gifted writer of elementary study material and her works are very successful.

SIX STUDY PIECES FOR THE DEVELOPMENT OF THE WRIST

FOR THE PIANOFORTE

By Carl Moter **Price 80 cents**

The musical and melodic qualities of these pieces are good. They not only develop the wrist, but also serve as a preparation for *Bravura* study. Third grade pupils may be given this study material. Even though there are but 6 pieces, there are various styles and staccato notes, thirds, sixths, and a few octaves are introduced.

SIXTEEN RECITAL ETUDES

By Ludwig Schytte. Op. 58 **Price, $1.25**

These studies correspond in mechanical difficulty with Heller, Op. 47. They are agreeable and pleasant to play, having musical worth, yet enabling the student to gain mechanical control of the keyboard. Teachers ofttimes find it helpful to substitute studies such as these for the commonly used works of Heller, Clementi, Kohler and others. Schytte ranks among the best of the modern composers.

PLAY AND SPORT

40 SECOND AND THIRD GRADE STUDY PIECES

By A. Sartorio. Op. 1235 **Price, $1.00**

Sartorio's educational material is always welcomed by piano teachers and this new set of bright, attractive study pieces is almost sure to be successful. While supplying a variety of technical material they are all tuneful and full of rhythmic go, making them interesting to practice. Each has been given an appropriate title, a feature that will appeal to the student in particular.

GOLDEN MEMORIES

By Mrs. H. B. Hudson **Price, 90 cents**

These "golden memories" are twenty-seven songs of the long ago with melodies indicated by letters of the alphabet after the manner of Mrs. Hudson's other well-known works. The melodies are also given in the regular musical notation, thus bridging the gap between the A B C system and the ordinary music instruction. Anyone with five fingers and a brain can master this book, even older folks whose musical educations were neglected in youth.

ETUDES MINIATURES

By Frances Terry **Price, $1.25**

Twenty-six studies or study pieces in grades two and two and a half by a very successful writer of juvenile material. They are particularly good, being quite interesting musically and quite valuable technically. They exceed many offerings in these grades in that they are tuneful throughout and well contrasted, the harmonies and general treatment being most workmanlike. Both teacher and student will benefit by giving this excellent series a trial.

SIX STUDY PIECES IN THIRDS

FOR THE PIANOFORTE

By Carl Moter **Price, 60 cents**

Teachers will find this a very helpful work, as it helps to introduce in the early intermediate grades a figure of technic which is not usually met until later. The pieces are interesting musically, and pleasantly prepare the pupil for work to come.

MELODIOUS ELEMENTARY ETUDES

By Franz J. Liftl. Op. 161 **Price, $1.25**

Franz J. Liftl is one of the leading European teachers working the easier and intermediate grades and his scholarly educational works have met with great favor. This, his most recent, is a set of studies suitable for second grade work and leading by easy stages into the third grade. They are well made musically and well balanced technically.

INTERMEDIATE STUDY PIECES

Price, 75 cents

This volume is useful for instructive purposes as well as for recreation. There are thirty-one numbers in this compilation, each piece exemplifying some points in technic as well as having quite a bit of musical interest. In point of difficulty these pieces are within the limits of grades three to five. They were selected from works of the best modern composers.

An Interesting Series of Albums of Study Pieces for Special Purposes

ALBUM OF TRILLS

FOR THE PIANOFORTE

Study Pieces for Special Purposes—Vol. 1
Price, 75 cents

Each of the eighteen pieces in this album contains some form of the trill and the use of this volume with medium grade pupils will be found by teachers to be the most desirable means of perfecting their ability to handle this valuable technical device. It is far better to encourage the pupil to triumph in this department with the use of attractive pieces than to discourage him by assigning only dry, mechanical studies for the development of the trill.

ALBUM OF SCALES

FOR THE PIANOFORTE

Study Pieces for Special Purposes—Vol. 2
Price, 75 cents

The tedium of scale practice is relieved by the form in which they may be studied with this album. There are 23 pieces or studies in the form of pieces in which the scales are generously introduced. The value of practicing them in this attractive form and in the variety of rhythms and harmonies that naturally occur can be appreciated readily by those who have had any experience in piano pedagogy or study. Pupils handling third-grade material are just ready for this study work.

ALBUM OF ARPEGGIOS

FOR THE PIANOFORTE

Study Pieces for Special Purposes—Vol. 3
Price, 75 cents

This latest addition to the series of albums of "Special Study Pieces" has an appeal not only to the teacher and student, but also to the many players who delight in arpeggio usage in a composition. There are 20 numbers in this collection, and there is an excellent variety due to the manner in which the arpeggios are employed, and to changes of key and of harmonies. Undoubtedly these pieces furnish the most delightful vehicle for the study of arpeggio playing. Chiefly medium grade.

THEO. PRESSER CO. *Music Publishers and Dealers* 1710-1712-1714 Chestnut Street **PHILADELPHIA, PA.**

When the Lesson is Over

By Russell Gilbert

1. When the lesson is over pass quickly out of the studio. Do not stop at the door to tell the teacher about something that does not interest him.

2. Do not make yourself conspicuous in the reception room by affecting to be temperamental. You will only get yourself laughed at when gone. Do not dress as though you were at a ball or display your possessions before others who may not be as fortunate as yourself.

3. Speak softly in the reception room and refrain from loud laughter and noise that may penetrate to the studio and annoy the teacher.

4. If you must telephone, go to the drug store around the corner. The teacher does not enjoy hearing you argue with "central" over his phone.

5. Be sure to take your music when you go. How many doorbells have been rung by pupils who have walked off with much clatter but without their music.

6. Do not slam the door when you leave the house.

7. On the way home try to recall topics discussed at the lesson.

8. When you reach home, put your music in a safe place at once. It is not wise to make your relatives do this service for you.

Increasing Command Over Scales

By George Coulter

It is a good plan, after the learner has mastered the twelve major scales and can play the orthodox two octaves, to increase the compass to four octaves and have the same scales gone through again thus extended. This gives some variety, and is a capital scheme to impress the scales upon the memory. The four octaves demand much more continuity of concentration and increase the facility in turning under, while they provide a better opportunity for unbroken legato playing than one or two octaves do.

Besides by playing into the higher and lower registers of the piano one gains a knowledge of key resistance and learns how to modify touch and to control tone. Confining oneself to an octave or two in the middle of the piano makes for tonal monotony and also restricts technical development.

"Firsts" in Music

The first overture in which melodies from the opera were freely used, was "Der Freischütz."

* * *

The first great American Musical Festival was the "Peace Jubilee," in Boston in 1869, organized by P. S. Gilmore.

* * *

The Boston Symphony Orchestra, instituted through the generosity of Col. Henry Lee Higginson, gave its first concert, October 22, 1881, with George Henschel conducting.

* * *

The first concert hall in Tokio was opened in 1919.

* * *

The thumb was first used in playing the organ and harpsichord, by John Sebastian Bach.

* * *

New Orleans was the first city in America to establish opera permanently.

* * *

In 1853 the first Wagnerian selection was heard in America, when the "Tannhäuser" Overture was given in Boston under the bâton of Bergmann.

The Little Corporal

By Emmet Fitzgerald

A famous Russian pianist, known particularly for the clean, accurate character of his technic, used to refer to his fifth finger as "my little corporal."

The little finger must be one of the strongest members of the pianist's hand. Despite its size it has to bear the brunt of much of the heaviest work, particularly in octave playing.

As the terminal finger for many runs in the right hand, it must be a "dead shot" for accuracy. This requires a great deal of special training, especially in skips or "leaps." Surprised at the force with which one noted concert performer struck high treble notes with his little finger, I asked him how he managed to do it and he showed how he supported and fortified his little finger by swiftly placing his thumb behind the second joint of the fifth finger, thus delivering the full force of the hand. This same "trick" may be applied to the fourth finger in skips.

Two Masters Meet

In 1888 Tchaikowsky met Grieg for the first time, when he was forty-five years old. The account of the meeting in Tchaikowsky's own words is not without romance.

"There entered the room a very short, middle-aged man, exceedingly fragile in appearance, with shoulders of unequal height, fair hair brushed back from his forehead, and a very slight, almost boyish beard and moustache. There was nothing very striking about the features of this man, whose exterior at once attracted my sympathy, for it would be impossible to call them handsome or regular; but he had an uncommon charm, and blue eyes not very large, but irresistibly fascinating. I rejoiced in the depths of my heart when we were introduced to each other and it turned out that this personality which was so inexplicably sympathetic to me belonged to a musician whose warmly emotional music had long ago won my heart. He proved to be the Norwegian composer, Edvard Grieg."

"Art itself cannot be said to grow; what is capable of growth is the taste for art. The need for self-expression is instinctive in all human beings, and in so far that art must be recognized as the most indispensable vehicle for self-expression, so may it be said that everyone is a born artist."

—Harold Bauer.

"Brazelton's Practical Elementary Method"—for Piano

"Brazelton's Practical Elementary Method" is practical—wasting no time on unnecessary drudgery but giving much in little, as, for instance, teaching the bass clef in the very beginning. Thus, the pupil soon arrives at the point where he is playing interesting "pieces." Price, **$1.25 net.**

"The student who masters Mr. Brazelton's valuable addition to pedagogic literature thoroughly, will be well and correctly started on the road to pianistic excellence, and teachers will find it a great help at the most critical stage of music study."

EMIL LIEBLING

Brazelton's Practical Method, Book II

"Melodic Analysis of Studies and Pieces in Minor Keys"

Solves the problem of presenting the **five forms of Minor Scales.** Twelve delightful compositions, showing the Composer's application of the Scales, stimulate the imagination and create enthusiasm.

The work enables the student to analyze and account for every tone in all compositions written in Minor Keys.

Price, **$1.00 net.**

The New President of the Theo. Presser Co.

Knowing our Editor, Mr. James Francis Cooke, will not use any space in the text pages to announce his election to the Presidency of the Theo. Presser Co., we feel that some announcement should be made in this department.

Mr. Cooke, in addition to having had full editorial charge of THE ETUDE for the past 18 years, was one of Mr. Presser's closest associates in the direction and management of the Theo. Presser Co.'s Music Publishing and Mail Order Music Business.

Mr. Cooke is surrounded by the same strong organization that had been built up by the founder of this business and is thus fortunately able to direct the carrying on and the expansion of the ideals and policies of the founder and at the same time continue as Editor of THE ETUDE.

The personnel of the Presser Co., for years have been encouraged to take individual interest in their daily business activities and this spirit was upon them when they presented to their new President, beautifully engrossed and bound, the following expression:

"We, the three hundred and fifty employees of the Theo. Presser Co., unanimously express our enthusiastic appreciation of the action of the Board of Directors in electing you to the Presidency of the Theo. Presser Co.

"It is very encouraging to see character, industry, fairness, courtesy and courage thus recognized. We hereby pledge to the President, the Executive Committee and the Board of Directors of the Theo. Presser Co. our fullest support and increased interest in the expansion of the practical business policies and ideals of our founder."

Easter Music

A few months only, separate the two great church festivals. Christmas, with its musical achievement, is past and the Easter season now demands the attention of alert choirmasters throughout the country.

The celebration of the Resurrection is of vital interest to the church as this festival is the basis of our Christianity. St. Paul rightly says: "If Christ be not risen from the dead, then our hope is in vain."

It would seem, therefore, that Easter is an excellent time for a sermon in song. This can be splendidly accomplished by using a cantata, instead of the usual anthem numbers.

An Easter cantata will tell the story succinctly and will be interesting, musically. For instance, there is *The Dawn of the Kingdom,* by *J. Truman Wolcott.* The first part deals with the Prophecy, the second, Dawn and the Resurrection and the third, the Dawn of the Kingdom. The solo sections are well worth study and the choruses are within the range of the average choir.

Immortality, by *R. M. Stults,* is another good choir cantata. After giving the old testament prophecies, a brief narrative of the Resurrection as recorded in the Gospels follows. The third part tells of Immortality in the words of Christ.

The Wondrous Cross, by *Ireneé Bergé* is a contemplative Cantata. The theme is the Crucifixion and the Supreme Sacrifice.

Victory Divine, by *J. Christopher Marks,* is a finely conceived and well wrought cantata. The central idea is the immortality attained by the abnegation of Christ. It is divided into three parts—In the Garden, The Earthquake and At the Tomb.

We are anxious that all choir directors have an opportunity to examine our Easter selections. Just give us a general idea of what you will want and our experienced clerks will send a selection of material for your approval.

Do not wait to write later—mail us a postcard today.

Easy Studies in Early Grades For the Pianoforte By Mathilde Bilbro

There is nothing like having plenty of new studies for teaching in the early grades. It is far better for the teacher to work with new material and it is better for the students to feel that not all are being assigned the same old conventional tasks. Miss Mathilde Bilbro has been unusually successful in writing and preparing elementary teaching work. In this new set of studies will be found everything essential to steady and profitable progress in second grade work.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Romeo and Juliet—Operetta By J. W. Brigham

We take pleasure in announcing the publication of a new operetta to be sung by men. Mr. Brigham's previous work along the same line entitled, *Cleopatra,* has proved very successful, *Romeo and Juliet* should prove no less so. It is an excruciatingly funny musical burlesque, a modern college version of the old story. Just the thing to be produced by a bunch of high-school students or college men. The music is partly original and partly adapted, sometimes it is in unison but largely it is in four-part harmony for a chorus of men's voices. This operetta may be produced in the open air outside a college hall or dormitory or it may be done indoors. The composer himself has already produced it with very great success.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

New Easter Service For Sunday Schools By R. M. Stults

From time to time it has been our custom to publish Sunday School Services adapted respectively for Christmas, for Easter or for Children's Day. We have had great success with these services. We aim to make them bright, tuneful and interesting without being flashy or commonplace. Our new *Easter Service* should prove one of the best. It is by a very popular writer and it represents his very best efforts in this particular line. The service is now in course of preparation and we aim to have it ready as soon as possible after the first of the year.

The special introductory price in advance of publication is 5 cents per copy, postpaid.

How to Succeed in Singing By A. Buzzi-Peccia

Buzzi-Peccia, as a name and personality, fills a quite individual niche in the American and foreign musical profession. Pupils have gone out of his studio, to eminence. Songs have emanated from his pen, to popularity. With these qualifications as a background, and a distinct style in writing about his art, a book of genuine merit only was to be anticipated. Students and teachers of singing will find in its pages counsel which will give them a new light in the pursuit of their devious roads to success.

The special advance of publication price is 60 cents per copy, postpaid.

Standard Second Grade Recreations for the Pianoforte

This new volume will be added to the series made up from especially large plates. It will contain more than fifty choice second grade pieces, each one a gem. The pieces will be in all styles and well contrasted. They are chiefly by contemporary writers. This will prove to be one of the best recreation books obtainable.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

THE THEODORE PRESSER CO. DESIRES TO EXPRESS ITS DEEP GRATITUDE TO THE FRIENDS OF THE LATE FOUNDER FOR THEIR OVERWHELMING NUMBER OF TOKENS AND EXPRESSIONS OF SYMPATHY. THEODORE PRESSER COUNTED HIS FRIENDS AMONG HIS GREATEST ASSETS AND IT HAS BEEN MOST IMPRESSIVE TO WITNESS THEIR SINCERE DEMONSTRATIONS OF REGARD FOR HIM.

Abraham Lincoln—Cantata By Richard Kountz

This is to be one of the most unique works we have issued for some time, and we feel confident that school choruses and oratorio societies will find in it a most unusual and inspiring presentation for Lincoln's Birthday and other patriotic celebrations. The varied phases of experience in the life of this immortal character in American History, present a wealth of opportunity for musical expression. Mr Kountz has succeeded admirably in giving the strong and vigorous text an adequate musical setting. Although no American airs have been utilized, there is a very definite atmosphere of patriotism found in the score. Should it be desired the orchestral parts will be obtainable for rental. The special advance of publication price for one copy only is 35 cents, postpaid.

From the Dalles to Minnetonka—Four Impressions for the Pianoforte By Thurlow Lieurance

By the Waters of Minnetonka is without doubt one of the most popular songs of the present day. Its peculiar construction however, both as to the character of the melody and the figuration of the accompaniment, render it highly suitable for transcription into a piano solo. In this new volume there is a fine new concert arrangement of this number. In addition thereto, there are three other very beautiful pieces based upon Indian Themes. These however, are not direct song transcriptions. The four pieces taken together would make a fine recital group, although each is complete in itself.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Album of Song Transcriptions and Variations For the Pianoforte

This may be the last opportunity given for the securing of a copy of this very desirable piano album at the advance of publication price of 40 cents a copy. The compilers and editors have completed their work and the production of the book is now up to our mechanical department. While these transcriptions are most interesting to any pianist they are not difficult, being within the playing ability of the average performer. The pianist as well as his audience will get more out of the playing of these song transcriptions than could possibly be enjoyed in the playing of the regular song edition. It can be appreciated readily the many beautiful melodies thus made available to pianists in this album.

Album of French Composers For the Pianoforte

For many years now, the French composers have been in the lead in the writing of graceful, elegant and original piano pieces. Such pieces are far and away above the ordinary run of drawing-room music. Many of them are on a very high artistic plane. We have only to mention such names as *Godard, Chaminade, Saint-Saëns, Widor, Wachs, Lacome, Lack* and *Pierne.* Our aim has been to compile a representative collection of fourth and fifth grade pieces by these authors. This should prove a very successful volume.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Bach Album By Sara Heinze

This is one of the Standard compilations which has been used very widely in the teaching of elementary polyphony. Our new edition is carefully revised and has been prepared with the utmost care. In this collection are included some of the most delightful of Bach's shorter pieces. It is an entirely different collection from the well known easy compilations by Carroll and by Leefson. Many of the numbers are from the *Suites* and *Partitas.*

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Six Picturesque Studies For the Pianoforte By Paul du Val

Students who have arrived at fourth grade work, will take great delight in this new set of studies. They are original and characteristic, and quite out of the usual line. Any student who has been well grounded in third grade work will be ready for them. In these studies are introduced such devices as broken-chords, staccato-sixths for light wrist, double-notes, velocity with pedal effects, octaves, glissando and melody playing. Each study has a special title of its own and all are so melodious that they might be played separately as pieces.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Technic for Beginners Preparatory to Hanon or Pischna By Anna Priscilla Risher

As soon as the beginner has mastered the rudiments and the hands have been well shaped at the key-board, it is well to begin daily technical exercises in addition to the regular work of the instruction book. Naturally, these exercises must be of the simplest possible character, while still leading up to daily exercises which are more advanced. These new exercises by A. P. Risher have been planned very carefully for this purpose, they may be used very profitably over a considerable period after which the student will be able to take up the easier exercises by Hanon and that valuable technical work known as *Kleine Pischna.*

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Elementary Piano Pedagogy By Charles B. Macklin

Those first pupils are a problem; and the teacher who arrives at a solution of holding their interest, while trying to get into their consciousness a working knowledge of the fundamentals of music, has made a real achievement. And this is just the thing that the author of this book has made many times easier. The teacher with little time for study, or the beginner in the profession, will find here a ready help in many troubles. The simple, colloquial style of presentation adds greatly to the charm as well as to the helpfulness of the book.

The special advance of publication price is 75 cents per copy, postpaid.

Rhythmical A. B. C's For the Violin Beginner By A. Louis Scarmolin

The main idea of this work is to teach the young beginner a real sense of rhythm. This is done in a very clear, common-sense manner through the medium of little piano pieces (to be played by the teacher) with accompanying rhythmical figures on the violin. This work will pave the way for the regular violin instruction book, at the same time building a firm foundation in that branch of musicianship which is of primary importance to the violinist—a sure feeling of rhythm. We believe every progressive violin teacher will welcome this interesting new publication and earnestly advise the placing of an order while it is obtainable at the special pre-publication price, 35 cents, postpaid.

Album of Octave Playing

Octave work should begin always in the third grade, wherever the hand is of sufficient span. If the hands are limited in span some mild stretching exercises might be used. The mere playing of octaves, however, as exercises is uninteresting and unprofitable. Where octave passages however are incorporated into pieces, then they not only have musical value but they also serve as a stimulus towards technical proficiency. An exceptionally attractive lot of study pieces based upon octave passages have been included in this new volume. It will soon be ready.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

What to Teach at the Very First Lessons By John M. Williams

Mr. Williams' lecture-lessons to teachers have brought such a response in the way of letters of commendation from members of his classes that anything he would put into collated form on the subject of musical instruction is sure to have in it something inspiring and helpful for the perplexed seeker. The materials of a number of these lectures have been developed and discussed in this book in a manner that will make it invaluable, particularly to the young teacher who needs a guide into paths of safety in the proper presentation of ideals to beginners. There is so much of inspiration in its pages that the book is sure to make itself a genuine friend to many.

The special introductory price is 30 cents per copy, postpaid.

Second Year Study Book For the Pianoforte By A. Sartorio

The many sets of studies by A. Sartorio, especially those adapted for third and fourth grade work, have all proved very successful. This composer knows how to write good studies, how to make them both interesting and profitable to practice. The new set, *Second Year Study Book* is just right to be taken up after the work of the second grade is completed. This book of studies might be used to good advantage for practice in velocity, since the studies adapt themselves well for this purpose.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

New Overture Album To be Published for Piano Solo and Piano Duet

Within a very short time these two albums will be published and advance subscribers will receive their copies. Both the solo and duet albums will contain the same standard overtures. These overtures are well known to bands and orchestras and are frequently found on concert programs. The piano arrangements are the best obtainable and the editing of this new edition has been most carefully done. Teachers will find these books invaluable for selecting program material for their pupils' recitals. The advance of publication cash price for the solo album is 40 cents, for the duet album, 50 cents. Kindly mention which volume is desired when placing your order.

Etudes for the Violin, Op. 32, Book 1 By Hans Sitt

We are making another valuable addition to our already fine catalog of violin studies by the publishing at an early date, of the well known Etudes by Hans Sitt, Op. 32, Book 1. These studies are general technical exercises in the first position, and are especially good as bowing studies, employing the staccato, and other styles. There are also exercises which develop smoothness in passing from one string to another. The new edition will be up to our usual high standard, and may be ordered now at the special introductory price in advance of publication of 30 cents a copy, postpaid.

Older Beginner's Book For the Pianoforte By John M. Williams

In these days of increased interest in music, there are many older beginners, those who for various reasons have not been able to take up the study of piano in childhood. For such as these a special instruction book is necessary. Mr. John M. Williams who has had a long experience with beginners of all ages, has prepared this particularly good book adapted for older beginners and adults. The material is of a very pleasing character and while it is sufficiently simple, especially at the beginning of the book, it is never childish or trivial. All of the explanatory text is absolutely plain and matter-of-fact.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Suite Op. 15 For Two Pianos, Four Hands By A. Arensky

The art of ensemble piano playing is being cultivated more and more in recent years by progressive teachers. It develops the young performer's musical perception and furnishes splendid practice in obtaining rhythmic accuracy. Probably the most exacting ensemble playing is that of the piano duo, certainly none is more valuable, especially for advanced students. One of the best compositions of this type is the Arensky *Suite* and few are more popular than this original work by the talented Russian composer. While this work is in process of publication we are offering it to advance subscribers at the special low price of 50 cents a copy, postpaid.

Advance of Publication Offers Withdrawn

In order to do that which we felt would be pleasing to our advance of publication subscribers, effort was made to avoid carrying over into the New Year any advance of publication offers that have been presented for a reasonable number of months. As a result we are able to announce that delivery will be made on six new publications. The delivery of these copies to advance of publication subscribers automatically withdraws the advance of publication price January first. Our usual liberal examination privilege will be extended to anyone in the profession desiring to make the acquaintance of any of the works which are now placed on the market.

Great Men and Famous Musicians on the Art of Music, by James Francis Cooke. So many thousands in the musical world are acquainted with this same author's two immensely successful companion volumes "Great Pianists On Pianoforte Playing" and "Great Singers On the Art of Singing" that little more is necessary in introducing this new work than to say that this volume is of great general interest and gives much that is instructive, stimulating and inspiring. The price is $2.25.

In the Candy Shop, Musical Sketch for Children, by Mildred Adair. This little operetta is easy to produce and is quite a charming and effective offering for juvenile participants. It goes beyond the usual makeup of an operetta in that it has an easy piano solo and easy piano duet beside the songs and dances for the young performers. Price, 50 cents.

A Little of Everything for Everyday. Technical Exercises for the Piano, by Gilmore Ward Bryant. Almost any piano student in the third and fourth grades and even beyond can utilize these studies for daily practice to good advantage. A great variety of technical figures are employed and are presented in all the keys. Price, $1.00.

Nearly a Honeymoon, Musical Play, by Jessica Moore and Geo. L. Spaulding. Church organizations, clubs and others desiring something mirthful in a musical play that is not difficult to present will find "Nearly a Honeymoon" as though it were written for their individual needs. The whole setting is rural in character. Price, 60 cents.

Preparation Trill Studies for the Violin Beginner, Op. 7 Part 1, by Otakar Sevcik. These standard violin studies have been newly edited by Mr. Otto Meyer who is a recognized authority on Sevcik's works. In ordering the Opus 7, Part 1 Studies, either of the Theo. Presser Co., or of any dealer, the violin teacher will do well to specify the *Presser Collection* edition. Price, $1.50.

Fifteen Studies for Violin (Second Violin in Score) by Chas. Dancla, Op. 68. This standard set of studies is good for general technic work throughout the first five positions. The second violin part meets with the approval of many teachers who prefer to play along with the pupil. Published in the well known *Presser Collection* of Standard Studies and Educational Works. Price, 60 cents.

World of Music

(Continued from page 3)

The Peters Edition, on December 1st, celebrated its century and a quarter of active life. The first enterprise of the new house was a complete and authentic edition of the works of John Sebastian Bach. It did a similar service for Mozart and has been a pioneer in bringing out the works of many masters. The Breitkopf and Härtel firm published their first music in 1756. Novello & Co. brought out their first publication in 1811.

Ronald Cunliffe's Boys' Choir of Todmorden, Lancashire, England, which started three years ago in a humble way, in September of 1924 created something of a sensation by giving at Todmorden a six-nights' run of Mozart's "The Magic Flute," without cuts or simplification. At this Christmastide it gave a three weeks' season of opera with "The Magic Flute," "The Golden Cockerel of Rimsky-Korsakoff," "I Pagliacci," and Wolf-Ferrari's "The Secret of Susanna" as a repertoire.

Municipal Management of Amusements has been tried by Red Wing, Minnesota, a thriving community near St. Paul, with the result that the profits have been more than thirty thousand dollars, with which the citizens are now considering the idea of installing an organ in the city auditorium.

The Directors of the Opera Comique of Paris have announced that they will organize an American operatic season for early next year, according to reports. Though there was an American season in Paris last summer, yet this will be the first one under the auspices of a state subsidized opera house.

The Saturday Morning Musical Club of Tucson, Arizona, is doing a special work to preserve the songs, dances and folk-lore of the American Indians and has lately had members of the neighboring Yaqui Nation on its programs.

Nearly Five Million Dollars for Municipal Music is expended annually by the seven hundred and sixty-two cities and towns which answered a questionnaire recently sent out by the National Bureau for the Advancement of Music.

Charles Martin Loeffler's "Memories of My Childhood" has been appearing on the programs of our leading symphonic orchestras. It is good to see our native composers more and more finding welcome from these important organizations.

Schubert's "Fierrebras," an opera in three acts, is to be presented this season at the Theatre de la Monnaie of Brussels, which will be its first interpretation with a French text.

Twenty-One Members of the Chicago Symphony Orchestra enter this year a service of twenty-five or more years. Six are original members; and Mr. Stock's own service stripes show thirty-one years of activity.

A Bach Choir of one hundred and fifty voices has been organized in Chicago, its work to be confined to the interpretation of the works of the great Cantor of Leipsig.

The Bangor Symphony Orchestra (Maine) has entered upon its thirtieth year of activity. A. W. Sprague is its conductor, and from it a number of members have graduated into positions of honor.

An "Enrico Bossi Scholarship" has been established at the Academy of Music of Milan, Mr. G. Aldo Randegger of New York having received the appointment to administer the selection of American candidates.

Walter Damrosch began his forty-first year as leader of the New York Symphony Orchestra, at a concert in Carnegie Hall on October 30.

Adele Aus der Ohe, the once eminent pianist, is now living in Berlin and making barely a living. A committee has been formed to raise a fund for her relief; and those interested may send contributions to Miss Kieckhoffer, in care of Richard Copley, Concert Manager, 10 East 43rd Street, New York City.

Christmas Caroling in Chicago was this year on a scale heretofore not undertaken. Carol leaflets, sufficient to supply every resident of the city were prepared. Business institutions, schools, churches, universities, public offices and institutions, clubs and practically all organizations, entered into the movement. Carols were sung in the three hundred and fifty moving picture theatres and the downtown theatres before the performances.

The Orpheus Male Chorus of Cleveland, Ohio, under the leadership of Charles D. Dawes, has definitely announced that it will participate in the 1926 Welsh National Eisteddfod at Swansea.

Bulletin of the Presser Home for Retired Music Teachers

On Sunday, November 8, a beautiful and impressive memorial service to Mr. Theodore Presser was held at the Presser Home for Retired Music Teachers. Members of the Presser Foundation, of the Advisory Board, and the Board of the Home were in attendance, as were noted men of business, clergymen, musicians and music teachers. A double male quartette sang several sacred songs. Brief addresses were made testifying to the character, service, and munificence of Mr. Presser; to his simplicity and humility, elements of his greatness; to his vision, his ideality, and his sacrifices.

1926 Calendars For Music Lovers

Considerable time and thought was given in the preparation of our 1926 Calendars since we had a desire to produce an exceptionally attractive Calendar that we could sell for the very nominal price of 10 cents each or $1.00 a dozen, postpaid. We feel gratified that the Calendar produced for this year has more than met expectations. The entire background of the Calendar is gold and upon the Calendar is a musical picture produced by Photogravure and giving a handsome effect in the planning of the varying Sepia tones of the picture with the golden background upon which it has been placed. The entire card of the Calendar is about 6 x 9 inches in size, the Calendar pad itself is of just the right size to be neat and at the same time each date is visible at a fair distance. There are six different picture subjects utilized in the making of these Calendars and in dozen lots they will be assorted. Many teachers use these Calendars for advertising purposes or for greetings to their pupils. Any Calendar orders under a dozen will be filled at the rate of 10 cents a piece.

Holiday Mail Rush is Still On

Bear with us during the after-holiday rush in the post office. Some ETUDES may be a little late in arriving. If a copy does not reach you within two weeks after the date of publication, which is the first of the month, drop us a post card and we will gladly duplicate. Second class mail is always subject to some delay in December and January but all copies should be delivered by the 15th of each month. We are here to give the best service and any cause for dissatisfaction should be reported to the Circulation Department at once.

Every Day is Gift Day For Premium Workers

Look over the inside back cover of this issue. Many useful gifts are offered for very few new ETUDE subscriptions. Remember, every article is a guaranteed piece of merchandise, not intended as an ornament but for every day use. We know you will be pleased with any selection that you may make.

Save Money on Etude Magazine Clubbing Combinations

There is still plenty of time to make substantial savings on your winter reading matter. Below is a list of the best publications clubbed with ETUDE at decidedly bargain rates. Make your selection now and send your orders in promptly. Give us your name and address and we will gladly mail to you our new 1926 magazine catalog showing combination prices on all magazines.

Fine Etude Binders at Cost

Now that you have the complete ETUDES for 1925, you will wish to arrange the issues so that any one number is readily accessible. We will send to any subscriber, a fine buckram binder, beautifully and substantially finished, stamped in gold on the back, THE ETUDE. It opens flat, easy to stand on the piano or book rack, always keeps copies clean and prevents their being torn. It is worth all of the retail price asked $2.25. If you will send your renewal for ETUDE MUSIC MAGAZINE for 1926 at once, we will send to you one of these binders on receipt of your check for $3.25, $2.00 paying for your renewal for the year 1926 and the additional $1.25 being the manufacturing cost of the binder, $3.25 in all. You will have made an investment which will be a source of constant satisfaction to you and the binder will keep your copies as firmly together as any substantially bound book and will last for years.

Beware of Swindlers

Pay no money to any canvasser for the ETUDE MUSIC MAGAZINE unless he is personally known to you. If there is a question as to his responsibility, take his name and address, send the money to us and if he is entitled to credit for the subscription, we will give it to him, but we cannot be responsible for cash paid out to strangers.

Premier Announcement of New Music Publications for 1926

A List of Recent Publications That Will Interest Teachers, Students, Performers and All Music Workers

ANY OF THESE NUMBERS MAY BE HAD FOR EXAMINATION

In ordering from this list it is only necessary to mention "Presser Edition" and give catalog number

PIANO SOLOS

Cat. No.		Cr.	Pr.
	BEETHOVEN, L. van		
23025	Farewell to the Piano (Arr. by A. Sartorio)	5	.35
	BERWALD, W.

	BRANDL, J.		
20510	Days of Long Ago, The (Two Part)		.06

Theo. Presser Co.—1712-1714 Chestnut St.—Phila., Pa.

Three Studies for Advanced Students

By Fenton Stancliff

THE following exercises will help you very much if you are in certain difficulties which they are designed to overcome. Unless you are sure, leave them severely alone.

The first one is for crooked fingers, particularly the fourth and fifth ones. Crooked fingers, made so by practice, will yield readily. This exercise will also increase the span of the hand, but it must be practiced exactly as stated. Now if you have a good reach, and have straight fingers which strike on the tips, leave this one alone.

Exercise I.—The notes are those of the ascending C-major scale. The fingering is the thumb alternating with the fifth finger, or with any other. Strike C firmly with the thumb. Relax. Reach up the keyboard, still holding the C, as if to test the span of the hand. Pull against the side, on the wood, of the key D. Still hold the C. Now contract the hand and strike D with the fifth finger, stretching down the keyboard as you did up before. Pull against the wood of the key C. Relax. In a like manner shift the thumb to E. Then repeat. The scale should be a perfect legato. Do not overdo this the first time.

The second one is for weak flexor and interosseous muscles (those which pull the fingers down and spread them). If your fingers are stiff, this will make them worse. If, when you play scales, your fingers will not strike firmly, try it. If your fingers seem stuck to the keys, this exercise will work positive harm. Know what you wish to do, then do it.

Exercise II—The notes are those of a legato five-finger exercise from C to G and back, not repeating any notes. The fingering for the right hand ascending from C is. five, four, three, two, one. This is not a mistake. Try to play it evenly and legato. Each finger is to go over the other and not under, even the thumb. The left hand fingering is: ascending; one, two, three, four, five. For descending, reverse the fingering. Other exercises may be invented with this idea. Never mind the apparent absurdity of the fingering, but watch the results.

The third is for weak extensor muscles (those which raise the fingers). If you need this one, leave number two alone; you cannot need both at once. If your fingers stick to the keys and you have practiced the hammer stroke too much, this exercise will work wonders for the wrist and velocity. Note each detail. One day's practice should show signs of improvement.

Exercise III.—Play scales as if each key were hollowed out and the fingers were following the curve, striking the edge nearest the player and sliding down the hollow and back up the other side. Make as much resistance as possible. Imagine each key to be hollowed out like a spoon with the handle pointed away from the piano and the spoon right side up as when filled. The fingers should strike from a little above the keys (a quarter inch), and with the tip should describe a round path. Strike the edge of the key nearest the body (front) and slide down and up as you go back. Watch that the muscles on the back of the hand are working.

The absurd fingering gives rise to the term False Technic. Unless you have studied three years and have well-grounded habits in the correct fingering of scales and arpeggios, do not try these exercises without advice from your teacher.

One should relax before every movement. The next step should be clearly understood and quickly executed. To accomplish this, a pause must come between the movements. Be deliberate and thoughtful, keeping in mind what you are trying to do. Too much practice will only do harm.

No notes are given, because it is better to have the exercises memorized first so that the entire attention can be given to the hands. The writer doubled his scale velocity in two weeks with these exercises, after having practiced for years and grown worse every year.

Some teachers think that exercises are good for the fingers and that like patent remedies of some kind are supposed to cure every ill somehow. They lack the power of intelligent discrimination. Use great discrimination in practicing these exercises if you hope to understand them.

Von Weber on Song Interpretation

IN his great treatise, Fetis, the zealous Belgian historian of music, makes the following quotation from Von Weber which, because of Von Weber's particular talent for the writing of dramatic song, is particularly pertinent:

"Song, by means of emphasis and verbal articulation, gives to the measure an effect which perhaps may be compared to the uniform breaking of the waves upon the shore. Instruments, and particularly those of the stringed kind, divide the time into sharp beats, mathematically true, like those of the pendulum.

"Now, justness of expression requires a union of these conflicting properties. The movement ought not to be a tyrannical check—a driving millhammer—but must be to the composition what pulsation is in the animal economy. There is no slow movement in which passages demanding accelleration do not occur. On the other hand, there is no quick movement but that requires, in many passages, moderate retardation. These changes in particular cases are absolutely necessary to expression.

"But, for heaven's sake, let no singer think himself justified, by what is here said, in rushing into a hare-brained mode of performance, tearing at pleasure into very tatters any number of measures he may think proper; a mode of proceeding which cannot fail to excite the same feeling in the hearer of taste, as is produced by the clown who distorts his limbs to amuse the mob. No, let the accelleration and retardation of the time be such as to convey the idea of their being dictated by feeling.

"Nor ought these modifications, whether in a musical or in a poetical point of view, to be admitted, except in accordance with the tone and character of the passion expressed. Of this, the duet between the *High Priest* and *Licinius,* in "La Vestale," may serve as an example; the greater the degree of dignified composure given to the passages in the part of the *High Priest,* and of energy and passion to those of *Licinius,* proportionally, the more striking will be the effect produced; and yet music has no marks or signs by which all this, important as it confessedly is, can be denoted."

"The great joy that was experienced when the Gospel was first made known, the happiness of Christians in the face of the incarnation, has been recorded in innumerable carols set to some of the most charming music the world possesses today, and there is more sound Christian theology in the average carol than those who sing them always realize. It is sometimes interesting to hear notable heretics lustily singing Christian truths."—*The Very Rev. Robert S. Chalmers.*

Special Chopin Issue of The Etude Music Magazine

February, 1926

For many years the ETUDE has been collecting material of an unusually useful and interesting character for a special Chopin number.

The name of Chopin in itself carries with it a kind of romance and charm that is irresistible. His works have been more frequently performed than those of any other composer for the pianoforte.

A century and a decade after his death Chopin's pianoforte pieces are becoming more popular every day.

What accounts for this remarkable vitality and fascination?

Some of the world's foremost experts upon Chopin will give their opinions in this coming issue on Chopin's life, music and its interpretation.

The ETUDE Music Magazine special issues become more and more valuable with time. When they are "out of print" it is often impossible to secure the information they contain from any source.

Time and again the ETUDE has been obliged to write friends who are seeking special information that such and such an issue is out of print.

For this reason we advise all of our friends, particularly our teacher friends, to order the coming Chopin issue in advance for their pupils and urge the pupils to preserve the February issue for future needs. The demand for this number is certain to be very great. Be sure to get your order in well in advance.

$2.00 a Year : : 25 Cents a Copy

The Etude Music Magazine 1712-1714 Chestnut St. **Phila., Pa.**

LITTLE SUITE for Two Violins in the First Position

By Arthur Hartman
Price, 80 cents
Published by

Very helpful material for violin pupils, being in the form of teacher and pupil duets. These little pieces illustrate the Open Strings, String Crossings (Wrist) Finger Exercises, the Trill and Tremolo, the Pizzicato, the Chromatic and in the "Teacher's Part"—Double Stopping and the Arpeggio.

THEO. PRESSER CO., 1712-1714 Chestnut Street, Philadelphia, Pa.

"LEADERS" IN MUSIC PUBLICATIONS EACH AN OUTSTANDING SUCCESS IN ITS CLASSIFICATION

OVER 10,150,000 COPIES REPRESENT THE ENORMOUS SALE OF THESE WORKS

SCHOOL FOR THE PIANOFORTE

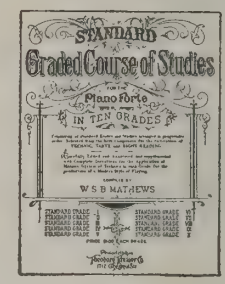
IN THREE VOLUMES — BY THEO. PRESSER

Volume Two — STUDENT'S BOOK

Volume One — BEGINNER'S BOOK — Price, $1.00 each

Volume Three — PLAYER'S BOOK

The Most Popular of All Modern Instruction Works for the Piano



"Beginner's Book" is a veritable "first reader" for the piano. Thousands of teachers enthusiastically state that it is the best of elementary instruction books for young students. "Student's Book" and "Player's Book" are also very popular because of their value as educational works covering the stages following the "Beginner's Book." Throughout this school the material is attractive and pleasing and the teacher is enabled to achieve speedy results in a thorough manner.

STANDARD GRADED COURSE *of* STUDIES

FOR THE PIANOFORTE
In Ten Grades—Ten Volumes

By W. S. B. Mathews — Price, $1.00

An Unequaled Educational Work for Piano

This is a complete, progressive series of the indispensable studies for the piano from the very beginning to the highest grade. It is a convenience to teachers and a great advantage to pupils. Except for young pupils, study can be started with the first book. Where the pupil is young, however, it is well to lead up to this course with the "Beginner's Book."

SUCCESSFUL TEACHING WORKS FOR VARIOUS GRADES of INSTRUCTION

TOUCH AND TECHNIC—By Dr. Wm. Mason—In Four Parts - $1.00 ea.
One of the most remarkable works in the entire range of piano pedagogy. A school for artistic piano playing highly endorsed by Paderewski, Joseffy, Grabrillowitsch, Liszt and others.

MASTERING THE SCALES AND ARPEGGIOS—By J. F. Cooke - Pr., $1.00
Scale study from the beginning to the highest degree of proficiency.

SELECTED CZERNY STUDIES—By Emil Liebling—In Three Volumes - $1.00 ea.
Extensively used because these volumes give the best of Czerny's wonderfully helpful studies arranged in progressive order. The editing, fingering and annotating are masterly.

COMPLETE SCHOOL OF TECHNIC—By I. Philipp - - Pr., $2.00
A compendium of modern technic. Excellent daily practice material.

NOTE SPELLING BOOK—By Adele Sutor - - - Pr., 50c
An unusually successful work. The young student is instructed in notation in an entertaining manner.

FIRST GRADE STUDIES—By L. A. Bugbee - - - Pr., $1.00
Exceptionally attractive material for use after the first few rudimentary lessons.

ADULT BEGINNER'S BOOK—By C. I. Norcross - - - Pr., $1.75
These are "suggestive studies for music lovers." An excellent manual for the intellectually matured piano student.

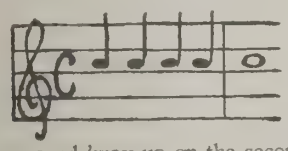
JUNIOR ETUDE



CONDUCTED BY ELIZABETH A. GEST

A "Note-"Able Transformation

By Marion Benson Matthews

Here is big Bass Note; a Whole Note he,
As your bright eyes can plainly see.

Now he moved 'way up on the second floor
With his Quarter Note Cousins, a group of four.

We paint him black, and give him a stem,
And now he's a Quarter Note—just like them.

The Land of Music

By Joan V. Bywater (age 12)

(For very little Juniors)

In the land of music live seven little fairies and five little goblins. They each have several little houses of their own and live on one long avenue called, "Pianoforte Avenue."

We will first visit a fairy whose name is "Fairy C." We must remember that she lives between a goblin's house, and a fairy's house, the goblins house being black and the fairy's house being white. This little person is always pleased to have visitors and will always be glad to sing to them. If we will just press her little white door, we will hear her sing, and I'm sure you will be pleased.

The next house we will visit is the home of "Goblin C-Sharp." He is a mischievious little fellow and loves to tease his friends the fairies; but they are used to him and his jokes.

This time we must remember that his house is situated between two fairies' homes, the one on the left being "Fairy C," and the one on the right "Fairy D." We must remember that his house is shiny black. If we press his little black door we will hear him sing.

After him come the homes of "Fairy D," "Goblin D-Sharp," "Fairy E," "Fairy F," "Gobin F-Sharp," "Fairy G," "Goblin G-Sharp," "Fairy A," "Goblin A-Sharp" and "Fairy B."

After you have heard these Fairies and Goblins sing once, you will want to do so again.

An Adventure with the Spirit of Music

By Ethel V. Moyer

It was a sparkling, cold day in winter. Two little girls with their sleds stood at the top of a hill ready to coast through the crunching snow. Nearby stood a great oak tree.

"Dorothy," said Ruth Ann, "don't you remember how the Spirit of Music sat up in the branches of that tree and talked to us?"

"Yes I do," replied Dorothy, "I wonder where he is now. He said he was going around the earth visiting the children who studied music. I guess he must be most half way round by now."

"Perhaps he comes once a year like Christmas and holidays," suggested Ruth Ann.

"Well, I hope he will not be so discouraged when he comes again. I think it makes him feel bad when he meets children who do not love their music," said Dorothy. "Don't you think he would be pleased to hear about our new music club?"

"Yes, indeed," replied Ruth Ann very emphatically, "I am sure that he would be delighted that we are studying the orchestral instruments in the club."

"We had such a *beautiful* meeting last week, didn't we? But I did not understand what that teacher said about studying the melodic curves in our pieces. I suppose it is something we have not had yet," said Dorothy.

"Have not had yet!" snapped a voice from the tree. "Well I guess you have."

The girls both looked up quickly, and there sat the little brownie spirit they had seen before. He was dressed in a frosty, white coat and cap quite like a tiny Eskimo. They both clapped their hands gleefully.

"We were just talking about you," exclaimed Dorothy, "and thought you would be glad to hear of our new music club. But we supposed you were way around the globe by this time."

"Yes, I was in Japan yesterday," said the Spirit of Music; "but I came here today, in fact just arrived to hear you say you did not know what was meant by melodic curves."

"We have never had melodic curves," responded Ruth Ann. "I suppost we are not advanced enough."

"Oh yes you are!" assured the Spirit. "You know all melodies curve up and down."

"Of course they must go up and down! There is no other way for them to go," said Dorothy. "They would not be melodies if they stayed on the same note."

"Exactly," responded the spirit. "Now how do you make them sound when they move up and down."

"Our teacher says that a very good rule is to make an ascending melody stronger and a descending melody softer," replied Ruth Ann.

"That is quite a good plan," said the spirit thoughtfully; "but first, you must examine the music and see what the composer wants you to do. If there are marks of expression you must follow them closely. However, you have to do some thinking for yourself; and you should experiment with your melodies and *listen* very intently to notice how they sound."

"I guess you can," said the voice from the tree.

"I was trying to shade a melody in my practice this morning; but my fingers were not quite strong enough to bring it out as it should sound," replied Dorothy.

"Then you should soften the other places enough so that the ones that need the tone would have a good chance to sing out," said the spirit. "But you did quite fine practicing this morning."

"What!" exclaimed Dorothy. "Were you there?"

"Indeed I was. I sat on the curtain-rod all the time."

"Then you did not hear me practicing?" queried Ruth Ann.

"Oh yes I did. You were doing your D minor scale when I was there; and I am glad to say that you kept your notes well with the metronome."

Just then a gust of wind blew the snowflakes in a quick little flurry. They looked up into the tree and the spirit was gone.

HAPPY NEW YEAR TO EVERYBODY

Mr. Jazz

By Margaret A. Fassitt

O, Mr. Jazz we're tired of you,
We are, we are, we are,
We wish you'd go to the trolley-track
And take the first fast car.
And don't come back old Mr. Jazz
Until we send for you,
We'll let you stay a month and a day
Perhaps a year or two.

We've hummed and played and danced with you,
We've thumped you day and night,
Till we've forgotten old time airs
That used to give delight.
Forgotten dainty "Sweet Marie,"
And "Annie Laurie" too!
We've left them all for you, old Jazz,
These songs that were true blue.

You really have no tune at all
No happy, gentle sway,
Just rattle-bang unpleasant noise
We hear by night and day;
Because you were so popular
We feared to say you nay,
So Mr. Jazz please go away
And stay, and stay, and stay.

Foreign Contest

Musical Conditions in My Town

(Prize Winner in Foreign Contest)

We Filipinos are music loving people. We have Spanish blood in us; that is why. My town, which is Manila, is sometimes called the land of music. In nearly every family in my town there is at least one member who is a musician. I classify them as the taught and the untaught musicians. What I mean of the taught musicians are those who study in the conservatories in Manila, and the untaught are those who play by ear. I will illustrate to you how the people in my town are music loving people.

In our family I am studying violin, my sister is studying piano, my mother is studying piano. My nine-year-old brother is a singer, for he sings in his school whenever there is a commencement exercise.

We have some poor neighbors, though poor, yet happy. At sunset when their tasks are done they sing and play. One plays an accordion, another a guitar, the third a fiddle and the fourth a mandolin, while the fifth plays a flute made of bamboo.

In our rear is a family of old folks, the youngest member being a half century old. It is the youngest that is a musician in that family. The harp reveals an unknown mystery when she plays on it. How I enjoy the music of this ancient instrument. If you take a walk one night in my town you will see three or four persons having a concert in a barber shop. A barber shop is a musical center, not only in my town, but throughout the Philippines. There are many Filipino composers now in Manila. The chief mediums which help in making the Filipinos a music loving people are the theaters, bands, orchestras and the barber shop concerts. The untaught musicians are one-third and the taught are two-thirds in Manila.

"How," you will ask, "can these musicians play if they are untaught?"

My answer is this, "If poets are born and not made it is also true with musicians. Those who are born musicians are really musicians, and they will become musicians whether they play by note or by ear."

Pascul Trinidad (Age 15),
1731 Sulo, Santa Cruz,
Manila, P. I.

OPERETTAS FOR JUVENILES

Select Now from this Attractive Material for Spring Production

THE GOLDEN WHISTLE

A Juvenile Operetta

Music by

MRS. R. R. FORMAN.

Charming musical numbers, entertaining dialog and sprightly dances combine to make this tuneful operetta pleasurable. It can be extended by utilizing choruses of elves, roses and butterflies, or by adding attractive little dances. The music includes four easy but effective solos and several choruses.

Price, 60 cents

LET'S GO TRAVELING

An Operetta for Children

By CYNTHIA DODGE

Children will enter into the spirit of this charming little operetta most naturally, because its story is based upon the self-entertaining instincts of children on a rainy Saturday morning. There are fourteen speaking parts and five easy solos to be sung. The other musical numbers are all very pretty and are in unison. Full staging and costuming directions are given.

Price, 60 cents

PANDORA

An Operetta in Three Acts

By C. E. LeMASSENA

Many successful presentations of this excellent operetta have been given. The music is tuneful and entertaining, while the dialog and action can be handled by any group of juveniles. The story is based on Hawthorne's "The Paradise of Children." Young folks will enjoy participating in this little work, and the audience will find it enjoyable.

Orchestration May be Rented

Price, $1.00

A ROSE DREAM

An Operetta for Young Folks

Music by

MRS. R. R. FORMAN

Boys and girls, or girls alone may be used in this musical playlet, which contains some bright and melodious numbers. There are eight main characters and twelve or more in the chorus as may be desired. The six little solo numbers are within the capabilities of a juvenile, and will be found enjoyable.

Price, 60 cents

RAINBOW'S END

An Operetta for Children

By CYNTHIA DODGE

This little operetta will furnish about an hour of excellent entertainment, and will be a delightful work for a large group of boys and girls. At least sixteen of each are required for the choruses, all of which are sung in unison. Three scenes are used in the action, the first and third being the same. There are eleven characters having speaking parts and individual action.

Price, 60 cents

MOTHER GOOSE ISLAND

A Musical Play for Children

By GEO. L. SPAULDING

The music of this little work is brilliant and melodious, and is set to a story that is lively and interesting. There are pretty little solos for most of the Mother Goose characters.

Price, 60 cents

A DAY IN FLOWERDOM

An Operetta for Young Folks

By GEO. L. SPAULDING

The characters of this pretty operetta are, with one exception, well-known flowers. The costuming is easy, and may be effectively done with crepe paper. The two scenes are not difficult to arrange, and add much to the effectiveness of this little work.

Price, 60 cents

PAGEANT OF FLOWERS

Children's Operetta

By RICHARD KOUNTZ

This is more in the nature of a pageant than an operetta and may be presented indoors or outdoors. About forty children are necessary, although more can be used with good effect. The music, tuneful and attractive, departs from the unison in some places, and a second part is given, but this may be omitted as desired.

Price, 60 cents

THE FAIRY SHOEMAKER

Pastoral Operetta in Two Scenes

By T. J. HEWITT

May be produced by boys and girls, or by boys alone. It is suitable for indoor or outdoor performance, and if given indoors, the scenery is very easy of preparation. The music and action are bright and entertaining.

Price, 60 cents

MILKMAIDS AND FARMERS

A Musical Diversion for Young Folks

By GEO. L. SPAULDING

This musical sketch for at least four boys and four girls is a diversion from the usual operetta, in that it has no dialog to embarrass beginners. Instead the tuneful little chorus numbers are interspersed with dances and marches.

Price, 60 cents

THE MOON QUEEN

An Operetta for Young Folks

By LOUIS F. GOTTSCHALK

Easy, melodious music, added to a bright and interesting dialog, make this a winning little operetta. There are two scenes, one representing a land of Rosy Dawn, and the other depicting the hall of Milky Way. All the chorus work is in unison, and the several solos are tuneful and easy. This can be produced effectively with little effort.

Price, 60 cents

LOST, A COMET

A Musical Play for Young Children

By GEO. L. SPAULDING

The situations developed in this entertaining operetta are humorous and enjoyable. The music throughout is good, and with the aid of attractive settings, it can be made quite effective. There are two scenes, both easily managed. The first is a lawn or garden and the second a reception hall or throne room. It can be presented in about three-quarters of an hour.

Price, 60 cents

DAY BEFORE YESTERDAY

Juvenile Operetta

By CYNTHIA DODGE

This operetta is cleverly planned and interspersed with music that is attractive and easy to sing. Following the idea suggested in the title, the pages of history are made to open and well-known historical characters step out. Full directions as to staging and costuming are given.

Price, 60 cents

THE ISLE OF JEWELS

A Musical Play for Juveniles

By GEO. L. SPAULDING

The opportunities in this musical play for picturesque staging and costuming are extensive, since the characters personify various popular jewels. The solo parts, as well as the unison choruses, offer material which will be enjoyed by the children who render them. The whole work, which is in two scenes, may be presented in a little over a half hour.

Price, 60 cents

Examination privileges will be extended to those who are interested

THEO. PRESSER CO., 1712-1714 Chestnut St. PHILA., PA.

MUSIC PUBLISHERS AND DEALERS

JUNIOR ETUDE—Continued

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original essay or story and answers to puzzles.

Subject for essay or story this month "What I Like Best in Music." Must contain not over one hundred and fifty words. Any boy or girl under 15 years of age may compete whether a subscriber or not.

All contributions must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, before January 20. Names of prize winners and their contributions will be published in the April issue.

Put your name and age on upper left corner of paper, and address on upper right corner of paper. If your contribution takes more than one sheet of paper do this on each sheet. Do not put puzzles and essays on the same sheet. Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

FOLK-SONGS
(Prize Winner)

Of all kinds of music, I like folk-songs best. Many of the old folk-songs had interminable verses. Some had very humorous texts, which were droned out to melancholy tunes which were not at all appropriate to the spirit of the words. Highwaymen and poachers were often popular heroes and many folk-songs were dedicated to their bold exploits. About 1540 sheets containing the verses of folk-songs commenced to be sold. They must have been very popular because we find in the Seventeenth Century that many printers in London were engaged in manufacturing such ballads in large quantities. About forty years ago American printers also printed ballad sheets. They sold for a penny each and contained the words of the popular songs of the day. Sometimes the sheets were two or three feet square.

HELEN QUINN (Age 12),
New York.

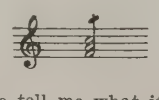
FOLK-SONGS
(Prize Winner)

Who does not love the folk-songs? I think the folk-songs of a nation are a part of its soul. We in America love the old plantation melodies, reminding us of our own early nation. The "gay cavaliers" in the early days brought the folk-songs of England to America, and they are sung yet. But the most fascinating of folk-songs are the wild, luring melodies of the Balkans, characteristic of the Gypsies. Even the rhythm of these gives one a care-free sensation and produces scenes in our minds of dancing Gypsies, flashing campfires and flaming scarlet.

The characteristics of a people will always be pictured in their folk-song.

ELEANOR SANDS,
Pennsylvania.

FOLK-SONGS
(Prize Winner)



The people themselves composed the largest class of music lovers. They sang according to their own instincts and feelings. About the end of the fourteenth Century the folk-songs reached a high degree of importance. Between that period and the Seventeenth Century masters of the science of harmony built their serious works upon some popular folk-song as a thematic basis. The old French melody, "L'homme Arme" was one of the most popular melodies, and it is often heard in the masses of the distinguished Netherlands' composers. It was the song of the people that carried the vital spark of musical development, not the mathematical music of the Greeks nor the rigid rules of the medieval scholars.

VERA VOGT (Age 14),
Illinois.

Question Box

DEAR JUNIOR ETUDE:

In the June ETUDE there is a song called "I heard the Voice of Jesus say," at the close of which there are a number of notes printed like this:

Will you please tell me what it means?

L. C. (Age 13),
Kentucky.

Answer—The printed notes that you refer to are really an abbreviation. Sometimes it takes up a good deal of room to write a great many eight-notes or sixteenth-notes, and if they are all on the one line or space they are sometimes abbreviated. The eighth-note flag is added to the half-note stem, meaning that the time of the half-note is to be filled up with eighth-note repetitions.

Puzzle Corner

Musical Trios

By E. Mendes

1. Use the last 3 letters of a musical instrument for the first 3 letters of a letter bird.

2. Use the last 3 letters of a musical instrument for the first letters of a letter word, meaning soon.

3. Use the last 3 letters of a musical instrument for the first letters of a 6 letter stinging plant.

4. Use the last 3 letters of a musical instrument for the first letters of a 6 letter word, meaning highly decorated.

5. Use the last 3 letters of a musical instrument for the first letters of a 7 letter flower.

6. Use the last 3 letters of a musical instrument for the first letters of a 6 letter bird.

Answer to October Puzzle

Verdi,
Mozart.

Liszt.
Brahms.

Prize Winners

J. P. Doyen (Age 13), Canada.
Sarah McClellan (Age 14), Pennsylvania.
Marjorie Mason (Age 13), Ohio.

Honorable Mention for October Puzzles

Harold Thompson, May Belle Smith, Lulu Armath, Janet Hillman, Hildagard Voorhees, Stella Hail, Leona Jenkins, Edmund Johnstone, Auguste Varrault, Evelyn Omwake.

Honorable Mention for October Essays

Selina Hill, Blanche Hall, Marylyn Hooper, Betty McMillen, Georgina Talbott, Helen Miller, Marjorie Mason, Jack Hooker, Marie Louise Mason, Jane Grover Gray, Ruth Millman.

Foreign Contest

The essay of one of the prize winners in the Foreign Contest appears in this issue. The winner lives in the Philippine Islands. The other prize winners for essays were Evelyn Frear (Age 15), Alberta, and Helen O'Driscall (Age 13), New Foundland.

In the puzzle contest the winners were Raymond Wilkinson (Age 10), New Zealand, Betty Rudd (Age 10), New Zealand, and Frances McBurney, Cuba.

Letter Box

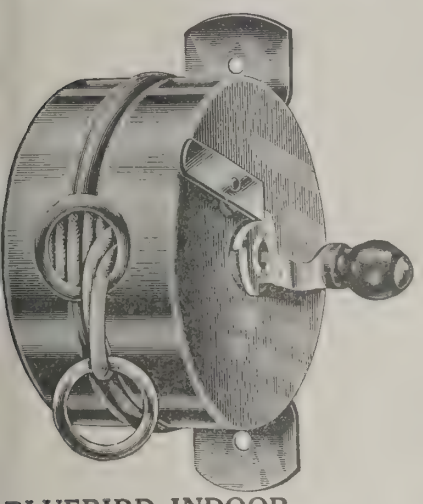
DEAR JUNIOR ETUDE:

Several of my pupils have seen the letters of the JUNIOR ETUDE members and wonder about the organization. Could you kindly inform me what the dues amount to and if all music students may belong.

Respectfully,
E. M. W.

N. B.—THE JUNIOR ETUDE has often received letters similar to the above and several times the answer has been printed. There is no organization of any kind connected with the JUNIOR ETUDE. Any one may write to the letter box and any one under fifteen years of age may enter the contests. It is not even necessary to be a subscriber. Juniors, please tell your friends this, as some may still be uncertain about it.

Letter Box List



Letters have also been received from Winnie Bush, Waverly Barbe, Catherine Powers, Edith Green, Mary Agnes Crews, Virginia Towns, Virginia Strickland, Mary Kathryn Volk, Jean Heaps, Pauline McNally, Mary Emma Packard, Odelia Baron, Frances Virginia Vogel, Henrietta Gibson, Melda Haynes, Margaret Pearce, Glema Sue Thompson, Elizabeth M. Wilkenson, Charlotte Merry, Doris June Brooks, Harriette Branch, Raye E. Christ, Evangeline Adams, Louise Fielder, Mary Margaret Berner, Helen Davis, Jeanette Arsham, Martha Wood, Virginia Mays, Mary Sulfsted, Ethel A. Haygood, Doris Hinsey, Katherine Clotfotter, Edna Coon, Vernon Jones, Melba Davis, Mildred McNulty.

How very strange it must have been
To live in olden days.
Instead of five lines on the staff
They had eleven—makes me laugh—
It's true, my teacher says.

IDEAL OPERETTAS AND CANTATAS

From Which to Make Selection Now for Spring Productions

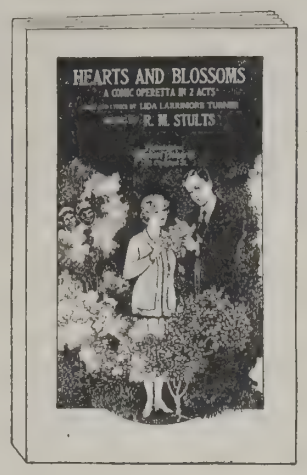
THE CRIMSON EYEBROWS

A Fantastic Chinese Romance in Three Acts

Book, Lyrics and Music by MAY HEWES DODGE and JOHN WILSON DODGE

This melodious romance of old China combines a delightfully interesting plot with most attractive musical settings. Reports of its use in various parts of the country are arriving continually.

Vocal Score With Dialog, Price, $1.00
Stage Manager's Guide, Price, $1.00
Orchestral Parts for Rental Only



BARBAROSSA OF BARBARY

Book by FRANCES BENNETT
Music by DAVID BRITTON

A Musical Comedy in Two Acts

Vocal Score With Full Dialog. Price, $1.00
Stage Manager's Guide, Price, $1.00

A delightful and amusing musical play that makes a very enjoyable and successful evening's entertainment for any audience. The plot is highly entertaining, the music is catchy, and within a reasonable amount of expense, the staging can be made very elaborate. Amateur performers can more than satisfy their audiences with this musical presentation of a mirth-provoking reformation of a band of pirates.

Orchestral Parts May be Rented

A New "Hit" in Comic Operas for Amateur or Semi-Professional Production

HEARTS AND BLOSSOMS

A Comic Operetta in Two Acts

Book and Lyrics by LIDA LARRIMORE TURNER
Music by R. M. STULTS

THIS melodious comic opera made such a "hit" at its first presentation that succeeding nights brought such crowds as to necessitate additional performances beyond those originally planned. The music, lyrics and dialog are such as to gain the spontaneous enthusiasm of any audience. Four love plots are unravelled with numerous laugh-provoking situations arising. The staging and costuming are not difficult and because this is such an excellent vehicle for young people in their 'teens and twenties the audience is treated to many pretty and fascinating stage pictures. "Hearts and Blossoms" truly gives promise of becoming one of the most popular of musical plays for amateurs.

Vocal Score With Full Dialog, Staging and Costuming Hints. Price, $1.00

THE CASTAWAYS

Libretto by A. M. FOSTER
Music by FAY FOSTER

A Clever, Melodious Operetta for Women's Voices in Three Acts

Vocal Score, Including Dialog, Price, $1.00
Stage Manager's Guide, Price, $1.00

KNIGHT OF DREAMS

Or "A Modern Pygmalion and Galatea"

Book, Lyrics and Music by MAY HEWES DODGE and JOHN WILSON DODGE

For a musical comedy that is worth while and ringing with melodies, and yet not difficult, this three-act play is ideal. It employs a very amusing story, while the staging and costuming can be easily handled.

Vocal Score With Dialog, Price, $1.00
Stage Manager's Guide, Price, $1.00
Orchestral Parts for Rental Only

A clever plot, replete with humorous situations, given a charming and excellent musical background by one of America's foremost composers. The chorus can be almost any number, and the main characters require one contralto, two sopranos, one mezzo and two speaking parts, one of these preferably a dancer.

An Immensely Successful Operetta for Young Ladies

GHOSTS OF HILO

Hawaiian Operetta for Young Ladies

By PAUL BLISS

THE weird characteristic music of the Hula dancers joins with the haunting melodies and catchy rhythms of the songs and choruses in this delightful operetta for young ladies. The two-part chorus work is especially beautiful, and is sure to arouse the appreciation of the audience. Suitable for indoor or outdoor performance, and may be lengthened by interpolating ukulele serenades, solos or dance numbers.

Vocal Score With Dialog, Music and Stage Manager's Guide, Price, $1.00
Orchestral Parts May be Rented

Opera Burlesque on College Life

CLEOPATRA

Book and Music by JOHN W. BRIGHAM

A NOVELTY musical burlesque for male characters, which abounds with excruciatingly funny situations. Every time it is produced word comes as to the great success and many laughs attending its performance. It is short and can be used as part of an evening's program. It makes a novelty used in conjunction with a men's chorus program in concert form. It is within the capabilities of high school and college young men.

Price, 75 cents

THE PENNANT

An Operetta in Two Acts

Lyrics by FRANK M. COLVILLE **Music by OSCAR J. LEHRER**

A composite description of "The Pennant" can be summed up in pretty tunes, amusing situations, well set-up young men, bright girls in smart frocks, a dance here and there, and a spirit of college "go." The choruses are made up of football players and college girls, and the musical numbers are of a pleasing character. This operetta has been produced successfully a flattering number of times in various parts of the country.

Complete Score and Dialog. Price, $1.00

An Artistic Musical Fantasy for Soprano and Two-Part Chorus

MOTHER GOOSE FANTASY

By ARTHUR NEVIN

ITS adaptability to limited producing facilities and its suitability for a brilliant and elaborate staging makes this a most acceptable work for any first-class young ladies' chorus. The addition of a professional soloist and of dancers will greatly add to the effect. The captivating choruses may be rendered by young people from eight to eighteen years of age, or by choruses made up entirely of young ladies.

Complete Score, Price, $1.00
Orchestral Parts May be Rented

FROM THE YELLOWSTONE

A Musical Drama for Solo Quartette and Chorus

Text by CHARLES O. ROOS and JUANITA E. ROOS
Music by THURLOW LIEURANCE

THE labors of the forester for the preservation of the forests and the untiring efforts of the musician in spreading abroad the hidden beauties of Indian music furnish the interesting points around which the plot of this excellent music drama is built. Can be rendered effectively in semi-concert form.

Complete Music and Dialog. Price, 75 cents.

A VIRGINIAN ROMANCE

A Musical Comedy in Two Acts

Lyrics by EDITH S. TILLOTSON
Book and Music by H. LOREN CLEMENTS

THE music of this short comedy is sprightly and catchy, introducing snatches of old war-time and patriotic melodies. The first scene is under the shade of the blossoming trees of a Virginia plantation, and the second is a reception room of a Southern mansion. It is most acceptable at any season of the year.

Vocal Score, Price, $1.00

CANTATAS FOR PRESENTATION IN CONCERT FORM

Mixed Voices

THE MERMAID

By JULIAN EDWARDS **Price, $1.25**

A brilliant, descriptive cantata which graphically depicts the roaring of the sea, the call of the mermaid, etc., in an interesting manner.

THE SINGING LEAVES

By GRACE MAYHEW **Price, 60 cents**

A bright, easy cantata from the text by James Russell Lowell. It is especially suitable for small choral societies.

THE VILLAGE BLACKSMITH

By W. H. NEIDLINGER **Price, 60 cents**

A musical setting of Longfellow's popular poem, full of color and striking choral effects.

THE GODDESS OF LIBERTY

By CAMILLE W. ZECKWER **Price, $1.00**

An inspiring musical work, which glorifies incidents and ideals, sacred to every American patriot.

Treble Voices

MON-DAH-MIN

By PAUL BLISS **Price, 60 cents**

The artistic presentation of an Ojibwa legend makes an ideal work for choruses in girls' high schools and colleges, or any women's choral society.

FOUR SEASONS

By RICHARD KIESERLING

Price, 60 cents

This cycle of four bright and melodious three-part choruses will fit well in almost any program of treble voices.

THE FAIRIES' REVELRY

By RICHARD KIESERLING

Price, 60 cents

This very pretty cantata with dancing numbers may be used with good effect for concert or stage presentation.

PETER PAN

By MRS. H. H. A. BEACH

Price, 50 cents

In this song cycle the music has been delightfully fitted to the mood of the text, making a bright, rippling group, a classic for three-part women's choruses.

IN FOREIGN LANDS

By RICHARD KIESERLING

Price, 40 cents

This desirable work for two-part chorus singing is appropriate for a women's club, or a group of advanced singers.

DAWN OF SPRING

By RICHARD KOUNTZ **Price 60 cents**

The story of nature, expressed in spring, is exquisitely told with a beautiful, melodious setting. An excellent two-part work for school choruses.

THE MERMAID

By Fannie Snow Knowlton, Price, 60 cents

A brilliant work for a soprano solo with three-part chorus, which will prove a striking feature of any program.

LIGHT

By RICHARD KOUNTZ **Price 60 cents**

An excellent work for three-part voices. It offers great musical possibilities either for women's choral societies or school choruses. Sung with immense success by over 600 Pittsburgh school children under the direction of Dr. Will Earhart.

RUTH

By PAUL BLISS **Price, 60 cents**

This sacred cantata for women's voices is a most admirable setting of the well-known Biblical story in solo and four-part numbers.

For convenience and economy to those interested in these publications, examination privileges will be extended

The World of Music

$220,000,000 Per Annum is the amount estimated to be spent for musical education in America. This is four times as much as for all the high schools in the country and nearly three times as much as for all the colleges, universities and professional schools. "However," the report continues, "a great portion of this money is wasted on persons of inadequate endowments," while "not one-half of those with a high order of musical talent are discovered and given a fair chance of a musical education."

"Paganini," a new operetta around the life of the "Wizard of the Violin," and by Franz Lehar, of "Merry Widow" fame, is reported to have been produced in Vienna.

Tax on Opera Tickets is to be removed if a bill presented to Congress by the Ways and Means Committee receives favorable action. The section to be incorporated in the revised tax bill specifies opera, spoken drama and musical comedies, the last item being distinguished from revues, burlesques and extravaganzas.

Agnes Zimmermann, widely known throughout Great Britain and much of Europe as musician and litterateur, died in London, November 14, 1925. Born in Cologne, July 5, 1847, she was taken to London as a child and entered the Royal Academy of Music at the age of nine, where she twice won the King's Scholarship. She is best known in America as the translator into English of the continental operas published by the Messrs. Novello and Co.

Miami, Florida, is to have a nine days' season by the Chicago Civic Opera Company, beginning March 8. The guarantee of $150,000 asked is reported to have been oversubscribed by $40,000. Why not, at a millionaire's playground?

Baroness Olga von Turk-Rohn, descendant of distinguished Austrian nobility, artist of the Vienna State Opera and court singer of the Austrian and German courts, is now teaching in Chicago. Her likeness is perpetuated as the composer's "Musa" on the Schubert Monument of Vienna.

M. Paul Dukas, celebrated composer of "The Sorcerer's Apprentice," of "Péri," of "Ariane et Barbe Bleue," and other well known works, has accepted the chair of musical composition in the Normal School of Music of Paris.

Mrs. Edward MacDowell, in her work for the sustaining of the "Peterboro Colony" at the composer's former home in New Hampshire, has given concerts and talks in more than six hundred cities and towns of the United States, in every state excepting Idaho, Nevada and Wyoming; and plans are already made for appearances in two of these. A wonderful example of persistence in the accomplishment of a great ideal!

That "The Star Spangled Banner" shall be recognized as the official National anthem of the United States is the purpose of a bill introduced into the House by Representative Fairchild, of New York.

A Turkish Music School is to be founded at Constantinople, by order of the Turkish Government, in order that native music, uninfluenced by the art of other countries, may be preserved and developed.

The Last Violin from the hand of the immortal Stradivarius has been added to the collection of Rodman Wanamaker. It is dated 1737, and is the fourth of this master's instruments in Mr. Wanamaker's collection. It is known as "The Swan" violin and bears an inscription by its maker stating that it was made "In My Ninety-third Year."

The Puccini Tomb will be located at Torre del Lago, according to the report of Professor Pilotti, of the University of Pisa. Lucca, Torre del Lago and Viareggio contested for the honor of being the place of sepulture of the famous composer.

The Centenary of Beethoven's Death will be celebrated by the performance of "Fidelio" at the New York Metropolitan Opera House on March 26, 1927.

A "Beethoveneum," similar to the Salzburg Mozarteum, is to be formed from the house in Mädling, near Vienna, where the great master in 1820 wrote his "Missa Solemnis." A school will be established as well as an auditorium for special musical performances.

A Memorial Carillon to the soldier dead of the World War has been offered to the city of New York, for placement in Central Park. August Heckscher, the millionaire philanthropist, has made the proposal through a letter addressed to Mayor Hylan.

The Saxophone made its first appearance in a grand opera orchestra when Harling's "A Light from St. Agnes" had its premiere at the Chicago Auditorium on December 17. This wholly American opera in librettist, plot and composer, won immediate favor. In the ovation which followed the close of the performance Rosa Raisa, who had created the leading rôle, embraced and kissed the composer before the audience.

"Fay Yen Fah," an American opera based on a Chinese plot, the libretto by Charles Templeton Crocker and the musical score by Joseph D. Redding, both of California, had its American prémiere at San Francisco on January 11. Its first production on any stage was at the Monte Carlo Theatre last summer.

Handel's "Messiah" had probably its most festal American performance of the year when it was given at Cincinnati on Christmas night with eight hundred of the musicians of the May Festival Chorus and the Cincinnati Symphony Orchestra, and with a quartet of soloists, consisting of Mabel Garrison, soprano; Kathryn Meisle, contralto; Dan Beddoe, tenor, and Fred Patton, basso, all under the baton of the veteran festival conductor Frank Van der Stucken. Trust Cincinnati to sustain the best choral traditions of America.

A Palazzo for Richard Strauss has been built by the city of Vienna in the gardens of the Belvedere Palace, formerly occupied by the Crown Prince. The composer moved into his new home about the middle of December and has announced that he will spend the winter in Vienna.

The Centenary of Italian Opera in America was celebrated by the Chicago Civic Opera Company on the 27th of November by a production of Rossini's "Barber of Seville" in a gala performance, with Toti del Monte as *Rosina.* This was just one hundred years less a day after Garcia's company presented "Il Barbiere di Seviglia" at the Park Theatre of New York, on November 28, 1825. The Metropolitan balanced the score by a Centennial Operatic Company on the 29th.

Max von Schillings has been dismissed as Director of the Berlin State Opera by the Prussian Minister of the Interior. It is rumored that his wife, Barbara Kemp, well known in America, has been the cause of much friction in the internal workings of the institution. Professional and political circles are feverishly agitated over the situation.

The National Association of Schools of Music and Allied Arts met in convention in Chicago in the last week of November. A movement to check the flood of spurious musical degrees of various qualities which have been conferred on our professionals was among the subjects claiming first interest in the discussions.

Mascagni has been engaged to conduct a series of performances of his "Cavalleria Rusticana" and other operas during the opera season in Alexandria, Egypt. Special significance to this season is given by the festivities attendant on the state visit of the King and Queen of Belgium.

Sir Edward Elgar has had the gold medal of the Royal Philharmonic Society of London bestowed upon him at a Queen's Hall concert devoted to his own works, on November 19. Sir Edward is the thirty-sixth person to receive this highly-prized medal in the one hundred and fourteen years of the existence of the Royal Philharmonic Society.

The Revival of Spontini's "La Vestale" by the Metropolitan Opera Company brought a cablegram of thanks from a committee of citizens of Majolati, birthplace of the composer, to which the Metropolitan management responded with thanks in the form of three thousand lire for the Spontini Monument Committee of Majolati.

American Composition in the Larger Forms received a fresh impetus when on the afternoon of November 19 Deems Taylor's "Jurgen," a symphonic poem especially commissioned by Walter Damrosch for the New York Symphony Orchestra, was brought to the public at their concert in Carnegie Hall. Among the expressions of opinion admiration was by far the most in evidence. Both the composer and conductor were heartily applauded by the audience.

Luella Meluis, our native coloratura soprano hailing from Appleton, Wisconsin, made her American début with the Chicago Civic Opera Company, November 19, as *Gilda* in "Rigoletto." Her reception amounted to an ovation, and the old opera goers remarked that such brilliancy of singing had not been heard at the Auditorium since Melba burst dazzlingly into the operatic constellation.

Mme. Luisa Tetrazzini is reported to have been compelled to cancel her engagements for a concert tour of Great Britain on account of ill health.

Giordano's "Le Cena delle Beffe (The Supper of the Jesters)" had its first performance in America at the Metropolitan Opera House, of New York on the evening of January 2, with Alda and Gigli and Ruffo in the leading rôles.

Henry T. Finck, one of the most eminent of our American writers on matters musical, has returned from a stay of somewhat over a year in Europe. It is regretted that Mr. Finck is reported to be in rather depleted health and will necessarily seek a climate conducive to its rebuilding.

The Fellowship of the American Academy of Rome is announced to be open for the sixth annual competition. The winner will have the privileges of a studio and three years of residence at the Academy of Rome, with opportunity for six months of travel each year to the music centers of Europe, two thousand dollars in all being allotted for expenses. Compositions must be filed before April 1, 1926, and full particulars may be had from Roscoe Guernsey, Secretary of the American Academy of Rome, 101 Park Avenue, New York City.

Jean Sibelius, eminent Finnish composer (recently, by a lapse, accredited to Denmark) is reported to be in need, and a fund has been started for his relief. Communications may be sent to William H. Hamilton, Guaranty Trust Company, Fifth Avenue and Forty-fourth Street, New York City.

"Namiko-San," the new American opera on a Japanese plot, by Aldo Franchetti, had its première on December 11 by the Chicago Civic Opera Company, at the Auditorium on the evening of December 11. Tamaki Miura created the title rôle, winning plaudits from the crowded house. The press united in commendation, their comments ranging from "it deserved to succeed" to "a hit."

Chaliapin, according to late reports, will make a coast-to-coast tour at the head of an opera company of his own, starring as *Don Basilio* in "The Barber of Seville," by Rossini.

Yehudi Menuhin, an eight-year-old violin prodigy of San Francisco, made his New York début on January 17 in a recital at the Manhattan Opera House.

Mrs. Thomas Toohey, of Schuylerville, New York, of which community she is the oldest native resident, has recently finished a service of seventy years as an organist, fifty of which she has been organist of the local Church of the Visitation. Born in 1841, she began her first appointment at the age of thirteen.

Women Artists are giving the men a merry handicap on the London concert course. In a recent fortnight no less than thirty women appeared in prominent concerts as against eight male instrumentalists.

Opera Seat Prices still slightly rise. An orchestra seat in the New York Metropolitan (except by subscription) now costs $8.25. At the Vienna opera they cost $4.75 to $7.00; while in the Paris Opéra the parquet seats now are forty francs—a little less than two dollars at present rates of exchange.

Geraldine Farrar, whose sudden illness was responsible for the closing of the run of "Romany Love Spell" after the première of the operetta at Hartford, Connecticut, early in December, has withdrawn from the stage for the entire winter.

A National Academy of Music is contemplated for Glasgow, Scotland, and subscriptions are rapidly coming in for a fund of £100,000 for the establishment and endowment of the institution. The idea is that the Academy is to be affiliated with the University of Glasgow to enable advanced students to qualify for a degree in music.

School Music *and* Instruments

We realize that one of the problems that confronts supervisors of music when contemplating the formation of a band or orchestra, is where to get instruments of a satisfactory quality at prices the pupils or their parents feel justified in paying, and where the right kind of music can be obtained.

The Problem Solved

Our "Music in the School" catalog contains the answer to both questions. The instruments shown are those with which we have equipped many school bands and orchestras, and the music listed has been selected to meet the special requirements of school organizations. We shall be glad to send you this catalog.

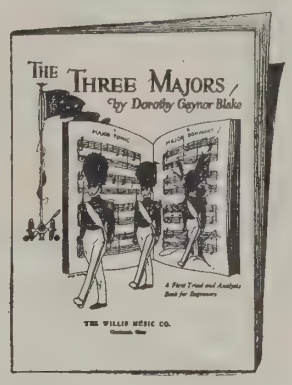
these books by Dorothy Gaynor Blake will simplify your teaching

The Eight Intervals
First Sight-Reading of Double Notes
by Dorothy Gaynor Blake

Sixteen pianistic and very melodious pieces designed to simplify the confusion which usually follows the first appearance of two or more notes on the staff. Chapter I takes up the writing of all intervals after which each interval is taken up separately with writing-lessons and fine examples in the form of charming pieces. Really a most modern and progressive work to teach thorough sight-reading.

Price, 75 cents

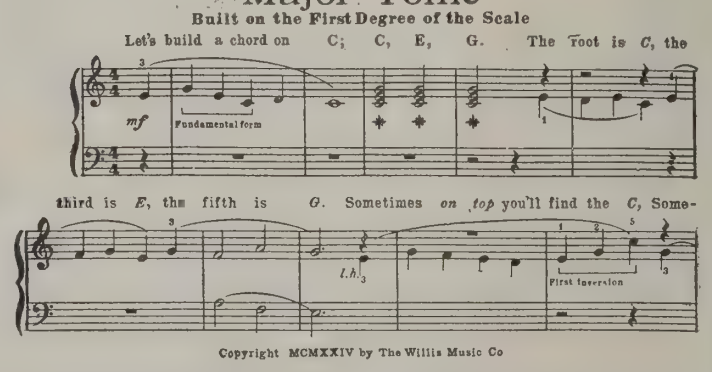


First Steps in the Use of the Pedal
by Dorothy Gaynor Blake

Studies and pieces designed to show in a definite way the use of the damper-pedal. Teaches complete independence of hand and foot-motion and cultivates the habit of *keen and attentive listening.*

Mrs. Blake has been very careful to write each study and piece so as not to suffer musically from a slow tempo.

Price, 75 cents



The Three Majors
by Dorothy Gaynor Blake

A book every teacher has wished for.

Contains first grade pieces for harmonic analysis to be used in the first few months of piano lessons. Teaches the elements of theory beyond the mere learning of notes. Free from all technical difficulties and interesting because pupils play and sing little tunes to be analysed. A book to broaden the scope for musical pleasure and appreciation.

Published with special "Introductory Page to Teachers" on loose insert.

THE ETUDE

FEBRUARY, 1926 | Single Copies 25 Cents | VOL. XLIV, No. 2

A Golconda of Melody

If any one were to ask us which of the great masters gave forth the greatest number of beautiful melodies we would probably be prompted to say at once Chopin—and this in full consciousness of the attack we would receive from the devotees of Bach, Mozart and Wagner. Chopin is a veritable golconda of marvelous melodies.

More than this, the product of the Polish master is unique, in that his works present a uniformity of beauty hardly equalled by any other composer. By this we mean, that, taking Chopin's works as a whole, there are very few which could be dispensed with. This cannot be said of all masters. Like Homer, alas! they nodded only too often.

Chopin seemed to have his genius unceasingly attuned to higher spiritual forces. The spontaneity of his melodies and his harmonies have been the glory of all music lovers for nearly a century. At times he speaks with the ethereal whispers of the berceuse, and then he roars with the tempestuous volume of the scherzas. Now, there is the fiery brilliancy of ballades, and then there is the delicate, dreamy rhythm of the mazurkas.

With the exception of his Polish songs and some ten other works, his entire output was focused upon the piano. He is preëminently the composer of the piano. No other master gave his heart and his soul so completely to the instrument, and none seemed to treat it so intimately.

Too Old!

Every now and then The Etude receives a letter from some venerable reader of, let us say, twenty or twenty-one summers, asking the question,

"Am I too old to do anything in music?"

Of course the question is one which never can be competently answered by correspondence, as so very much must always depend upon the industry and native ability of the individual making the inquiry. On the whole, however, age in itself is never a barrier to musical success, providing the ambitious student has the other success ingredients, which are numerous and varied.

After a lapse of years we have just heard again Verdi's *Falstaff*, given with that incomparable finesse which one expects from the Metropolitan Opera Company of New York. We challenge any young musician in the full flush of his twenties, thirties or forties to equal in virility and youth this octogenarian masterpiece. The entire work, from beginning to end, is a musical miracle of sprightliness, romance, poesie and piquant humor. There is no vestige of senility.

Therefore, our answer to the question is, Go hear Verdi's *Falstaff*, and then tell yourself that you have sixty years in which to try to equal its inimitable springtime.

Many teachers who were unknown at fifty have become famous at seventy. You are never too old until you admit that you are.

In these days the wise people keep on growing and growing until the final curtain. Grandma's bobbed hair and knee-length skirts are the answer of the times to "Am I too old?"

Twenty-five years ago men at the age of fifty thought it time to "retire" and, in full possession of their senses, sentenced themselves to a term of profitless indolence which usually cut their lives short by many years. Now we re-tire after the manner made familiar by the Fisk Automobile Tire advertisements. We "Re-tire" by putting new rubber on all four wheels and getting ready for an entirely new journey. There is a great lesson in this for all musicians in middle life.

Too old! Pshaw! You are just beginning at fifty to retire for the most interesting joy-ride of your life.

It is never too old to try.

Inspiration and Youth

Perfect Bliss

Music teaching is work—hard work—very hard work!

Many young people enter the profession with the idea that, if they work in music, all the rest of their lives will be in perfect bliss. Soon they find that life is very much a matter of adjustment to conditions. Some never find this out. Many of the worries, troubles and difficulties of life appear in music teaching precisely as they do in other callings.

There are times when the music teacher's life seems a perfect nightmare rather than Perfect Bliss. At that moment the teacher is given an opportunity to exhibit those traits of character which are all-essential to success and happiness.

If you are overcome with these little enemies of peace and order—the little imps of Fate that churn up continually in the lives of all busy people; if you let their pin pricks make you taciturn, disgruntled, peevish, irritable, don't expect fame or prosperity or happiness.

The rich rewards of life rarely fall upon those who are habitually unpleasant to themselves and to others. Yesterday I heard a workman say to another, "It never pays to quarrel with your meal ticket." My! what a sermon!

A Special Hungarian Issue

The special issues of The Etude, such as this special Chopin issue, often represent years of patient collection of facts and material. We are pleased to announce a special Hungarian issue in April, with many distinguished contributors including Erno Dohnanyi, Yolanda Mero, Mme. Matzenauer and a lesson on Liszt's "Liebestraum" by Mark Hambourg.

A Life Sentence, Please

For years we have been explaining to our readers, gentle and otherwise, that, much as the late Reverend Dr. Haweis would have us believe to the contrary, music has a most direct influence upon morals. As our subscribers know, we do most emphatically believe that music, given in conjunction with character training or ethical discipline, is one of the most precious assets of civilization.

Now we have learned from two men who have spent much time in teaching music to the unfortunates in criminal institutions that very rarely do they ever encounter among the incarcerated a really finely trained instrumentalist. Mr. Albert N. Hoxie, Philadelphia altruist, who conducts the band and supervises the musical work at the Eastern Penitentiary, is responsible for the statement that his instrumentalists have been trained in the institution, where he also supervises the harmony and piano instruction given by Prof. Ernest Hartmann. Mr. Robert Lawrence, for three years song leader at Sing Sing, who believes that some eighty-five per cent. of the prison inmates are more the victims of circumstances than willful wrong-doers, says that during the entire time he was engaged in musical work at the great New York prison, it was impossible to find among the inmates a pianist good enough to play ordinary accompaniments well. The situation was so amusing that one of the inmates addressed a facetious letter to a judge requesting that if a pianist came up for conviction he would "Please give him life."

Who knows but that in the future some of our teachers may advertise

"Study the Piano and Dodge the Hoosegow."

The fact of the matter probably is that anyone who becomes an accomplished instrumentalist is kept so everlastingly busy that he has no time to get into trouble.

The Talisman of Practice

The talisman of practice is INTEREST.

Without interest, practice is not only likely to be profitless, but it is also likely to become a terrible nervous strain—terrible, because of the dangerous psychological and physiological consequences.

Dr. W. Hanna Thompson, in his famous and essentially practical book, "Brain and Personality," says:

"If a man expended the same amount of muscular exertion sawing wood which he does climbing rocks or wading streams after trout he would faint dead away."

When you are after a twelve-inch trout work ceases to be work and turns to interest.

Paderewski can practice twelve hours a day when he desires, not merely because of his physical strength—as that much ordinary drilling at the keyboard would exhaust a Sandow—but he endures these long periods of concentrated work because his art interest is so acute and sustained that the work ceases to be work.

When we were very young we had a piano teacher of incredible severity. She had been brought up not on the milk of human kindness but on the wormwood and gall of bitter misfortunes. Poor thing, she had a way of pulling back her hair in a kind of knob-like tourniquet, so that her parchment countenance was drawn tightly over angular facial bones in a fashion that would startle any child. Alas! her conception of music corresponded to her appearance: scrawny, bony, fleshless, bloodless.

Her first step in teaching the incipient editorial us was to play the scale of C on the keyboard. She showed us how she did it and we imitated her. Thus, during some six or nine months we played scales without any suggestion of teaching us musical notation, or any thought of melodies or harmonies. This was followed by an explanation of notation, then large doses of unadulterated Herz, and, later, pure and unmitigated Bertini—dullest and driest of technicians.

Thus, by carefully avoiding anything suggesting musical interest, she assured us that we were on the way to musical salvation. At the end of a year we detested the piano so thoroughly that we frequently wondered whether there might not be some means by fire or flood of destroying the instrument.

Then we got a human teacher. A man with a twinkle in his eye, who saw life as a fascinating experience. Gradually he brought us back to normal and showed us that music was one of the most interesting things in existence.

Make Your Music Interesting or You Will Never Make a Musician.

The Music Spot

That there is a section of the human brain devoted specifically to music is widely known. Some little derangement of the brain may so alter the capacity of the individual to comprehend music as to destroy his musical future.

Dr. W. Hanna Thompson, in his remarkable book, "Brain and Personality," says, "A trained musician may be entranced at one time listening to a symphony of Beethoven; but in a few hours, though still able to hear it, he may be wholly unable to recognize it as music."

Is it not easy to conclude from this that there is to be expected a great lack of uniformity in the powers of musical perception in different individuals? This is, of course, confirmed by the experience of all teachers.

Although there is this lack of uniformity of musical perception, we are also told that the musical sense, like all others, can be trained and developed by experience and drill. Therefore, if a pupil does not seem to show pronounced musical ability at the start, the teacher should not despair. We have known some remarkable instances of development. Pupils who seemed at first what might be called "musically dumb" have blossomed forth after some years of honest work in a way which has been a gratification to the performer, the teacher, and to the parent.

Very little musical effort is ever really wasted. It proves an asset when least expected.

Travel and Music

We have often wondered why many artists who are continually traveling on tours from city to city show so little of the alleged advantages of travel. Travel is supposed to be broadening, and it may be if conducted for that purpose.

Traveling salesmen, with their minds bent on commissions and orders, only rarely profit by their opportunities. Travel seems to make them alert and responsive and capable of deciphering the railroad guides, but at the same time appears to give them little of educational and cultural value. They are usually far too busy and too intent upon making the necessary profitable reports.

We know of one famous musician, however, who made every country and every city a study as he toured around the world. He bought small libraries of books as he went, and by the habit of genial inquiry informed himself, insofar as his time permitted, upon the geography, the geology, the anthropology, the sociology, the art, the industries, the history and the politics of the countries he visited. Such education, secured through long travel, naturally resulted in ripe and broad erudition and culture. The man was John Philip Sousa.

Progress Every Minute

"Why does not the curtain rise?" asked the King at the theatre.

"Because, Your Majesty," replied the Lord Chancellor, "because the Queen has not finished shaving." And forsooth the Lord Chancellor was right, because in that day all of the female parts upon the stage were taken by young men—female impersonators.

When real women went upon the boards in London, in 1639, society was shocked by the terrible immorality of the thing. A change in the attitude of the public occurs with almost every minute. The music that was considered insufferable twenty-five years ago is hailed to-day as the basis of a new art.

Chopin

A Eulogy upon the Greatest of Polish Musicians

By the Greatest of Living Poles

IGNACE JAN PADEREWSKI

Pianist, Composer, Statesman, Philanthropist

"The Etude" presents herewith a remarkable address given by Mr. Paderewski at the opening of the Chopin Centenary Celebrations in Lemberg. We are likewise indebted to Mr. H. B. Schaad, the owner of the copyright upon this exceptionally beautiful and able appreciation. The address is also published in booklet form (Copyright 1911) and may be obtained from Mr. Schaad at Aeolian Hall, New York City, upon receipt of fifty cents. The Eulogy is one of the most beautiful in the history of language and shows Mr. Paderewski's immense literary gifts. The receipts of the sale of this book will be given to Mme. Paderewski for use in the extensive charities in Poland she still maintains with such generosity.

IGNACE JAN PADEREWSKI

WE ARE here to honor the memory of one of Poland's greatest sons.

Lately, in Cracow, on a luminous and unforgettable day of July, we paid homage to those valiant forefathers by whom our country was upbuilt; today we bring thank-offerings of love and reverence to him by whom it was enriched and marvellously beautified. We do this not only in remembrance of a dear past, not only in justifiable and conscious pride of race, not only because our bosoms are still quick with sparks of that inextinguishable faith which was, is and always will be the noblest part of ancestor worship, but because we are deeply convinced that we shall go forth from these solemnities strengthened in spirit, re-inspired of heart.

And we are in sore need of strengthening, of re-inspiration.

Blow after blow has fallen upon our stricken race, thunderbolt after thunderbolt; our whole shattered country quivers, not with fear but with dismay. New forms of life, which had to come, which were bound to come, have waked among us on a night of dreadful dreams. The same wind that blew to us a handful of healthy grain has overwhelmed us in a cloud of chaff and siftings; the clear flame kindled by hope of Universal Justice has reached us fouled by dark and blackening smoke; the light breath of Freedom has been borne towards us on choking, deadly waves of poisoned air.

Poland Forever

OUR hearts are disarrayed, our minds disordered. We are being taught respect for all that is another's contempt for all that is our own. We are bidden to love all men, even fratricides, and yet to hate our own fathers and brothers should they think otherwise, albeit no less warmly, than ourselves. Our new teachers are stripping us of the last shred of racial instinct, yielding the past in prey to an indefinite future, thrusting the heritage of generations into the clutches of that chaotic ogre whose monstrous form may loom at any moment above the abyss of time. The immemorial sanctuary of our race, proof until now against the stoutest foe, is being assailed by brothers who batter at the walls, meaning to use our scattered stones for the building of new structures—as if these poverty-stricken architects were unable to afford material of their own! The white-winged, undefiled, most holy symbol of our nation is being attacked by croaking rooks and ravens; strange, ill-omened birds of night circle around her, screeching; even her own demented eaglets defy her.

"Away with Poland!" they cry. "Long live Humanity!"—as if Humanity could live by the death of nations!

In such moments of distraction and turmoil we turn towards the past and wonder anxiously: Is all that Was worth nothing, then, but condemnation and contempt? Are only that which Is, and that which May Be, worthy of regard and faith?

The answer is not hard to find.

Here, at this very moment, there rises amid us, above us, the radiant spirit of one who Was. What light, what valor, what energy were in him!—what strength of endeavor he showed in the midst of suffering! Through trouble and affliction, through heartache, through creative pain, he marked to his country's glory the burning trace of his existence. By a bloodless fight fought on the plains of peace, he assured the victory of Polish thought.

Blessed be the past, the great, the sacred past which brought him forth!

A belief has been widely spread that Art is cosmopolitan. This, in common with many other widely spread beliefs, is mere prejudice. That which is the outcome of man's pure reason, Science only, knows nothing of national boundaries. Art, even Philosophy, in common with all that springs from the depths of the human soul and is the outcome of a union between reason and emotion, bears the inevitable stamp of race, the hallmark of nationality. If Music be the most accessible of all the Arts, it is not because she is cosmopolitan, but because she is of her very nature cosmic.

Music is the only Art that actually lives. Her elements, vibrations, palpitations are the elements of Life itself. Wherever Life is she is also, stealthy, inaudible, unrecognized, yet mighty. She is mingled with the flow of rushing waters, with the breath of the wind, with the murmur of forests; she lives in the earth's seismic heavings, in the mighty motion of the planets, in the hidden conflicts of inflexible atoms; she is in all that lights, in all the colors that dazzle or soothe our eyes; she is in the blood of our arteries, in every pain, passion, ecstasy that shakes our hearts. She is everywhere, soaring beyond and above the range of human speech unto unearthly spheres of divine emotion.

The energy of the universe knows no respite, it resounds unceasingly through Time and Space; its manifestations, rhythm, by the law of God, keep order in all worlds, maintain the cosmic harmony. God's melodies flow on unbroken across starry spaces, along Milky Ways, amid worlds beyond worlds, through spheres human and superhuman, creating that wondrous and eternal unity, the Harmony of universal Being. Peoples and nations arise, worlds, stars, suns, that they may give forth tone and sound; when silence falls upon them, then Life ceases also. Everything utters music, sings, speaks, yet always in its own voice, using its own gesture, according to its own particular hunger. The soul of a nation, too, speaks, sings, utters music —but how?

Chopin best of all can tell us.

Human Music

HUMAN music is but a fragment of eternal music. Its forms, created by the mind and hand of man, are subject to frequent transformations. Times change, peoples change, thought and feeling take new shapes, put on fresh garments. Sons bow their heads unwillingly to that which moved and enraptured their fathers. Every new generation in its hour of dawn, filled with the dreams of youth, its thirsts, intoxications and enthusiasms, thinks itself called upon to impel humanity towards heights unmeasured, believes itself an appointed pathfinder, a thinker of thoughts, a doer of deeds greater than any of those which came before. Every new generation desires beauty, but a beauty all its own. In this spirit are begotten works of art which come to life, as it were, to serve the needs of the moment, and which some times endure a shorter space of time than their creators. Others, longer lived, bear the stamp not merely of one generation, but of a whole period, whose lights and ideals they still reveal after long years. But there are works of yet another order, strong with undying youth, luminous with unchanging truth, in which there speaks the voice of every generation, the voice of a whole race, the voice of the very earth which brought them forth.

No nation in the world has reason to pride itself on greater wealth of mood and sentiment, on emotions more delicately tuned than ours. The hand of God strung the harp of our race with chords tender, mysterious, mighty and compelling. Yearning maidenhood, grave manhood, tragic and sad old age, light-hearted, joyful youth; love's enfolding softness, action's vigor, valiant and chivalrous strength—all these are ours, swept together by a wave of lyric instinct.

Here may be found, pehaps, the secret of a certain enveloping charm that is ours; here, too, may be our greatest demerit. Change follows change in us almost without transition; we pass from blissful rapture to sobbing woe; a single step divides our sublimest ecstasies from the darkest depths of spiritual despondency. We see proof of this in every domain of our national life; we see it in our political experiences, in our internal developments, in our creative work, in our daily troubles, in our social intercourse, in all our personal affairs. It is palpable everywhere. Maybe this is only an inherent characteristic; yet when we come to compare ourselves with other happier and more satisfied races, it strikes us rather as being a pathological condition; if this be so, it is one which we might specify, perhaps, as inborn national Arythmia.

This Arythmia would serve to explain the instability, the lack of perseverence with which we are generally credited; we might there find the source of our, alas, undeniable incapacity for disciplined collective action; therein, doubtless, lies some of the tragedy of our ill-fated annals.

Not one of those great beings to whom Providence entrusted the revelation of the Polish soul was able to give such strong expression as Chopin gave to this Arythmia. Being poets, they were hampered by limiting precision of thought, by the strictness of words; no language can express everything, not even ours, for all its wealth and beauty. But Chopin was a musician; and music alone, perhaps alone his music, could reveal the fluidity of our feelings, their frequent overflowings towards infinity, their heroic concentrations, their frenzied ecstasies which lightly face the shattering of rocks, their impotent despairs, in which thought darkens and the very desire of action perishes.

Tempo Rubato

THIS music, tender and tempestuous, tranquil and passionate, heart-reaching, potent, overwhelming; this music which eludes metrical discipline, rejects the fetters of rhythmic rule, and refuses submission to the metronome as if it were the yoke of some hated government; this music bids us hear, know, and realize that our nation, our land, the whole of Poland, lives feels, and moves "in Tempo Rubato."

Why should the spirit of our country have expressed itself so clearly in Chopin, above all others? Why should the voice of our race have gushed forth suddenly from his heart, as a fountain from depths unknown, cleansing, vital, fertilizing?

We must ask this of Him who alone can open the secret womb of Truth, who has never yet told us all, and who perhaps will never tell us. . . .

The average Polish listener, unfamiliar with the art of music, hears the masterpieces of Bach, Mozart and Beethoven with indifference, at times even with impatience. Polyphonic ingenuities, wealth and variety of harmonic intricacies, lucid enough to the trained understanding, are inaccessible to his ear; his mind loses its way in the mystery of fugues; his attention wanders and strays amid the marble forms of the beautiful but German Sonata; he confronts the amazing structures of the classic symphony chilled and ill at ease as in a foreign church; he cannot feel the Promethean pangs of the world's greatest musician.

But let Chopin's voice begin to speak and our Polish listener changes immediately. His hearing becomes keen, his attention concentrated; his eyes glisten, his blood flows more quickly, his heart rejoices although tears are on his cheek. Be it the dancing lilt of his native Mazurka, the Nocturne's melancholy, the crisp swing of the Krakowiak; be it the mystery of a Prelude, the majestic stride of a Polonaise; be it an Etude, vivid, surprising; a Ballade, epic and tumultuous; or a Sonata, noble and heroic—he understands all, feels all, because it is all his, all Polish. . . .

The Heart of Poland

ONCE more his native air enfolds his being, and spread before him lies the landscape of his home. . . . Under the sad sky's vague blue, he sees the wide plains upon which he was born, the dark edges of distant forests, plough-lands and fallow lands, fruitful fields and sterile sandy stretches. . . . A gentle hill has risen, at whose feet the twilight mists hover mysteriously above the green hollows of the meadows; the gurgling of brooks reaches his ears, the scant leaves of the birch rustle tearfully, a soft wind plays in the tall poplars, strokes the green waves of yielding wheat; a perfumed breath blows from the ancient pine forests, wholesome, resinous. . . . And all this becomes peopled by strange legendary shapes such as, long ago, his fathers conjured to sight: unearthly, half-forgotten beings come to life again in the spring night. . . . A Scherzo! he beholds the wild frolics of demigod and goddess. . . . Phantoms without number haunt field and meadows; in the dense thicket were-wolves struggle; roguish imps are at their pranks; little, hovering lovesprites rove a-wooing, returning ever to encircle their Queen of Love, Dziedzila, and to hear that deathless song which, long ago, burst her bosom open and laid bare to all men's sight a heart broken with loving—the heart of Poland.

Now and again Perun the immemorial raises his voice and thunders, gloomily, threateningly, solemnly. . . . The holy groves tremble, the sacred elves vanish from the surface of the lake, and lightning-flashes burn the sky. A storm has broken, sudden, terrific, driving, pursuing, shattering: caught in the tempest's whirling blast, the proud fanes of the Druids totter and fall. . . .

Our Pole listens on. Summer's breath on the fields of his fathers blows softly round his soul. The sea of golden wheat has dried away, the shocks and sheaves are standing, the sickle is at rest. Light quail and graver partridge are on the wing, searching the rich stores of the stubble. Waves of harvest song are on the air: from marsh and pasture comes the echo of the herdsman's pipe: not far away, there is the hum and bustle at the wayside inn. The fiddlers play dexterously, they play by ear, thrusting in a frequent augmented fourth, familiar, racial: a rude bass viol supplies a stubborn pedal: and our folk dance briskly, stridingly, or sing slowly, musingly—a healthy folk, wayward, merry, yet soaked with melancholy. . . . In the little church across the road an organ sounds, poor and humble.

The Polonaise

AWAY there, in the stately Manor, lights are flaring in the halls; great nobles, county electors maybe, are gathered here in a colored, glistening throng. Music sounds. My Lord Chamberlain, or whoever present be most dignified of rank, steps forth to lead the Polonaise. There comes the clank of swords, the rustle of brocaded silks against wide sleeves, purpled lined. With dashing step the couples march on proudly, while soft, smooth words begin to flow towards fair cheeks and lovely eyes—the glib words of the old Polish tongue, well interspersed with manly Latin, and with here and there a timid touch of French. . . .

The dance has ceased; and now an old man, long-bearded, white-haired, silver-voiced, tells some misty tale to the sound of bagpipe, lute and harp. He tells of Lech, Krak and Popiel, of Balladyna, Veneda, Grazyna, . . . he chants of lands beyond the seas, of Italian skies, of jousts and troubadours, . . . he sings of the White Eagle, of Lithuania's Horsemen, of victorious encounters and of battles lost, of vast, immortal struggles, unended and unsolved. . . . All listen and all understand. . . .

Out in the garden where the air is sweet with breath of roses, with sigh of jasmine and of lily, a lovely daughter of the house, under the shielding murmur of the limes, caught in a starry Nocturne, whispers to some sad youth the tender sorrows of the summer night. . . .

Summer has passed now, and so have many summers. Gone are the armored knights and their conquering marches, fallen are the wings of the intrepid hussars who once victoriously ploughed the Baltic waves; the manhood of the Lancer's noblest charges is now no more; nothing remains but a memory fast-held in the annals of our glory. . . . Autumn has come—here are Preludes that almost seem to be Epilogues. Is this Life's autumn? No; it is rather Autumn's life that here begins. The days are shorter, the light wanes, fair times and merry are rarer now. Yet, when the sun shines forth in its glory, it is hard to tear oneself away from so much wealth and matchless color, and to face consciousness of dusk, of the outweighing shade. The old timepiece that measured fairer days for our grandfathers and great-grandfathers now solemnly strikes a late, a midnight hour. The gloomy wind howls in the empty chimney; one hears the measured drops of the autumn rain, the soft thud of withered leaves falling to earth, the mournful rustle of the orphaned branches.

The old graveyard is full of ghosts; amid the ancient mounds and hillocks phantoms creep, spectres fulfill their shadowy rights. What ghost was that? Whose spirit there went past? Was this Zolkiewski? or Czarniecki's noble shade? Were these the traitor brothers, Boguslaw and Janusz Radziwill? or Radziejowski of equal stain? Was not this the lofty figure of Kordecki—luminous still in this hour of darkness with the light of Jasna Gora? Was this not Sicinski, of dishonored bones? Here perhaps Rejtan the patriot, or Potocki the renegade Marshal of Targowica. Here perhaps Bartosz Glowacki, the peasant hero, or Szela the infamous. . . . Ah, no! these names belong to history, for History, although she stands at the threshold of immortality a fastidious guardian, admits to her sanctuary good and bad alike, provided only they be great.

Part of Immortality

BUT the music we speak of is a part of immortality itself and harbors all, great or little, strong or humble, famed or nameless, stripping them only of the errors and guilts of their earthly covering, and bringing them forth anew from the cleansing depths of the soul, beautified, ennobbled.

Chopin beautified, ennobled all that he touched. Deep down in Polish earth he discovered precious stones of which he fashioned the most priceless jewels of our treasury. He it was who first conferred nobility upon our peasant, the exquisite nobility of beauty. He led that simple figure forth into a wider, greater world, into castle halls, glittering with light, and set him close beside the proud Lord Palatine; he set the village herdsman beside the Knight Commander, the disowned orphan beside the lady of high birth; poet, magician, monarch by right of genius, he equalized all ranks; not here on the plains, on the flats and levels of every-day life, but high up on the loftiest summits of human emotion.

The Pole listening to Chopin is aware of all this, because he listens to the voice of his whole race. Beginning with the peace, sweetness, and light of the wind-swayed Berceuse, ending with the two Sonatas, portentous, strong as if forged of heroic metal, he possesses the entire gamut of his own and of his nation's life. He sees himself an infant once again on a golden, burning day when above his cradle orchestras of butterflies played to him in the sun, when swarms of bees hummed out to him their honeyed song, when choirs of birds twittered to him softly as if in fear to wake the sleeping child. . . . He sees his boyhood, rural, angelic; his youth, lofty and clouded; his manhood, his age of affliction. . . . And here is Winter now. Snowflakes, borne on the whistling breath of tempests, have stiffened white on the fields of his home. Here is the very close of life, the end of dreams, of struggle, and of pain. . . . His last poor, narrow house is on the dismal chariot, his frail remains are being led back to the open bosom of the earth, his mother; and on this pilgrimage towards eternal rest he hears the mighty, solemn trumps of the archangels. . . .

The Pole listens and sheds tears pure and abundant. We all listen so. For none could listen otherwise to him who, by the grace of God, was spokesman of the Polish race.

Chopin Wholly Polish

CHOPIN came into the world after the triple murder of our nation. Napoleon's star was at its zenith then in Europe's sky, that star which, during long years, shed upon Poland illusive rays of hope. In childhood Chopin knew the comparative liberty enjoyed by the Kingdom, newly cut out, as a heart might be, from the living flesh of the Nation. That violent storm which was presently to shatter the whole of our country had already gathered in the sky when Chopin left his native land forever. He did not go forth alone. He carried with him that which Mickiewicz somewhere defines as "genius loci," but which we here prefer to call "genius patriæ;" he carried with him the spirit of the Land of his Fathers, destined to remain with him till death.

It was, thanks to this spirit, that, even were desire not lacking, none could ever take him from us. France herself, in spite of blood-relationship through his father, has never dreamed of using his glory for her own embellishment. No one asks a king to give account of his blood; royal spirits accept with crown and sceptre the nationality of the hearts subject to them; but the mystery, depth, sensitiveness, and volcanic force of Chopin's creations provide no elements of kinship with the French race; his very form lacks the stamp of courtly elegance, replacing it by a dignified and exquisite nobility.

Not even that nation, mighty in numbers, strong yet oceanless, which fain would create unto itself a sea engulfing all Slavonic streams, not even that nation which has taken so much from us already, has yet dared lift its usurping hand towards Chopin. He too was a Slav—yet with how great a difference! How distant his grace and charm, his wealth of colors, of lights and shades, from the sombre and monotonous although clever Russian muse upon whose cheek no smile of humor or of happiness seems ever to have played. What an abyss between his yearnings, his griefs, the unfailing fitness of his tragic sense, and that withering despair which blows towards us as a blast frost-laden; across steppes immeasurable, boundless, hopeless. . . .

(*Continued on page 145*)

Chopin's Estimate of Fellow Musicians

He placed Bach "very much first."

He found Schubert uneven and said of his works, "The sublime is desecrated when it is succeeded by the trivial."

For him Weber's music was "too operatic."

He dismissed Schumann, as a composer, with airy contempt.

When speaking of Berlioz, to Gutman, he picked up a pen, bent back the point, and then let it snap as he jested, "This is the way Berlioz composes—he sputters the ink over the pages of ruled paper, and the result is as chance wills it."

Only the C-Sharp Minor and certain others of the sonatas of Beethoven inspired any enthusiasm within him.

He admired Liszt as a virtuoso but rated him lightly as a composer. But it must not be forgotten that he had an opportunity to see only the earlier works of this amazingly versatile character.

After Bach, he loved Mozart best. Mozart was his ideal poet among the composers, because he "is always beautiful and never commonplace." On his death-bed he is reported to have said, "You will play in memory of me and I will hear you from beyond." To this, Franchomme, thinking to please him, responded, "Yes, master; we will play your sonata," referring to the one for piano and 'cello. "Oh, no, not mine," objected the dying composer; "play really good music—Mozart, for instance."

Six "Dont's" for Young Students

By Gertrude Conte

Don't keep the loud pedal down for good.

Don't play the accompaniment louder than the melody.

Don't play faster the easy measures and then have to slow down at the harder ones.

Don't sit so close to the piano that your elbows stick out at the back.

Don't guess at the very low or very high notes nor hit them by chance.

Don't think any music too easy to be played well.

A Chopin Pilgrimage in the Mediterranean

BY JULIA E. SCHELLING

Miss Julia E. Schelling was born in Covington, Kentucky. Like her two brothers, Felix E. Schelling, Ph.D., of the University of Pennsylvania, noted for Shakesperian research, and Ernest Schelling, the composer and pianist, she was educated in music at an early age, first with her father and later with Lowitzky and Joseffy. She also studied organ with Samuel Strang, a pupil of Guilmant. For years Miss Schelling lectured with great success, through the northwest, upon Wagnerian Opera and other musical subjects. Miss Schelling has made over thirty journies to the shrines of great musicians. The article presented herewith is an example of her love for a closer view of "seats of the mighty" and recounts certain incidents in Chopin's life not generally known. The close observation which discovered these makes the article unique in its unusual interest and value.

"MY LIFE," wrote Chopin, "consists of an episode without a beginning, and with a sad end."

This little story is a fragment of that episode, having its beginning and end on the mysterious Island of Majorca off the coast of Spain. It was never intended for publication.

My pilgrimage to the shrine of Chopin disclosed to me some unknown facts about his sojourn there; and I am giving them to you as the kind-hearted people on the island and an old monk at the Monastery of Valdemosa gave them to me.

The splendor of an almost tropical sunset was spreading its glow over land and sea when, with passengers comfortably seated upon the deck, our tiny steamer puffed away from the sea-wall of Barcelona, over the Mediterranean, to the Balearic Islands.

The total population of eleven of these islands, in 1900, was one hundred and seventy-one people; and all were inhabited, even the dread Island of Cabrera, a place of banishment from which no exile returns. The Islands Majorca and Minorca, from the Latin Major and Minor, were inhabited by savages until the Carthaginians, Moors, Romans, French and Spaniards in succession claimed them.

My destination was Palma on the Island of Majorca. It is only one hundred and thirty-five miles from Barcelona; but the boats are small, and the sun was rising next day when we landed.

Ramparts, dark and gloomy, surrounded the city on all sides except the port, where they were demolished in 1872. The ancient castle of Bellver towers far above palaces, churches, mediæval prisons, and a wealth of wonderful ruins. The people look as primitive as the fortress and are dressed in costumes almost as old.

Chopin's Pilgrimage to Majorca

It was such a picture as this which must have lured Chopin to these Islands seeking health.

In November, 1838, accompanied by George Sand (Madame Dudevant), her two children and a maid, he reached the islands by sailing vessel, after a tempestuous voyage. Exhausted, they at last found a charming villa in a grove of olives. George Sand wrote, "We could find no small Inns, beds were bad, food worse;" and, to add to these discomforts, the Customs Officials held Chopin's precious piano, demanding seven hundred francs (about one hundred and forty dollars) duty to let it enter the Island. Later they reduced the amount of duty to four hundred francs.

We are told that Chopin borrowed money to take this trip. Before leaving Paris, Chopin had sketched several of the Preludes and had offered them to the piano manufacturer and publisher, Pleyel. He asked two thousand francs for them; but the necessity for this trip to sunny Spain and the immediate need for money arising, he arranged for an advance of five hundred francs, the balance to be paid upon the delivery of the manuscript. This remarkable series of compositions, which cost the publisher only five hundred dollars, has in itself produced a financial return that can hardly be measured by figures. Thousands and thousands of copies are sold every year. More than this, those exquisite Preludes have been a ceaseless source of inspiration to the entire world of music for three quarters of a century. And the petty customs officials at little Palma held Chopin's piano, demanding seven hundred francs duty!

JULIA E. SCHELLING

The piano was a Pleyel; let us hope that the wealthy firm in Paris advanced this piano with the five hundred francs asked by Chopin. Grove's Dictionary of Music, states that Chopin's piano was held from November 1838 till February 1839. Information obtained on the Islands places the time of detention at two or three weeks. It is probable that the piano was held for a longer time at the port and delivered to him at Valdemosa, his second resting place on the Island. I found the people of Majorca reluctant to discuss Chopin's sojourn there! The beauty of the Islands delighted Chopin. Settled in a charming villa far from the excitement of Paris, everything was for a time, *colour de rose* with the party; but the rainy season set in and Chopin's illness increased to such an extent that the landlord insisted on their leaving and paying for the process of disinfecting the villa. So little attention is paid to sanitation on these primitive islands that I believe that the fumigation was not for sanitation, but as a rite or spell to ward off the "Evil Eye" so dreaded by superstitious Spaniards even to-day. From the first, Chopin's little party was suspected of witchcraft. The crude Balearic slingers (men who fought with stones cast from slings), noted from the time of the Carthaginians for their great strength, looked askance at the frail young foreigner with his strange following. Chopin was twenty-eight years old, George Sand thirty-four, her children fifteen and sixteen. Solange inherited her mother's unconventional nature, but not her genius.

Driven from their temporary home, without a roof to cover their heads, misunderstood by the hostile and inhospitable islanders, in a damp climate, at the coldest season of the year, these super-normal refugees could think of no other haven but the church. Accordingly,

in a chaise drawn by one mule our pilgrims started for Valdemosa, an ancient monastery of the monks of Chartreuse, which more than once has given shelter to illustrious refugees.

The Pilgrimage to Valdemosa

THE DRIVE is a beautiful one through groves of oranges, figs, limes, olives and palms, the twisted trunks of the ancient olive trees looking like dwarfs, imps and weird goblins of the hillside! The very name Valdemosa exhales the poetic Moorish spirit which is spread over the island. This valley once belonged to a Moorish Chief named Musa. In the old Chronicle it was named Val de Mus (Vallee de Musa, Valley of the Muse) an appropriate place for Chopin to seek refuge.

George Sand, always a practical woman, perfectly indifferent to public opinion, is registered at the monastery of Valdemosa, where they sought hospitality, thus: "Madame la Baron Dudevant, her children, Solange and Maurice, and *one of my family* who is dangerously ill." It was very obvious that Chopin was in a most grave condition at that time and that George Sand with her family was only admitted to the monastery because she was the nurse of a man believed to be dying and there was no other sanctuary. The humanitarian attitude of the devout monks thus rendered a great service to art. Chopin to the end of his life was profuse in his expressions of gratitude to George Sand for her tender care during the winter spent at Majorca.

Three cells, opening on the beautiful vine-covered cloisters, were allotted to them. My guide, a picturesque old monk who looked old enough to have remembered Chopin, stood with me in the center cell. "Here," said he, "is where Chopin read and prayed; the piano too was here." An old daguerreotype of George Sand, with her signature, hung on the wall; but no picture of Chopin. The furniture had not been disturbed; the piano alone was gone.

The cell to the right was Chopin's bed-room, low stone ceiling, tiled floor like a sepulcher. To the left of the living-room, the refectory or dining-room. A small window was pointed out by my guide as the one through which food was passed to the occupants. I noted with pleasure that another small cell with stone steps, leading down the mountain side, had belonged to the suite allotted to Madame la Baron, where utensils still testify to additional comforts administered to Chopin during his sojourn with the hospitable monks of Valdemosa.

Works of Chopin's Majorca Period

WITHIN the silence of those historic old walls, Chopin is said to have developed and written several *Preludes;* the *Ballade in F♯, op. 38; Polonaise in C minor, op. 40 No. 2; Scherzo C♯ minor, op. 39.* Huneker attributes the *Nocturnes, op. 37, No. 1* and *op. 37, No. 2* to the Majorca period. He also contends that the famous *Polonaise in A major, op. 40,* known as "Le Militaire," was written at Majorca and tells the story that, after it was written, "Chopin in the dreay watches of the night was surprised by the opening of the door of his cell and the entrance of a long train of Polish nobles and ladies richly robed, who moved slowly by him. Troubled by the ghosts of the past he had raised, the composer, hollow-eyed, fled the apartment."

George Sand, most prolific author of her period, while at Valdemosa, wrote *Spiridion.* This remarkable woman boasted of royal blood in her veins. Disregarding the bar sinister, she claimed affinity with Charles X and Louis XVII and inconsistently declared that she was a daughter of the people, sharing their instincts and sympathies. These peculiarities, however, were not understood by the simple-hearted people of the village, and stories were circulated that George Sand was seen in white draperies, her hair unbound, wandering for long hours at night among the tombs of the dead. She danced a Sabbat in the cemetery. Her daughter, clothed in men's garments, wandered over the mountain side in rain or shine! The village was scandalized. Aristocratic women of Spain, and I may add of France, in 1838, did not go out in the rain. The graceful lines of our drooping galoshes were unknown in those days. Only men braved the elements. Alas! George Sand lived a century too soon! What a bewitching flapper she would have made! Bewitching perhaps to-day, but in 1838 bewitched. Oh! the horror of that word "bewitched!" It never left its victim, be she young or old, lived she in ancient Spain or in our own free New England.

The simple people of the village, always curious, and once so kind to these foreigners, now, at the whispered word, "bewitched," covered their faces as George Sand or any of her "family" approached. Little children fled in terror, lest the "evil eye" fall upon them.

At night small bands of peasants crept silently through the cloisters, and were rewarded for their boldness by hearing strange sounds from a strange instrument. Chopin's was the first piano at Valdemosa. Those wonderful sounds continued at times all through the night. The spirit of inspiration was upon Chopin! The bewildered listeners heard the pianist depicting the perilous journey in storm and danger, the insurrections of an oppressed people, the glorious realization of success, the peace and quiet of the monastic home, then the wild longing for the unattainable, disenchantment, loss of confidence, of love, of life itself! The little group of prowlers, the audience invisible, crept away at dawn and whispered, "bewitched."

It soon became clear to Chopin that the superstitious attitude of the natives would make it impossible for them to remain even under the hospitable eaves of the monastery. Again the incongruous little band of pilgrims was ordered to move on, despite the desperate condition of Chopin. The dream of rest, of peace, of restoration to health, was ended. The fanatical fear and hatred of the

COSTUMES AT MAJORCA

These are the same to-day as in the time of Chopin

peasants knew no bounds, Chopin's precious piano, which had cost him such effort and money to take to Majorca, was dragged from the monastic cell, together with every vestige of his music, and burned publicly in the square before the austere old monastery of Valdemosa. Who knows what priceless scraps of manuscript might have been lost in those flames!

In March, 1839, Chopin still very ill, returned to Marseilles. Later he went to Genoa, then to Nohant, and Paris. During these last years of his life he was obliged to take the greatest care of his health. He died in Paris, October 17th, 1848. At his funeral at the Chapelle de la Madeleine, Mozart's *Requiem* was sung. Devoted friends followed the funeral cortege to Pere-la-Chaise, where he rests near the tombs of Bellini and Cherubini. At Valdemosa the "episode without a beginning" found its "sad end"; but the genius of Chopin, in his music will live forever!

What the Piano Teacher Must Know

By T. S. Lovett

THAT learning what to think and how to think constitutes the basic principles of thinking.

That the early stages imply accepting without questioning, and the later stages, questioning without accepting.

That practice precedes theory, but that knowledge precedes practice.

That hearing is not listening.

That swallowing is not digesting.

That remembering is not knowing.

That stating is not explaining.

That the solution of all problems can be found in nature.

That to teach the beginnings of things one must know their origins.

That to teach the notes of the scale one must know a tone and its constituent parts.

Interesting Class Lessons

By Alice M. Fiene

CLASS lessons, under the following plan, have been found to be of the greatest interest and profit to students. The classes consist of from three to six members each and meet once a week, the lessons being forty-five minutes in duration. The groups are just large enough to be companionable and to arouse the enthusiasm which grows out of friendly competition, yet small enough to remain informal, so that the teacher is able to give the students individual attention.

At first a thorough study is made of notation, rhythm and the correct writing of music, supplemented by ear drills. After this, the study of scale formation and interval building is taken up, along with music history. A certain amount of home work is assigned each time, with instructions that ten minutes a day be spent on it. If the work handed in is without errors, the pupil receives a gold star on his or her progress card. About once in six weeks a little review test is given. Each pupil is required to keep a notebook.

One feature in which the pupils take especial interest is the recitals. Each pupil is required to memorize and play before the class something new every six weeks. This "something" is decided upon by teacher and pupil at the private piano lesson. Sometimes it is a piece, or, if the piece is very long, a portion of it may be played. Often a little study, if attractive and well-prepared, makes a pleasing number. The last five or ten minutes of the lesson time are devoted to this playing before the class. The pupils enjoy it, and each is anxious to do his very best when his turn comes. "Whose turn is it to play to-day?" is the chorus which greets the teacher at the beginning of nearly every lesson. Where the class is too small to have one member play each week, the teacher sometimes plays, or else fills up the time with a musical story or something of a like nature. This plan has proved to be an almost infallible cure for stage-fright.

Another thing the pupils like is a "practice lesson." Some easy piece with simple harmonies (mostly I and V, with an occasional IV and II) is chosen, and each pupil in turn memorizes four measures. One pupil sits at the piano while the rest sit or stand about, close enough to be able to watch both the music and the keys. The piece is first analyzed by the class as a whole—key signature, time signature, rhythm, phrases, harmonies and other features being named. After this the first phrase is analyzed for its harmonic pattern, which is memorized and repeated by the class in chorus. Now the pupil at the piano plays the left-hand part twice from the music, paying special attention to notes, fingering and counting. Then the book is closed and he is told to play the left-hand from memory. If he succeeds, it is played once more—"to make it stick." If he does not quite remember, the other members of the class may help, or, if they also have forgotten, he may play it once more from the book. The average pupil will know it after this. As soon as he can play the phrase through twice with the left hand without mistakes, the entire process is repeated with the right hand. Now the pupil is ready to put the hands together, *from memory,* consulting the book after the first playing, to see whether or not it has been done correctly. After it has been played twice more perfectly from memory, the next pupil is ready to begin.

At the end of the lesson the entire piece (or as much of it as has been learned) is played, each pupil taking one phrase. If the work has been done carefully, and the change from one pupil to another is made quickly, a person in an adjoining room will hardly suspect that there is more than one performer. This is entertaining as well as instructive; it helps the one who is poor at memorizing, but also compels those who grasp it easily to concentrate.

The class lessons become an incentive to do better piano work. The writer has three little pupils (girls eleven years old) who must be told constantly not to overdo their practicing.

Vary the Position

By B. I. C.

LITTLE folks do not like to sit still. Let the pupils stand for ear training and dictation work, having them march and clap to make sure they feel the rhythm. Sticks or bâtons are useful for beating time as teacher plays, when studying rhythm of new pieces. To get hand position and condition correctly, drill them at a table. In early sight reading the pupils may stand before the music rack and name the notes aloud.

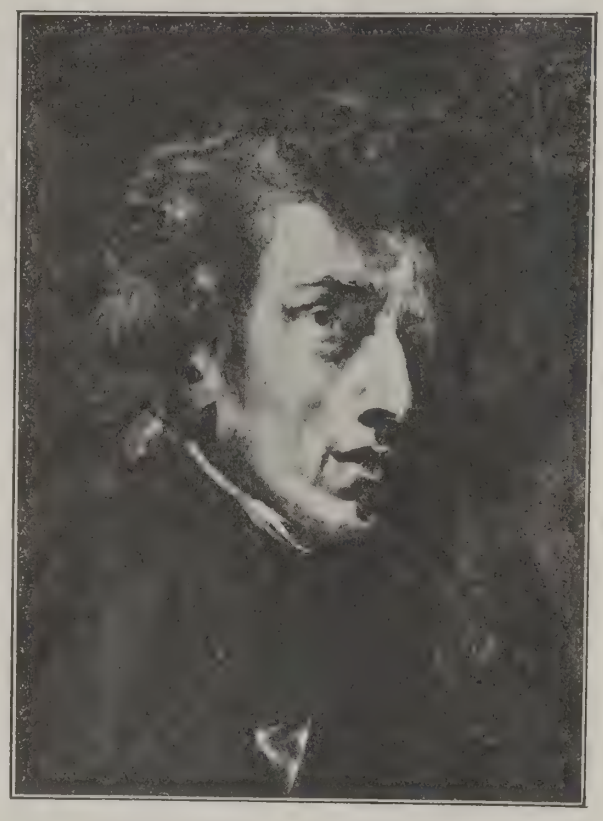
The Present-Day Significance of Chopin

An Interview with the Eminent Virtuoso Pianist

HAROLD BAUER

Mr. Harold Bauer was born in London, April 28th, 1873. His introduction to music came through his father, who was a violinist. Later he studied with Adolf Pollitzer, the noted London teacher. His first appearance as a violinist was in 1883. Thereafter he made many successful tours of England, as a violinist for nine years. In 1892, he went to Paris where he studied piano for one year with Paderewski. The following year he made a tour of Russia, during which he appeared as a pianist. Since then he has repeatedly toured Europe as a virtuoso. For many years his home has been in the United States; and he is now a citizen of this country. Mr. Bauer's playing is famous for its broad human interest, its sympathetic beauty and aesthetic values, as well as musicianly finish. He is also distinguished for his remarkable ensemble playing with such artists as Thibaut, Casals and others. He is an eminent type of the modern interpretative artist who with his music is also a man of broad culture.

"THE PRESENT significance of Chopin is possibly greater than ever. Certain it is that no other composer of works for the pianoforte can draw as many ardent admirers to pianoforte recitals. The remarkable thing about the compositions of the great Polish-French master is the quality of high musical interest in all of his works. Many masters ascend to great heights in some of their compositions; but these are alternated by periods when Homer has not only nodded but also has fallen quite securely asleep. Chopin seems to be marvelously alive, musically, in every one of his compositions. He is never banal, never trite, never inconsequential, even in his lightest numbers.



"There is to be observed of course an unmistakable development in his genius. He differs somewhat from Mendelssohn or Mozart in this respect. The works of his maturer years reflect the soul growth of a great genius. This evolution is most interesting and something which the astute teacher should point out to the pupil. Some of Chopin's earlier works seem somewhat old-fashioned now. They represent the care and attention to detail which characterize his later works, but are at times more like the compositions of a talented youth than the outpourings of a master mind. But, as I have remarked, they never have the element of the banal.

"Take the case of the famous *Nocturne in E flat* which "everybody" plays. It loses nothing because of its popularity; and, even though it is heard thousands of times, it does not seem hackneyed, when it is played by a master pianist. It is peculiarly Chopinesque. No one but Chopin could have written that emotionally delicious melody. There is a tendency to play this composition with a kind of mawkish sentimentality. The student hears rumors of the wonders of rubato and his first experiment is often with this composition. He fails to keep up the regular rhythm of the left hand and distorts the right hand melody as he chooses. The result is a kind of meaningless jumble which would have horrified Chopin.

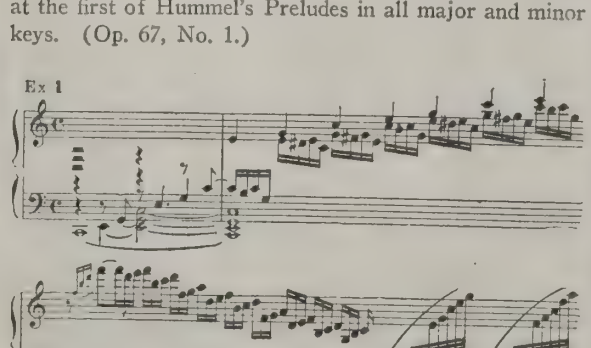
Famous pupil and exponent of Chopin. This rare portrait as found among the effects of Mr. Case, a pupil of Mathias, who recently died at the Presser Home.



AN IDEALIZED PORTRAIT OF CHOPIN BY DELACROIX

A Little-Observed Manifestation of Chopin's Genius

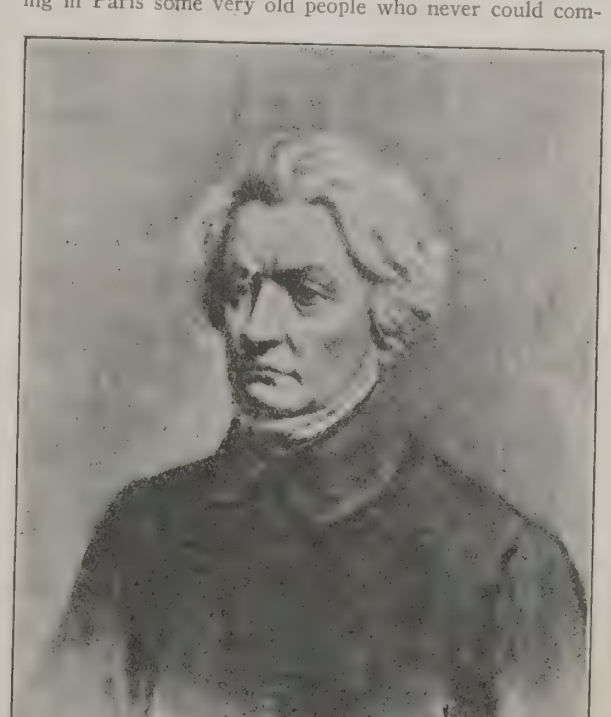
"One of the ways in which Chopin's genius was manifested was in the extremely artistic manner in which he developed ornamental passages that other composers had treated in a purely conventional manner. He gave such passages a real musical significance; and by this I mean that he related them organically to the structure as a whole. In order to appreciate what I mean, one has only to investigate some of the piano compositions of his contemporary players of the Parisian school. They were filled with runs and trills and arpeggios and cadenzas that can only be described as protuberances. The pianoforte pieces of Thalberg, of Henri Herz, of Kalkbrenner, with their interminable variations, were often very tiresome and artificial. With Chopin, however, the smallest trill or turn has an inherent artistic relation to the whole. The result is that literally tons of the music of Chopin's ephemeral contemporaries have vanished, and Chopin is as vital to-day as it was when it was written.

"As an illustration of the difference in treatment, look at the first of Hummel's Preludes in all major and minor keys. (Op. 67, No. 1.)

Ex 1

"Contrast this with the first of Chopin's Preludes in all major and minor keys.

Ex.2



Agitato

"This innovation in treatment, which pervades all of Chopin's later works, had far reaching effects. It influenced all of the thinking composers who followed him; and it is impossible for a composer who is in the least stereotyped to get any recognition whatever in this day.

"In addition to this, Chopin's harmonic ideas are original and distinct. Even in his earlier works one may find evidences of harmonic treatment no previous composer had ever touched. The observer will also note that all of Chopin's harmonies are exquisitely appropriate. They are just the right thing at the right time and never seem forced or strained, as though the composer were seeking effects rather than the natural expression of his own ideas. It must not be thought however that Chopin was not regarded as an iconoclast in his day. One severe French satirist went so far as to say in comparing him with John Field: 'Where M. Field makes a graceful gesture, M. Chopin makes a hideous grimace.' Indeed, Chopin was treated to far more bitter criticism than that which has greeted Debussy and Ravel in our day.

"Chopin played very little in public. He was a great social favorite and played a great deal in private. For this reason the public was some time in coming to know his works. Indeed some of his finest things were published posthumously. On the other hand, Debussy and Ravel found a world waiting for novelties and innovations. They had little opposition to overcome. Schumann and Liszt recognized Chopin as a great genius immediately; but there were many others, like Mendelssohn, who showed an indifference which must have been discouraging to the master. I am old enough to remember meeting in Paris some very old people who never could com-

ADAM MICKIEWICZ

Great Polish Poet whose works inspired many of the Chopin Masterpieces

prehend the success of Chopin. I remember one old gentleman in particular, Eugene Sauzay, one of the violin teachers at the conservatory. He could tolerate the early Chopin; but he said, 'I cannot comprehend how he could degenerate after he had written so many charming things which everyone liked.' Degenerate! Chopin's whole life was a continual evolution. His works became more powerful and more dramatic with each increasing year.

"Such outstanding masterpieces as the *Ballade in F Minor,* the *Barcarolle, Polonaise Fantasie* and *Polonaise in F Sharp Minor,* are the outpouring of a great soul. They seem to me among his finest works. I prefer them to the *Sonatas.* The *Sonatas* to my mind are less sure and less masterly. They are hampered by the form in which he must have felt himself constrained.

"There seems to be a prejudice against a whole recital given over to one composer. There are hardly more than two composers to whom it is safe to devote a whole evening—Beethoven and Chopin. Of the two, there are doubtless far more Chopin recitals than Beethoven recitals. The recital devoted to the works of one composer seems to me however a very logical and beautiful idea. I gave a Schumann recital last year, in New York, and met with unusual favor. The Elschuco Trio gave eight recitals this year devoted to Brahms. Why not devote an entire evening to one master? At the drama and at the opera, the rule is to give one entire evening to one work. Only occasionally is it devoted to two or more works. The novel is far more in demand than collections of short stories. There is likely to be a continuity of thought in one-composer recitals. Chopin's works and Beethoven's works offer great variety in interest; and for this reason they have possibly been the composers most frequently selected for composer recitals.

"In his day Chopin literally revolutionized the resources of technic. As a player it is said that he lacked great force. This may have been due to his weakened physical condition and it may have been due to his quest of extremely delicate effects little known before his time. On the whole Chopin's compositions are played much too fast. The passage work always requires expression; and beyond a certain speed the ear is unable to appreciate properly the value of the individual notes.

"The study of Chopin is often regarded with insufficient seriousness by students. Possibly this is due to the fact that some seem to regard his works as compositions in a freer style. Liberty is thus mistaken for license. This is a great error. Even the smallest of Chopin's works demands the very best that can be found in the equipment of the master interpreter. One of his smaller preludes often has as much in it as many a protracted symphony.

"Take for example these preludes:

F Minor

Ex. 3

B Minor

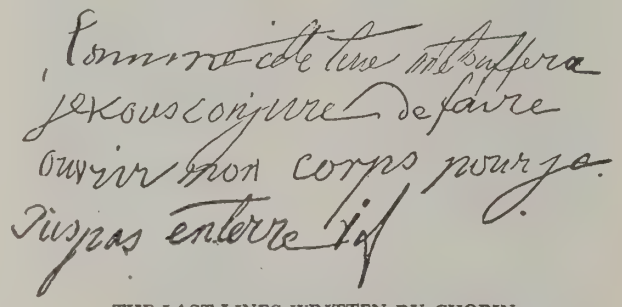
Ex 4

G Minor

Ex. 5

E Minor

Ex 6



Every one of these is a masterpiece and a complete drama in itself.

"The great dramatic powers inherent in some of the smaller Chopin works are marks of his immense genius. Like Fortuny, he did not demand a huge canvas to express some tremendous emotion. Once, in San Francisco, Isadora Duncan and I gave a recital together. We rehearsed for several days. One of the most effective numbers was the *E Major Prelude* of Chopin. When the curtain rose, Miss Duncan was in the center of the stage crouching under a shapeless mass of draperies. As the modulations rose to their glorious climax, she gradually rose with them until she stood at full height with her arms uplifted—a wonderful figure of triumph. The effect upon the audience was very great. It gave to me a new meaning to the composition, although I had played it innumerable times."

Self Test Questions on Mr. Bauer's Article

1. *How does Chopin differ from Mozart or Mendelssohn?*
2. *What is one particular way in which Chopin's genius manifested itself?*
3. *What are the chief characteristics of Chopin's harmonies?*
4. *Which composers are best adapted to one-composer recitals, and why?*
5. *Why should Chopin's compositions be played not too fast?*

THE LAST LINES WRITTEN BY CHOPIN

TRANSLATION

As this world is a place of great suffering, I implore you to open my veins so that I may not be buried alive.

Inspirational Moments

With Cultured Minds That Love Music

"Music, to be fully enjoyed, must be known; and for the enjoyment to be lasting the music itself must be good."

Mr. David Stephen (Carnegie Trustee).

"I think I should have no other want if I could always be filled with music. Life seems to go on without effort while I am listening to it."

George Eliot.

"No life is complete, however worthy, useful and successful it may be, which does not include a responsiveness to the call of beauty and art, which has not known the thrill that comes with these things."

Otto H. Kahn.

"Fatigue can easily be cured by music; and it is well known that persons who sing at their work tire less easily than others. Anyone who can play two hymns a day need never be tired."

Dr. W. E. Dentinger.

"Music is to the mind what the plow is to the soil. Music stirs up thought, it makes the brain more active, makes thought and life better, more harmonious. It drives out disagreeable thought, brings in thoughts of beauty, hope and aspiration."

Arthur Brisbane.

"Few deep emotions are capable of expression in words. It is an evening sky of mystic tints by Whistler, a nocturne of soothing charm by Borodini, that act on the pent-up emotions of the true lover of beauty and soothe as only the gentle hand of Nature can minister to a troubled spirit."

Jesse F. Spencer, Jr.

"We may be sure that the first musical and literary influences under which a sensitive boy comes will have a profound and lasting influence upon his mentality and his morale. Romanticism has given us some wonderfully beautiful things, but it has probably done more to soften the moral tissues of the human race than any other phase of art in the modern world."

Ernest Newman.

Climaxes in Chopin's Art

By Madame Antoinette Szumowska-Adamowski

[Editor's Note: The following is from the pen of one of the most famous of Polish Musicians residing in America. Madame Adamowski has long specialized in the playing of Chopin and is well known to thousands of Etude readers.]

Chopin, who has created an entirely new and original school in composition, and started a new era in Romantic Music, has raised the style of pianoforte music to its acme of perfection. Since his death, seventy-five years ago, not only no one has surpassed him, but no one has quite reached the high standard set by his compositions for the piano.

With the exception of his early youth there is an extraordinarily small percentage of really weak compositions in the very rich heritage left us by the great master, but in the general number, certain pieces stand out as climaxes in his art.

Such are, before all, the few works written on a broader scale. Thus, among the Ballades, while all of them are perfect instances of poetic beauty, dramatic intensity and logical structure, the first one in G minor is perhaps the most dramatic and the richest in melodic inspiration; while the fourth one in F minor, is the most exquisite and presents many unusual traits, as well as the greatest depth of thought, which make it the least popular, the hardest to understand.

Among the Scherzi, the second one in B flat minor is the most forceful, and has the most dramatic intensity.

The Sonata in B flat minor is a composition on big lines, very powerful in conception, of the utmost dramatic quality, very rich in melody and harmony; a work of sublime inspiration from beginning to end.

The same may be said of the B minor Sonata, especially its first two movements.

In the F minor Concerto the *Romanza* is one of the most wonderful and the most perfect of bits in the world's Musical Literature.

Schumann used to say that it should be approached with awe and in the humblest spirit by the virtuoso wishing to perform it; it should be played on bended knees!

The *F minor Fantasy* is one of the highest pinnacles of Chopin's art, through its perfect form, its breadth, tremendous wealth of melodic motives, harmonic effects, and its dramatic power.

Among the Nocturnes, almost all are of great beauty; perhaps Op. 48, No 1; Op. 27, No. 1; Op. 62, No. 1 and Op. 9, stand higher than the rest.

The Etudes are not only the finest examples of Piano technic; they are really lyric or dramatic poems. Among them, the *Revolutionary Etude* Op. 10, No. 12 and the Nos. 2, 3, 7 and 9 in Op. 25, are the most noteworthy.

The Preludes—while almost all of them short sketches—are most exquisite in inspiration and treatment, and go through a whole gamut of musical expression.

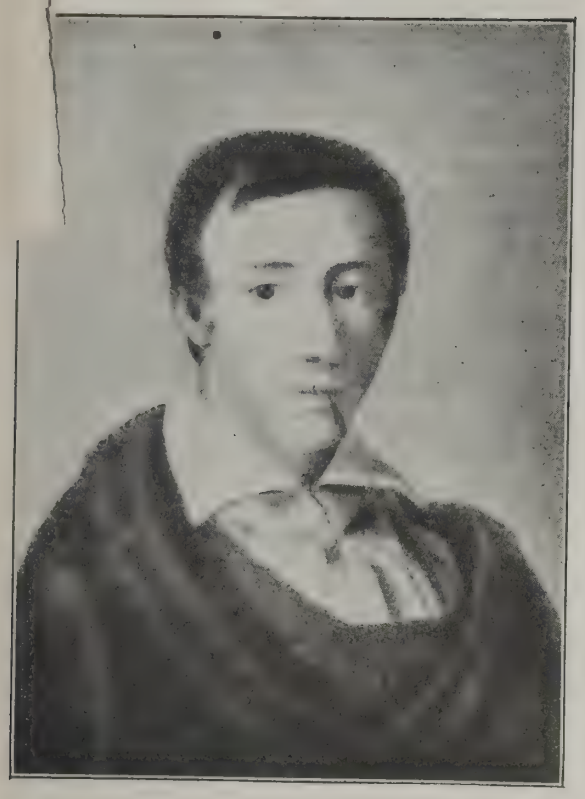
But in the midst of all this original production, the pieces claiming the greatest originality are those of the national dance form; the Polonaises and Mazurkas, as Chopin was the first who raised these items of Polish dance form to the level of the highest musical compositions, and was unrivaled and even unapproached in this field by any other composer.

Among the Polonaises, the grandest, written on the broadest lines is the well-known *Revolutionary Polonaise in A-flat major,* Op. 53. Among the Mazurkas there is an endless variety, a veritable mine of most exquisite melodies, richest and boldest harmonies, all the changing moods of the most wondrous inspiration. Practically all are masterpieces, and it is hard to make a choice among them.

This seems like presenting a rather overwhelming number of climaxes, but when dealing with the product of Chopin's muse, can one help the feeling of being rather crushed by an "embarrassment of riches?"

"A country is not artistic or musical when you can get its people to look at pictures or listen to music, but when its people are themselves artists and composers."

—Mrs. Edgar Stillman Kelley.



"Which one of the two powers may lift man to the highest plane, love or music? That is a problem. But it seems one might say, love cannot give us an idea of music, while music expresses love. But why separate the one from the other? Are they not the two wings of the soul?"

—Berlioz.

A Character Study of Chopin

By the Eminent Composer, Critic and Teacher

FELIX BOROWSKI

A Picture of Chopin in His Youth, by the Polish Artist, Mirozewski

IT IS ONE of the strangest, as it is one of the regrettable aspects of literary activity that people who have written books about great men and women have seldom been able to dip into the well of truth and bring up a full bucket. It is only of recent years that biographers have learned to be frank; only recently have they learned that the weaknesses and imperfections of humanity are—in regard to genius, at least—not less fascinating than its virtues and its strength. Among the musical immortals who have been hero-worshipped and coddled and generally misrepresented by biographers, none would have a better reason to complain—if complaining were possible—than Frederic Chopin.

To the majority of music-loving people who have taken their ideas of the Polish master from the biographies written by Liszt or Moritz Karasowski, Chopin was a super-poet whose heart was incessantly torn by tragic sorrow and whose body never found surcease from the hectic fever which finally consigned it to the tomb. There was enough truth in the floridly written pages of the composer's biographers to make the figure which they offered to a guileless world plausible enough. But there was another Chopin, too, a jolly, fun-loving, healthy, witty Chopin who would have cut a strange figure in the salons wherein Liszt loved to depict him—salons filled with beautiful countesses who, leaning over the piano at which the master poured out his soul, looked into his eyes with unutterable longings, their own suffused with the tears that had been born of emotions stirred by Chopin's art. Liszt conceded but little to truth, when Romance stood by his side and guided his facile pen, and the fluttering, pallid, langorous weaver of poetic sounds was the only Chopin that he could offer to the world.

Healthy and Life-Enjoying

WHILE it is true that the Polish master always was delicate in constitution (what the medical profession call the "tubercular diathesis" was probably evident in him from the first) he was ordinarily a healthy and life-enjoying person, for the greater portion of his life. As a boy he was full of fun and mischief, incessantly playing pranks upon his sisters and his schoolfellows; and his gift for imitation and caricature was pronounced even in his earliest years. Something will be said of this talent presently, but it is sufficient to allude to it now as showing that Chopin, the side-splitting impersonator of his schoolmaster; the youth who, when he traveled in stagecoaches, kept the passengers in continuous mirth; the satirist who so frequently amused his friends with ironic quips, and whose ability to see the humorous side of life was as keen as it was quick, was not always the mournful loiterer in graveyards that many of his posthumous admirers believed.

Yet in spite of his frequent sprightliness, Chopin was not the type of boy or man who, if football had been existent or popular in Poland, would have loved to play the game. That he could not endure violence of any kind, whether of action or of language, and that his sensitiveness was almost abnormal, was due to the fact that in a man' body Chopin possessed a woman's soul.

In his adolescent years the letters which he wrote to his friend Titus Woyciechowski resembled, in their fervor of affection, the type of correspondence which often passes between highly romantic and ebullient schoolgirls. "I embrace you heartily and kiss you on the lips if you will permit me," he wrote at nineteen. "You, my dearest one, do not require my portrait," he wrote in the same period. "Believe me, I am always with you and shall not forget you to the end of my life." It would seem that, in spite of the fact that in Slavonic countries kissing on the cheeks is a common form of salutation among men who are related to each other or who are friends, Chopin's companion thought that a liking for osculation might easily be overdone. "Time passes, I must wash myself," Chopin wrote to Titus in 1830. "Do not kiss me now . . . but you would not kiss me in any case—not even if I anointed myself with Byzantine oils—unless I forced you to do so by magnetic means."

The Feminine in His Nature

IT was the feminine element in him that caused Chopin to be so attracted to the society of women, who certainly were more likely to understand and humor him than men would have been. And with this element of the woman in him there mingled also something of the child. Liszt, for once permitting his Polish romanticist to escape from the scented hothouses of Parisian countesses, made mention in his book of Chopin's naïve liking for games. "He loved," said Liszt, "the unimportant talk of people whom he esteemed; he delighted in the childish pleasures of young people. He passes readily whole evenings in playing blind-man's-buff with young girls, in telling them amusing or funny little stories, in making them laugh the mad laughter of youth, which it gives even more pleasure to hear than the singing of the warbler." Chopin's feminine side had its effect upon his outward bearing. His interest in clothes was remarkable and his understanding of and liking for sartorial effectiveness was akin to Richard Wagner's. Even in his last days, when consumption had ravaged his frame and death had a bony hand upon the master's throat, Chopin was particular as to how he looked.

The year before death won his victory—in 1848, to be precise—the pianist-composer, forced out of Paris by the Revolution, betook himself to Britain. In Edinburgh he stayed at the house of Dr. Lyschinsky, a Polish refugee, who, having studied medicine in the Scottish capital, remained to practice it there. Mrs. Lyschinsky communicated to Frederick Niecks—one of Chopin's biographers, and his best—the particulars of the master's visit. "Chopin," she said, "rose very late in the day and

A Death Mask of Chopin Made a Few Hours After His Passing

A Picture of Chopin at His Prime, from an Oil Painting by Malezewski

in the morning had soup in his room. His hair was curled daily by the servant; and his shirts, boots and other things were of the neatest—in fact, he was a dandy, more vain in dress than any woman." Like Wagner, too, Chopin was exceedingly particular as to the elegance of his surroundings.

Selecting a Residence

HAVING, in 1839, obtained the assistance of his friend Fontana in the selection of a residence for him in Paris, the master wrote lengthy communications in regard to the details of the new abode, so that Fontana would not be led astray in choosing one which might perchance corrode the composer's sensitive soul. The wall-paper had to be dove-color, "only bright and glossy, also dark green with not too broad stripes. . . . I prefer the plain unpretending and neat ones of the shopkeeper's staring colors. Therefore, pearl-color pleases me, for it is neither loud nor does it look vulgar." Having disposed of the important matter of wall-paper, Chopin later turned to the not less weighty business of curtains. Those in his ante-room had to be grey, and in the bedroom grey, too, but with white muslin curtains under them. There were directions as to red coverings for chairs and sofas.

Having disposed of the furniture, Chopin psased on to coverings for himself. The faithful Fontana was commissioned to purchase at his friend's hatter a new specimen of the season's headgear. It had to be "of this year's shape and not too exaggerated." Trousers had to be purchased, too. Grey trousers, "something respectable, not striped, but plain and elastic. Also a quiet black velvet waistcoat, but with very little and no loud pattern, something very quiet but very elegant," and so he continues.

Chopin's Associates

IT is not surprising than an individual so fastidious about his apartment and his clothes should have been equally fastidious in regard to the society in which he moved and had his being. Although he was not of noble birth, Chopin was happiest in aristocratic surroundings. From his youth he was the petted darling of aristocrats. In Warsaw he was invited as a child to the mansions of Princes Radziwill, Czartoryski, Lubecki; Counts Lempicki, Czetwertynski, Hussarzewski and many others. In later years, when he found his residence in Paris, Chopin plunged himself into the same rarefied atmosphere. "I move in the highest society, among ambassadors, princes and ministers," he wrote in 1831, "and I don't know how I got there, for I did not thrust myself forward at all. But for me this is at present an absolute necessity, for thence comes,

as it were, good taste." So in the French capital the roster of Chopin's friends and acquaintances reads like the Almanach de Gotha.

It was this constant association with aristocracy which, in part at least, was responsible for Chopin's hyper-refinement. It must not be believed, however, that the Polish composer made a deliberate assault upon the salons of the noble and the great. No one was less pushing than he. When he traveled from Warsaw to Berlin in 1828 and the acquaintance of the famous men in the Prussian capital would have meant much to him, Chopin contented himself merely with gazing at them from afar. Writing of a concert at the Berlin Singakademie, at which he was present, Chopin wrote: "Spontini, Zelter and Felix Mendelssohn-Bartholdy were also there; but I spoke to none of these gentlemen, as I did not think it becoming to introduce myself." Nor was he more assertive in his art. The idea of giving a concert in Vienna when, in 1829, he was urged to do so by his friends, terrified this shrinking Pole; for Vienna was the city in which Beethoven and Mozart had appeared!

Although Chopin knew his own worth—and what man of genius is ignorant of his worth?—he was not of that band which flaunts its achievements before the faces of all people. Soon after his arrival in Paris he found himself much in the favor and admiration of the connoisseurs of art. Having stated in a letter to his friend Diewanowski all the fine and flattering things which had been said and done to him by the great artists of the capital, he continued: "Really, if I were somewhat more silly than I am, I might imagine myself already a finished artist; nevertheless, I feel daily how much I still have to learn and become the more conscious of it through my intercourse with the first artists here."

Sensitive to Criticism

MODEST as he was, Chopin was sensitive to criticism if it was unfavorable. When, after he had played at a concert in Vienna, the program of which had included dancing, the pianist-composer, having returned to his hotel, heard a gentleman in the coffee-room, on being asked how he had enjoyed the program, remarked that "the ballet had been very pretty," this so ruffled Chopin's feelings that he left the room in high dudgeon and went to bed. It was generally agreed that Chopin's touch on the piano was over-delicate; but although he read and heard this criticism of his playing incessantly, the master never became reconciled to it. "They are accustomed to the drumming of the native pianoforte virtuosos" he wrote once after reading this judgment upon his delicacy of tone. And he added: "I would rather that people say that I play too delicately than too roughly."

Like many artists Chopin had his little eccentricities. Throughout his life he was superstitious. He had a horror of the figures 7 and 13 and would never live in a house which bore either of those numbers. Never, if he could help it, would he set out on a journey the date of which would involve any of the unlucky figures. Nor would Chopin travel or perform any important labor on a Monday or a Friday—two days regarded in Poland as being unlucky.

He thoroughly believed in dreams and presentiments; and, although Chopin may not have had a large number of the former, he had a multitudinous experience of the latter. "I have always a presentiment that I shall leave Warsaw never to return to it; I am convinced that I shall say farewell to my home forever," Chopin wrote in 1830. And that presentiment at least came true, for after he left Poland in that year, he never trod his native soil again. Occasionally his presentiments of coming trouble were accompanied by waking nightmares. George Sand had taken Chopin, then beginning his long struggle with the dread disease which eventually brought him to the grave, to Majorca, where they lived at the monastery of Valdemosa (deserted by the monks, who had been expelled and their property confiscated by the State). "Returning," she wrote in *Histoire de ma Vie"* (Story of My Life), "from a nocturnal exploration in the ruins with my children, I found him at ten o'clock at night before his piano, his face pale, his eyes wild, and his hair almost standing on end. It was some minutes before he could recognize us."

Affairs of the Heart

THE mention of George Sand naturally leads to some mention of Chopin's affairs of the heart. What with the composer's constant association with the fair sex, the petting which he received from princesses and others of noble birth, the romantic flavor of his music and, particularly, the balderdash written in his biography by Liszt, Chopin has been believed by most people to have been one of the Great Lovers. As a matter of fact he was nothing of the sort. Liszt, who hunted for himself diligently in the forests of romance, must have been puzzled at the reticence of his friend who, having so many opportunities for stalking the fair and noble game, remained placidly aloof.

Three passions made up the sum of Chopin's life of love. The first was his absorption in Constantia Gladkowska, who came into his life when he was nineteen years of age. The young lady was a vocalist and a student at the Warsaw Conservatorium. It was characteristic of Chopin's diffidence and lack of assertiveness that for long he carried his passion in his secret breast, unable even to meet the maiden whom he so adored. Only the pen of the poetic Liszt can do justice to the affair of Miss Gladkowska. "Like the Madonnas of Luini whose looks are so full of earnest tenderness, this young girl was sweet and beautiful. No doubt the sadness increased in that pure soul when she knew that no devotion tender as her own, ever came to sweeten the existence of one whom she had adored with that ingenuous submission, that exclusive devotion, that entire self-forgetfulness, naïve and sublime, which transform the woman into the angel."

There can be no doubt that Chopin was deeply smitten by Miss Gladkowska. Yet he did not propose to pursue her with importunities. "God forbid that she should suffer on my account," he wrote to John Matuszynski in 1830. "Set her mind at rest and tell her that as long as my heart beats I shall not cease to adore her. Tell her that even after my death my ashes shall be strewn under her feet. Still, all this is yet too little; you might tell her a great deal more." Chopin might have been more reserved in his assurances if he had considered the possibilities of the future. Not very long after the infatuated composer had left Warsaw, Miss Gladkowska caused it to become unnecessary for her lover to make arrangements to have his ashes strewn under her feet, for she married a Mr. Grabowski, who was unromantically in business in Warsaw. But Chopin too, must have been glad later that his passionate avowals were not destined to achieve the semi-immortality of the printed page until after he had departed to a bourne in which there is no lovemaking or giving in marriage. For in 1835 Chopin fell in love again.

Another Inamorata

THIS TIME his inamorata was Maria Wadzinska, the sister of two boys who had been friends of the composer in his earlier Warsaw days. Chopin met the family, after a long separation due to his expatriation, at Dresden in 1835. Miss Wodzinska was then 19 years of age, blest with a svelt figure, black eyes, which Niecks declared "were full of sweetness, reverie and restrained fire," and a lovely mouth around which there played "a smile of ineffable voluptuousness." It is not surprising that to such a charmer Chopin made a quick capitulation. Maria's father was not particularly pleased with the intelligence which he received from his brother, at whose house in Dresden the Wodzinskas were residing, that the young lady and the fascinating pianist were much together in shadowy corners and at the piano—at which, of course, the young man would be entirely irresistible. Monitory coughs from the uncle had no effect upon these interesting *têtes-à-têtes;* still no immediate crisis disturbed the serenity of the Dresden visit. Maria and her brothers went back to their Polish domicile, Chopin, at the hour of parting, improvising a valse which later he sent her from Paris and which he entitled "L'Adieu." The following summer they went to Marienbad and Chopin went too. This time the crisis arrived. After a series of long walks in the woods and much ardent music-making at the piano Chopin proposed. "Could Maria," he said, "link her fate to his forever and be the continual inspiration of his life?" Alas! Maria could not. The Chopin affair already had been discussed, it seemed, by Count Wodzinski and his wife and both had set their faces against such a mésalliance; for although Chopin loved aristocracy he was not an aristocrat, and Count Wodzinska was the owner of an ancient name and of Polish estates of more than fifty-thousand acres. Marie was devastated, of course, by the cruelty of destiny, but she must do as she was told. So there was another parting and the following year Chopin's flame was allied to Count Frederick Skarbek, who, it may be added, treated her badly and caused her to sue for a divorce.

The master's third and last love-affair was more serious than those which had gone before. This is not the place, nor is there the space in which to enlarge upon the qualities of Mme. Dudevant, better known to history as George Sand. This woman, whose literary artistry had given her a definite place in the hall of fame, was a curious example of her sex. "Everything that is imposed upon me as a duty," she once said "becomes hateful to me." By that token, her marriae to Casimir Dudevant was likely to end, as it did, in disterHaving lost a husband, George Sand consoled herself with the affections of various gentlemen, the mosdistinguished of whom—before Chopin drifted into heath—was the poet, Alfred de Musset. When it is rembered that Chopin's sensitive soul was unutterly able to endure the least violence of thought or actiand that anything that was bizarre or crude gave hinual pain, it is difficult to understand the fascinatiich George Sand had for him. For that lady was antithesis of all that the delicately-souled roman believed a woman ought to be. She was fierce, ate, lacking in even the elements of decorum, lackinally in dignity—and she smoked cigars! Perhaps i because she was the exact opposite of himself thapin was drawn toward this extraordinary woman, who hau as much of the masculine in her make-up as he had of the feminine in his.

The two met for the first time in 1836 at a reception given by the Marquis de Custine in Paris. The biographic rhapsodists have outdone themselves in describing the occasion. According to Louis Enault, Chopin was performing on the piano, "playing one of those ballads whose words are written by no poet, but whose subjects, floating on the dreamy souls of nations, belong to the artist who likes to take them. Suddenly, in the middle of the ballad, he perceived, close to the door, immovable and pale, the beautiful face of Leila" (alias George Sand). "She fixed her passionate and sombre eyes upon him. The impressionable artist felt at the same time pain and pleasure. Others might listen to him. He played only for her. They met again. From this moment fears vanished and these two noble souls understood each other—or believed that they understood each other."

Karasowski gave an account of the meeting scarcely less thrilling. According to him, Chopin looked up from his improvisation to perceive "a plainly-dressed lady, who, leaning on the instrument, seemed to wish to read his soul with her dark and fiery eyes." Mme. Sand, Karasowski adds, "wore a silk dress which exhaled a fragrance of violets. . . . Speaking to Chopin with a deep, sweet voice, she made some remarks upon his playing and more especially upon the contents of his improvisation. Frederic listened to her with pleasure and emotion; and while words full of sparkling wit and indescribable poetry flowed from the lady's eloquent lips, he felt that he was understood as he had never been before."

That the biographers really were romancing when they declared that the Polish master had become thus immediately a captive in the siren's net is plain from a letter written by Chopin himself, in which he said, "Yesterday I met George Sand. She made a disagreeable impression on me." And Ferdinand Hiller recalled that after another meeting with the famous authoress at Liszt's apartments, Chopin said to him on the way home, "What a repellent woman the Sand is! But is she really a woman? I am inclined to doubt it." Yet his ultimate reaction to Sand's charms, such as they were, was that which is known to all the world. For some eight years this ill-assorted pair walked together down the path of life. Finally there was a quarrel—no one knows precisely what it was about—and after 1848 they met no more. But long before that Chopin had been ill, and love and happiness and even music melted their raptures for him when the tomb was well in sight.

Chopin Reflections

"PLAY as you feel."

* * *

"Time is the soul of music."

* * *

"Listen carefully and often to great singers."

* * *

"I cannot create a new school, because I do not even know the old."

* * *

"It is my conviction that he is the happier man who is able to execute his compositions himself."

* * *

"Let your accompanying hand be your conductor, and let it keep time, even while your other hand plays rubato."

* * *

"I owe it to the public and to myself to publish only good things. I kept to this resolution all my life."

CHOPIN'S LAST INSPIRATION
A famous picture by the Polish artist, Joseph M. Krzeez, showing the grim spirit of Death creeping in upon the great master

Episodes on the Life of Chopin

Milestones, Musical and Otherwise, in the Career of the Most Famous Master of Piano Music

By WILLIAM ROBERTS TILFORD

WHEN Frederic Francois Chopin (pronounced Frederic Fran-swah Shoh-pan) was born at Zelazowa Wola, Poland, February 22, 1810, the great conquerer Napoleon Bonaparte was at the height of his career. Victory had followed victory, and he was turning his covetous eyes toward Russia. In the path of his armies was Poland, proud and aristocratic in its ages of national life. After nearly a century of warfare during which Poland had been variously parcelled out to her neighbors, Russia, Austria and Prussia, the Poles saw some hope in uniting with the armies of the "Little Corporal" and waging war against her larger oppressor, Russia.

Frederic Chopin was born of a French father (who, in Poland was known as Szopen) and a Polish mother, Justina de Krzyanowska. The child symbolized the uniting of two great peoples which have long been joined in political quests. The child was brought up with the atmosphere of conflict on all sides. According to Huneker, neither of his parents was musical. The father was a teacher and the home was one of culture and breadth. The mother was of noble ancestry. Frederic had three sisters but no brothers. The child was extremely sensitive and could not hear music without crying. His first music teacher, Albert Zwiny, a Bohemian, was startled with the boy's talent as was his master in composition, Joseph Elsner. His general education was pursued largely at home with his father's pupils, and at the Lyceum.

A Fragile Child, a Fragile Man

CHOPIN never could be classed as even approaching robust physical power. Liszt described him as "fragile and sickly." Notwithstanding this, he was vivacious in his youth. His taste was exquisite and he formed in his childhood an aversion for coarse people or those with bad manners. From his earliest years a great part of his work was inspired improvization. As a child he had the habit of playing with his eyes cast upwards as though to the source of his inspiration. Once when the boy was playing in the rooms of the Grand Duke Constantine, the gruff Russian bear grasped the little Chopin by the shoulder in apprehension and exclaimed, "Boy—why do you always look upward? What is it you see up there? Does your music come from there?" The frightened child rushed away from the piano.

Liszt—The Rhapsodist

FRANZ LISZT, always a rhapsodist, spoke of his youthful playing thus: "Chopin could easily read the hearts which were attracted to him by friendship and by the grace of his youth and thus was enabled easily to learn what a strange mixture of leaven and cream, of roses, of gunpowder and teachers of angels the poetic ideal of his nation is formed. When his wandering fingers ran over the keys, suddenly touching some moving chords, he could see how the furtive tears coursed down the cheeks of the loving maid or the young neglected wife; how they moistened the eyes of the young men enamored of and eager for glory. Can we not fancy some young beauty asking him to play a simple prelude, then, softened by the tones, leaning her rounded arms upon the instrument, supporting her dreaming head, while she suffered the young artist to divine in the dewy glitter of her lustrous eye the song sung by her youthful heart?" Lizst's euphemisms painted a picture that was probably altogether accurate.

After having listened to the honeyed words of the Polish nobility, particularly to those of his patron, Prince Radziwill, Chopin longed for experiences in other countries. In September, 1828, in company with a professor of zoölogy from the University (Dr. Jarocki), he made the five-day trip to Berlin in stage-coaches over "impossible" roads. There, owing to his companion, he was thrust into scientific circles greatly to his embarrassment, as he had no desire to pose as a savant. His modesty was striking. At one concert he sat near Mendelssohn and, greatly as he desired to meet the older Master, Chopin could not embolden himself to present himself without a formal introduction. Chopin's playing was so sympathetic and so appealing that even when he commenced to play in the parlor of a hotel auditors came running from all directions to hear him, although he was still unknown. On one occasion the hotel-keeper was so spellbound that he delayed the stage-coach so that the youth might continue.

Chopin then journeyed to Vienna, where he appeared in concert with little preliminary announcement. His success was meteoric. The foremost men and women of the brilliant Austrian capital immediately commenced to idolize him. In Vienna, as in Berlin, he heard many fine operas and was delighted with the metropolitan life.

Chopin's art was so intimate and his improvisations so remarkable that efforts were continually made to hear the pianist apart from the concert hall. Chopin's personal modesty and his hesitancy about meeting people often made this very difficult. In Dresden, for instance, he was persuaded to go to the home of a Madam Dobryzcka. Desiring to please a compatriot, he went, and found in the company gathered two elderly ladies and a man of thirty. They were delighted with his playing. At the end of the meeting Chopin was introduced to the elder lady, "Her Majesty the Queen." The others were the princess and the crown prince.

Chopin in a New World

ON THE first of November, 1830, Chopin left Warsaw never to see his native land again. At this time, it should be remembered, he was comparatively unknown as a composer. It is true that he had already written his masterly *Concerto in E minor*, had played it at a concert in August of that year and had doubtless written many other compositions. The only works then pub-

lished were the *Rondo for Piano* and the Variations for Piano (*La Ci darem*).

During the following six years he published fifty-five of his best-known works. Notwithstanding the fact that he must have had these manuscripts in hand, it was a brave undertaking for a young composer to start out into the great world with the knowledge that under the severe conditions of travel he would probably never see his native land again. As he sorrowfully left Warsaw he did not know that his friends had prepared a dramatic surprise for him. Reaching the first village on his journey, he met his Teacher, Elsner, and the pupils of the Conservatoire who sang a cantata composed for the occasion and handed him a silver goblet. The goblet was filled with the earth of his beloved Poland—earth, that only nineteen years later was sprinkled upon his casket at Père la Chaise, in Paris.

His goal was Paris; but on the way he stopped at many places. At Breslau, Schnabel praised Chopin's playing, but asserted that altogether he was a fine pianist he could not compose. At Dresden he gave us the key to one of his sources of inspiration. He said to a friend, "If I lived here I would go to the Gallery every week, for there are pictures there at the sight of which I imagine music."

In Vienna he was chagrined to find that notwithstanding his previous successes he was literally forgotten. The publishers rejected his compositions—works which since made fortunes for others. He was so discouraged that he contemplated returning to his home, and would have done so if he had not feared that he might be a burden to his father. In fact, he even went so far as to think of suicide. The failure of a concert made it necessary for him to write home for funds to go to Paris.

He started on the journey to the French capital in July. At Munich he gave a concert to enable him to continue the trip. It was fairly successful. At Stuttgart he learned the news of the Russian captivation of Warsaw and spent days in panic until he learned of the safety of his loved ones.

Paris—1831

CHOPIN arrived in the French capital at an hour when the interest in literature, in art and in music had reached a very high standard. Louis Philippe was emperor. Hugo, Dumas, Balzac, George Sand, de Musset, Gautier, Chateaubriand, Baudelaire, Prosper Merimee, Scribe and Saint-Beuve were in the full flush of their genius. Rossini, Meyerbeer, Auber, Liszt, Rubini, Lablache, Berlioz and others made a brilliant coterie of musicians. Art was everywhere. Small wonder that Chopin, with his half-French parentage, found this a kind of paradise.

Chopin went to the conceited Kalkbrenner for advice, and tells of the meeting: "He proposed to teach me for three years and to make a great artist of me. But I do not wish to be an imitation of him and three years are too long a time for me. After having watched me attentively he came to the conclusion that I had no method; that although I was at present in a very fair way, I might easily go astray; and that when he ceased to play there would be no longer a representative of the grand old piano school left."

Chopin made his Parisian debut in 1832. The concert was not financially successful, but it did establish the young composer's reputation. Liszt, Mendelssohn, Hiller, Fetis and other leading musicians were loud in their praise. Still his income was so slight that he thought for a time of emigrating to America. Through Prince Radziwill, however, he was introduced to the home of the Rothschilds, and from that time on he was enabled to gain access to social circles which placed him beyond want.

Chopin as a Pianist

PARIS became the axis of his orbit and thereafter it remained his home. Great men and women were always ready to pay homage to his genius. His style of playing was often too delicate to please some of his critics. There is a story of Thalberg, who returning from a Chopin concert was heard to shout aloud. When asked why he made such a disturbance he replied, "After so much pianissimo a little forte is absolutely necessary."

Chopin realized that his playing was delicate and subdued; but at the same time he knew that it was impossible for him, with his nervous, retiring disposition and his slender frame, to become a lion of the keyboard. He did not like playing in public. In fact, he said to Liszt upon one occasion, "I am not at all fit for giving concerts. The crowd intimidates me; its breath suffocates me; I feel paralysed by its strange look and the sea of unknown faces makes me dumb."

Heller went so far as to state that at times Chopin's piano tone was scarcely audible. Mathias, his pupil, said: "Those who heard Chopin play may well say they never heard anything approaching his playing. It was like his music. And what virtuosity, what strength, what force! But it lasted only several minutes." Here we have two sharply contrasting reports, one intimating that his performances were like keyboard cobwebs, the other indicating great force. The truth is half way between. From all accounts, Chopin was capable of very short, powerful passages; but he exhausted his strength so rapidly that there were no long-sustained fortes. His playing and his teaching were subject to fits of excitement. Mathias reports that he once saw Chopin so angry at a pupil that he raised a chair in the air and broke it upon the floor.

Teaching Characteristics of Chopin

IF CHOPIN had a "method" of procedure in teaching pianoforte technic it was certainly based upon Clementi's *Gradus ad Parnassum*. It is said that he required all of his pupils to prepare through this book. He was particularly insistent that the pupil should have a thorough technical training in scales, arpeggios and finger exercises. He excused no one from this. The fingers, and particularly those of the left hand, were trained to move with perfect independence. He did not hesitate to break the old tradition which literally prohibited the use of the thumb and little finger upon the black keys except in very unusual cases. His fingering was absolutely unique in that he always accommodated the fingers to the keyboard. He thought nothing of passing the second and third fingers over the fourth. Chopin's own hand must have been remarkably elastic. It was not a large hand in any way, but according to Heller "It was a wonderful sight to see Chopin's small hand expand and cover a third of the keyboard. It was like the opening of the mouth of a serpent about to swallow a rabbit whole."

It is well known that Chopin attempted to write a "method" but never got beyond the opening paragraphs. This fragment was given to the Princess Czartoryska, by Chopin's teacher, and is reproduced here.

"No one notices inequality in the power of the notes of a scale when it is played very fast and equally, as regards time. In a good mechanism the aim is not to play everything with an equal sound, but to acquire a beautiful quality of touch and a perfect shading. For a long time players have acted against nature in seeking to give equal power to each finger. On the contrary, each finger should have an appropriate part assigned it. The thumb has the greatest power, being the thickest finger and the freest. Then comes the little finger, at the other extremity of the hand. The middle finger is the main support of the hand, and is assisted by the first. Finally comes the third, the weakest one. As to the Siamese twin of the middle finger, some players try to force it with all their might to become independent. A thing impossible, and most likely unnecessary. There are, then, many different qualities of sound, just as there are several fingers. The point is to utilize the difference; and this, in other words, is the art of fingering."

The novelty of Chopin's own compositions was such that even as thoroughly schooled a pianist as Moscheles found many passages which he was unable to master. Later he admitted that under the hands of Chopin these very passages resulted in "the most charming originality of execution; the harsh and dilettante-like modulations which I could never get over when playing his compositions ceased to offend when his delicate fairy fingers glided over them." Mendelssohn was entranced by the playing of Chopin and said of him: "There is something so thoroughly original and masterly about his pianoforte playing that he may be called a truly perfect virtuoso."

When was Chopin Born?

SOME years ago the *Musical Courier* in a short article quoted nine excellent authorities who gave the date of Chopin's death as March 1, 1809, one giving it as February 8, 1810, and another as February 22, 1810.

The dispute is century old. According to Henry T. Finck, who translates the baptismal certificate of the church in which Chopin was christened, we can hardly question the written word of the priest who wrote, "I, the above, have performed the ceremony of baptizing in water a boy with the double name of Frederic Francois on the 22nd day of February, son of the musicians Nicolai Choppen, Frenchman, and Justina Krzyzanowska, his legal spouse." Huneker and Baker credit this date. However, since the date of a man's birth is the thing with which he has least to do the matter is purely one of historic interest.

That Chopin himself was uncertain as to the date of his birth is revealed in a letter reprinted in *Dwight's Journal of Music* in 1861.

The writer (J. D'ortigue) is one of the many who attempted to become biographers of Chopin during the composer's lifetime. In his letter he reports a conversation with the master.

"At the period of which I am speaking, Chopin did not exactly know his age, for I find in my notes that he was born at Zalazowa-Wala, *about* 1810. It is impossible for us, I wrote, to give more exactly the date of his birth. He, himself, could only fix approximately, the day on which he saw the light, by a watch sent him, in 1820, by Mad. Catalani, and on which were engraved the words, *Given by Mad. Catalani to young Frederick Chopin, aged ten years.* This, by the way, leads us to suppose that, in his boyhood, he was a little prodigy, a fact, however, of which he did not boast. To return to Chopin's age. M. Barbedette asserts that he was born on the 1st of March, 1810. M. Fétis, in the new edition of his *Biographie universelle des Musiciens,* fixes on the 8th of March in the same year as the correct date."

First Lesson on the Keyboard

By M. E. James

MANY children approach the piano as a strange big world to explore. The keyboard is the path to they know not what experiences. They are thrilled, but they are timid. A wise teacher will foster the thrill, but take away the timidity by associating the keyboard, the most vivid part of the piano, with something intimately connected with child life. Children love stories about almost anything, but a story which can be connected with themselves or other children always makes the strongest appeal.

Realizing this, I tell my pupils that the white keys are little white boys and the black keys are little colored fellows. Now for all of these children we have only seven names; so, in order that they shall all have a name, the same one must be used many times. But it is easy to remember who has which name, because of the way the children are arranged. For instance there are

"Two little colored boys
Right in front of me;
E comes above them,
Below them is C."

Now wherever there are two colored boys standing close together,

"E comes above them,
Below them is C."

The pupil can pick out E's and C's all over the piano saying the rhyme as he moves his hand over the keyboard.

But the colored boys do not always come in twos. There are many groups of three colored boys, and they have different white children among them. When there are

"Three little colored boys
Sitting in a row,
B comes above them
And F comes below."

From this all the B's and F's are found.

The pupil now knows all the E's, C's, B's and F's. Knowing these, and knowing how the first seven letters of the alphabet are arranged, it is easy for the child to discover for himself the position of D who is always guarded by two colored boys and walks between them, while G and A sit between F and B.

This lesson fills the child with pride. He knows so much more than he knew at the beginning of the lesson, and can claim the acquaintance of many new friends, black and white, whom he is anxious to introduce to the whole family at home, with the result that everyone is reciting "Three little colored boys," and the pupil comes back confident, cheerful and keen for his next lesson.

Can You Discriminate?

By Eutoka Hellier Nickelsen

CAN you explain the difference between—

1. Metre and Tempo?
2. Pulsation and Rhythm?
3. Relative Pitch and Absolute Pitch?
4. Primary Accent and Secondary Accent?
5. Augmentation and Diminution?
6. An "Anticipation" and a "Suspension?"
7. A Prelude and an Introduction?
8. Musical Orthography and Musical Chirography?
9. A Conductor and an Impresario?

The Genius of Chopin

By the Distinguished Pianist

MORITZ ROSENTHAL

[EDITOR'S NOTE: *Mr. Rosenthal, world-famed for his playing of Chopin, was born in Lemberg, Poland, December 19, 1862. His first teacher was Goth. Later, Karl Mikuli, one of Chopin's most famous pupils and a director of the Lemberg Conservatory, became his teacher. Later, he went to Vienna where he studied with Rafael Joseffy. His debut as a pianist was made in 1876, in Vienna, where he played Chopin's "F-Minor Concerto." From 1876 to 1878, he was a pupil of Liszt's at Weimar and Rome, keeping in touch with the great master until the latter's death.*

In 1878, he began to make extensive tours as a pianist, astonishing the entire musical world with his prodigious technic. He then retired for six years and took the classical course at the Statts Gymnasium in Vienna, at the same time studying philosophy and aesthetics at the University of Vienna, with Zimmerman, Brentano and the great Hanslick, as teachers.

With this splendid educational background and incessant practice, he has remained one of the very great virtuosos of the age. His comments upon Chopin are worthy of earnest attention. In Vienna in 1913, he was persuaded by Deziet to put these into print. We have the pleasure of reproducing them here as of especial interest.]

WITH "Chopin doux et harmonieux genie," Liszt began his memorial for the friend that he lost too soon.

Robert Schumann wrote about the Chopin Preludes: "They are like ruins, the wings of eagles scattered around in every wind."

Again in the same criticism, he says, "They are, moreover, like fine pearls, and everything that Chopin wrote has in it the indelible feeling, 'Frederick Chopin wrote this.'"

"We recognize Chopin in the rests, the deep artistic breathing of his genius. He is and always will be the most daring and the proudest musical genius of his time. Few musicians have had a higher place given to them by their contemporaries in the world of music. Artists and composers are forever battling for their own laurels. Alas! Those who follow the Muses rarely have time enough for the consideration of the genius of others."

Only the exceptional personalities ever pay tributes of this kind to one of their confreres. In all the history of music, there are no composers that show such a very great concentration of their exceptional contents in short forms as that with which we find the Preludes and Mazurkas of Chopin. In twelve short measures, it was possible for him to embrace a whole tragedy. His little miniatures are virtually revolutions in music. The intention and the execution of a musical thought were the same thing to him. He did not merely aim, he always hit.

There is a seductivity to be found in the rare, exotic, and mystical character of his melodies. His musical logic is exceedingly forceful and it has a greatness comparable only to the lines of Rafael.

With all this, there is the volcanic power and richness of the modern soul, reaching into the Infinite. In the great climaxes of his flights of genius, he speaks, not in tones, but in thunder-bolts. Indeed, he has charged some of his musical masterpieces with veritable musical dynamite, revealing his phenomenal personality for all future generations.

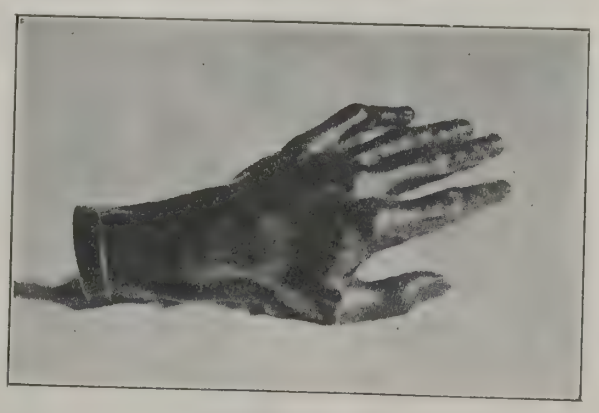
All through his Nocturnes or his Preludes he leads us into the enchanting atmosphere of a tropical night. His immortal melodies seem to flit around us like moon-moths in the flame of his great soul.

Schumann on Chopin

MANY OF Chopin's contemporaries were extensively reviewed in the writings of critics of the time. In the case of Chopin, however, only a very few of his fellow-artists commented upon his playing. "Like a great eagle he soared to heights that were beyond short-sighted eyes." Robert Schumann, however, took great exception to the critic, Rallstab, who once said, "If Mr. Chopin had shown his Mazurka, Opus 7, to one of the great masters, the master would have torn it up in little bits and thrown them at his feet, which we wish to do now symbolically."

In his day, Chopin was still an obscure composer to many music lovers. They could not comprehend his genius. Therefore, we find in the important English paper, *The Musical World*, during the year 1841, (that is, after Chopin had written his *B Minor Scherzo*, the Preludes, the Etudes and most of the Mazurkas, Scherzos and Ballades), "Mr. Chopin has made an enormous reputation, a veritable fame, for himself, through means that we cannot discover. Indeed, similar distinction is refused to composers ten times more important than he is. It is certainly a biting satire that musicians of discernment in this day find in as unripe and narrow-minded a composer as is Chopin, work that can be praised as a classic. We cannot understand how it is that he is widely believed to be so great. His harmonies are affected stiff and clumsy. His melodies are forced and sickly. His far too lengthy works show a complete lack of orderly system and intelligent development. When he has these limitations, how can he be considered better than Strauss or any other manufacturer of waltzes?"

MORITZ ROSENTHAL



With this did *The Musical World* persistently and violently attack Chopin, notwithstanding innumerable protests coming from musicians.

Even in our own times, critics have not hesitated to ostracize Chopin and place him in the group of virtuosos and drawing room composers.

Even in the year 1910, at the Centenary of Chopin, the famous Viennese, Herr Doctor Julius Korngold (father of the composer, Eric Korngold), committed himself by saying that Chopin cannot be included among the very greatest composers.

In the closing years of the last century James Huneker, the American critic and author, in his estimable book, "Chopin, the Man of Musicians," becomes a lyric rhapsodist in describing the object of his love and of his fervor, Frederic Chopin. Huneker was also a composer and a pupil of Rafael Joseffy.

Again, Dr. Hugo Lichentrich, the Polish critic, who was educated partly in America at Harvard University, where he studied music under Professor J. K. Payne, and later at the Berlin High School of Music and at the University of Berlin, published in 1905 a valuable review of Chopin indicating the great importance of the harmonic advances made by the Polish master

CHOPIN'S HAND
From a Cast Made During the Composer's Lifetime
(Note the Broad Finger Tips.)

Carl Fuchs, a friend and pupil of Nietzsche, has revealed in numerous articles the strong individuality of Chopin; and Adolph Weismann, with his reputation as an extreme conservative, has now written a book upon Chopin. Weismann's book, which, according to the author, is admittedly a confession of his admiration for Chopin, devotes two hundred and seven short pages to a lively and enthusiastic opposition to the sharp prejudices which some musicians of the past have held against the musicianship of Chopin. However, when Weismann discusses the music of the great Polish composer, from a psychological standpoint and also from the standpoint of the essence of its real musical worth, especially in those pages where Chopin and George Sand arrive, he is quite frequently in error. Perhaps this is because in his own breast he feels tender emotions marked by ardent desires, and these bring forth a stronger echo than the heroic emotions of Chopin. Since Chopin is not merely the Byron or the Heine of the piano, but also the Tyrtaeus of his own people.*

Chopin's Sacrifice

I HAVE never had very much belief in the opinion that Chopin was a slave to his soul and his senses. I would far rather believe that he was more influenced by the inimitable chivalry and gallantry of his Polish race. There is no doubt that Chopin sacrificed himself in many things, because he felt that his own life was of very little significance in comparison with the high artistic nature that had been given to him. When, however, he was located at Castle Nohant, in Majorca, he was far away from the inevitable noise and din of a metropolis, and where George Sand with her soft hand kept uneasiness away from him, he could transcribe his ideas to paper as they really came to him. His pitiful condition after the breach with George Sand indicated not merely that his pride was unbroken, but also that his haughty and virile strength of character, under such an affliction, was maintained in a manner indicating those characteristics of force which Weismann dwells upon. Chopin, one day, after the breach, met George Sand at the door of Madame Marliani's, wife of the Spanish Counsul at Paris. He saluted her, and when he told her that her daughter, Solange, had a child and that she was feeling well, Madame Sand merely replied, asking Chopin how he himself felt. Although the meeting must have been an extremely painful one for Chopin, the master expressed his thanks, asked the porter to open the door, and refused any overtures for a reconciliation. George Sand apparently thought little of her grandmotherly dignity and thought a great deal of her more or less motherly attitude toward Chopin.

She, herself, was as proud as Circe. Imagine what humiliation it must have been to have had her friendship discarded in such a way by Chopin. In the chapters in Weismann's book under, "The Psychology of the Musician," he makes a bridge from the man to the composer, although he finds it difficult to deal with determining how much of Chopin's work is intentional and how much unintentional. He cannot fail to notice this unbroken chain of great masterpieces which this composer presented.

Unless the composer has an all-pervading genius, unless his intellect continually guides his work, we will find in his compositions flashes of inspiration, occasional confused passages mixed up with logical ideas, but Weismann, who was a very acute critic, found in the works

*Tyrtaeus was a Greek poet who flourished about 680 B. C. He so inspired the Spartans by his war-like songs that they vanquished their enemies, the Messenians, in battle. So powerful were these poems that they were translated into English at one time and circulated through the army for the purpose of fostering the war-like ardor of the soldiers.

of Chopin nothing of this sort. He went so far as to say that in Chopin we find a beautiful virgin forest in which there are no weeds growing. This same Weismann, who talked of the accidental harmonies in Wagner, endeavors to make clearer in the works of Chopin the things that appear as the natural development of the whole; whereas with smaller intellects, the invention is not only lame, but the works are subject to caprices which bear no structural relation to the composition. Weismann mentions in this connection the exercises of harmony which appear in modern compositions. These exercises have very little relation to the organic whole of these. In Chopin he finds that all the innovations are natural. Weismann is in his own element when he studies these compositions analytically. At times he does not realize the innate character of Chopin. In fact, in speaking about one of the Nocturnes, he refers to it as hot-house air, the eternal song of love, shrieks, soft crying in a quiet prayer.

The Nocturnes of Chopin seem to know everything and everybody. They are often protests against aristocratic states of society and tend to annihilate the weak.

Weismann did a great service in publishing the collected letters of Chopin. Through these he shows the great composer as a reserved man with a kind demeanor. His conversation was often lined with spiritual glimpses and occasionally there were sharp satirical invectives. Sometimes Chopin is cool, sometimes he is critical and at other times he is over-enthusiastic. Now and then he makes ironic remarks about art. One of Chopin's characteristics was that he avoided giving the program significance of his works. That is, he would not personally and did not personally desire to have people imagine anything about them except as pure music. He did not look upon them himself as pictures. He realized that every listener to the Chopin compositions would feel a different poetic significance; that he would make his own program; build up his own reveries and fantasies, and that the same composition might have a totally different effect upon ten different individuals.

Chopin also refused to discuss the æsthetics of the art of music. Possibly because, as a kind of musical dictator, he felt his own works should establish the laws. What Chopin has put into his compositions can never be even imagined in words. Every one is the portal of a dream world, so intangible and yet so real, so delicate and yet so virile, that no master of his time could be said to have equalled him in this respect.

Chopin Character Lines

CHOPIN described himself as "In this world like the E string of a violin on a contrabass."

Kind, generous and forbearing, he could yet rate his of the least of the menial services he often demanded of them.

A man of education and culture, he was governed by the most whimsical superstitions. He had a horror of the numbers seven and thirteen. Like Rossini, he never invited more than twelve guests to dinner. He would undertake nothing of importance on a Monday or Friday, these being unlucky days in Poland.

Liszt said that "he could forgive in the noblest manner." Yet it was but a half-forgiveness. Hadow says that he lacked that broad sense of pardon which effaces the source of its necessity. If wounded, he could wish no ill to his adversary, but the scar remained.

Chopin and Schumann Play "Quits"

WHEN Chopin's variations for piano, with orchestral accompaniment, on Mozart's *La ci darem la mano,* inspired Schumann's notable eulogy, "Hats off, gentleman! A genius," it was not only the first journalistic recognition of Chopin as a composer, but also spoke volumes for Schumann's perspicacity and magnanimity.

From Chopin this elicited no warmth of appreciation or enthusiasm for either his protagonist or his works. He could praise Bellini; but for Schumann's *Carneval* (one of the works which has served best to preserve and popularize his name and fame) he could only declare that it really was not music at all—certainly one of the choicest curiosities of musical criticism.

The story goes that Schumann sent to Heller a copy of the *Carneval* for presentation to Chopin. The volume was richly bound, the title page being printed in colors. On receiving it from Heller, Chopin examined the work and then remarked drily, "How beautifully they get up these things in Germany." Such a thrust could have been expected from the ironic Rossini or Hans von Bülow; to the suave Chopin it seems alien.

Those who hold to the theory of vengeance to the evildoer will get some satisfaction from Schumann's later writing of Chopin's *Tarantella, Op. 43,* "Nobody can call that music."

Chopin Chronology

1809—Born, Zelozowa Wola, Poland, March 1.

1818—Played a concerto by Gyrowitz in public, February 24.

1820—Madame Catalani gave the lad a watch for his playing.

1822—Discontinued lessons with Adalbert Zywny, his first teacher.

1824—Entered the Lyceum and began piano lessons with Joseph Elsner.

1825—Played first movement of concerto by Moscheles in public.

1825—Publication of his Op. 1.

1825—Wrote *Mazurkas in G and B-flat Major.*

1826—Spent part of the summer at watering-places to recuperate from overwork.

1827—Studies at the Lyceum ended. Carried off the prize.

1828—Published *La ci darem la mano,* variations for piano and orchestra.

1828—Visited Berlin and Vienna.

1829—Visited Vienna in July, playing in two concerts.

1829—Visited in October the Prince Radziwill.

1830—Met Mlle. Sontag, whose singing he extravagantly admired, probably because it displayed much the same characteristics as his own playing.

1830—Played his *F-Minor Concerto* at his first Warsaw concert, March 17.

1830—Concert at Warsaw, October 11. Played his *Concerto in E-Minor.*

1830—Left Warsaw November 1. At Wola the pupils of the Conservatorium sang a cantata by Elsner, in Chopin's honor. At a banquet by Elsner and friends a silver goblet filled with Polish soil was presented to the composer in the name of all.

1830—Arrived in Vienna late in November.

1830—Met Hummel late in December.

1831—Played at a concert in the Redoutensaal, April 4.

1831—Left for Munich, July 20. Gave concert August 28.

1831—September, at Stuttgart, wrote the "Revolutionary Etude" on hearing of the taking of Warsaw by the Russians.

1831—First performance of a Chopin composition in Germany occurred at the Leipsig Gewandhaus, October 27, when Julius Knorr played the variations on *La ci darem la mano.*

1831—Played the *E-Minor Concerto* for Kalkbrenner in Paris, December 16.

1832—Concert given in Paris, February 26. *E-Minor Concerto,* mazurkas and nocturnes. "Took everybody by storm."

1832—Played at concert of the Prince de la Moskowa for the poor, May 20.

1832-1833—Became an acknowledged pianistic luminary of Paris.

1832—Played with Liszt and Hiller, Bach's concerto for three pianos, December 15.

1833—Played with Liszt and the brothers Herz in a quartet for eight hands on two pianos at concert of April 3.

1833—Became known to the world as a composer.

1834—First criticism of Chopin's compositions in a French musical paper, in the *Revue Musicale* of January 26.

1834—With Mendelssohn at the Lower Rhenish Music Festival at Whitsuntide.

1834-1835—Chopin's busiest and last season as a virtuoso.

1835—Played at a benefit concert of Habeneck, April 26, 1835, which is notable as the only concert of the Société des Concerts du Conservatoire in which he took a part.

1836—*Concerto in F-Minor* published in April.

1836—Arrived in Leipsig September 15.

1837—Met George Sand.

1837—Published *Impromptu in A-flat Major, Scherzo in B-flat Minor, Valse Brillante in A-flat major,* and many other works less known.

1838—Appeared at court, February 25, playing mostly improvisations.

1838—Went to Island of Majorca for the Winter, accompanied by George Sand and her children.

1838-1839—Wrote most of the *Preludes.*

1838—Took quarters in the Carthusian Monastery of Valdemosa, December 15. Chopin in precarious health.

1839—Left Majorca in February. In Marseilles, March 2.

1839—Visited Cenoa in May.

1839—Settled in George Sand's home at Nohant, June 3.

1839—At Paris late in October, Chopin and George Sand take separate houses.

1839—Preludes, Op. 28, his only compositions published this year.

1840—*Sonata in B-flat Minor, Op. 35,* published in May. *Ballade in F-Major; Valse Brillante, Op. 42; Scherzo in C-sharp Minor* and *Polonaise in A-Major* also among compositions published this year.

1841—*Tarantelle in A-flat; Ballade in A-flat Major;* and *Nocturnes, Op. 48,* among compositions published this year.

1841—Chopin's genius as a composer reached its zenith.

1841—Gave concert (semi-public) at Pleyel's rooms, April 26; of which *Le Menestrel* named Chopin "the king of the *fête,* who was overwhelmed with bravos."

1842—Gave concert (semi-public) at Pleyel's rooms, February 21—the audience consisting of a select circle of pupils and friends from among the most elegant families and of eminent artists.

1842—No compositions published.

1843-1847—A story of gradually declining health and of increasing uneventfulness.

1843—Publications: *Allegro Vivace, Op. 51 Troisième Impromptu* (G-flat major); *Quatrième Ballade* (F-Minor) *Polonaise in A-flat Major;* and *Scherzo Op. 54 (No. 4).*

1844—Publications: *Nocturnes, Op. 55; Trois Mazurkas, Op. 56.*

1845—*Berceuse, Op. 57; Sonata in B-Minor, Op. 58.*

1846—Publications: *Trois Mazurkas, Op. 59; Barcarolle in F-sharp Minor, Op. 60; Polonaise-Fantasie, Op. 61; Deux Nocturnes, Op. 62.*

1838-1846—Chopin each year passed three or four months at Nohant.

1847—Publications: *Trois Mazurkas, Op. 63; Trois Valses, Op. 64; Sonata in G-Minor, Op. 65.*

1847—Associations with George Sand came to an abrupt and painful end.

1848—Last concert (private) in Paris, February 16.

1848—Fled from The Revolution to London, arriving April 21.

1848—Concerts at private homes: Lady Blessington, Duchess of Southerland, Lady Falmouth and Mrs. Sartoris, in London.

1848—Appeared privately at Manchester, August 28; at Glasgow (date lost); at Edinburgh, October 4.

1848—"His "Swan Song," or last time to be heard, was at the Polish Ball and Concert at Guildhall, London, on the 16th of November, under Royal patronage.

1849—Returned to Paris in January.

1849—Visited by Jenny Lind.

1849—Died, Paris, October 17. Delayed by the elaborate preparations, there was a grand funeral service at the Chapelle de la Madeleine, on October 30, when Mozart's "Requiem" was sung and the body afterwards interred in the cemetery of Père-la-Chaise.

That New Composition

By Edmund Lukaszewski

WHEN you are buying a new composition do not get one above your grade. Because you heard it at a concert does not mean that you are capable of playing it. Many pieces sound easy until they are tried, and then—(?)

When you get home with that composition, look it over first. Find the melody, hum it to yourself; and when you start practicing you will be surprised at your progress. But remember that you must be interested in the selection you play. If you are enthusiastic throughout your work, you will memorize very easily. While we are enthusiastic, we must also be patient. Many times a little passage baffles us and stubbornly resists our efforts to overcome it; but with a little persistence we shall soon have smooth sailing. Through the above-mentioned scheme we are able to acquire a cheerful view of our work. That is then real control over one's self and is character building.

Do not forget technic; because undeveloped fingers are a hindrance to memorizing. Try to learn as much harmony and theory as you can. It is possible because of the wonderful books on the market. Furthermore, try to learn and notice all marks of expression. They are a guide to the soul of the music. They give us the composer's idea of the work. If you do not quite know the meaning of a term, look it up; don't trust to intuition.

All this will result in a grand musical accomplishment. Do you not agree?

"Musical training is a more potent instrument than any other, because rhythm and harmony find their way into the inward places of the soul, on which they mightily fasten." —PLATO.

Advice on the Interpretation of Chopin

By the Noted Polish Virtuoso and Teacher

WANDA LANDOWSKA

(*Translated by Miss Florence Leonard*)

Wanda Landowska was born in Warsaw in 1877. She was educated at the Warsaw Conservatory, studying with Michalowski. Later she studied with Moszkowski and Urban in Berlin. For many years she lived in Paris studying at the Schola Cantorum. She devoted herself to the Harpsichord and her appearances here and in Europe upon this instrument have been momentous. In 1913 she became teacher of the Harpsichord in the Berlin Hoch Schule. This year she is in America and will teach at the Curtis School in Philadelphia. For many years she has made a close study of the life and works of Chopin. The following article is reprinted from "Le Courrier Musical."

A PERSONAL interpretation! How this expression has been misused! It is used most frequently where one should say "a personal style of playing." Each of us has a more or less individual way of playing. A player who leans on the piano with all the weight of his body has, obviously, a different sort of sonority from the player who skims lightly over the keys; one derives his power from the shoulder, the arm, the fore-arm; another from the hand, or the independent finger-strength; some cultivate the *jeu perlé*, others the *tour de force;* one—very nervous in organization, will have the style called that of the genius, that is, headlong and thick with false notes, and other inaccuracies.

There is little merit attached to having a personal style. But a personal interpretation—that is something excessively rare. If you give a musician a composition unknown to him, he will render it according to his own ideas—perhaps! But a work of Beethoven, or of Chopin—he will play it, you may be sure, as he was taught by his teachers, and the more positive he is in his interpretation, the more he has been subjugated by many years of work; the more sensitive he is in temperament, the more the impressions of his youth, founded on the interpretations of the great virtuosi will remain crystallized in his imagination. It takes enormous effort to induce our fingers to make different nuances, to induce mind and heart to perceive and feel differently from their old habits. In the history of interpretation, moreover, we are always confronted with two chief conditions: creating and routine. A new composition is created by various artists and the author. One of these interpretations will survive. The best? No, not always, but rather the one which has been propagated by the interpreter who happens to be most in vogue, and who has handed it down to his pupils and his pupils' pupils.

That is what happened to Chopin. Most of his disciples were of the fashionable world, while others, like Paul Gunsberg and Caroline Hartmann, died very young from lung troubles.

Young Charles Filtset was Chopin's pride. Liszt, after hearing him play, exclaimed: "When that boy goes on tour I shall shut up shop." But this boy, too, died young, at the age of fifteen years. Gutmann, who started out to tour the world, became so homesick, after his first concert, that he returned to his master, retired to Florence, and ended his days as a painter upon satin. Telefsen devoted himself wholly to composing. Others, like Mikuli and Mathias, were, obviously, unable to rival Liszt and Rubinstein in prestige, and the traditions of Liszt and Rubinstein persisted and formed a "school."

The Paganini of the piano had the profoundest admiration for Chopin, the pianist. "No one," said he, "would know how to execute the compositions of Chopin better than Chopin himself." But Liszt's temperament was too different from Chopin's, and he was well aware that his decorative emphasis, and his exuberant virtuosity did not always satisfy the delicate dreamer who, for his part, sought for sympathy rather than for burning enthusiasm.

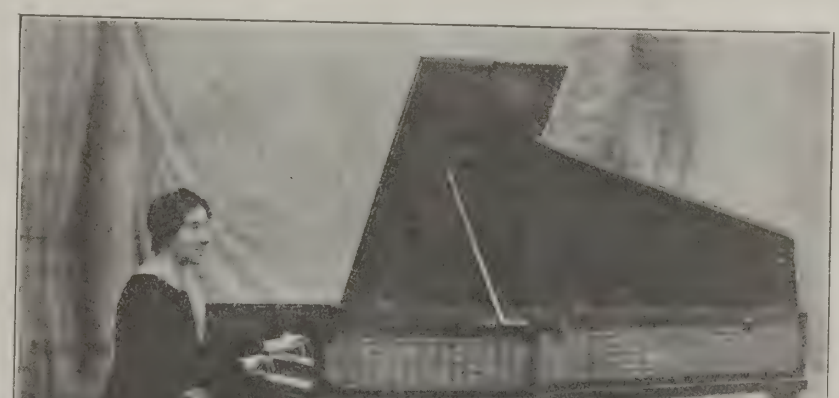
As for Rubinstein, all Chopin's friends agreed that Rubinstein's interpretations diverged even further than Liszt's, from the original idea of the composer.

If the singer of Poland should actually arise from his tomb to-day, and play for us his Polonaise—chivalrous and solemn—his Ballades, through which move sad phantoms in national costumes—his Mazurkas, which evoke the lively and melancholy dances of our countryside—and especially his Nocturnes, his Valses, his Impromptus, which portray his intimate life and his impressionable soul—he would surely be received with the enthusiastic cry, "How beautiful! how beautiful! But alas! it is not the true, the real Chopin!"

* * *

The traditions of Liszt and Rubinstein have been still more exaggerated, and pushed even to the extreme of monstrosities, by grimacing romanticism and acrobatic virtuosity, and by the pianistic tumults of certain modern artists, who not only seek not to conform to the intentions of the composer, but persist in exhibiting the exact opposite.

The author has had occasion to discuss these questions with certain virtuosi.—"But"—they said—"if Chopin had not been ill, if he had had any muscles, he would have pounded as we do!"



How do you know? On what do you base your suppositions? The author would have little trouble in proving to you the contrary. When Prince Maurice Lichnowski offered to lend to Chopin, for his second concert in Vienna, a piano more sonorous than that which Chopin had used for his first concert, the composer answered, with irony, "Thank you. It is not the fault of the piano; it is my way of playing—which, nevertheless, the ladies like very much."

In general, when Chopin chose an instrument, he always avoided those which were too sonorous. Most of the critics found fault with him for producing a small tone. But not only did he never try to correct this so-called fault; his greatest care was given to avoiding anything which could suggest pianistic noise.

Liszt said: "He addressed himself to a group rather than to the great public, and could therefore with impunity show himself as he is: a poet elegiac, profound, pure, and a dreamer. He had no need to astound, nor to startle."

These are not idle anecdotes. You have only to open the memoirs of his friends and scholars, you have only to glance through his letters, and on every page you will find proofs of his aversion for any harsh sonority and the disgust which was aroused in him by the rhetorical audacity that the virtuosi considered indispensable.

After a visit to his compatriot Sowinski, he wrote: "He sits down at the piano, strike about here and there, crosses his hands without knowing why, and in five minutes he breaks a poor innocent key; he has enormous fingers, made to drive a plough and hold a whip, somewhere in the Ukraine. If I had had no idea of the brutishness and market-place cries of the artists, I should have one now. I ran into my room with wounded ears; I had a wild desire to open the door wide. . . . ."

WANDA LANDOWSKA AT THE HARPSICHORD

And the virtuosi imagine that they breathe life into his works by lending him their muscles. Physical force is, in art, a highly relative quality. Let us not deceive ourselves! With few exceptions the athletes have been as insignificant, as ineffectual in art, as they have been—"it seems"—in love. Pianistic noise has as much connection with beautiful execution as the dazzling illumination of the German breweries has to do with the niceties of their cookery—both having the same object, to attract the great public.

Muscular force in the pianist may be useful for some work of Liszt, some transcription of that period. But the great arms which strike heavily on the poems of Chopin, crush the arabesques and the transparent lace of the ornamental network and destroy the modelling of the principal idea. "If the voice is loud in the throat," said Nietzsche, "one is hardly capable of subtle thoughts." The case is perhaps still worse, if the executant who squanders much useless strength, possesses also in his arsenal the swooning *pianissimo;* for thus are created the brutal extremes of light and shade which were absolutely foreign to the character of Chopin.

"His *piano* is so delicate"—related Moscheles—"that he needs no powerful *forte* to obtain the desired contrasts."

Gutmann vouches for the fact that his master's playing was always very calm, and that the incomparable poet rarely made use of a *fortissimo.* For instance, in playing the *Polonaise in A flat major,* he did not employ the thundering force to which certain virtuosi have accustomed us. He commenced the famous octave passage in *pianissimo,* and carried it through without too brilliant a dynamic development. He avoided, in general, all noisy effects, all fireworks.

"He detested all exaggeration," said Mikuli; "he increased and diminished the tone gradually, and, moreover, with the greatest precision."

"He required of us," says his pupil Frederike Streicher, "that we should keep to the strictest rhythm; he abhorred all exaggeration; all moving about."

And his friends, his pupils, all are of the opinion that when he played, he accented but lightly, as if he were conversing in a group of distinguished persons.

"I indicate, I suggest, merely," he said to Lenz, "and I leave to my audience the labor of finishing the picture. Wherefore should one always speak in so *declamatory* a fashion?"

* * *

If the muscular virtuosi would but offer us at least the spectacle of a calm, strong spirit, in a robust body! We are forced to see them waiting, trembling and piteous, in the wings, for their turn to throw themselves upon the piano and smite the keys, like a wayfarer who has strayed, in the night, into a deserted street, and strikes the pavement with his cane, to give himself courage, and to frighten away the fear which possesses him.

And these spasms of hysteria, epileptic *rubato,* transports of bad taste, these relapses into sweetness—and what sweetness! Honey would seem bitter in comparison. The heavy, heavenward flights of leaden butterflies! All these æsthetic effects designed to please the public, these æsthetics of the parvenus, which can be summed up in the one word—"much!" Much sound, much clamor, much passion, much sweetness! What is offered to us as great feeling is often merely gross feeling. And of Chopin, this Couperin touched with romance, the players have made a most exaggerated, most clamorous romanticist; they have suggested in him the soul of the streets, the sentimentality of old maids and the gross feelings of the cinematograph. "His aspect," wrote Liszt, "had such distinction, his manner so much the stamp of distinguished society,

that involuntarily everyone treated him like a prince. His whole appearance reminded one of the convolvulus, balancing on incredibly slender stems its cups, divinely colored, but as thin as mist, so that they tear at the least touch."

His friends constantly reproached him for his restraint of character, his reserve and his haughty modesty. And his modern interpreters have made him avow himself with indecent importunity.

Chopin was never inclined toward the romanticists; he did not admire Victor Hugo, nor Berlioz; Schubert seemed to him too mundane; Mendelssohn too sweetly sentimental; and he had no response to the divine madness of Beethoven. His master was Johann Sebastian Bach. Before every concert, he shut himself up for whole days, and played "The Well-Tempered Clavichord." And his god was Mozart. "Play some Mozart in memory of me!" were his last words.

Chopin and Mozart—what an abyss has been dug between these two geniuses!

* * *

Chopin would permit no alteration in his works. But what is the sacrifice, or rather, the sacrilege, before which a virtuoso, in quest of applause, would recoil? What would you say of an actor who, to give life to the monologues of *Othello,* added to them the tirades of Hamlet? Our art has also its logic, a logic more refined than that of speech—too refined, perhaps, for certain persons.

Chopin's Sombre Moments

By Mattie G. Williams

One does not have to go very far in the study of the works of Chopin before encountering certain passages filled with the deepest gloom. These represent the sombre side of Chopin's nature, a nature which at times could be translated into the glittering brilliance of the waltzes and the scherzos.

Chopin unquestionably had a morbid "streak." He seemed to enjoy letting his mind dwell upon horrible things. It is difficult for us to tell whether this was the result of his physical condition or whether it came from his mental inclinations. At a hotel in Stuttgart, for instance, he had a horror of going to bed because he feared to contemplate the number of corpses that might have died in that bed. When the clock struck the hour, he writes in his diary, "How many become corpses at this moment in the world? How much sorrow over the corpses and how much consolation? Virtue and vices are the same; they are sisters when corpses. It seems that death is the best action of the human being." This morbidity often lasted for some time, indicating an abnormal state of mind.

Chopin died at Paris, October 17th, 1849. After a life marked by great sadness and yearning, he approached death with grim certainty. To his faithful friends he said:

"You will play in memory of me and I will hear you from beyond."

"We will play your sonata," said Franchomme, his assistant.

"Oh no, not mine, play really good music, Mozart, for instance."

The doctor tried to persuade him that death was not imminent, but Chopin replied:

"Do not disturb me. It is a great favor when God permits us to see beforehand the moment of death. He has granted this to me; do not make my thoughts wander."

Later in the night he asked for a drink. Rising in the arms of a friend he breathed heavily and passed on.

"The piano bard, the piano rhapsodist, the piano mind, the piano soul is Chopin."—Rubinstein.

A Master Composer's Portrait of Chopin

By Camille Saint-Saëns

"Chopin!" When the good King Louis Philippe was alive you should have heard with what a dainty accent and eager expression women uttered the two syllables. The artist's elegant manners, and the ease with which his name was pronounced, certainly contributed largely to the huge success he achieved. And besides, he was consumptive at a time when robust health was unfashionable; women, on sitting down to table, would thrust their gloves into their glasses and nibble only a few dainty morsels at the end of a meal. It was the fashion for the young to look pale and thin: Princess Belgiojoso appeared on the boulevards dressed in black and silver white, looking as wan and ghastly as Death himself.

Chopin's illness, though real enough, was regarded as an attitude he had assumed. This young invalid of slow steps, a foreigner with a French name, son of an unfortunate country whose fate was pitied and whose resurrection was desired by all in France, was in every way calculated to please the public of the day. Indeed, all this served him better than his musical talent, which, as a matter of fact, this same public did not in the least understand.

Proof of this lack of comprehension is to be found in the popularity of a certain *Grande Valse in E-flat,* now quite forgotten, but in those days strummed on every pianoforte to the exclusion of other works of Chopin that were really characteristic of his talent. He had but few admirers worthy of the name: Liszt, Ambroise Thomas, Princess Czartoriska (his best pupil), Madame Viardot, and Georges Sand (who extolled him to the skies in her *Memoirs,* proclaiming him the greatest of composers, "approached by Mozart alone," she added—a childish exaggeration, though at the time a useful counterpoise to the general opinion which saw in Chopin merely an agreeable pianist and looked upon Liszt as a performer of amazing powers of execution). Thus was judged and interpreted the musical ability of the two geniuses whose influence on the art of music has been so great.

Times have changed. After long years of futile strife the great compositions of Liszt have taken their rightful place. The *Waltz in E-flat* is relegated forever to the lumber-room, and all the dreamland flowers that appeared in the garden of the marvelous artist claimed by both France and Poland now blossom in perfect freedom and dispense their fragrance. We admire and love—but do we understand them?

Chopin's musical studies had been so incomplete that the great vocal and instrumental fields were not for him; he had to confine himself to the piano, in which he discovered an entirely new world. This specialization, however, may lead the judgment astray. When interpreting his works we think too much of the piano—of the instrument regarded as an end in itself; we forget both musician and poet. For Chopin is, above all, a poet who may be compared with Alfred de Musset; like the latter, he sings of love and women.

More than all else, Chopin was sincere. His music, without being in accordance with any particular program, is invariably a tone-picture; he did not "make" music, he simply followed his inspiration. He expresses the most varied human feelings; he also gives musical form to the impressions produced in him by the sights of nature. But whereas in others—in Beethoven, for instance—these impressions may be pure and unalloyed, in Chopin's music (with the exception of a few polonaises that voice his patriotism) woman is ever present; everything is referred to her, and it is this standpoint we must adopt if we would give his music its rightful character. His music thrills with a passion—now overflowing, now latent or restrained—that gives it an inner warmth of feeling which makes it live intensely. Too frequently this passion is replaced by an affected and jerky performance, by contortions utterly opposed to his real style, which is both touching and simple.

This latter word may excite surprise when speaking of music that bristles with accidentals, with complicated harmonies and arabesques; but we must not, as is generally done, lay too much stress on these details. Fundamentally, the music is simple, it betokens great simplicity of heart, and this must be expressed when playing it, under penalty of completely falsifying the intentions of the composer.

Chopin distrusted himself. He invited—and sometimes followed—pernicious advice, unaware that he himself, guided by instinctive genius, was more clear-sighted than all the savants around him, who were devoid of genius of any kind.

At the beginning of the famous *Ballade in G Minor,* the last measure of the introduction, we find in the original edition a D, evidently written, though subsequently corrected into an E. This supposed E gives an expression of pain, quite in harmony with the character of the piece. Was this a printer's error? Was it the original intention of the composer? The note produces a dissonance with unexpected effect. Now dissonances were at that time dreaded, though nowadays as welcome as truffles. From Liszt, whom I questioned on the matter, I could obtain nothing except that he preferred the E-flat. So do I, but that is not the point. The conclusion at which I have arrived is that Chopin, when playing the *Ballade,* sounded the D; but I am still convinced that the E-flat was his first inspiration, and that the D was adopted on the advice of timid and bungling friends.

These marvelous works are threatened with a great peril. Under pretext of popularizing them, there have appeared new editions bristling with erroneous fingerings. That, in itself, would be a small matter; but, alas! they have also been improved upon, and this means that alien intentions may gradually replace those of the composer himself.

I cannot enter into the technical details necessitated by such an inquiry, but it is high time someone thought of bringing out an edition—if not of all his works, at least of those that deserve to be handed down to posterity—going back to the fountain-head and showing us the master's thought in all its purity. This fountain-head consists of manuscripts, wherever they can be found; original editions, now very rare, and Tellefsens' edition, at present difficult to find, badly engraved and printed, and containing many faults, though these are easy to see and can be corrected. Before it is too late, may a really intelligent editor raise to Chopin's memory this imperishable monument that has nothing in common with the critic-given versions with which the musical world is invaded as by some destructive art-lice.

The Importance of Sight-Reading

By C. Chester Brown

With a large majority of students, sight-reading has been sadly neglected. The pupil is often efficient in other lines but completely lost when it comes to reading a simple little piece of music.

This is a lamentable condition in this age of music, for so many students are given only a few short years of a musical education; and, without this essential of the art, the time at the piano is virtually lost when their tutoring ends.

On the other hand, if they are fair sight-readers, there is always an incentive to work out some new melody, and the inclination, wisely guided, will continue their musical education in a measure.

Pupils have come with wonderful technic, and the best of interpretation on many little classics, yet they could not begin to read a third-grade study piece, in tempo.

In finding this with a new student, a portion of each lesson should be devoted to sight-reading alone. It has proven to be an oasis in the lesson, and looked forward to each week.

The current number of The Etude is always in my music case and I find it invaluable for this particular point of instruction. In the first place, it meets all the demands in grade of difficulty and various styles of music. Each month there is new material for the same students, and the sight-reading must, of course, be new each lesson.

The development is really marked when the teacher conscientiously keeps at it every lesson. It is one of the *most-noted* advancements by students and also by those personally interested in the child.

It would seem that a pupil who can play a fourth-grade piece well with study, *should* be able to handle any ordinary second-grade piece at sight; and it is with this aim in view that I devote at least from ten to twenty minutes alone for sight-reading each lesson period.

The Etude duets serve a double purpose, as one can alternate what the pupil plays. So many are particularly poor in reading the Bass clef; and to those I always give the secondo, first, to read.

About once a month a little sight-reading test is given; a record of the per cent. grade is made in the student's memorandum book; and through this method they take a keen interest in their own progress.

"To make a home out of a household, given the raw materials—to wit: wife, children, a friend or two and a house—two other things are necessary. These are a good fire and good music. Inasmuch as we can do without the fire for half the year, I may say music is the one essential."
—Sidney Lanier.

Chopin's Famous E Minor Prelude

A Lesson Analysis

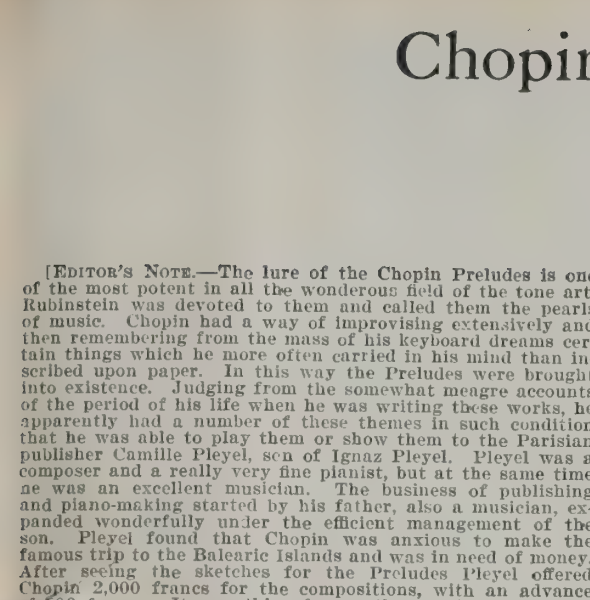
By the Noted German Composer, Editor and Teacher

MARTIN FREY

[EDITOR'S NOTE.—The lure of the Chopin Preludes is one of the most potent in all the wonderous field of the tone art. Rubinstein was devoted to them and called them the pearls of music. Chopin had a way of improvising extensively and then remembering from the mass of his keyboard dreams certain things which he more often carried in his mind than inscribed upon paper. In this way the Preludes were brought into existence. Judging from the somewhat meagre accounts of the period of his life when he was writing these works, he apparently had a number of these themes in such condition that he was able to play them or show them to the Parisian publisher Camille Pleyel, son of Ignaz Pleyel. Pleyel was a composer and a really very fine pianist, but at the same time he was an excellent musician. The business of publishing and piano-making started by his father, also a musician, expanded wonderfully under the efficient management of the son. Pleyel found that Chopin was anxious to make the famous trip to the Balearic Islands and was in need of money. After seeing the sketches for the Preludes Pleyel offered Chopin 2,000 francs for the compositions, with an advance of 500 francs. It was this advance that made the journey possible. The preludes, twenty-four in number, were published in 1838 and bear the opus number 28. They were dedicated to the pianist and composer J. C. Kessler. Kessler in his day was very much admired for his own Etudes, which were recommended by Liszt, Moscheles and others. Now they are forgotten and are regarded as extremely dry.

The remarkable Prelude, number four, in E minor, is one of the simplest and at the same time one of the most beautiful of all Chopin's compositions. It has been called by some "a lesson in harmony;" others have compared it with the "Ein Ton" (Monotone) of Peter Cornelius, in that it takes one tone and seems to press out all of the musical and harmonic emotions to be found in such a theme.

This beautiful prelude is said to have been used at Chopin's Funeral. This must have been a most impressive occasion. The great doors of the Church of the Madeleine in Paris were hung with rich black curtains. On these curtains were emblazoned in silver thread the huge initials F. C. Meyerbeer, Pleyel, Gauthier and many others among the most distinguished men in Paris were among the pall bearers and are said to have followed the casket on the three-mile walk to *Père la Chaise* Cemetery. Three thousand people attended the services.



Anton Rubinstein said, "In playing the Chopin Etudes one forgets the whole world around him. The more one plays them the more one finds in them. These apparently innocent little pieces seem to become greater and greater with every note. If Chopin had never composed anything but the Preludes his name would have been immortal. Liszt, Schumann and von Bulow were ecstatic in their praise of these evidences of Chopin's remarkable genius. One rarely hears the entire twenty-four preludes played in one evening by famous virtuosi. There is, however, great variety and differentiation in the character of the works, although all are, like Chopin's other masterpieces, immediately identifiable as the compositions of the Polish master.

Many of these Preludes which apparently have minor technical difficulties are often seen, greatly to the surprise of accomplished musicians, in the collections of early and intermediate technical material similar to the Sonatina albums. The wisdom of this is to be seriously questioned because their meaning and interpretation can not be comprehended by any but serious and experienced musicians. These seemingly easy compositions are really extremely difficult to render well.

The beautiful Prelude Number 4, in E minor, probably suffers more in the hands of children than any other work of Chopin. The fact that this work was chosen to be performed at the Madeleine, at the funeral of Chopin, is an indication of its great musical merit. The *Rain Drop Prelude* (Opus 28, No. 15) is said to have been played at the same time. Surely the spiritual content of such a composition does not place it in the repertoire of children.]

FREDERICK NIECKS, the noted German musicologist who spent the better part of his life in England and Scotland, made an exhaustive study of the life of Chopin, publishing a valuable two-volume work on the subject. He said of the *Prelude in E Minor*, "It is an exquisite little poem." However, it is quite evident that he has not grasped the inner contents of the Prelude when he intimates that it is impossible to describe its fascinating sensuality. This Prelude has a far deeper meaning. Adolf Weissman, famous German critic, who also made a deep study of Chopin, comes much nearer to the point when he says of the *Prelude in E Minor*, "This Prelude is the voice of the deepest sorrows, the sorrows of love." An even more accurate characterization is that of the great Russian pianist, Anton Rubinstein, who in teaching this little masterpiece once said to his pupils:

"The Chopin *E Minor Prelude* is really a complete

poem. In the left hand we find human life, the daily humdrum of affairs, the terrible monotony of existence. It must be played with very severe evenness, quite softly and with a deep understanding of the movement of the harmonies. The right hand is human suffering, human sorrow, which reaches a wonderful culminating point, a fine dramatic climax in the stretto near the end of the composition. Finally the human soul is exhausted—life is extinguished—and in the last chords we have a wonderful little requiem. If Chopin had written only this one work he would still be the great Chopin."

The noted artist Robert Spiess endeavored to portray this Prelude through a remarkable drawing depicting the figure of a woman with both arms leaning on a balustrade. She is enveloped in deepest sorrows. Her tired soul is filled with the bitterness of life and her body shudders at the great tragedy. She gazes blankly and hopelessly over the great waste of waters before her.

An Analysis

LET us make a closer examination and analysis of this remarkable and expressive composition. The opening phrase is clearly a sigh coming from the depths of a disconsolate soul. This unusual phrase engages our attention and seems to lay hold upon our emotions in such manner that we are unable to relinquish it until the end of the composition. See how wonderfully Chopin has reiterated this thought in various ways throughout the composition.

With a view of creating a mood in which to play the composition, let us assume that the great tone poet sketched this lovely Prelude at the keyboard, shortly after receiving the news of the death of a very dear friend. This is by no means an illogical fancy, since we have no real assurance that he wrote this at Majorca, nor do we know just when and where he did write it.

When I first studied this composition (I use the term "studied" and not "played," because the latter term does not do justice to a piece in which the left hand alone demands a most careful and detailed study of the harmonic sequences) I saw before me as though in a vision a young mother at the deathbed of a child. It is impossible for her to grasp that the things which have been dearest to her in all life have been snatched from her arms by some invisible force which she does not understand. This is portrayed in the rocking, swaying repetition of one motive—the surging of irrepressible feelings in her breast. It is the terrible awe-inspiring question of existence which is embodied in Hamlet's great soliloquy, "To be or not to be." The question is moving her whole frame convulsively. After four measures of diminuendo, the question comes again in the fifth measure, this

Chopin's E Minor Prelude. Pictorial Idealization by Robert Spies

time expressed through B-flat and A followed by B and A, a masterly stroke of the tone colorist in depicting emotions. Here there is a slight crescendo. This sorrow motive, as it may readily be called, may be given a little stronger accentuation than the dotted half-note would at first seem to require. The phrase in eighth notes in the ninth measure may be played as a cry of anguish. The mother screams from the depths of her maternity, "It cannot be! It cannot be!" The mother repeats, somewhat mechanically, the last two notes, A and F-sharp, with increasing depth of feeling and possible resentment at the hand of Fate.

As we approach the stretto there is a gathering intensity of feeling which finds the culmination of the tragedy in the stretto, which must be delivered with real dramatic force and feeling.

The Tragic Rest

THE SMORZANDO notes the approaching resignation of the sorrow-torn mother. The half rest marked with a hold has great tragic significance. It is one of the evidences of Chopin's inimitable genius. Do not pass over this rest carelessly, as so many do with these dramatic pauses which great composers employ with such significance. The rest is Chopin's way of portraying that a kind of divine oblivion is given to the sufferer to assuage the unbearable pain. The three final chords, which should not be played as arpeggios, as marked in some editions, are the final resignation to the inevitable. To Rubinstein they were a requiem.

Consider for a moment what a real human drama you can act within the musical stage of twenty-five measures. A great masterpiece taking an entire evening need not be more deeply impressive, need not contain more intense and impressive visions of the greatest of life problems than this beautiful composition of the Polish master. The work is small in only one dimension, and that is its length. Considered in every way, the *E Minor Prelude* calls for the powers of a real musical tragedian. It is a composition that the student may well afford to play many times, not in a spirit of maudlin sentimentality, but with the same feeling as though he were called upon to act the leading rôle in a great drama. The great actor who, on the stage for but ten minutes, thrills his audience with a few phrases, is far finer than he who spends hours before the footlights and is forgotten soon after the fall of the curtain. The Chopin *E Minor Prelude* has a most far-reaching effect upon all musicians. After such an analysis as we have given it the reader will readily understand why his friends selected it to be played at the funeral of the master.

Keys in Rhyme

By Mary T. Patterson

SHARPS

No sharps or flats belong to C; One sharp will show the key of G; D has two, and A has three; In E are four, and five in B; The F-sharp scale must then have six; And for C-sharp all seven prefix.

FLATS

F-natural one flat must take; two flats the key of B-flat make. E-flat has three, and A-flat four; And for D-flat, add still one more. For six the G-flat scale is known; And C-flat makes all seven its own.

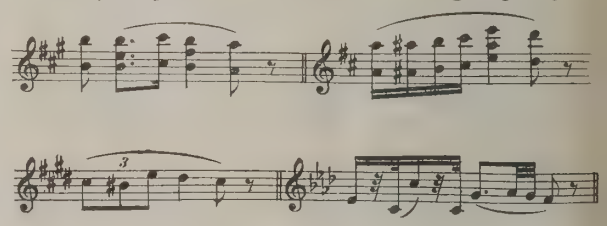
A Master Lesson on Chopin's Military Polonaise in A Major

By the Famous Polish Pianist and Composer

SIGISMUND STOJOWSKI

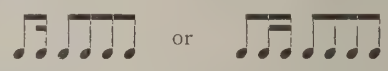
(See Music in Music Section)

The Importance and Nature of Rhythm



IN THE beginning there was rhythm. . . . From the "revolutions of celestial orbs," the countless vibrations of distant and mysterious ether, through the tidal motions in the vasty deeps of oceans wide, down to the heart-throbs of suffering and struggling humanity, even to the life-drawing breaths of the lowliest creatures, rhythm seems the very essence and mainspring of being. Without that all-governing principle of order, the Cosmos would be mere chaos. And, wherever the rhythmic pulse ceases to beat, life ceases to flow. "Manifestation of the relentless energy of the universe," as Paderewski once put it, rhythm includes two elements: a *dynamic* moment, the *affirmation,* as it were, of Life through beat and accent, within time and meter, in accordance with the *cyclic* principle of recurrence, repetition, rotation, to which all phenomena conform in their endless diversity and which the mind conceives as law and order.

Man and his art are subject to the universal law. Music—whether it be that of the spheres or simply that which bursts forth in song from man's breast—is indeed inseparable from and inconceivable without rhythm in its dual aspect. In the propelling, dynamic urge of rhythm lies Music's emotional appeal. And what we have come to call musical form is but an extension of the rhythmic principle of order and proportion, which raises the Art to the plane of intellectual perception and achievement. By virtue of rhythm the heart's outcry crystallizes into Art. In his desire to perpetuate himself, his Gods and heroes, man moulds his ideas and their deeds into patterns of verse. So, too, the craving for liberty that dwells in man's breast prompts him to devise gestures, steps and mimicry as a self-imposed rhythmic discipline, which is Dance. No less than language, dance is a faithful mirror of racial and national psychology. From the languid or frantic evolutions and contortions of semi-savage tribes, to the elaborately skillful graces of a highly polished society, from "sword-dance" to minuet, from "the Lord of Salisbury's his Pavin" to some fox-trot or tango born on modern America's "Barbary-Coast"—there are differences in time and latitude, mood and temper, taste and education. Yet, the fundamental impulse remains the same, attested by patterns crude or noble, simple or complex, but rich and varied like humanity itself.



The Dances of Poland

"LE Pologne Dansante" (Dancing Poland)—as a Frenchman defined the nation, was no misnomer. Poland's originality asserted itself since the dawn of history by remarkable inventiveness in rhythmic patterns which have survived in a treasury of folk-songs and fertilized the national musical crop. Rhythms, like all vibrations, are communicative, not to say infectious. So, there was a time—long ago and before sick old Europe "jazzed" in the wake of another "Sclavus Saltans," originally of darker hue—Polish dances were adopted far and wide. While in France the great Couperin wrote "Air dans le goût Polonais" (Air in Polish taste), Leo Hassler's "Venusgarten" contained "jolly and amiable German and Polish dances" (published 1615). From Bach to Beethoven, German masters wrote Polonaises. In the XVIII century the Polonaise was a favorite and fashionable all over Europe. It was cultivated not only by Polish composers like Prince Michael Oginski, Jan Stefani, Kozlowski, but by Germans, such as Friedemann Bach and Johann Schobart. With Louis Spohr it climbed the operatic stage. Von Weber brought into his treatment of it a certain dash and bravura imparting a glitter of virtuosity and romantic glamor to his "grand" Polonaises. Brilliant as was Von Weber, the foreign pianist; and charming as was the native Oginski, whose gentle and graceful creations, sometimes tinged with gentle melancholy, achieved wide popularity, it was left for Chopin to lift the Polish dances to the high level of supremely idealized form, to transform the Polonaise by magic wand into a tone-poem not merely characteristic of the Polish spirit, but symbolic of the nation's historic destinies of glory and woe.

Grave or gay, full of vim or solemnly dignified, the manifold strains, changing moods and shifting accents of Polish popular dances faithfully mirror a people ardent, chivalrous and brave, passionate, capricious and moody, enamored of pomp, panoply and bright colors, yet prone to sentiment and rêverie, in fact easily carried from extreme joy and enthusiasm to the opposite pole of sadness and despondency. Like the moods reflected, the patterns are infinitely varied. Triple rhythms mostly predominate and syncopations are plentiful. It is through the position of accents as well as in general character that the dances are differentiated and recognizable. The Polonaise which achieved such universal vogue, as contrasted with the more regional Mazovienne, or Mazurkam, equally in triple time, moves more slowly and solemnly, in stately and dignified fashion, though it is by no means lacking in fire and energy. Its main rhythmic accent mostly coincides with the metric one, placed as it is on the first beat, which gives to it its peculiar march-like character. Even so, it does not elude the capricious Polish shifting of accents, occasionally emphasizing the second beat, as, for instance, in every second measure at the beginning of the Trio in Chopin's *A major Polonaise,* which we will presently discuss. This may have misguided Huneker into the belief that the characteristic accent of the Polonaise regularly falls on the second beat. Again, the third beat assumes a peculiar significance in cadences. The Polonaise has developed, in phrase structure, a typical cadence of its own, a graceful melodic curve, winding up by a stop or ornamental turn on the second degree of the scale descending upon the tonic, comparable to the feminine ending in poetry.

We may add to these features that of a frequently used pulsating accompaniment of which Chopin was excessively fond, though it remained for Liszt to make of it an almost abusive use (Trio of the E major Polonaise). We refer to the well-known rhythmic patterns

The Origin of the Polonaise and Its Place in National Life

THE origin of the Polonaise, like all origins, is more or less obscure. One of the early Chopin biographers, Karasowski, relates that after the Polish nobility had elected Prince Henri de Valois to the throne of Poland (1574), a reception was given to the French prince upon his arrival, at the royal castle in Warsaw, when the Polish nobles defiled with their wives before the new king in a fashion reminiscent of the solemn French Pavane, but to strains of wholly different native Polish music. This story has led to the erroneous belief that the Polonaise was born right there and then. Nor is the inference, possibly drawn by some "authorities" from the same source, that the Polonaise is but a tributary of, or still worse, a mere caricature of the wholly different French Pavane, anything but a gratuitous assumption. The Polonaise may, on that occasion, have made its first appearance at court, the ceremonial of which it was steadily to accompany ever since. In its inception, however it was not an imported and courtly dance, but distinctly native and popular. Its characteristic rhythms and cadences are implicit in many folk-songs of ancient origin and this writer has not hesitated to use its freely adapted pattern in some choral settings of old Polish Christmas Carols, such as the well-known "W żobie leży" (In the Manger He lies).

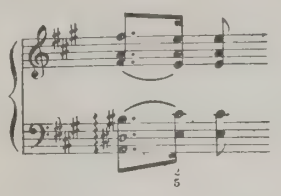
CHOPIN PLAYING
From a Monument in the Parc Monceau in Paris

IT remains true, nevertheless, that in the course of time the Polonaise became appropriated by the gentry with whom it grew institutional, so to speak, and inseparable from all festive occasions, while the peasants more faithfully favored the livelier dances of the Mazurka type. In fact, as the peasant garb to this very day seems a requisite of the boisterous and jolly Mazurka, so the "Kontusz" (long frock-coat) falling down to the knees with its peculiar floating sleeves, the richly adorned feathered-caps, colored high boots, the whole brilliant attire of the gentry seems inseparably identified with the Polonaise's festive pageant. "A vivid pageant of martial splendor," writes Huneker, "at once the symbol of war and love, a weaving, cadenced, voluptuous dance." "The Polonaise," says Franz Liszt, "is the true and purest type of Poland's national character." But eloquent as is Liszt's description of it, one must turn to Poland's national poet, Mickiewicz, whose great epic, "Pan Tadeusz," is now available to the English speaking world in a beautiful prose translation,* in order to form an adequate idea of the true character and the place which the Polonaise held in national life. To quote but briefly, "The Chamberlain stepped forward and lightly throwing back the flowing sleeves of his Kontusz and twirling his moustache, he offered his arm to the bride. With a polite bow he invited her to lead off in the first couple . . . .

"And the couples followed one another merrily and uproariously . . . .

"The circle would disperse and then contract once more! As when an immense serpent winds into a thousand folds, so there was seen a perpetual change amid the gay, parti-colored garments of the ladies, the gentlemen and the soldiers, like glittering scales gilded by the beams of the western sun and relieved against the dark pillows of turf. Brisk was the dance and loud the music. . . . ."

Chopin's Polonaise in A Major



IT was some vision like the above which terrified, haunted and inspired Chopin on the Island of Majorca, possibly amid the walls of the convent of Valombrosa, in the wake of some sleepless night of meditation, reminiscence of by-gone days and creative effort. The already ailing Chopin was seeking relief there in 1839 in company of George Sand. The two Polonaises published a year later as Op. 40 belong to that most fruitful period when Chopin had reached the height of his genius. Think of the music-lovers of the day able to secure as primaries in that blessed year: the *Sonata in B flat minor,* the *Second Impromptu,* second *Ballade, Scherzo in C sharp minor, Op. 39,* four *Mazurkas, Op. 41,* the *Valse, Op. 42,* and the two *Polonaises* mentioned!

The richness of the composer's fancy as well as the pliability of his chosen form are wonderfully illustrated by these twin companions of Op. 40, the Polonaises in A major and C minor. While deeply contrasted, they seem complementary of one another; brothers in mould, they are each other's opposites in mood. Between themselves, they indeed epitomize the whole tale of "Poland's glory" and "Poland's downfall." They seem to reflect not merely subjective impressions but collective aspirations and experiences. Contrary to the theory propounded that only the major mode is fit to translate collective feelings, the fact being adduced in proof that all national anthems are in a major key, the writer feels that the deep pathos of the *C minor Polonaise* indeed transcends personal emotion and seems to voice the grief and woe of an entire people. But to none of Chopin's Polonaises does the appellation of "heroic hymns of battle" better apply than to the A major. Because of its martial ring, it is popularly labelled the "Military Polonaise." Performers beware, however, lest this does not turn into a sad travesty, if it be made to evoke the rigidity and stiffness of some Prussian drill-sergeants! Nor is it necessary to make it symbolic of some cavalry charge storming a difficult position at top-speed. It is not speed but fire and power that matter. Huneker is justly surprised that this Polonaise should be so much played while being so very "muscular." Perhaps it is the total absence of ornamental passage-work that deceives people as to its facility of execution and beguiles amateurs as well as brass-bands into hurrying through it. In truth, it demands wrists of steel and iron fingers. One is reminded of a contemporary's surprise at a handshake of Chopin's, at the "bony resistance" of this velvety hand and of Louis Enault's judicious comment about Chopin: "a frail man born to be strong" and "the skeleton of a soldier covered by feminine flesh." Huneker is right in asserting that Chopin "had the warrior in him," for indeed "there are moments when he discards gloves and deals blows that reverberate with formidable clangor." Sustained power is no easy task. For that reason—besides some esthetic considerations—it should be remembered that even the most powerful forte is susceptible of alternatives of relaxation and tension, of more or less accented tonal and rhythmic values, of proper distribution of light and shade, or to use a word discredited in the political world, the right "balance of power." A detailed survey will bring home the realization of this point almost at every turn.

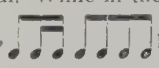
Structural Analysis and Hints for Performance

A PERFECT balance between technic and expression, form and contents was certainly achieved by Chopin. His constructive ability—for a long time often under-rated and but recently fully appreciated—admirably knew how to adapt form to subject-matter. With unerring instinct he discriminated between old patterns to be retained and new ones to be created in order to meet fully the requirements of the fundamental idea. A prodigious innovator, he could be wholly conservative. For a truly bold and independent spirit does not rejoice in revolution for its own sake. Genius is frequently content with filling familiar old vases with rich new wine of its own. Thus is Chopin in his Polonaise. In a great epic like the *A flat major Polonaise* (*Op. 53*) the dance-form becomes enriched and renovated by a novel harmonic scheme, by episodes intertwined of different color, rounded out by Introduction and Coda. The fantastic drama of the *F sharp minor Polonaise* (*Op. 44*) actually bursts the whole frame asunder by its curious, decorative interpolations and the superimposed vision of a Mazurka. But in the A major, this fiery outburst of concentrated energy where all is light, sound and power, the unity of mood demanded extreme simplicity as well as regularity of structure. This triumphal paean adopts the old pattern of the dance-song with its tripartite, cyclic arrangement, A + B + A, wherein B —the Trio—brings a new idea in a related key (the subdominant in this case) while A opens and closes the cycle without resorting to either introduction, transition or coda. Each section, in turn, consists of two parts, the second but a derivation of the first and repeating the same first part so as again to reproduce on a smaller scale the tripartite scheme of the whole. Regular metric structure, elemental rhythm and dynamics, simple though rich harmony, are made to enhance the essential oneness and directness of appeal.

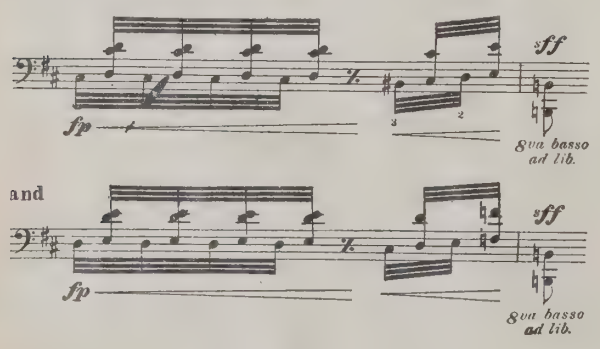
The initial phrase sets out boldly with the tonic chord on the strong beat of the measure, underlined by the pedal. Chopin's sarcastic comment about Thalberg, "a pianist who makes his shadings with his feet instead of his fingers," need not be taken too literally but should be remembered in working out with the wrist and fingers, and without pedal, the crescendo in the onrush of the five sixteenths to the accent on the first beat of the second measure. In that second measure, the triplet and the following eighths of the third beat are suggestive of percussion instruments, a rhythmic feature to come out clear and crisp, without pedal, to relieve by short staccato the strain of sustained power. The fourth measure starts with a handful of notes in extended positions the consequence being a loss of power to the accented top-note. To remedy this, the writer recommends the following for facility:

By a sudden 6/4 chord the fifth measure switches off into the key of C sharp major. Its triplet of chords sounds peculiarly "military" with their brassy ring. But, on the last C sharp major chord, the second eighth of the second beat, the firm grip must be somewhat relaxed to render the crescendo of the following ascent possible, while the pedal may come down again on the third beat —the melodic and chordal progressions in this high register being quite immune from blurring. These cues should be consistently observed for effective coöperation of touch and pedal. In the sixth measure—to give one more instance of proper economy of strength—the six sixteenths in octaves of both hands upon C sharp should be started piano and with a fresh pedal. In measure seven, a series of first inversions of perfect triads beginning with the minor triad of B, swiftly turns back to the initial key in which the eighth measure exhibits the typical cadence already described.

The second part of section A boldly starts with a dominant seventh of the key of E. It is, as has been said, subsidiary and derivative, bringing back some previously heard features such as the chord triplets, the six sixteenths in repeated octaves, and requiring the same mode of treatment. As strength is liable to wane, the repetitions at least in the bass, may be avoided thus:



Notice how skilfully Chopin contrives, by using several minor triads before, to turn the high light upon the major key of G-sharp in which the subsidiary motive luminously reappears, a major third higher up. Quite



A PENCIL PORTRAIT OF CHOPIN
(Made by Winterhatter in 1847)

suddenly again, and by a modulation analogous to that used at the close of the first part, the distant new key is switched back to E, whence a brief but beautiful sequential transition bridges over the resumption of the entire initial phrase.

The Trio

THE Trio provides not so much a contrast as a continuation through new material. While in the accompaniment the characteristic pattern,  prevails, the melody suggests a trumpet call. Broad and powerful, it seems to sound the high note of a battle-cry for freedom! The call is repeated twice and strong fingers must be used to make it ring. Chopin himself is supposed to be the inventor of a proceeding—thumb and second finger joined to strike simultaneously the key—which might prove an excellent solution, though it is not devoid of danger when it comes to the quick skip of a fourth in every second measure. After this danger-point, a sudden *p* and, like some eager response from the crowd to the preceding call, surges a sequential climax to be carefully graded until we reach, through chromantic octaves, by contrary motion in both hands, the return of the main theme scored for full orchestra. (The upper part of the right hand octaves and the lower of the left should be carefully fingered—with fourth finger on black keys and the third on A sharp of the right and on F sharp of the left—and practiced separately, *legato* and *pianissimo*). Another interruption with the "piano" effect of a distant key and another sequential rise, by diatonic steps in the harmony, carries us up to the familiar cadence at the end of this part.

The second part of the Trio includes a mainly dynamic and rhythmic interpolation before the resumption of the theme of the first part. Kettle-drum rolls and rhythmic pulsations alternate, become condensed, and lead back to the beginning by the mighty unison of left hand octaves and right hand trills. Because of this character, we are not averse to a modified disposition of the hands, especially in the initial measure, as used by some virtuosos, for the sake of greater power, such as the following:

This enables even amateurs to make a "big row" at a comparatively small cost, provided the repetitions be quick enough in both hands to give sufficient density to the trill and adequate intensity to the crescendo. In spite of exceptional passages like this, it remains understood that Chopin's wonderfully idiomatic scoring for the piano should not be tampered with. But, since we mention slight alterations to the letter, justifiable only inasmuch as the spirit remains preserved, I will call attention to the fact that we may, at the very close of the piece, follow with impunity Mr. Paderewski's example in adding the low octave of the fundamental as a grace-note to the last beat, thus bringing the whole cycle described to a decisively conclusive stop.

*Pan Tadeusz, or The Last Foray in Lithuania, by Adam Mickiewicz, translated from the Polish by George Rapall Noyes. London and Toronto, J. M. Dent & Sons, Ltd.—New York, E. P. Dutton & Co.

Chopin Reflections

"Friendship has no tendency to secure veracity; for by whom can a man so much wish to be thought better than he is, as by him whose kindness he desires to gain or keep."

* * *

"For a long time players have acted against nature in seeking to give equal power to each finger. On the contrary, each finger should have an appropriate part assigned to it."

* * *

"A little private imitation of what is good is a sort of private devotion to it, and most of us ought to practice art only in the light of private study—preparation to understand and enjoy what the few can do for us."

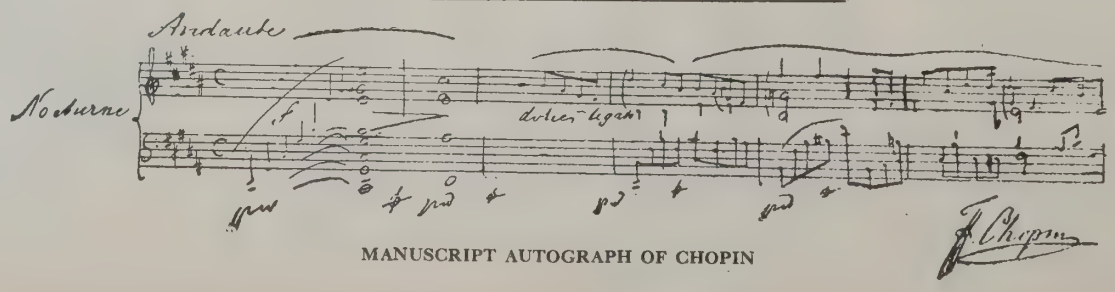
* * *

"So much is clear to me, I shall never become a copy of Kalkbrenner; he will not be able to break my perhaps bold but noble resolve—*to create a new art-form.* If I now continue my studies, I do so only in order to stand at some future time on my own feet."

CHOPIN AND HIS FRIENDS

What Great Men of Art Said About Chopin

Selected, S. Poraj



"I AM still enough of a Pole to give up the rest of music for Chopin."—F. NIETZSCHE, "Ecce Homo."

"I worship Chopin particularly because he freed music from its tendency for all that is shallow, ugly, mean, awkward. Beauty and nobility of spirit and especially a fine cheerfulness, buoyancy and magnificence of the soul, as well as an Oriental deepness of emotion, have never been expressed in music before him."—FRIEDRICH NIETZSCHE.

"Yes, one has to admit that Chopin is a genius in the full sense of the word. He is not only a virtuoso, but a poet as well. He knows how to bring out all the poetry in his soul. He is a poet of tone, and nothing equals the delight he renders when he sits at the piano and improvises. He is then neither a Pole, nor a Frenchman, nor a German, but betrays a higher lineage. One feels that he has come from the world of Mozart, Raphael, Goethe. His real fatherland is the world of dreams."—HEINRICH HEINE.

"Liszt possesses a sublime talent of execution equalled only by Paganini, but you can judge Liszt only when it will be given to you to hear Chopin. The Hungarian is a devil, the Pole an angel. This fine genius is less of a musician than of a soul manifesting itself."—BALZAC. Written in 1843.

Owing to the great wealth of Chopin material secured for this special issue, the Teachers' Round Table Department and the Scrap Book are to be found later in this issue.

MANUSCRIPT AUTOGRAPH OF CHOPIN

The Form and Construction of a Famous Nocturne, Chopin's Opus 15, No. 3

As Analyzed by A. F. Christiani

IN THE music section of this issue our readers will find the exceptionally fine outline of the form of this famous nocturne as portrayed by A. F. Christiani, in his invaluable "Principles of Expression in Pianoforte Playing." This gives a great insight into the form and consequent performance of the work. It is most desirable for the student to learn the balance of the periods. In the text of his work Christiani writes:

Periodizing is one of the most important aids in comprehending and interpreting a composition. Being an intellectual acquirement, entirely independent of emotion or taste, it can be subjected to precise principles and rules.

The first step in periodizing a composition is to ascertain where each period ends.

First Rule

The termination of a period is shown by the reappearance of the old, or the commencement of a new subject; because, with the reappearance of the old, or the commencement of a new subject, another period begins.

By examining the periods of Chopin's nocturne it will be found that the termination of the first six periods was determined by symmetrical reappearance of the original subject; and the termination of the seventh and eighth periods, by the commencement of new subjects.

The next step is to ascertain the termination of phrases and sections.

The rule just given is here equally applicable.

The termination of either phrase or section is likewise to be ascertained by a symmetrical beginning of the next one, or through quite a new beginning.

Second Rule

Each metrical group should be as much as possible a unit in itself. Periodizing should respect this unity, and not cut into it.

The consideration of such unity is of decisive importance when any doubt arises as to whether

A Section has 2 or 3 Measures,
A Phrase has 2 or 3 Sections, or
A Period has 2 or 3 Phrases;

for example: Where two sections have five measures, or three sections have seven measures, and it is doubtful to which of the sections the odd number of measures belong; or, where two phrases have five sections, or three phrases have seven sections, and it is doubtful to which of the phrases the odd number of sections belong, etc.

Compare now the sections and phrases in our illustration, and ascertain whether there is such unity in them.

By examining the first period of Chopin's nocturne, we find that it terminated with the twelfth measure, because the original subject reappeared in the thirteenth measure. This gave us a period of twelve measures.

The first phrase terminated at the seventh measure, by a symmetrical appearance of the subject in the eighth measure. This gave us two phrases, of seven and five measures respectively.

The first section was terminated with the third instead of the second measure, by the evident unity of the second and third measures which could not be disjointed.

The second, third and fourth sections had plainly two measures each.

The last section, with three measures, had evidently more right to them, on account of greater unity, than the fourth section.

This gives us five sections, of three, two, two, two, and three measures, respectively.

If the student will now examine the other periods in the same way, he will find these rules equally observed, and applicable as well as adequate for all similar metrical work.

"After the hammer and tongs work on the pianoforte, to which we have of late years been accustomed, the delicacy of M. Chopin's tone, and the elasticity of his passages are delicious to the ear."

—HENRY CHORLEY.

MAZURKA

Chopin's idealizations of the *mazurka* rhythm are no less wonderful than his treatment of the waltz. The *Mazurka* in B flat is a striking specimen. Grade 3.

Have You Faith in Yourself?

Have you ever wondered whether or not it would pay you to take up a special course in music and train for something bigger in your work? State Departments of Education recognize schools of high scholastic training. You can earn a Diploma, Degree or Teacher's Certificate through our school, which is issued by the authority of the State of Illinois.

Earnest, ambitious students are invited to send for our catalog and sample lessons. We send them without any obligation and they show how it is possible to get accredited courses without having to go away from home for an expensive course.

We have been offering our courses to music lovers through THE ETUDE columns for many years. If you haven't sent for literature before DO IT NOW! Check on the coupon below what particular course you wish to see and we will send sample lessons and quote special terms to you.

If you want to advance in your music, get full details now of the courses which have started others on the road to success. There can be no *question* about its paying when so many thousands of musicians are advancing through the aid of our courses to positions of responsibility and influence.

A Public School Music graduate writes:

"I am now the director of the Community High School Orchestra, having received my certificate from our superintendent upon the recommendation of the State Board after presenting my credits received through my studies with your institution."

Piano Students' Course by William H. Sherwood.

Normal Piano Course For Teachers, By William H. Sherwood

Harmony By Adolph Rosenbecker and Dr. Daniel Protheroe. This course includes Counterpoint, Composition and Orchestration.

Public School Music by Frances E. Clark.

Sight Singing and Ear Training by F. B. Stiven, Director of Music, University of Illinois.

Choral Conducting by Dr. Daniel Protheroe.

History of Music by Glenn Dillard Gunn.

Advanced Composition by Herbert J. Wrightson.

Violin, Cornet, Mandolin, Banjo and Guitar by eminent teachers.

WANTED: Teachers in the different States for affiliation to take charge of our branch schools. If interested, mention in your inquiry.

HARMONIC EAR TRAINING AND THEORY TO HEAR AND UNDERSTAND

By

Blanche Dingley-Mathews

A SYSTEMATIC COURSE IN LESSON FORM, **DESIGNED ESPECIALLY FOR BEGINNERS,** TO BE PRESENTED IN CLASSES OR TO ACCOMPANY PRIVATE LESSONS IN PIANO PLAYING

THREE YEARS' WORK IN ONE VOLUME!

(262 Pages—Cloth Gilt)

This modern text book has for its object the awakening and the stimulating of the musical ear by educating it progressively. Appeal is made first to the ear—then to the musical feelings—then to the musical intelligence. While the ear is unquestionably the "acid test" in music—an ear impression is not enduring unless the mind and hand correlate with it. The elements of power in a person musically educated are three—and these three underlie all his culture: a musical ear, a musical mind and a musical hand.

Mastery of this Book Makes Cultured and Artistic Attainment Certain!

SPECIAL INTRODUCTORY PRICE $1.25 POSTPAID

Musical Scrap Book

By A. S. GARBETT

THE SECRET OF LISZT'S SUCCESS

EVEN to this day, Liszt's technic is regarded by many as the last word in pianoplaying, but Henry T. Finck in his *Success in Music,* reminds us that this is not wholly true, and that something more than technic established Liszt among the immortals:

"Klindworth wrote that 'Liszt did the most astonishing things with his left thumb, making one think it must be doubly as long as an ordinary thumb,'" writes Finck. "He certainly had an ideal hand for pianoforte playing, his fingers being not only unusually long but connected by such elastic sinews that he could play as easily in tenths as others can in octaves. But this was not the secret of his success. Nor can his triumphs be explained by reference to the amazing technical facility he acquired by incessant practicing in his youth—one of his daily exercises being the transposition of one of Bach's preludes and fugues into all the twenty-four keys. Dazzling as was his technic, it has probably, as one of the leading German pedagogues, Rudolph M. Breithaupt, maintains, been surpassed since by D'Albert, Busoni, Godowski and other virtuosos of our time. What gave him his tremendous power over audiences was the fact that his technic was spiritualized, was made subservient to the will of a unique, inspired personality. That was the reason why, as Tausig said, 'No mortal can vie with Liszt; he dwells upon a solitary height.'"

THE CHILDHOOD OF SCRIABIN

ONE of the most interesting and original of Russian composers was the late Alexander Scriabin, concerning whom A. Eaglefield Hull has written a book of autobiography. His genius manifested itself early. His mother died when he was six months old, and his education was cared for by his father's sister, "Aunt Luboff," who seems to have devoted herself to him and trained him well.

"When only five years old he would extemporize on the piano, though it was some time before he could *write* music," says Hull. His acute ear and his musical memory were astonishing. A single hearing of any piece was sufficient to enable him to hit down and reproduce it exactly on the piano. In 1887, during the Russo-Turkish war, when the Ismailovsky Guards Regiment was leaving for the seat of war, the young boy was taken to the station to see his uncle off with the rest of the Guards. During the entraining the band played a quadrille, then very popular, called "The Snowstorm." On his return home the five-year-old musician played the piece through on the piano from beginning to end, greatly to the amazement of the family.

"Later on, when he heard his foster-mother play a *Gavotte* by Bach, and *The Gondolier's Song,* by Mendelssohn, young Alexander, then a boy of eight, immediately sat down and reproduced them without a mistake.

"From the age of eight he composed a few simple pieces and also developed a strong love for poetry, writing many short poems himself. He also amused himself a good deal by cutting things out of wood, and this inventive pastime even expanded to the making of miniature pianos, in which he was particularly successful."

Scriabin died from an infected boil on his lip, much as Lully, nearly two and a half centuries ago, died from an infected wound on his foot received from his own baton while conducting.

IN PURSUIT OF MACDOWELL

ONE of MacDowell's first teachers was the great pianist Theresa Carreno; and in her book on "The Boyhood of MacDowell," Abbie Farwell Brown includes an amusing incident which is given here in somewhat abbreviated form.

"At that time Mme. Carreno was about eighteen or nineteen, a very lively and fascinating young woman," says Miss Brown, while Edward MacDowell was only a little boy to whom she took a great fancy and undertook to teach. "Like a true Spaniard she liked to show her fondness for those she loved. . . . But he was proof against her sweet ways. Especially he could not bear to have Madame kiss him, as she liked to do.

"Naturally at first this piqued her. But, with her cleverness and mischief, she soon discovered that she had an unexpected weapon to use for her own purpose. Sometimes he did not play his lesson as well as his fair teacher thought he should. Then instead of scolding him—she kissed him! 'Zis time, if you play zat not right, I kiss you, Edouard!' So the fascinating young creature would say, shaking her pretty head and showing her white teeth, with mischief in her eyes. And he would hasten disgustedly to do his best, in order to escape that dreadful punishment."

Years later, Carreno used to tell the story of one such occasion when Edward got the better of her. Madame not only threatened him with the above dire punishment but also proceeded to carry it out. But Edward was too quick for her. He darted out of the room, down the stairs and out of the front door into the street with his teacher at his heels. She chased him quite around the city block and back into the house again, "doubtless to the great edification of the neighborhood."

THE PERSONALITY OF BERLIOZ

"EVERYTHING about Berlioz was misleading," remarks Romain Rolland in "Musicians of Today," adding, "even his appearance. In legendary portraits he appears as a dark southerner (Southern France, of course!) with black hair and sparkling eyes. But he was really very fair and had blue eyes, and Joseph d'Ortigue tells us they were deep-set and piercing, though sometimes clouded by melancholy or languor. He had a broad forehead furrowed with wrinkles by the time he was thirty, or, as E. Legouvé puts it, 'a large umbrella of hair, projecting like a movable awning over the beak of a bird of prey.'

"His mouth was well cut, with lips compressed and puckered at the corners in a severe fold, and his chin was prominent. He had a deep voice, but his speech was halting, and often tremulous with emotion; he would speak passionately of what interested him, and at times be effusive in manner, but more often he was ungracious and reserved.

"He was of medium height, rather thin and angular in figure, and when seated he seemed much taller than he really was. He was very restless, and inherited from his native land, Dauphiné, the mountaineer's passion for walking and climbing, and the love of a vagabond life, which remained with him nearly to his death. He had an iron constitution, but he wrecked it by privation and excess, by his walks in the rain, and by sleeping out of doors in all weathers, even when there was snow on the ground."

It is difficult, by the way, for an Anglo-Saxon to believe that Berlioz "wrecked his constitution" by sleeping out of doors!

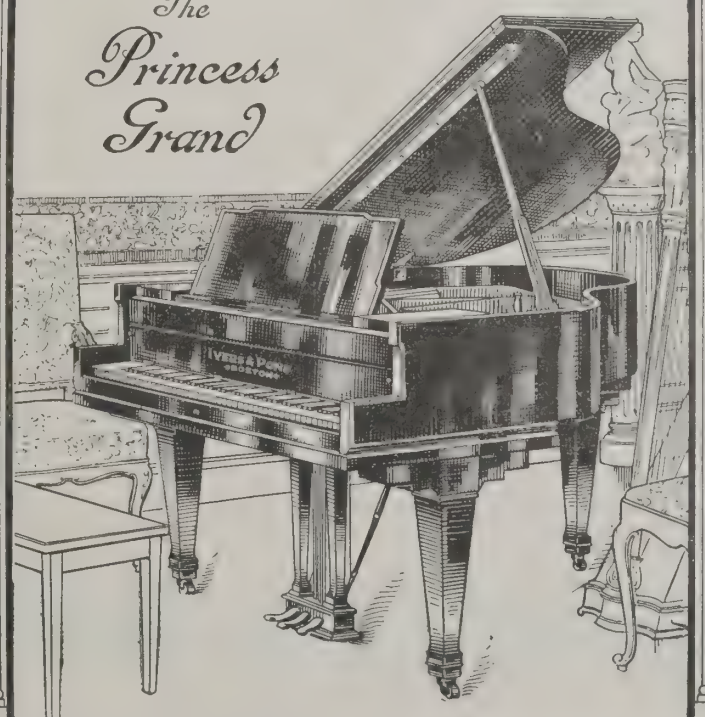
IVERS & POND "PRINCESS"

A MINIATURE CONCERT GRAND

This delightful instrument might with justice be called a miniature concert grand, for musically it embodies the advantages of the larger grands, and possesses a tone volume and range of expression surprisingly broad.

In no detail has quality been sacrificed for size, the Ivers & Pond standards being rigidly maintained. Musicians quickly recognize the characteristic Ivers & Pond tone in the "Princess"—a tone half a century in developing, and easily apparent in every Ivers & Pond.

The best traditions of old-time Boston piano building and the most advanced ideas of today are combined in Ivers & Pond pianos. Built, as from the first, in *but one quality—the best*—by the same interests, with the same artistic ideals, they are used in some 600 educational institutions and 75,000 homes. *Write for catalog now.*



Our Unique Selling Plan

If we have no dealer near you, we can supply you from our factory as safely and as satisfactorily as if you lived near by. We make expert selection and guarantee the piano to please, or it returns at our expense for freight. Liberal allowance for old pianos in exchange. Attractive easy payment plans. For catalogue, price, and full information *write us today.*

The Singer's Etude

Edited for February by Noted Voice Specialists

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

When to Begin Voice Training

By Beatrice Wainwright

THE GENERALLY accepted and popular idea as to when the training and developing of the voice should begin is that the prospective student should have attained full growth. That is, they should be not less than sixteen or seventeen years of age. This is true in the case of those who are to be singers and will have to use the voice several hours a day and undergo concentrated vocal training. But, and this is the main point, the training of the voice should begin in Childhood. Children's voices ought to have supervision in the home and in the school so that later when the child is grown and wishes to devote the necessary time to become a singer the way will have been prepared and the usual bad habits of tone and speech will not have to be corrected.

All persons should have agreeable speaking voices and pleasing singing voices. The exceptions are in the case of abnormal conditions needing pathological attention. Such cases are rare. Selfconsciousness is the greatest reason more people do not become singers. Early vocal training would eliminate selfconsciousness.

Regarding the matter of vocal training, the late David Bispham said, "We have now reached a period when all music, and singing in particular, should receive most careful consideration. The voice is so intimate a thing that no one can escape it in himself or others and so great its powers, when properly used, whether in speech or song, that it is amazing that its qualities are not more fully realized by educators and treated accordingly. But up to the present time it seems that those who have influence in educational matters have not had their eyes opened to the fact that every human being should be taught to speak properly and sing as well as may be, and that these things are perfectly easy of accomplishment if only correct methods are put before the children as they grow up.

Languages, the most difficult to acquire by adults, are learned by children with perfect ease, from those with whom they come in contact. They will speak them well or ill, according as they hear others speak. In short, example is, as far as the voice is concerned, better than precept; and the ear, so intimately associated with everything vocal should be given more to do than has been hitherto thought necessary either in schools or by private teachers.

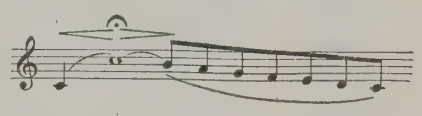
While most young people do not begin to take singing lessons until their voices are reasonably settled and can bear the strain of study, it does not seem incompatible with the dictates of common sense to say that the training of voices, of bodies, and of minds, may be undertaken much earlier than has been thought advisable. The early hours of youth too often are shamefully wasted. In them this natural and beautiful gift should be brought out. This seems so obvious as to be hardly worth saying; but, as a matter of fact, song by the many is looked upon as a luxury to be indulged in by the few. Whereas it is a necessity that should be used by all. For all not only have a latent impulse toward vocal expression, but also more of a natural gift than is usually granted. Persons, selected for the purity of their enunciation and the beauty of their voices, should every day in all schools speak and sing to the pupils, who in turn unconsciously imitate what they hear.

Even with the interest of so great an artist as David Bispham and others prominent in the musical world there is still need of agitation and pioneer work along this line. That there is more general interest in the voice than some years ago, there is no denying. But all those preparing to teach in schools should have good and sufficient vocal training to enable them to guide and instruct all students under their charge in the correct use of the voice. In the Normal schools there should be courses in the regular curriculum to train the aspiring students to teach the children that are to be their charges when they become teachers.

Young children do not need voice training such as the settled voice requires for its full development. Children should be given beautiful songs to sing, and should be impressed with the fact that their voices are fine instruments that should be cared for and not abused. They can be taught to breathe correctly. Later, when they are old enough, they should be taught something of the vocal mechanism—just enough to give them an intelligent understanding of the vocal instrument, not to confuse but to overcome the natural feeling of mystery that is the general attitude toward the voice. At this time simple vocal exercises may be given and deep breathing always kept before the young students.

The speaking voice should have attention as well as the singing voice. Voices ought never to be strained, particularly in the case of children. The production of the voice is the same in speech and song; so that the training of the singing voice should act beneficially on the speaking voice.

Correct enunciation is of the greatest importance to both singer and speaker. Clean distinct enunciation is an aid to good tone production. With the foregoing training in childhood, young people would avoid falling into the bad habits of speech and song that take so much time for the singing teacher to correct and they would already have acquired sufficient control of the voice to take up serious training and advance without the usual handicaps acquired by incorrect use of the voice when growing up. During the adolescent period, boys may sing simple songs of limited range, as well as the girls. Rote songs should be taught to the younger children and later singing at sight, the voice training to continue through high school. There are some teachers and supervisors teaching just in the way here indicated; and they are highly esteemed in their respective communities. There is nothing that makes people happier than singing. What a pleasant place the world would be to live in if all had well-trained voices.



Intelligent Vocal Practice

By Catherine Culnan

MANY vocal students will recognize as their own, the complaint of one pupil to her teacher, "It's strange how much better I do at home when I practice, than I do at my lessons!"

Under a few conditions this statement is true. The pupil may not yet have become well enough acquainted with his teacher to feel unembarrassed before him; or may be afflicted with weak self-consciousness, and lack the mental poise he possesses when alone. But far more often the cause of this seeming phenomenon can be traced to the practice hour, and is, found to be the simple fact that, when practicing, the student fails to *listen to his own voice*; while at the lesson he does listen to it.

Examine yourself frankly at your next hour of practice. Use, for instance, an exercise like this, with the vowel Oh:

Your *exercise* consists of attacking the first note with a small, firm tone; leaping lightly to the octave above it; developing the upper tone, diminishing it, and tripping lightly down to the first note again. Your *object* is to do this with an even quality of tone throughout; with every note of the descending scale focused as far forward as its predecessor; with full breath control, and a relaxed throat.

Even with the best of intentions you may forget to begin listening to the quality of the *first* tone, although that should determine the quality of all the following ones. Or, granting that you have achieved this tone and alighted on the octave above it; did you alight softly or harshly? While you developed that upper tone from a lightly-resonant one to a fully-resonant one, *were you listening every moment?* Or, granting that you were,—are you sure you did not release your attention *then,* and let your voice take care of itself to the bottom of the scale, while you listened only to the final tone and judged from that whether the exercise needed repeating?

In this instance the interval for inattention was very short; but not too short for your mind to have touched upon many thoughts quite foreign to tone-production. Often you labor for fifteen minutes over an exercise that could be done justice to in *five* minutes of *intelligent practice. Listen to your voice* every moment you are singing. Each time you find your thoughts wandering, make yourself begin all over again. You will be surprised to find how much persistence will be needed before you are able to practice for even one hour without releasing your attention for a single minute from the work in hand.

During the lesson hour, your teacher's concentrated attention upon your voice induces yours also, and although you wonder why you are doing so poorly, you are in reality discovering for the first time since your last lesson, the actual sound of your own voice. To think the tone you produce, and to produce the tone you think, are two sadly different things; but they should be synonymous.

When, by unremitting attention to your own practicing, you learn the power of concentration, your work will have become not only *intelligent,* but *productive* of quick results. New tone-possibilities will unfold to you: Your ear will be your severest critic: And your lesson hour will not only be as true a record of your practicing *as it now is,* but a satisfactory record also!

The thoughtful student of voice will find in these suggestive remarks the basis for a large field of personal experiments and discoveries.

Tartini's Advice

(An Extract from Mr. William Shakespeare's Book, *Plain Words on Singing*—G. P. Putnam's Sons.)

GIUSEPPE TARTINI (1692-1770), composer and great master of the violin, wrote valuable advice to a pupil on the bowing of this instrument. All he said might apply equally to the breathing and tone production of a singer:

"Your first study should be the true manner of holding, balancing, and pressing the bow lightly and steadily upon the strings; in such a manner that it seems to *breathe* the first note it gives."

Paraphrasing this, and substituting the word "breath" for the "bow," and the "vocal instrument" for the "strings," it would read: "Your first study should be the true manner of holding, balancing, and pressing the breath lightly and steadily against the vocal instrument, in such a manner as to 'breathe' the first note it gives, without any shock or sudden slip of the breath."

More About Purity of Pronunciation and Resonance

Hiller (already quoted) says that "Well spoken is half sung," and that this is a motto that should be inscribed on the four walls of every school of singing. Interest is being aroused in this subject, and it cannot be too strongly urged that the right production of the voice is not displayed unless the singer is unmistakable in the utterance of his words before the public. Indeed, it should be impossible to mistake what he says. The perfect sustaining of the thirteen vowels in the English language and the thirteen tuned consonants previously explained (see chapter on Pronunciation) really comprises the different shades of color in the voice, and is of equal importance with the colors on the palette of the painter.

Foundation of Singing

We have seen that tone (prolonged pronunciation), resonance and breath-control form the foundation of the singer's art.

It cannot, however, be expected that the most capable pupil can immediately grasp this as a whole, and realize that true sonority; resonance and even dramatic force rest on the purity of his vowel sounds—which purity, should he aspire to perform in theaters or large buildings, thus becomes his most important asset.

Regarding the question of *resonance,* about which so much has been written, when the voice is properly produced, and the experienced singer brings to bear a powerful, yet controlled, breath pressure, the result is the greatest resonance of which any voice is capable. The singing of one artist may be highly dramatic; on the other hand, the size of the voice of another may lend itself only to tender and lovely effects, lyric in character. In this case the student must wait for later ex-

perience before attempting anything dramatic. It is surely only the ignorant teacher or the charlatan who would assert that all voices are capable of the same dramatic force!

One professor is reported as having said: "It is all an affair of the nose." Surely this does not mean that the voice should be *nasal*. Probably he intended to say that the medium voice is felt in full resonance against the upper teeth, that the mouth should be "alive with sound." What shall we say of the head voice? Surely no good teacher would inculcate sounds which seem to be resonant on the forehead—gloomy, hooting. Rousseau says on the subject: "I think that the stage, whose principal aim is to exhibit the touching and sympathetic character of singing, should be forbidden to certain hard, bellowing voices, which only succeed in deafening the ears. On the other hand, I believe that a singer who possesses only a small voice has enough wherewith to make himself heard and admired, provided it be of sufficient compass, easy, expressive and in tune."

The Value of the Mirror to Singers

By Charles Tamme

MANY faults of the singer can be seen as well as heard.

Tension, constriction, strain, either mental or physical, or both, are the usual obstacles to a career of success in singing. These, to a large extent, fortunately, are visible—fortunately, that is, for the singer who uses a mirror. For the recognition of a fault is an important step towards correcting it.

When the singer looks into his mirror he should see, first, that his mouth is functioning naturally, freely, and without grimaces. There should be no contortion and no unnatural stiffness. The shape of the mouth should vary, of course, according to the vowel that is being sung, and according to the articulation of the consonant. Resonance, too, plays a part in the shape of the singer's mouth, in accordance with the quality and quantity required for the precise expression of the meaning of the song.

The tongue, as a general rule, should lie flat, with the edge against the lower teeth all around, so as to permit the free emission of sound.

The next problem for the singer with his mirror is the lower jaw. The lower jaw should drop with the utmost freedom when the mouth is opened in singing. It should drop from the hinges and should not be drawn down by pulling the head forward or by pointing the chin towards the throat and chest. The sides of the face and the chin should be innocent of any tense lines due to the movement of the lower jaw. If any such lines are visible, the singer would do well to practice dropping his jaw before the mirror a dozen times or so at every practice period, without singing at all, until the telltale lines have ceased to appear.

The neck is another problem for the singer with his mirror. Tension shows all too plainly in the swelling of the lateral blood vessels as well as in the muscles of the neck. This tension may be the result of a number of causes. There may be undue pressure or constriction in the lower throat. It may be that the singer thinks he must make a tremendous effort; or he may have some other faulty mental conception, such as failing to carry a given phrase to its logical resting point, or dwelling too long on insignificant words or syllables. Faulty manipulation of the breathing mechanism often causes the enlargement of the blood vessels in the neck. Perhaps the singer has neglected to take in sufficient breath for the phrase to be sung; perhaps he is striving to amplify his tones unduly by force rather than by the legitimate use of his resonance chambers.

Whatever the cause of this visible tension, it should be studied and corrected, then carefully checked every day by means of the mirror; for when a fault has become a habit, only constant vigilance will serve in correcting it.

Of course when a singer is sincerely interpreting song, his face will and should show unmistakable expressions; but these should in no way interfere with the mechanical freedom of the tone.

"Suit the action to the word," said Shakespeare. This precept is especially appropriate for the singer. The mirror will tell any singer who will but interest himself to look, how well he is obeying this precept.

Perhaps the most important thing that the mirror tells a singer is his psychical condition. Is he mentally in tune? Is he glad to be singing? Is he content, yet not phlegmatically so? Is he at ease? Is he vitally alert, yet not strained by anxiety?

The singer should be able to command himself into a state of mental repose which is necessary for good singing, and which most certainly will carry its stamp on the singer's face, where it is visible to all who look at him.

"There are but few happy and contented men here below; everywhere grief and care prevail, perhaps your labors may one day be the source from which the weary and worn or the man burdened with affairs may derive a few moments' rest and refreshment. What a powerful motive to press onwards! And that is why I now look back with heartfelt, cheerful satisfaction on the work to which I have devoted such a long succession of years with such persevering efforts and exertions."—Haydn.

UNIQUE VOICE TRAINING
By W. P. Schilling

A NEW book just off the press, different from anything ever published. Unexcelled—Unequalled—In advance of all competitors. This new system will make reputation for Teacher and Singer. *Save Time—Save Money.* Secure a beautiful voice within a shorter time than ever attempted. Special exercises for acquiring high tones easily, without strain. "Unique Voice Training" has merited the hearty approval of teachers, singers and music lovers, everywhere. **Price, $5.00.** Other books by the same author, *"Ear Training," 15 cts.; "Sight Singing," 50 cts. etc.*

W. P. SCHILLING
Music Publisher
131 W. 23d Street - - New York
(Also private instruction, terms reasonable)

The Wurlitzer Studio Piano, without player action, stands but 3 feet 8 inches high. Full 7⅓ octave scale. The perfect small piano, at last! Prices, $295 and up, f.o.b. factory.

A Tiny Player Piano

So small that it fits almost anywhere

LIMITED space in your home no longer means that you must go without a player piano. This remarkable little Studio Player stands only 4 feet 1 inch high and only a few inches wider than its standard keyboard. A room could hardly be too small for it.

Yet in spite of its compactness, this Studio Player is a perfect Wurlitzer Instrument in every sense of the word. It plays from any standard size music roll with the full round tones and fine shades of expression you'd expect only from a much larger and much more costly player. You'll be equally delighted with its artistic qualities when playing yourself.

This exquisite instrument can be yours for as little as $445, F. O. B. Factory. And the Wurlitzer dealer will be glad to arrange convenient terms.

Do Not Abuse Vocal Technic

By Jean McMichael

Do NOT let your vocal studies become your master and make your singing mechanical. Every singer must master technic, a foundation to future greatness that is absolutely necessary; but how very often young singers, and also those who have "arrived," have allowed technic to overshadow their personality until there is nothing left but a lifeless machine.

The public likes programs iced; and every young singer should realize early that her personality is the sugar-coating of technic, essential to success, and that personality should be developed side by side with technic.

Put a little of self into your studies. Be original, not merely a well-oiled machine that is able to render without a mistake a lesson learned, which nine cases out of ten is dull, monotonous. Give your work the spark of life, frost it with personality and charm. Be master of your technic, never its slave.

Keep Your Voice Nourished

By Jean McMichael

DID you ever stop to think that a beautiful voice is one that is properly nourished, that many a thin and weak voice is due to lack of food?

A vocal student is apt to overlook this fact, never realizing that a voice depends upon food for its nourishment, brilliancy, and richness.

A diet is an excellent thing, providing a vocal student does not go to extremes, thus retarding the progress of voice development. Every smooth-running machine must be oiled, so it is with a pleasing voice, it must be fed or the student cannot expect encouraging results.

Many vocal students think of their bodily health, but perhaps have not realized what an important part nutritious food has upon the human singing voice itself. It is essential that all singers should eat enough to give a voice the power and sustenance it needs for its possible growth, otherwise it will be warped, under-nourished, unable to blossom forth and become the lovely thing that nature intended it to be.

Affectation

By Sidney Bushell

AFFECTATION, in the commonly accepted meaning of the term, is a quality with which none of us wishes to be saddled. The word is synonymous with many undesirable characteristics.

For all that, the vocal student must not be surprised if his family or friends begin to notice a difference in the quality of his speaking voice, or subtle changes in his singing, which they may unkindly label "affectedness."

As a matter of fact, it *is* "affectedness," but in the very best meaning of the word. What is his daily practicing for but the affecting of a better quality of voice? If his friends notice it and remark upon it, provided it really is a change in the *right* direction, the pupil should feel encouraged. It will not be very long before this improved, "affected" voice is firmly fixed as his very own, and not, to quote a few of the terms usually coupled with affectation —priggishness, "airs," pretense, unnaturalnesss, and the like.

A Paderewski Eulogy

(*Continued from page 96*)

Shortly after Chopin left the land of his birth it was beset by oppression, an oppression so ruthless and terrific that it can only be accounted for as some wild, delirious action of revolt against the long-drawn Tartan yoke, falling in revenge upon the innocent. All was forbidden to us; the language and faith of our fathers, observance of our ancestral customs, the heritage of our past, our national dress, our songs, our poets—Slowacki, Krasinski, Mickiewicz. . . . Chopin alone was not forbidden to us; and yet in him we still could find the living breath of all that was prohibited; he was able to give us back our colored robes, our belts of woven gold, our sombre cloaks, our proud headgear, the noble clank of our swords, the glitter of our peasants' scythes, our graveyard crosses, our little wayside shrines; he gave all back to us, mingled with the prayers of broken hearts, the revolt of fettered souls, the pain of slavery, lost Freedom's ache, the cursing of tyrants, and exultant songs of victory. . . .

Through long years of torment, martyrdom, and persecution, our hounded thoughts encircled him with their most secret threads, we clung to him in the sorrow of our souls and he soothed, upheld, sometimes even converted us. He was a smuggler who, in harmless rolls of music, carried contraband Polish patriotism to his brothers across the border; he was a priest who, to his fellows scattered far and wide about the world, brought the sacrament of their martyred home.

He now stands illumined by the undying light of his country's gratitude, wreathed ever with fresh garlands of honor and wonder and rapture and love. But he does not stand alone. His "genius patriæ," the spirit of the land of his fathers, the spirit of his nation, has not left him, not even in death.

No man, however great, can be above his nation, or beyond his nation. He is seed of her seed, a portion of her, blossom of her bearing, fruit of her ripening; and the greater, the finer, and the stronger he is, the closer he lies to her heart. Chopin, perhaps, did not know how great he was. But we know; we know, too, that he was great with our greatness, strong with our strength, beautiful with our beauty. He is ours, and we are his; the whole of our collective soul is in him made manifest.

Therefore, let us brace our hearts to fresh endurance, let us adjust our minds to action, energetic, righteous; let us uplift our consciousness by faith invincible; for the nation cannot perish which has a soul so great and so immortal. . . .

The Home Beautiful Contains a Grand

One of the finer things in life

A LOVE for beautiful music! How fortunate the child who is taught to enjoy it! For a true appreciation of music, much depends upon the enthusiasm gained in tender formative years. A teacher that inspires; an instrument that thrills with its sweet resonance . . . both are supremely important.

Music teachers universally endorse the Brambach Baby Grand as the ideal instrument for home and studio use. For it is a compact, beautifully-proportioned instrument of glorious tone; the fruit of 103 years' experience in making superior pianos.

The Brambach needs no more floor-space than an upright, yet, within its beautiful case is to be found a full grand scale and all the tonal excellence of far more expensive instruments.

Easy to own one

Because of the enormous Brambach production, this remarkable grand piano is priced surprisingly low, $650.00 and up, f. o. b. New York City. On convenient terms, if desired. Distributed by leading music houses everywhere.

Mail coupon below for further information and for a paper pattern showing how little floor-space is required by this beautiful Baby Grand. The pattern will be mailed with our compliments.

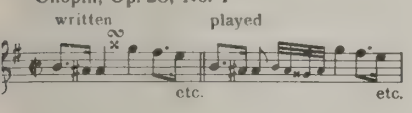
Question and Answer Department



Conducted by ARTHUR DE GUICHARD

opin, Prelude, Op. 28, No. 4—Czerny, Op. 740.

Q. In Chopin's Prelude, Op. 28, No. 4, ere is a turn immediately following A♯, and e turn is followed by G. Is this played on ♯ or G? If on A♯, do you use G for the low- t note of the turn?—K. F., Myrtle Point, e.

A.

Chopin, Op. 28, No. 4

Q. Should Czerny be played as fast as the tronome marking in Op. 740?—K. F., Myr- Point, Ore.

A. The metronome marking for the studies ntained in Czerny, Op. 740 (the Art of nger Dexterity), as, indeed, for all Czerny's udies and for kindred works, by various mposers, indicates *the ultimate speed* to attained by a finished performance of the rticular exercise or study. For example, in . 1, "Molto Allegro ($\frac{2}{2}$ = 92.)," the prac- e should be begun at $\frac{2}{2}$ = 92; and then, complete accuracy and greater facility are quired, a faster speed may be taken by de- ees, very gradually, until the metronome ce be attained. No. 2 could be begun at = 72 and gradually increased to $\frac{2}{2}$ = 60 ich stress cannot be laid upon the *necessity slow practice* until perfect execution be stered.

gher Studies for Advanced Pupils.

Q. I have been studying Czerny, Op. 740; ch's Well-Tempered Clavier, Bk. 1; and thews' grade eight. What other studies d pieces might I study to advantage?— F., Myrtle Point, Ore.

A. Heller, Op. 45, 46, 47; Moscheles, Op. ; Haberbier, Op. 53; Philipp, Complete hool of Technic; School of Advanced Piano ying (Exercises), by Rafael Joseffy; Men- ssohn's Pianoforte Compositions; Chopin's udes, Preludes, Ballades; *and more Bach.*

Correction.

Q. Please tell me if, in measures 19 and of the Air in D major, by Bach-Parsons, "second eighth beat" is supposed to be C♯ C♮, as printed in my edition.—C. G. K., mphis, Tenn.

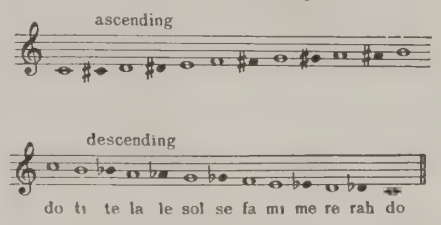
A. The second eighth-beat is correctly nted a C♮ (C natural), but the *sixth* eighth- it should have the C♯ (C sharp) re-estab- hed.

Over a Double-bar—Tonic—Irreg- ular Rhythm.

Q. (i) What is the meaning of a pause over a double-bar ||, *followed by a few asures of Largo movement? (ii) How is nic pronounced; has it a long O as in ne"? (iii) Valse by Schütt, Op. 59, No. 2: uld like to know how the second part in ree sharps should be counted, since there seven or eight eighth-notes to a measure three-four time?*—MATILDA F., Edwards- le, Ill.

A. (1) The pause indicates a short rest both voice and accompaniment, as well the change of movement to *Largo.* (ii) onic" has a short o, as in "bonnet." (iii) e movement in A, marked "Allegro," is ter than the first part. It is counted h one beat to a measure. The groups of hth-notes, whether seven or eight in the asure, must be played equally and evenly, h group to one beat, with an accent on the t note of the measure.

re Irregular Time-groups.



Q. In Czerny's "School of Velocity," Ex. in six-eight time, some measures have 19, and 22 sixteenth-notes in the treble, against ighth notes in the bass! How should they played?—F. O. San Francisco, Cal.

A. This is an example of playing that re- res much virtuosity, a very free and flexible ht-hand, with a left-hand accompaniment t accommodates its movement unobtrusively the flowing phrases of the melody. Careful mination shows the piece to be regularly structed in six-eight time, two beats to a asure, each beat a $\frac{2}{2}$ = 88 and the move- nt *allegro.* The left-hand accompaniment sists of an unending series of six eighth- es in each measure from beginning to end. accent, save a slight one on each first beat. e right-hand melody contains, in each meas- , two groups of sixteenth-notes (not al- ys the same number in a group), each up equal to one-half a measure (that is, otted quarter-note, $\frac{2}{2}$ in time, to a group). nsequently, the first group is played with first beat in the bass, and the second group h the second beat, or dotted quarter-note the fourth eighth-note). There is scarcely accent to be given anywhere. The chief iculty lies in playing the various groups of 0, 11, 12 and even 13 notes, evenly, equally.

The Descending Chromatic Scale.

Q. In Pennsylvania schools I have been taught to sing the chromatic scale descending: do, ti, te, la, le, sol, fi (4th sharp), fa, etc. In the schools of Florida, my teacher says that "fi," (4th sharp) is absolutely wrong and that the scale should be sung; do, ti, te, la, le, sol, se (5th flat), fa, mi, etc. Which is correct?—A. B., Winter's Park, Fla.

A. When a chromatic scale is the transfor- mation of a diatonic to a chromatic scale, it is called a tonal chromatic scale, and its writ- ten notation should be in conformance with the tonality to which it belongs. In order to write a tonal chromatic scale, first write the notes of the diatonic scale of the scale name, then write between the diatonic notes (which have the interval of a tone between them) the accidental which divides the whole tone into two half-tones. Of course, the accidental be- ing formed regularly from the diatonic note *takes the same name.* For example:

This notation of the descending chromatic scale is the correct form.

Handel's Largo.

Q. Please tell me if Handel's well-known "Largo" is a piece in itself, or just a move- ment of some opera, and if so what one?— K. J. LEF., Newark, N. J.

A. Handel's Largo is an aria from his opera of "Serse," also known as "Xerxes," composed and performed in 1738, in England.

Anglican Church Responses.

Q. Will you tell me in what tempo the Anglican Church Responses should be taken? Is the metronome time measured by the min- ute? In case of one not having a metronome, what is the best course to take?—"BREVE," Alta.

A. The beat, as an average, should be about MM. 72; occasionally slower, according to the sentiment to be expressed. The metro- nome is regulated so that 60 represents one beat per second; therefore 72 is the fifth of a second faster than 60. Consult the second- hand of your watch and practice beating sec- onds. After much practice you will find it an easy matter to establish the right pace, very nearly.

An Old Violin in Ohio.

Q. Will you give me a little information about an old violin, in our family for some time? Is it valuable? What make is it? I am unable to read the inscription inside it, somewhat as follows:

РИГАРТЪ ○ СПЕТЕРБУРГЪ
a seal
РУБУСЪ 1850.

—MRS. J. W., Canton, Ohio.

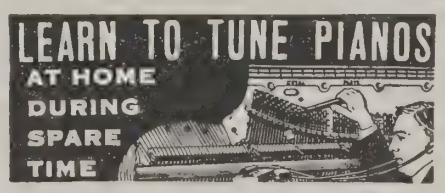
A. Without seeing and examining the in- strument, it is absolutely impossible to say anything whatever about it. The inscrip- tion, which may not be authentic (many of them are not), would go to show that the violin is of Russian make, by one Regarth, of St. Petersburg, unknown to the writer. Very sorry not to be of greater assistance.

Origin of the Sol-fa Names of Notes.

Q. Who invented the Sol-fa syllables which are given to the notes of the scale, and when? Some have told me that the inventor was French; if so, why did he use Italian syla- bles?—PARADIS, New Bedford.

A. The inventor, or discoverer (same thing), was one Guy d'Arezzo (Guido d'Arezzo, Guido Aretinus), a French Bene- dictine monk, born about the year 995, near Paris (France) and educated at the convent of St. Maur-des-Fossés, near Paris. The name of d'Arezzo was attributed to him from the name of the Italian convent to which he re- tired. The syllables are not Italian but *Latin.* They were the initial syllables of each line of a hymn to Saint John—each line beginning on a higher note of the scale:

Ut queant laxis
Resonare fibris,
Mira gestorum
Famuli tuorum,
Solve polluti
Labii reatum,
Sante Johannes.



The system of music was, then, hexachordal —a scale of six notes, which became: *Ut,* re, mi, fa, sol, la. The syllable "do" was adopted much later for the first note, or tonic; but the French still use "ut." When the scale took in a seventh degree it was given the name of "si," made up from the two initials of the last line: *Sante Johannes,* SI—the I and J being interchangeable in those days. Curiously interesting.

WEAVER
GRAND PIANOS

BECAUSE of its beautiful and enduring tonal qualities, a host of cultured people—gifted musicians, talented singers, skilled teachers, earnest students, discriminating music lovers —acclaim the Weaver Grand Piano as one of the really artistic instruments of America.

The Saxophone

Among the music lovers of America, the Saxophone is and undoubtedly will continue to be the most popular of musical instruments.

One of the things that has contributed to the popularity of the Saxophone, is that it requires a comparatively small amount of time and effort to become a creditable performer.

There are no better Saxophones made than the Buffet (Paris) and the Carl Fischer (American). Why not have us send you one for a week's trial? You can send it back, at our expense, if you do not wish to purchase it.

The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Edited by EMINENT SPECIALISTS

The Rise of Organ Music in America

By William C. Carl, Mus. Doc.
Chevalier of the Legion of Honor

Mr. Carl has for years been the Organist and Director of Music of the First Presbyterian Church, of New York, and is also the Founder and Director of the Guilmant Organ School.

IN THIS vast country of ours organ music had to have its beginnings the same as in the other arts. The pioneers in the early days of America's musical history did not ride to church Sunday mornings in a limousine nor did they have even a flivver to bring them home. For years people were adverse to the organ in the churches and extreme prejudices had to be overcome. As an instance of this, in the First Presbyterian Church, Fifth Avenue and Twelfth Street, built in 1845, where I preside, a tuning fork was all that was used until less than forty years ago. Finally, when the "new church organ" was built, it created such a commotion amongst many members of the congregation that it required several years of time before it subsided, and this on Fifth Avenue in the City of New York!

You have all hummed the tune, "Johnny Morgan played the organ and his father played the drum." How many of you know that the organist referred to was the famous John P. Morgan who so ably played at Old Trinity Church which keeps sentinel over Wall Street and the kings of finance. This man did splendid constructive work in the old days, as did another Morgan of a different family who came from Great Britain during the same period. I refer to George Washbourne Morgan, father of Maud Morgan, the distinguished harpist, who last fall celebrated her Golden Jubilee in Carnegie Hall. On reaching New York, Mr. Morgan was prepared to play programs of merit and of educational value, but the people would have none of it until finally he entertained them with variations on "By the sad sea waves." This instantly stamped his popularity, which continued for many years and enabled him to play whatever he chose. He was one of the first to make known the works of Bach in America, of which he was a recognized exponent, and toured the country for years in addition to presiding at the organ in Dr. Talmadge's Church in Brooklyn.

Others of the Period

About this period there were several others who must be remembered. Notably Dudley Buck, whose anthems were sung everywhere, is still regarded as having been one of our best organists and leaders; Samuel P. Warren, organist of Grace Church on Broadway, the teacher of many prominent organists, who led the organ profession here for more than a quarter of a century; Clarence Eddy, of Chicago, whose fame began at the Centennial Exposition in Philadelphia, and the success of whose European and American tours have made him the *Dean of American Organists*. Mr. Eddy has done a great work, and his tours still occupy much of his time.

Then, there were George E. Whiting of Boston; John Zundel, of Brooklyn, who long directed the musical forces at Henry Ward Beecher's Church; David D. Wood, of Philadelphia; John K. Paine, of Harvard University; Edward Hodges, Eugene Thayer and A. H. Messiter, at Trinity Church, New York; and many others who should be remembered in the Hall of Fame, for their early constructive work.

When Alexander Guilmant, the great French organist played at the Chicago World's Fair, some people exclaimed, "Why, when he uses his hands and feet, the notes are struck exactly together. We have never heard anything like it before," (and mind you, this was thirty years ago!) The influence of Guilmant in this country can never be fully estimated, for he came at the crucial moment and when he was most needed. At that time, we were not discussing the merits of Fundamentalists or Modernists in either the world of music or theology. A new school of organists was being formed and Guilmant was the man to do the work and he did it well. His unaffected manner won the hearts of our people on each of his three tours, and his marvelous improvisations have not yet been surpassed in either Europe or America.

World War Effects

During the World War, Joseph Bonnet was brought to this country by a committee of Americans headed by Mr. Otto Kahn. Bonnet was the idol of Europe, the organist of St. Eustache in Paris, and distinguished pupil of Guilmant during his Conservatoire days when he won a notable First Prize. His success here was phenomenal and is still fresh in the minds of us all. During the first winter he appeared over twenty times in New York City and, in addition to his regular programs, played a series of Historical Recitals which stamped him as one of the greatest organists the world has known. Bonnet's tours throughout the country were phenomenally successful. His name spells "bonnet" in English. An amusing incident occurred one day in a western town where the prospects of a full house seemed dubious for the evening concert, and the enterprising manager had to devise something to arouse the people. Knowing how much French millinery was admired and sought for, he announced the latest "Bonnet" from Paris had arrived, and all who wished to see it should come to the concert, when it would be on exhibition. Needless to say the house was packed to the doors, and the French Bonnet played a brilliant Organ Recital for them.

Method and System

Both Guilmant and Bonnet showed us what *method* and *system* could accomplish. There was never a detail of the smallest importance left unprepared. Guilmant would take as much care in folding the morning newspaper after reading it, as in playing a Bach Fugue. Many young men and women grasped these ideas, and are now demonstrating them in the splendid work they are doing. The rapid strides and phenomenal progress made during the past twenty-five years, is past our comprehension.

There is an incentive to work at the present time. First of all, the American people have proven that they are fond of the organ and its music. This is true from the east to the far west and up into Alaska, where I had the pleasure of inaugurating a new organ and playing for the music lovers there. Repeatedly, in the *remote western villages,* I have found audiences who will *double encore* a Bach Fugue and show a keen appreciation of the best in Music.

The advantages for hearing and becoming acquainted with the organ to-day are manifold. In addition to the Churches, organs are found in our Municipal Buildings, Concert Halls, Theaters, Film Houses, Universities, High Schools, Department Stores and, as well, in the houses of thousands of our citizens.

From an educational standpoint, nothing has helped the advancement of good music as the popularizing of the organ in this way. An interest in good music has been created, and with the advent of the radio, millions now have the opportunity of knowing what the organ is capable of doing.

What can be more far-reaching than the Festivals of Organ Music participated in by the world's famous artists, both European and American and the frequent series of Recitals at the stores of John Wanamaker in New York and Philadelphia, under the able direction of Dr. Alexander Russell.

A Notable Service

At the College of the City of New York, Professor Samuel A. Baldwin has performed a noble task for which the citizens of the community should be ever grateful. On the 8th of March he celebrated his one thousandth free Recital on the magnificent Skinner Organ in the Great Hall of the College, when engrossed resolutions from the City government were presented to him and he was honored in many ways. Professor Baldwin is the first to give one thousand free recitals in New York City.

As an innovation an out-of-door organ, the first of its kind in America, was built for the Spreckels Pavilion at the San Diego Exposition in California. It was a success from the start; and hundreds of free recitals have been given upon it by Dr. Humphrey J. Stewart, the distinguished musician, assisted at various times by visiting organists. From an artistic and educational standpoint, its value cannot be spoken of too highly.

The Out-of-Doors Organ

It would mean much for any city to possess an out-of-door organ to be played in the summer months by American organists; and a Municipal Band conducted by Americans. Both, it is hoped, will be a reality in the near future.

In New York City, with its multitude of musical offerings during the course of the season, the organ as a solo instrument is undoubtedly heard more frequently both in Recitals and in combination with other instruments including the Orchestra, than in any other city, either in Europe or America to-day.

The antiquated instruments of a former decade are rapidly being replaced by modern up-to-date organs. Our builders have progressed with the times and have accomplished magnificent results in the work they are putting out. The electric motor has necessitated that the men who formerly performed the task as organ blowers should look for a new occupation. Once I asked Guilmant in Paris why his Church did not install a motor. "Why," he replied, "what would the blower do?" His grandfather blew the organ, then his father blew the organ and now his son is waiting to follow him. They would be thrown out of business, and look for a new job. *"No, we cannot have a motor here!"*

To continue regarding Organ Music in America, it is most gratifying to record that the Organists who did constructive work in our country did it well.

There were many obstacles to encounter, for everyone was more occupied in the quest for gold than for art. Naturally our organists first achieved success in the churches, where the standards, by persistent hard work, have been raised fully one hundred per cent. Where can one hear good church music better rendered than in America at the present time? All honor to the men who have worked and given freely of their best to make this possible. The prejudice against women as organists is a thing of the past, and we now find them holding positions of distinction in the prominent churches of every denomination and creed, the country over. In New York they have been especially honored. I take off my hat to the women organists in America. They deserve the success they have achieved and so well merited.

Organ Fraternities

We must not forget the American Guild of Organists, founded over twenty-five years ago and the National Association of Organists, for the part they have played and are doing in bringing our Organists to the front.

The demand for organ study has been quite phenomenal. This is not surprising when we consider the thousands of new instruments built in recent years and the search for organists who can play them. There is always room "at the top," for those who study seriously and who will put their brains back of the music.

Although an organist is not made in a day, good old-fashioned hard work will accomplish a great deal. System, persistence and method, in everything, are the things that count.

"All honor to the American Musician!"

The Non-Legato Alto Part

By Helen Oliphant Bates

LISTEN carefully to your hymn playing for a few minutes. Does your alto part flow along in a smooth legato melody, or does it sound broken and disconnected? If it is not legato, the chances are you belong to that class of organists who invariably play the soprano and alto with the right hand, and the tenor with the left hand.

Now as hymns are written for voices and not for hands, your alto singers will not in the least object to your occasionally playing some of the notes of their part with the left hand, when to do so would enable you to give them a real legato line, and not a string of semi-staccato notes. Try it. The next time you cannot make both soprano and alto legato with the right hand, study the place and see if by the aid of the left hand, or by changing fingers, you cannot solve the situation. It is true it is not always possible, but it can be done it the majority of cases, which will be sufficient to make a big improvement in your hymn playing and amply repay all extra effort expended.

When is an organist in high society?

When he comes in contact with the great and the swell.

* * *

"WE ARE surrounded here by art and craftsmanship, and we have no business to be offering to God anything tawdry or silly, in music or in words."—*Bishop of Liverpool* (at Liverpool Cathedral).

An Old Silbermann Organ Dating from the Time of Bach

THE following description of an organ ating back to the time of Bach (1721), nd undoubtedly played on by him, ppeared in *The Diapason* for March, in an ccount of "The Organ in Bach's Day as ade by Gottfried Silbermann," by Mr. scar E. Schminke.

The organ is in the little village of Rotha, the immediate vicinity of Leipzig, in the cturesque Church of St. George, built fore A. D. 1100, in Romanesque and rly Gothic style. It is said that Mendels-hn used to walk there to practice and mpose at the organ.

"Our party ascends to the organ loft in e rear gallery (the usual position of the gan in all German churches), mounting old stone staircase in the tower, which nells of age and dungeons—the windows ve only recently been discovered and ened up. A thrill of anticipation and now last—the organ. Our first impression we t from the case, an ornate affair in white d gold resplendent in all the characteris- curlecues of rich rococo. This was a ock to American eyes accustomed to the ignity" of Flemish or burned oak cases. the days of yore, churches spent many ekels upon the tasteful decoration in lors of the organ case, employing artists repute for that purpose. In some cases ere were angelic hosts in the organ front, ho, when the proper stop was drawn, blew mpets and struck bells and cymbals quite e an orchestrion on Coney Island.

"The interior of St. George's had been cently redecorated in tastefully brilliant manesque style, and, with its simple but autifully carved benches and altar, rnished a rich setting for the instrument. he pipes in the front are unpainted (the ual thing in Germany) and highly lished. Those in the middle field are miss-g, a sacrifice to the moloch, "War." We quire about this and the mild-mannered huldirektor and organist emeritus flushes th anger, and, referring to the govern-ent officials who carried off the pipes, claims: "Those vandals, those villains; would have killed them had I been here!" ich is the affection of a real organist for e companion of his joys and sorrows, his loved organ.

"We open the ornate white doors on g brass hinges which prevent desecration the console by the impious, the bad boys the choir. (Most German churches have o an iron railing around the console.) An teresting sight greets our eye: Two anuals of keys the color scheme of which the reverse of that used at present, the ys ordinarily white being of ebony and ose usually black being of ivory. Herr huldirektor remarks: "You know, those ack keys keep your fingers warmer in nter than the white ones;" and since there no heating in German churches since the ar the argument appears a good one.

"The lower keyboard, we learn, is desig-ted as "hauptwerk" (great) and the upper "positiv" (corresponding to our choir). each side of the upper keyboard there is good-sized brass knob set in the wooden frame. Inquiry elicits the fact that these knobs constitute the manual couplers. The act of coupling is a curious operation. One grasps a knob with each hand and draws forward bodily the whole upper keyboard. By pushing the knobs back the keyboards are again uncoupled. Interesting, but rather inconvenient.

"We look more closely. The lowest C sharp is missing, a peculiarity of all Sibermann organs, for which I was unable to get an explanation. The pedal keys are spaced very widely, and to one accustomed to a concave radiating board this is bewildering. Not only do the intervals feel different, but one's sense of location is also befuddled by having to stretch the right foot its utmost to reach the high D and finding in the center C where one would ordinarily expect E. Of course the board is flat, with sharps and flats all the same length; and unless one is especially careful there will be much stubbing of toes on those in the center of the keyboard.

"There is no swellbox and consequently no swell pedal on which the right foot can take its ease during those affecting even songs on the oboe or vox humana. Organists with a weak sense of equilibrium, requiring a brace, will find a shelf-like projection directly above the pedal keys. The stop knobs have handles somewhat like an old-fashioned door bell, and they do have some pull, about three or four inches, if I remember correctly. The name of each stop is posted on the jamb directly above the corresponding knob in large script."

The following is the specification:

Manual I

1. Rohrflöte, 8 ft.
2. Principal, 8 ft. (Diapason).
3. Octave, 4 ft.
4. Spitzflöte, 4 ft.
5. Octave, 2 ft.
6. Cornet, 3 ranks.
7. Cymbal, 2 ranks, largest pipe 1 ft.
8. Quinta, 3 ft.
9. Mixtur, 3 ranks, largest pipe 1½ ft.
10. Bordun, 16 ft.
    1½ octave wood, remainder metal

Manual II

11. Gedeckt, 8t ft.
12. Quintadena, 8 ft.
13. Rohrflöte, 4 ft.
14. Principal (Diapason), 4 ft.
15. Octave, 2 ft.
16. Nasat, 3 ft.
17. Quinte, 1½ ft.
18. Tertia, 1 3-5 ft.
19. Sifflet, 1 ft.
20. Mixtur, 3 ranks.

Pedal

21. Principal (Diapason), 16 ft., wood.
22. Posaune, 16 ft.
23. Trompete, 8 ft.

Mechanical

Manual I. to Pedal.
Manual II. to Manual I.

Interesting Facts About Organ Pipes

By Helen Oliphant Bates

ORDINARILY the pitch of organ pipes ll be determined by their length, long pes producing low notes and short pipes oducing high tones. But it is interesting note that a stopped pipe produces a tone octave lower than an open pipe of the ne length. The explanation for this s in the fact that, on reaching the top a stopped pipe, the air is forced down ain, and is thus made to vibrate twice far as if the pipe were open.

The reverse of the stopped pipe is found in pipes of the harmonic series. These pipes are pierced with a small hole about half way up. This causes the column of air to vibrate in two sections instead of vibrating the entire length of the pipe. The result is a note an octave higher than would be produced by a pipe of the same length without the opening. The effect is similiar to that of lightly touching the middle of a violin string.

JESSE FRENCH & SONS PIANO

—The Upright Best for Everyone

For the finished player, the teacher, the pupil—for *everyone* who loves tonal beauty, there is no instrument so delightfully pleasing, so entirely satisfactory as the artistic Jesse French & Sons Cabinet Grand.

Those of you who are seeking the utmost in piano value should know this instrument. You should acquaint yourself with its superiorities. There's a Jesse French & Sons dealer near you. If not send at once for our free Illustrated Catalog and we will sell you direct from the factory upon easy terms, if desired.

Evangelistic Piano Playing
By GEORGE S. SCHULER
PRICE, $1.00
Every Pianist Will Find This an Extremely Helpful Work—Full of Interesting, Practical Hints on Effective Hymn Playing
Very often the playing of hymns as they are written is not easy nor effective upon the piano. The effect of the singing of the four parts is usually the main thought in the mind of the composer, not the question of how many notes the right and left hand shall play, or whether the performance is, or is not, physically easy.
This book gives numerous illustrations showing how to adapt real piano accompaniments to hymn-tunes. This is an interesting subject to all pianists and this book will help those who should become more proficient in playing religious songs in which the piano accompaniment is lacking.

A Summer Session

Beginning June 21st

Length of course arranged to suit individual convenience

Study

~at an amazingly low cost, averaging $150 or less for a full course of study under master teachers

Master Classes

Master Classes in Piano, Voice and Violin, conducted by renowned artist teachers, at so low a cost as to be within reach of all.

Classes in Teaching Repertoire, Music Pedagogy (Normal), Public School Music, Harmony, Counterpoint, Composition, History and Appreciation of Music; Accompanying, Ensemble Playing, Sight Singing, Orchestra Conducting, Choral Conducting, Dramatic Art, Dancing and Languages; a special course in Community Music, and another in Motion Picture Organ.

Teachers' Certificates may be earned by completion of prescribed Courses.

Private instruction available from the entire Faculty of more than one hundred instructors, in any subject desired.

Dormitory accommodations provided at moderate rates.

Vacation

All the good times of a real vacation along with the advantages of summer study

Eight Vacation Excursions

All the good times of a real vacation can be enjoyed in a series of eight vacation excursions, conducted by the School. The schedule includes; 1. An automobile trip through the Chicago Parks, concluding with a visit to the studios of the famous sculptor, Lorado Taft. 2. A visit to the Art Institute. 3. Capitol Theater Party. 4. A visit to the Field Museum. 5. A boat ride on Lake Michigan. 6. A visit to Newberry Library and the Chicago Historical Society. 7. A visit to the Chicago Tribune, to see the printing plant, the great Radio Station WGN, and the Observatory Tower. 8. A journey in chartered car to Ravinia Park. Picnic supper in the Park. *Opera in the evening with Metropolitan and Chicago Opera Company artists.*

Free recitals will be given every week by artist teachers of the School.

Opportunity

~for professional advancement

Teaching Positions

The Sherwood Music School now has Thirty Neighborhood Branches in Chicago. These Branches give rise to positions for advanced students and teachers who wish to teach and at the same time continue their study under our artist teachers. There are also excellent positions available for our students, when qualified, in the thousand and more Branches of the School, located throughout the country. *Additional teachers for the 1926-27 teaching season in the Chicago Neighborhood Branches will be engaged from those in attendance at the Summer Session. The number of openings is so large that any talented, ambitious student or teacher, with reasonable preparation, may be sure of an opportunity in our organization.*

Organ and Choir Questions Answered

By Henry S. Fry

President of the National Association of Organists, Dean of the Pennsylvania Chapter of the A. G. O.

QUESTION. In the Widor-Schweitzer edition of the Bach Passacaglia they recommend using at the beginning, a single 8′ string stop in the pedal. Would you consider it too un-orthodox to use, in a large hall, a string celeste stop for this? It seems to me to make the ground bass more prominent.

—Crochet.

ANSWER. The Bach *Passacaglia* was originally written for a two-manual Clavicembalo with pedals, on which the only contrast possible was that represented by the two manuals—one loud and one soft. Since the composition was not originally written for the organ, we need only be limited in the registration for the organ by the resources available in the particular instrument on which it is being played, and by the extent of producing effects only in keeping with the general character of the composition—which by its nature forbids anything of a tawdry or bizarre character. Harvey Grace in *The Organ Works of Bach,* speaking on the matter of registration for the *Passacaglia,* says, "There are a hundred workable methods."

The mission of music is to bring a message of beauty, and if the use of the string celeste, in the hall you have in mind, produces a beautiful effect, and is consistent with the working-out plan of the whole composition, I can see no objection to its use, whether it be considered orthodox or non-orthodox. I would personally prefer the beautifully voiced Gamba Celeste, with its additional warmth of color, to the single string tone. The directions in the Widor-Schweitzer edition do not, however, indicate this registration of a single 8′ string stop for the first eight measures, or giving out of the theme or ground bass—that registration not being called for until the second appearance of the ground bass (in measure 9), with accompanying manual parts. Probably not every organist agrees with the suggestion of an 8′ stop as the registration for the pedal part at this point; and it is interesting to note that Leopold Stokowski, Conductor of the Philadelphia Orchestra, in his excellent orchestration of the *Passacaglia,* employs 'cellos and basses for the passage—which would be the equivalent of using a 16′ stop in addition to the 8′ stop. In Conductor Stokowski's orchestration, in the 5th variation (wood wind), the theme (varied) appears for the first time with orchestration suggesting omission of the 16′ pitch.

Q. Having read your answers in "The Etude" with great interest and benefit, I write to ask a few questions. Enclosed you will find a diagram of our choir seats and organ console and you will see we have no room between the railing and organ bench for singers to stand. (1) Where is the best place for a quartette to stand under such conditions? They must stand at either right or left of organist or bass and alto at one side, tenor and soprano at the other side. (2) How are Echo Organ and Chimes used? Are they coupled to desired stops? When is the Echo Organ used? Is it only for echo effects with pp combination or with combinations including "f" or full organ? Please tell me the meaning of RKS on Dolce Cornet stop in swell organ. (4) Are Chimes used at all in accompanying the voice? Please give titles of organ, also choir music (ten to twenty voices) suitable for a dedication service. (6) I would appreciate a list of good organ compositions for opening numbers.

A. (1) The placing of the quartette depends somewhat on the qualifications of your chorus voices. If they do not require the assistance of the members of the quartette as leaders the quartette might all be placed in one location—either to the right or left of the console. We would not advise this, however, on general principles, as it would seem better to have the quartette occupy places where they would be over the chorus voices of their respective parts. It would appear to the editor, from the diagram you sent, that unless the quartette voices are located with their respective chorus voices, they might occupy the seat directly back of your extended console—except when they are singing entirely "quartette" numbers, when they might be located at the right or left of the console. While it is not desirable to have the singers move about during the service, your diagram would indicate this might be done quietly when quartette numbers are to be sung.

(2) The effectiveness of the Echo Organ depends somewhat on whether it is really an "Echo" organ, or, as it is in many cases, simply an Antiphonal organ, which may have the effect of an Echo organ to those at the opposite end of the auditorium, but *not* to those near the location of that part of the instrument. In some instances a better echo effect may be obtained by using very soft stops in one of the main organ departments. In an Echo organ placed as you indicate it may be used for Antiphonal effects, and for Echo effects, if it is effective as an Echo organ. As a rule it will probably be better to use the Echo organ alone—although there is no objection to using main organ stops with it if the effect is good, as it might be in some instances—either using a soft stop in the main organ as an accompaniment to a solo played on the Echo organ—or to slightly augment the Echo organ giving the effect of the passage coming from two different sections of the auditorium. With such use much care must be taken in "balancing" the tones, as the effect in the auditorium is likely to be different from that at the key-desk. Experiment might be made by having another organist play on the combinations you suggest while you listen in different locations in the auditorium. An Echo organ such as you describe would not be of much use in forte passages or full organ.

(3) "RKS" on Dolce Cornet in Swell Organ is an abbreviation for Ranks, and indicates the number of pipes to each note in the stop—thus, III ranks means there should be three pipes to each note in the Dolce Cornet, or any other stop of the mixture family—IV ranks, four pipes to each note, and so on.

(4) Chimes are usually played with single notes and without other stops except those used on another manual for the accompaniment. Chimes may be used in accompanying the voice, if the passage is in single notes, is appropriate, and the effect good. Chimes, however, should be used sparingly under all circumstances.

(5) While the editor does not recall any organ numbers that are particularly adapted for Dedication Services, any numbers of a Festival character might be used. The following are appropriate for such service:

How Lovely Are Thy Dwellings Fair
(a long and elaborate composition) . . Spohr
How Lovely Are Thy Dwellings,
O Lord of Hosts . . . . . Hadley
How Lovely is Thy Dwelling Place . . . . Brahms
Dedication Anthem . . . . . Buck
Except the Lord Build the House . . . . Gilchrist

(6) Any of the numerous organ numbers of a quiet, meditative character are suitable for opening preludes—and more brilliant ones for festival occasions. Some organ numbers, with use for Harp, Chimes or Echo organ are:

Largo (Harp) (arranged by Whitney) . Handel
Arpa Notturna (Harp) . . . . . Yon
By the Brook (Harp)
Arranged by Federlein . . . . . Boisdeffre
Magic Harp (Harp) . . . . . Meale
Gesu Bambino (Chimes) . . . . . Yon
Sunset and Evening Bells (Chimes)
Federlein
Evening Bells and Cradle Song
(Chimes) . . . . . MacFarlane
Eventide (Chimes) . . . . . Frysinger
In Moonlight (Chimes) . . . . . Kinder
"Eco" (Echo Organ) . . . . . Yon
Contrasts (Echo Organ) . . . . . Browne
Russian Boatmen's Song on the River Volga (Harp and Echo Organ). Arranged by Clarence Eddy
Reve Angelique (Harp, Chimes and Echo Organ) Arranged by E. H. Lemare.
Rubinstein

In the use of the Harp stop it is frequently advisable to add other stops, such as an 8′ flute—depending on the Harp to supply the percussion effect. Where a melody is being played on the same manual it is advisable to add some soft solo stops, such as Strings and Vox Humana—by coupler if necessary—to make the solo effective.

Q. My only instrument is a small reed organ, and my abilities range about grade 4. Can you suggest suitable music for study with a view to progress, and also playing for the pleasure of others?—"Eboe."

A. You may find material for your purpose in the following books for Reed Organ:

New Themes of Modern Gems . . . . . Berg
Laus Organi . . . . . Weston
Gems for the Organ . . . . . Jackson
The Organist's Repertoire,
Volumes 1 and 2.
43 Offertories for Pipe or Reed Organ . . Lorenz
The Organist at Home . . . . . Schnecker
Reed Organ Selections for Church Use.
Classic and Modern Gems for the Reed Organ.

"My compositions in music are the product of my mind and spring from my sorrow; only those that were born of grief give the greatest delight to the outside world."—Schubert.

PROFESSIONAL APPROVAL

The Premier Aristocrat Model

5 feet, 3 inches long. Price, $725. f. o. b. New York

EMBODIES the artistic qualities sought by the real musician and artist—yet purchasable at so reasonable a price, that a considerable saving is effected compared with any other make of quality Small Grand.

This is because it is the product of the largest and most critical Grand Piano makers—the institution that made the Small Grand Piano the instrument of universal appeal and dominant from coast to coast.

Before selecting *any* piano, see and hear the Premier—sold by leading Dealers. If you cannot obtain locally, please advise—we shall see that you are promptly supplied.

"Brazelton's Practical Elementary Method"—for Piano

"Brazelton's Practical Elementary Method" is practical—wasting no time on unnecessary drudgery but giving much in little, as, for instance, teaching the bass clef in the very beginning. Thus the pupil soon arrives at the point where he is playing interesting "pieces." Price, $1.25 net.

"The student who masters Mr. Brazelton's valuable addition to pedagogic literature thoroughly, will be well and correctly started on the road to pianistic excellence, and teachers will find it a great help at the most critical stage of music study."

EMIL LIEBLING

Brazelton's Practical Method, Book II

"Melodic Analysis of Studies and Pieces in Minor Keys"

Solves the problem of presenting the five forms of Minor Scales. Twelve delightful compositions, showing the Composer's application of the Scales, stimulate the imagination and create enthusiasm.

The work enables the student to analyze and account for every tone in all compositions written in Minor Keys Price, $1.00 net.

Eight Songs

from

Green Timber

Lyrics by CHARLES O. ROOS
Music by THURLOW LIEURANCE

The Enchanting Wonders of the Great American Outdoors Inspired These Beautiful Songs

THIS cycle of "Green Timber" songs stands as one of the most original in American song writings.

These songs put a touch of the unusual to a program and give the singer an excellent opportunity to display artistry in voice and interpretation.

The secret of the appeal of these songs is in the manner in which they conjure up the heart throb of the great outdoors. The "Green Timber" country or the "Magic Valley" of the St. Croix River is one of nature's beauty spots where the vast stretches of whispering trees, majestic and hazy hills, and an, enchanting stream move the most prosaic. The poet and musician have blended inspirations in these "Green Timber Songs," giving the heart beat of this *Enchanted Valley.*

Price $1.50

A very interesting two page preface is given in the cycle.

Published Separately in the Following Keys

Letters From Etude Friends

"The Assignment Will Be—"

TO THE ETUDE:

Do you not think that a pupil can get either too much or too little of an assignment? If the beginner gets too much to practice, he is liable to get discouraged at the beginning of the week and then—no practice the whole week, on that new part which you *did* want Johnny or Susie to be able to play extra well.

If you give the young pupil too little as a definite assignment then—"Aw, my teacher, she don't give me enough. I ain't gonna practice that 'cause I could play that little bit right off." And the teacher knows how the result sounds.

I usually tell my pupils, "Now Susie, I don't think you can do more than this section, but if you could do more (pause) it will be splendid." (That pause, with a smile, works wonders sometimes.) And Johnny or Sue comes next week with the whole page and even a little bit of the next, learned.

It's human nature, especially human childish nature, to do what is suggested as "you will not or can not do."

D. D. LITTLE.

Memorizing By Transposition

TO THE ETUDE:

I have much sympathy for those who find it an arduous task to memorize their music and will offer these suggestions, believing if they are faithfully carried out the results will be quite satisfactory.

No matter how well advanced you may be, look up several pieces in grade *one*, of different styles, and thoroughly memorize them, and also transpose them into a *few* keys, at least. After grade *one* goes *easily*, then proceed in the same manner with grade *two*, then on through the other grades as far as you are capable of playing with notes. The transposing will not come easy above grade two, and that might be dropped, though some of that kind of work all along the line would do no harm. A half hour a day is none too much time to spend at the memorizing and transposing.

Some musicians do not grasp the ideas of intervals and chords as quickly as others, much the same as remembering Bible verses or poems. Transposition becomes quite interesting after one gets "the hang" of it; and it is restful to the nerves following the monotonous practice hours.

MISS MILLS.

The Hand Staff

TO THE ETUDE:

In many years of teaching the piano I accidentally came upon a method for very young children who have no knowledge of the A, B, C's and the lines and spaces.

I name the fingers E, G, B, D and F—the hand having the five lines and four spaces just like the staff.

Naming the thumb (or first finger) E, the second finger G, the third finger B, the fourth finger D, and the fifth finger F, the spaces between the fingers were then named in order, F, A, C, E.

This seems to make it very clear to little tots, and it is scarcely any trouble, the materials being all right "at hand."

I am glad to pass this on, hoping it may assist other teachers of children.

Very cordially,
MRS. I. C. FRENDBERG.

Books on Music Reviewed

Singing Made Easy. By Watson Lyle. Cloth bound; ninety pages; illustrated. Published by W. Foulsham & Co., Ltd. Price 50 cents.

The modest volume does not attempt to go into anatomical details. What it rather undertakes is to furnish a guide to bring the vocal mechanism and the brain into a logical working arrangement. There are many practical suggestions as to how this may be done, with means offered to the end. Theorizing has been tabooed, while usable hints are numerous. A singer's handbook that is just a little different.

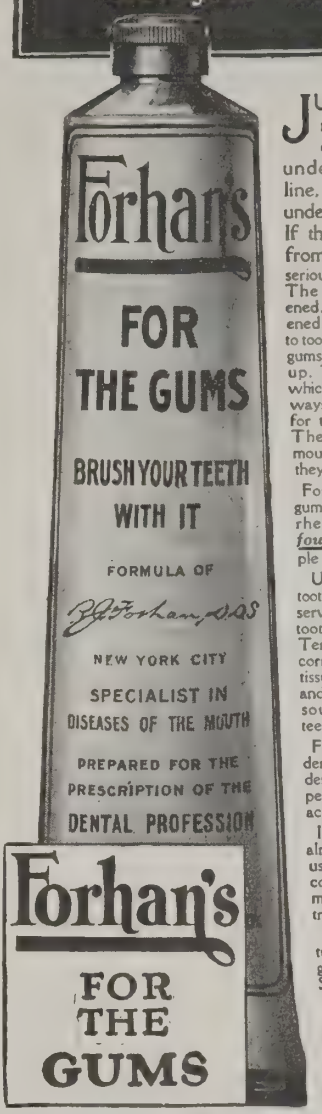
Music in Work and Worship. By Edmund S. Lorenz. Cloth bound, three hundred and eighty-five pages. Published by Fleming H. Revell Company. Price $3.00.

A book which has been written to help three classes: Students of theological seminaries; ministers in the active pastorate who feel the gaps left in their preparation for actual work; and the musical workers in the churches—organists, choir directors and song leaders. There has been no attempt at technical instruction, but rather an effort to furnish the mainspring of inspiration which will lead workers to acquire proficiency. The organ, the organist, the choir, the choir leader, Church and Sunday School music, all are discussed in a lucid and exhaustive manner, with many suggestions to which the author's long experience give weight. Workers in Church Music will find in the volume much that will inspire and help.

Bach's Keyboard Suites. By J. A. Fuller-Maitland. Paper bound; seventy-four pages; illustrated. Published by the Oxford University Press. Price 50 cents.

The "French" and "English" Suites, the separate Suites and the Partitas of the great Cantor are discussed in a manner to initiate the student or young professional into their intricacies and beauties. In fact, the seasoned musician will derive no small benefit from the lively discussions of group and individual numbers.

Famous Violinists of Today and Yesterday. By Henry C. Lahee. Cloth bound; 435 pages; illustrated. Published by L. C. Page & Company. Price $2.50 per copy.



In this volume the writer has endeavored to give a "bird's-eye view" of such violinists as have achieved distinction, from the earliest times to the present day, rather than to give a detailed biography of "the chosen few." His purpose has been accomplished with a thoroughness characteristic of the scholar which he is, and which at the same time makes the book a real authority for those interested in the annals of violinistic achievements. The work is particularly interesting in its tidbits of reference to those earliest players of the instrument, for information about whom one is sometimes puzzled to know just where to look.

The History of Orchestration. By Adam Carse. 348 pages, numerous illustration, bound in cloth. E. P. Dutton & Co. Price $5.00.

An unusually complete and valuable work, showing not merely library research but also practical experience and a great deal of travel to investigate instruments and original sources. Two hundred pages of the book are consumed before the orchestral instruments of the Nineteenth Century are reached; but all of this material is most valuable as it gives the historic background of all of the means and materials in use in the present-day orchestra.

The book should not be omitted from the collection of anyone who is interested in the orchestra or in writing for the orchestra.

Protect your gums and save your teeth

JUST as a ship needs the closest attention under the water-line, so do the teeth under the gum-line. If the gums shrink from the tooth-base, serious dangers result. The teeth are weakened. They are loosened. They are exposed to tooth-base decay. The gums themselves tender up. They form sacs which become the doorways of organic disease for the whole system. They disfigure the mouth in proportion as they recede.

Forhan's prevents this gum-decay called Pyorrhea, which attacks *four out of five* people over forty.

Use Forhan's every tooth-brush time to preserve gum health and tooth wholesomeness. Tender gum spots are corrected. The gum-tissues are hardened and vigored to support sound, unloosened teeth.

Forhan's is used as a dentifrice, though no dentifrice possesses its peculiar gum-tissue action.

If gum shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

In 35c and 60c tubes at all druggists in the United States.

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Management of the Orchestra, Part I

By Dr. Perry Dickie

IN OUR first article on the Amateur Orchestra we dwelt entirely upon its formation, in order that the conductor be enabled to start with an organization that could possibly accomplish some successful results if managed intelligently. Still it should be borne in mind that after the orchestra is brought into existence the work does not by any means whatsoever end, but in fact just begins in earnest.

In this article we purpose to treat the carrying on of the organization already started, as well as also the betterment of any such of these orchestras that are, so to express it, "limping along" and need help to enable them to stand firmly on their normal musical feet.

We stated in our first article on this subject that no matter how often or how long an amateur orchestra of poor players were rehearsed, without outside drilling and coaching they would always remain as they were on starting. Also that in case the players were very incapable they should be required to take instruction on their instruments; otherwise they should not be retained or even in the beginning permitted to become members. If after a reasonable amount of instruction they cannot attain an ability to play, they should not be allowed to remain in the organization.

An Absolute Essential

It should be needless to state that an absolute essential to any success to be acquired on a musical instrument is intelligent home practice. This advice may be superfluous to some; still the fact is that many who attempt to play in an amateur orchestra neglect this very important matter. In fact, there are some who do not practice at all; the only time that they touch their instruments being when they come to rehearsal. It is not necessary to say that organizations that contain such members are as a rule most miserable to listen to and never reach any musical standing. Such persons as these are a veritable nuisance and should not be tolerated, as they retard all possibility of progress for the orchestra.

In all organizations of this kind, where we are consulted in the matter, we invariably counsel a general disbanding and reorganizing with a desirable membership of those who are willing to work.

Practice Ideas

We have already mentioned home practice; and it would be well for us to explain more fully our ideas on the subject, since there is a right way and a wrong way, a profitable and an unprofitable one, of which the latter is too often in vogue, and which accounts for so many poor musicians even although they may spend a great deal of time in this work.

To the average musician, professional as well as amateur—and especially so with the latter—practicing is not a real enjoyable proceeding; hence the reason so many try to shirk all that is not really necessary. Still if one is ambitious to succeed and can realize its value, it becomes a duty for attaining a pleasant ending. It is incumbent upon the professional, because upon it depends the ultimate success of his future, which to him is a business proposition and cannot be neglected. However, in the case of the amateur it is not a necessity to practice at all, save if he would play his instrument well—pride being the incentive to work.

As for the amount of time to be given to practice, we would say that there are many amateurs who, when they spend an hour a day to practice, seem to regard what they are doing as a semi-philanthropic deed. As for the sufficiency, one hour a day given to practice by the amateur will keep him up so that he can get along in the orchestra, provided he already knows how to play moderately well and in tune on his instrument. This amount of time, however, will not suffice if one is studying music and has not yet acquired technical ability. Two hours would barely be enough; and not less than four hours for work on the instrument is prescribed for one who would aspire to be a fairly good player. In addition to this, several hours daily should be devoted to theoretical music study.

However, in cases where but one hour a day can be given we are frequently asked how to expend it to the best advantage. The following is a plan of procedure that we recommend as giving the most for the above limited time.

Starting with what we term *Attack*—short quick notes paying particular attention to the tone quality which should be clear, full and in perfect intonation. To be practiced slowly at first, gradually increasing the tempo. In the beginning, until this exercise is acquired in a satisfactory manner, at least ten minutes a day should be given to it; afterwards, when it is mastered, five minutes a day should suffice to retain it.

Sustained Notes

The practice of *Sustained Notes* is absolutely necessary for the player on every musical instrument, be it string, wood or brass. These notes should be held as long as possible, increasing their duration as the bow or wind—depending upon the instrument—will permit. Invariably the tone must be of good quality and in perfect intonation, both at the beginning and at the ending of the note without any variation in pitch during its sounding. Sustained notes should be practiced in even tone, loud and soft, also swelling at the middle and also at ends of the note. We have found that the practice of sustained notes, played as softly and of long duration as possible, are most efficient for acquiring a complete mastery over one's instrument. By combining scales and various exercises with sustained notes, attack, and so on, time can be economized and much more can be accomplished in the hour. This, however, should not be attempted until each has been mastered singly and can be played without any mistakes. A thorough practice of the *Scales* is positively essential for good playing and cannot be dispensed with by one who aspires to any musical ability. They should be practiced slowly, sustained, both slurred and staccato, as well as dotted *in all keys*. Our modern composers and arrangers are disposed as likely as not and often with no reason at all, to write in the very remote keys; hence the necessity of preparation to meet them. Often when a piece starts in an easy key, before it is ended one may find one's self confronted with a key full of flats and sharps. We have met violinists who have demurred at three sharps or flats in music put before them to play. What they would have done with six or seven, as we meet them now, we wonder.

The *Chromatic Scale* imparts ease and fluency and should always be included in the hour's practice.

This specified work should take up at least forty to forty-five minutes out of the hour, even when it can be played fluently; the remaining portion should be expended on some study for the purpose of acquiring a general knowledge of one's instrument. By an hour thus spent—the player could keep up sufficiently to make a comparatively decent showing and thus enable him to play the average difficult music met with in the amateur orchestra. It is the minimum amount of time that would suffice to accomplish anything at all.

Little Hints

ONE of the most frequent causes of bad tone in violins is when the edge of the chin rest presses on the belly. This is caused either by the chin rest being such a flat model that the edge of the chin rest, where it projects over the belly, is not high enough to clear it, or where the violin is a very high model, such as the Stainer. With these very high modeled violins, the average sized chin rest is very apt to press against the belly.

The pressure of the chin rest, when its edge actually touches the top of the violin, has a very serious effect on the tone. It checks and shuts off a considerable portion of the vibrating surface of the belly and gives the violin a hollow, tubby, and sometimes rattling tone. If the violin is to sound clear, resonant and sonorous, every bit of the wood of the belly must vibrate freely. When anything is pressing tightly against the belly, it is like a singer trying to produce a clear, sonorous tone while some one is choking him.

Every violin student should examine his chin rest to see that it does not press against the belly. If it seems very close, the student can ascertain if it actually touches, by passing a thick playing card under the edge of the chin rest where it projects out over the belly. There should be room for the playing card to slip easily between the under edge of the chin rest and the belly.

Violin students often send their violins long distances to expert repairers when there is trouble of this kind. They know that something is wrong with the tone of the violin, but cannot exactly locate the cause.

Fortunately the trouble is easily remedied. If a chin rest which is comfortable for the pupil and high enough to clear the belly cannot be procured, a piece of cork can be placed between the edge of the chin rest and the edge of the violin, where it is clamped down by the screws. The cork must be thick enough to elevate the chin rest to the proper height to avoid touching the belly. Sheets of cork can be bought at the hardware store.

Accordatura and Scordatura

By Orlando A. Mansfield, Mus. Doc.

(Continued from last month)

ALTHOUGH No. 8 was a great favorite with De Bériot, Nos. 8, 9 and 10 are chiefly associated with the name of that "wizard of the violin," Nicolo Paganini (1784-1840). Indeed he used these so often that the raising of the G string a minor 3rd to B flat, or a major 3rd to B natural was often termed "solo pitch."

Strictly speaking, No. 11 is not an instance of scordatura, as every string is simply tuned a semitone sharp for the sake of brilliancy, the moral proportion of 5ths not being disturbed thereby. Although a favorite procedure with Paganini, as in his *1st Concerto,* it was also used by Ludwig Spohr (1784-1859), in his duets for harp and violin (Spohr's first wife, Drette Scheidler, being a brilliant harpist), the harp part being then written a semitone higher than the notation of the violin part.

A Rare Scordatura

The 12th scordatura of our series is now rare. It merely shows the G string lowered a semitone to F sharp. It was a favorite with Baillot (1771-1842), the great professor at the Paris Conservatoire and the teacher of Mazas, Habeneck, the two Danclas, and other distinguished violinists. For arpeggios in sharp keys it would undoubtedly be found to be very useful on certain occasions or for certain passages.

Concerning No. 13 we have only to remark that it was used by Peter von Winter (1755-1825), the great enemy of Mozart; and a musician who, although best known as an operatic composer, was a violinist in early life.

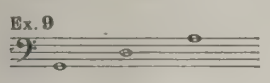
Our last scordatura, the most modern of the series, is one of the most interesting because of being the only one in which the E string is lowered a semitone to E flat. The other strings, it will be observed, remain unchanged. This tuning is employed by Saint-Saëns (1835-1922), in his *Danse Macabre,* quite a weird conclusion to our series.

Notation of Scordatura

In most of the works mentioned, and in others in which the scordatura is employed, the latter is generally indicated at the beginning of the movement, pretty much in the same manner as that employed in our Example No. 6. But the music itself was written according to the fingering to be employed; so that no burden of transposition would be thrown upon the player, only upon the theoretical reader, or upon a performer playing the part upon a keyboard instrument or upon a stringed instrument with normal tuning. As a natural consequence of this altered tuning, the pianoforte part (if all the strings were altered as in No. 11 of our series) would be in a different key to that of the violin. Thus, in Paganini's *First Concerto for the Violin,* the part for the solo instrument is written in D, but the pianoforte part in E flat; where the violin is in B the pianoforte is an C; and, in the last movement, when the violin is in G, the piano is now in A flat. So if the violin pitch is raised a certain number of semitones the pianoforte part must be the same number of semitones above the mere notation of the solo part and *vice versa.* Hence it comes to pass that sometimes the violin has the notation of a flat key while the accompaniment is noted in a sharp key. In other cases the reverse occurs.

The raising of the pitch of the strings in the old violins was somewhat more practicable than to-day, owing to the shorter neck and string of the older instruments. Also the pitch of that period was considerably lower. It is scarcely

ssary to add that for raised pitch thin- strings would be required, for a lower n those of thicker gauge.



While the tuning of the Viola, or tenor n, has never been seriously interfered , the Violoncello has received only or two important instances of *scorda-* treatment. The most noticeable is to ound in Bach's *Fifth Suite for Violon- Solo,* in which, for the key of C or, the A, or first string, is directed e tuned to G, a whole tone lower. Ac- lingly the music played on this string ritten a tone higher than the sounds luced, and often appears as if in D or while the accompaniment is in C. or the double basses the scordatura has been employed in modern works. As readers are probably aware there are kinds of orchestral basses, one with strings with the accordatura shown Ex. 5, and another with three strings. England the three-stringed double bass sually tuned as shown in Ex. 8.

Ex. 8

e 4ths sounding, of course, an octave er, since the double bass, as already ed, is a transposing instrument, *i. e.,* whose produced sounds do not agree the written notes. In France, how- , the favorite tuning for the three ged bass is that shown in Ex. 9,

Ex. 9

string being a 5th apart. But in many, and in all modern orchestras, four-stringed bass is supreme and is d in 4ths from E upwards, as shown Ex. 5. Hector Berlioz (1803-69), in standard text-book on "Instrumenta- " suggests that, in order to secure more strings, several of the basses should in perfect 5ths, as in

Ex. 10

ggestion which has not received much practical endorsement, probably because requiring for its full effect strings of abnormal construction. Up to the present time the scordatura of the double bass has been chiefly confined to the alteration of E or 4th string. Thus Johannes Brahms (1833-97), for the pedal point at the end of the third movement of his "German Roquiem" directs that "some double basses tune the E string down to D." Richard Wagner (1813-83), for the Introduction to the "Rheingold," directs that half his double basses tune their E string down to E flat; while in the second act of his "Tristan and Isolde" he orders that two basses, for a few measures, tune their E strings down to C sharp. All this, obviously, to secure a lower fundamental tone.

We thus observe that the scordatura, whenever employed, is used for simplification of execution, for the securing of deeper bass tones, or for some special effect such as increased brilliancy, or sombreness, or for imitation of some particular instrument or sound. All scordature must be judged upon their merits. Those employed in violin playing were mostly for the production of executive effects, those in double bass performance for tonal improvement or augmentation. Of the two reasons the latter is the more justifiable. But with all the variety of tone and the numerous instruments to be obtained from and included in the modern orchestra, the scordatura, except in rare cases or in solo playing, seems unnecessary or, at best, scarcely worth the trouble essential to its provision and notation. Since the 18th century the technic of composition and performance has so advanced that effects considered marvellous at the time of their production excite to-day but little interest other than of the antiquarian. If it were desired to produce the effects we have tabulated the majority of them could be obtained, in all probability, by much simpler and more effective means. The employment of the scordatura was always more or less of a rarity. It is highly probable that in a few years its use may become practically extinct.

The Advance in Strads

HERE seems to be no end to the ad- e in price of the violins of Antonius livarius. A late cable from London unces the purchase by Mischa Elman, amous violin virtuoso, of the Recamier l, at the record price of 10,000 English ds, equivalent in American money to 00. The violin was previously owned Mme. Recamier, the most famous ch beauty of her time. The violin was l by her to Field Marshal Count Mol- the property of whose descendants nained until quite recently.

here the advance in Strads will halt hard to say. Thirty years ago an lent specimen of Stradivarius' work- hip could be obtained for from $5,000 0,000, but these unrivalled instruments been steadily advancing since that and are still advancing. It is said certain of the owners of the most us Strads are holding them at $100,- and it is not impossible that that may be reached in the not distant e. The owners of the violin go on heory that if paintings by Raphael, ggio, Murillo and other great artists from $500,000 to $1,000,000, a fine nen by the greatest violin maker of all ought to be worth $100,000.

h men buy violins by Stradivarius ther great Cremona makers, because a collection of violins of this character brings distinction on the possessor, just as is the case in the ownership of a fine gallery of pictures by great artists.

Concert violinists buy Cremona violins not only for their matchless tone qualities, but also because the possession of such a violin has a distinct advertising value, in that it draws much money to the box office. Musicians, violinists, violin lovers and collectors and the general public go not only to listen to the playing of the violinist, but also to hear the tones of the famous violin he plays on.

It is said that Stradivarius made about 2,000 violins during his lifetime, only a few hundred of which remain at the present day, and that he sold some of his violins as low as twenty dollars, the value of money at that time, however, being much higher than today.

Hardly less remarkable than the advance of the $50,000 Strad to its present price is the advance of the fortunes of its purchaser, Mischa Elman, who, from a penniless Russian boy, has reached a point where he is acclaimed as one of the world's greatest violinists, and who is one of the few violinists in the history of the art who has entered the millionaire class, having won a large fortune by the popularity of his playing.

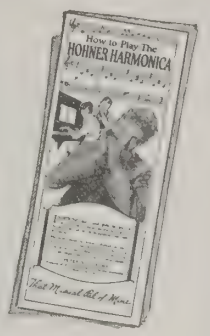
tte, one of the famous violinists of was the son of a blacksmith, who also an amateur horn player. For some years he dropped violin playing and became a wine merchant, only to return to his profession later on in Paris.

The Child's Approach to Music Study

To win the enthusiastic interest of the boy or girl at the very outset has always been one of the biggest problems in music teaching. Leading educators agree, today, that this can be best accomplished by enabling the youngsters to *make music in their own way* with the aid of that universal musical instrument—the Harmonica. After they have become proficient on this instrument they will take naturally and enthusiastically to the study of the piano, violin and other musical instruments.

A Hohner Harmonica for the boy or girl will help solve the problem. With the newly perfected Chromatic Harmonica they can play the complete chromatic scale. It is not a toy, but a real musical instrument which will promote self-expression, rhythm, and accuracy, and lay the foundation for serious musicianship.

Hohner Harmonicas are endorsed by such prominent group educators as—



Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

Violin Outfits

Those who wish to purchase complete outfits in preference to selecting the articles separately will find the ones we have assembled are exceptionally satisfactory. Our violin outfits consist of violin, bow, case, chin rest, rosin, mute, extra set of strings, and a good instruction book.

There are cheaper violin outfits on the market, but we cannot conscientiously recommend any outfit that would tend to discourage the student and no outfit, worthy of the name, can be sold for less than ours.

SUMMER MASTER SCHOOL

June 28 to August 7, 1926 (40th Season)

MME. DELIA VALERI
World-famous instructor of the Voice, Repertory Teacher's and Auditor Classes. Available for instruction from June 1 to July 20.

HENIOT LEVY
SILVIO SCIONTI
Brilliant pianists and eminent instructors. Repertory and Teacher's Classes.

KARLETON HACKETT
Distinguished vocal instructor and critic. Repertory and Teacher's Classes.

JACQUES GORDON
Famous violin virtuoso and Concert Master Chicago Symphony Orchestra.

HERBERT BUTLER
Eminent teacher of the violin.

WILHELM MIDDELSCHULTE
One of the world's greatest organists.

JOHN KENDEL
Noted authority on Public School Music.

Faculty of over one hundred artist teachers

Special Summer Courses for Supervisors of Public School Music *O. E. Robinson, Director*

Special Summer Courses in Dramatic Art, Expression *Walton Pyre, Director*

School for Theatre Organ Playing
Frank VanDusen, Director

Special Summer Courses in Musical Theory
Arthur O. Anderson, John Palmer, Leo Sowerby

Lectures by eminent Educators, Recitals by distinguished artists

FREE SCHOLARSHIPS

Mme. Delia Valeri will award two free scholarships to the most talented and deserving students. Apply for application blank.

Superior dormitory accommodations.
Rates of tuition moderate.

CREDITS will be given for summer courses taken, toward Certificates, Diplomas, Degrees—granted by authority of the State of Illinois.

Summer Session prospectus, regular catalog and Public School Music circular mailed free on application. For detailed information address

PLAN NOW FOR SPECIAL SUMMER STUDY

ATTRACTIVE MATERIAL FOR TEACHING

ALBUM OF TRILLS
Special Study Pieces—Vol. 1 **Price, 75c**

The trill is a valuable technical device in piano playing and in place of coldly presented trill studies the teacher will find these pieces utilizing the trill hold the pupils' interest while effectively developing ability to handle trills in various forms. Eighteen pieces make up this album—about six different forms of the trill appearing in them. Pupils in the medium grade can be induced to accomplish much with this excellent study help.

FROM MY YOUTH
Twelve Character Pictures for Piano
By R. Krentzlin **Price, 75c**

Special attention is given in these pieces to the development of style, rhythm and technic, The first of these dozen pieces start in grade two with gradual progress in later numbers to grade three. One number brings out *Clinging Legato,* others *Light Velocity, Rhythm Groups, Rhythmic Accuracy, Staccato, Triplets, The Trill,* etc.

25 MELODIES FOR JUVENILES
By Mana-Zucca **Price, 75c**

Here one of the foremost woman composers of the day has written delightful little melodies for delighting young pianists. Starting with the most easy type of a piano piece the numbers progress in a nice, gradual manner. Clever texts that aid in holding the pupil's interest accompany many of these pieces.

FIRST GRADE BOOK
By Mathilde Bilbro **Price, $1.00**

A very attractive work for young beginners just above the kindergarten age. It introduces practically all necessary points, including the rudiments as far as necessary, hand position, notion, etc The material is very attractive for little tots to study and both clefs are used from the start. Miss Bilbro's elementary teaching works are so very successful because throughout they display a practical knowledge of how to interest and instruct young pupils.

FIRST PIANO LESSONS AT HOME
By Anna Heuermann Hamilton
Book One, Price, $1.00 Book Two, Price, $1.00

This is a work for very young children and each part consists of a piano instruction book and a writing book. The writing books are fine notation and time aids and the piano books help in developing playing ability. At first the pupils have very easy one hand work with accompaniments by the teachers. The second book brings both hands playing together and introduces the bass clef. This is a sensible and practical arrangement of teaching material for little tots.

STORIES NOTES CAN TELL
By Frances Terry **Price, 75c**

These are charming early second grade piano pieces. They are characteristic numbers that delight young players. The key variety will interest many teachers since these six short easy pieces use the keys C, G, F, and A minor.

YOUNG FOLKS' OPERA GEMS
Price, 75 cents

The aim in each of these numbers has been to present a playable piano solo in a fairly easy arrangement of an opera air, frills and variations having been avoided. There are seventeen composers and twenty-three operas represented in the twenty-seven selections in this album. Most of the numbers are in grades two and three.

THE TWO PLAYERS
Thirty-three Four Hand Piano Pieces
Price, 75 cents

An exceptional variety of four hand entertainment material is found in this album. The pieces are in the intermediate grades and there are excellent arrangements of such favorites as *Song of India, Czardas, Don Juan Minuet* and a few others, but the major portion of the numbers are melodious numbers by well-liked contemporary composers.

Violin Questions Answered

By MR. BRAINE

Violin at Twenty.

W. R. O.—Twenty is entirely too late an age to begin to study the violin with a view of doing professional violin work. With such a late start you might acquire enough technic to play music of medium difficulty well enough to afford you a great deal of pleasure; but anyone studying for the profession should have his violin education completed at twenty. Having, as you say, the ability to sing at sight, together with a certain amount of piano technic, you might take up teaching of singing, or public school music, as a profession, if you wish to make music your life work.

Free Study in Paris.

A. de A.—I am afraid you would be disappointed if you went to Paris with $500, hoping to get a free musical education, and to pay your living expenses for eight years with that sum. Living is very high in Paris, and you would have difficulty in paying your living expenses for even one year with $500. You would have to be extremely talented to get a free education also, in Paris, as in a large American city. If you have great talent, possibly you can interest some wealthy patron in your home town who would be willing to give or lend you the money to get an education in violin playing. 2—For information you might write to the Director of the National Conservatory of Music, Paris, France.

Positions and Shifting.

T. B.—The Hermann Violin School, Vol. II, would probably be what you want to gain a knowledge of the higher positions and of shifting. 2—The problem of profusely perspiring fingers is a very annoying one to the violin player. Some are greatly troubled with it, while others have perfectly dry hands. In many cases this habit of perspiring comes from nervousness. I would advise you to consult your physician about it.

The Steel E String.

MRS. H.—The use of the steel E string is now thoroughly approved by the great majority of our best violinists and violin teachers. Almost all the famous concert violinists use it in their solo violin playing. Some authorities object to it, claiming that its tone is harsh, cold and metalic, and that its use injures the violin. These authorities are in a hopeless minority, however, and it is evident the steel E has come to stay. The best violinists use the gut A, gut D, or gut D wound with aluminum, and gut G wound with silver wire. A few orchestra players use the steel A, but most violinists object to it unless the player is very badly troubled with perspiration. Thibaud, the greatest French violinist of the present day, informs me that he uses steel E, gut A, aluminum-wound D, and silver-wound G, the D and G being wound on gut, of course.

I cannot see why the use of the steel E should injure a violin. Great violinists use these strings on their Stradivarius, Guarnerius, Amati, Bergonzi, and other Cremona violins, without noticing any deterioration of the tone.

Stradivarius or Guarnerius?

S. G.—The violinist mentioned usually uses a Stradivarius in his concert work. 2—The tone of the best specimens of Stradivarius and Joseph Guarnerius is of such surpassing excellence that it is idle to debate as to which is superior. Great violinists have used either. Thus, Paganini and Vieuxtemps used Guarnerius violins in their concert work, while Dr. Joachim, another violinist of the first rank, preferred Stradivarius. There could be endless discussion concerning the relative merits of these violin-making giants which would lead nowhere, since the element of differing tastes enters into the problem—some preferring one and some the other.

Is It a Strad.?

F. M. P.—I cannot tell you if your violin is a genuine Strad. or not without seeing it. The chances are a million to one that it is not. 2—Yes, Stradivarius violins are extremely valuable, if genuine. Imitation Strads. are worth from $1 up, according to quality. If made by first-rate violin makers the imitations are often valuable.

Andreas Guarnerius.

M. E. J.—Andreas Guarnerius was the first of the famous family of Guarnerius violin makers of Cremona. A leading authority says of his violins: "Excellent instruments of his make, not very highly finished, but covered with fine orange varnish, are dated from the sign of 'St. Theresa,' in Cremona, where he was succeeded by his son." There are thousands of imitations of the violins of all the Cremona makers, so you will have to consult an expert in order to ascertain if your violin is genuine.

The Vibrato.

R. S.—The vibrato in violin playing has to be practiced the same as anything else. It is true that many violin students acquire it instinctively, without instruction, because their artistic natures crave it as a means of heightened expression. Some pupils of a cold, phlegmatic nature would never acquire the vibrato if their teachers did not call their attention to it, teaching them how to do it technically, and indicating the passages in compositions where it would be effective

A Guarnerius?

E. T.—Have your supposed Guarnerius violin examined by a good expert, to learn if it is genuine. There is not one chance in a million that it is. 2—The violin, if genuine, would be worth from $10,000 to $25,000, according to preservation and quality. 3—Any leading dealer in old violins could find a purchaser for you if the violin proved genuine. The chances are that you would go to useless trouble and expense in having it examined, but you would have to run that risk.

Length of Practice.

S. A. DE S.—Violinists studying to become professional concert artists practice from three to six hours daily, sometimes more. No exact rule can be laid down, as some students progress much faster than others. 2—In addition to violin playing you ought to study the piano, as well as theory, harmony, counterpoint, composition, and history of music.

Stradivarius?

A. K. S.—Antonius Stradivarius was the greatest violin maker of the world. He was an Italian and made his famous violins at Cremona, a town in Italy. Of course not more than one in a million of the violins labeled "Stradivarius" were really made by him. 2—Alard's Conservatory Method for the violin is used by many for the start, and is a work of merit. Personally, I prefer the "Easiest Elementary Method for the Violin," Op. 38, by Wohlfahrt.

Imitation Strad.

P. B.—It is quite certain that your supposed Strad. is only an imitation, from the fact that it is branded "Ole Bull." The latter was a most famous Norwegian violinist and his name has been extensively used by way of trade-mark in branding factory imitations of Cremona violins.

A Strad.?

E. I. P.—You will have to risk the trouble and expense involved in sending your supposed Stradivarius to an expert in a large city for examination. There is not more than one chance in a million that it is genuine.

Russian Inscription.

J. W.—The inscription on the label in your violin is in Russian, and translated would read as follows: "Richard Rubus, St. Petersburg, 1850." There are a great many of these violins on the market, and they are mostly factory fiddles of no great value. However, I could not give you the exact value of your violin without seeing it.

Imitation Cremonas.

C. S. M.—There are millions of these supposed Cremona violins scattered all over the world. It would not be safe for you to buy a supposed Stradivarius, Guarnerius, Amati, or other old make, at a large price, without having it examined by a competent, reliable expert, who could tell you whether it is genuine or not. The leading dealers in old violins in the larger cities have experts who examine and appraise violins.

Unlabeled Violin.

M. D. A.—As your violin contains no identification mark, except the name of the repairer, I fear that to try to find who made it would be like hunting for the proverbial "needle in the haystack."

Between Kayser and Kreutzer.

J. H. G.—Better have your pupil take up the Special Studies, Op. 36, Book 1, by Mazas, after completing Kayser and before taking up Kreutzer. These studies are thirty in number and are widely used by violin teachers everywhere. Kayser Studies were written as an introduction to Kreutzer, it is true, but the average pupil needs some studies in between.

The Rural Pianist's Problem

By Robert Price

Are you one of those pianists in the country districts whose general complaint is that piano music is not appreciated by rural audiences? If so, cease your murmuring immediately and be convinced that the trouble lies chiefly in your ability to develop public appreciation.

The city pianist draws a select audience, people with whom music is a chief interest, only a small percentage of the entire population. The average rural audience comprises most of the residents of that community, folks whose only musical traditions have come from country dances and church choirs. Do you wonder that but few can respond enthusiastically to Beethoven *Sonatas* and Debussy *Arabesques?*

Miss C. lives in a typical mid-western rural center. A farmers' organization there meets twice monthly for miscellaneous programs on which the local pianists are scheduled sooner or later. Now a vocal solo, no matter how poor, is always greeted with some degree of attention; for there is the elusive chance of understanding some of the words. A violin selection is given a cordial welcome; for "fiddles" have a warm spot in rustic hearts. But a piano number is usually accompanied by a rising confusion which develops into a jolly social visit before the dispirited performer reaches the final measures.

Miss C. recognized the reason for this and applied a successful remedy. When her turn arrived, she announced to the startled listeners that she would play a group of numbers illustrating "Types of American Music." Following a short discussion of the jazz element in modern music, she caught her audience with a short typical example. Then she proceeded to an account of our aboriginal Indian music and the work of Thurlow Lieurance in its preservation, illustrating with *By the Weeping Waters.* She spoke next of our standard composers and increased the applause with Nevin's *Narcissus.* A good arrangement of Stephen C. Foster's best known melodies completed the group. It was a light program of course, but it had won the interest of those farm folks more effectively than would a dozen Chopin Etudes unexplained. Miss C.'s audience had been attentive and appreciative. Because of her interesting explanations, most of them for the first time in their lives had really enjoyed piano solos.

A short time later, in a second venture, she dared introduce "Tone Pictures," with McDowell to illustrate. Her talk made it impossible not to catch the spirit of *To a Water Lily, A Deserted Farm,* and the spirited *Rigaudon.* Then she requested that at the close of her fourth selection, which she would not name, each one hand in a slip of paper with the title which her playing had suggested. The composition was *From an Indian Lodge,* and such suggestions as *A Dreary Day, The Surf, Distant Thunder,* showed that the audience had caught the idea.

And the moral is this: The rural pianist owes his audience an intelligent explanation of what he wishes them to hear. When our foremost musicians are crowding their printed programs with explanatory notes, in order to catch the interest of cultured music lovers, is it unreasonable to say that rural listeners deserve at least a statement of the title and composer of the selection they must hear?

Slow Movie

By E. A. Gest

How slow can you play? Have you, as a matter of fact, ever really tried to play slowly?

You know, one of the features of the theatre nowadays is "slow-motion" movies, which are made by a very rapid machine.

It is delightfully entertaining and instructive to see race-horses floating slowly and gracefully in the air, or to see base ball players, pole-vaulters, and so on, apparently suspended between earth and sky.

Try this with your fingers. Count eight slowly while you lift your finger, eight while you hold it still, and eight while you lower your finger. You have no idea how much "control" this requires.

Then see how slowly you can play your piece or etude with every motion, fingering, time and every feature of the playing absolutely correct.

This is not merely something to do; it is a wonderful exercise for gaining control, sureness, flexibility, smoothness and general improvement in your playing.

SUMMY'S CORNER

Music Teachers have reason to be well satisfied with the outcome of the proceedings instituted by the Federal Trade Commission. Throughout the entire contest Clayton F. Summy Co. has insisted that the music teacher was a distributor and entitled to a discount from the price marked on music. Its chief purpose has been to preserve its right to give the teacher such discount.

The order which has just been entered by the Federal Trade Commission directs us to cease marking our publications at a price higher than the music is intended to be, and commonly and usually is, sold at retail. It does not prohibit our continuing to give a discount from the marked price, to the teachers.

Music teachers, music schools and music dealers, as they purchase to resell, are not, never have been, and cannot be, classed as retail purchasers. The Federal Trade Commission order, therefore, does not purport to, and was not intended to, prevent our giving a discount from our marked price to dealers, music schools and music teachers and we will continue to give such a discount.

Such change in our system, as in our judgment is necessary to fully comply with the order of the Federal Trade Commission, will be later announced, but under any system which we adopt we will continue giving a satisfactory discount to music teachers, schools and dealers.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries

Recital Pieces

Please give me a list of twelve recital pieces of the fifth, sixth and seventh grades.

J. M. W.

The following pieces are of varied styles, and are rranged in chronological order:

Veber: *Rondo Brilliant in E-flat.*
Schubert: *Impromptu in B-flat,* Op. 142, No. 3.
Mendelssohn: *Capriccio,* Op. 16, No. 2,
Schumann: *Grillen,* Op. 12, No. 4.
Chopin: *Nocturne in F-Minor,* Op. 55, No. 1.
Chopin: *Fantasie—Impromptu* in C-sharp minor.
Alabieff-Liszt: The *Nightingale.*
Rubinstein: *First Barcarolle.*
Moszkowski: *Guitarre.*
Debussy: *Clair de lune.*
Cyril Scott: *Danse nègre.*
MacDowell: *Polonaise.*

A Beginner's Class

How long does it usually take for a child to acquire a good hand position?

Can you suggest something for instructive musical entertainment at monthly musical club meetings of my pupils? I want to have a short recital each time, and something else besides.

Mrs. J. L. G.

There is no reason why a good hand position should ot be taught from the very outset. Begin by making ure (1) that the pupil sits at the proper height, so that he top of the hand and arm is about level and a little bove the keyboard; (2) that the wrist is loosened up; nd (3) that the fingers are evenly spaced and slightly urved. In future lessons all these points may be enarged upon and the various touches gradually taught.

I suggest that at each monthly meeting there be a diseussion of some important composer. One pupil may resent facts about his life, another about his music, while another may present some anecdotes about him. ll these points should be illustrated by selections from is works.

A Refractory Pupil

Please advise me how to teach a pupil who does not seem to be aware of the importance of obeying her teacher in regard to such matters as practice methods, touch, and so on. She is about nineteen, and has studied with me for three years.

J. O. Y.

When a pupil has, at least in her own estimation, outrown her teacher, it is about time for them to part, for he prime requisite of any instruction is that the pupil hall have enough confidence in the teacher's judgment o attempt, at least, to follow out her requirements.

The case which you mention is not a unique one; for very teacher occasionally finds a pupil with whom it eems impossible to establish harmonious relations—a upil whose coming she dreads and who "takes more out f one" than a half-dozen of the normal variety.

Perhaps by the exercise of tact, by frankly explaining o the pupil the why and wherefore of your assignents, and by taking care to give attractive music, the ifficulties may vanish; but if these measures fail, the est course to pursue is to send her to someone else. or if the pupil is continually dissatisfied and disobeient she will not only bar her own progress, but will lso have a bad effect on prospective applicants for your astructions.

A Professional Career

"An ambitious student" writes that she has taken up usic after an interval of twelve years, is studying hard, nd has worked to good advantage on a considerable list f standard piano pieces. She concludes:

What would you consider that my chances are in the music field? Do you think that I have made good progress for three years' work as an adult student? . . . My teacher thinks I am progressing rapidly, but that I have not the health for a professional musician. I am now teaching a class of eighteen pupils, all in the elementary grades.

From the list of compositions which you enclose, you ave certainly covered much ground in your three years' ork; and if you have learned this repertoire thoroughly, ou should have an excellent start toward a professional areer.

You do not say, however, whether you wish to specialize as a teacher or as a pianist. If the former is your objective, I see no reason why, with so large a class already, you are not on the road to success. In this case you should not only increase your prowess as a player, but should also study musical theory, history, form, and the general principles of pedagogy.

To become a professional pianist, however, is another matter and will require several years more, at least, of intensive technical study. Also you must build up a strong physique, since a concert performer needs plenty of reserve strength and unflinching nerves.

Perhaps you can "try out" the question by attempting recital work. Make up a program from pieces you have studied, and play it to an assembly of invited friends. If this proves a success, try another of the same nature. The results will estimate your own powers of endurance and of interesting an audience.

Playing by Ear

What shall I do with a very bright child who finds it a great effort not to play by ear? He reads music very slowly, and loathes taking lessons and practicing (the piano); but he really loves music, and is constantly strumming the ukelele or playing the harmonica.

F. C.

This is a case where regular practice must be made attractive enough to compete with mere "fooling" on the keyboard. Try, first of all, to get some sort of system into his work. Plan out with him definite, short practice periods for each day—say of twenty minutes or a half-hour each. Also plan just what he is to do during each minute of this time.

Then, set his imagination to work. Let him assign a name to each study or piece which he is to practice, and make up a little story to fit it; or let it represent some scene or event. In his edition of Bach's *Well-Tempered Clavichord,* for instance, Busoni suggests that the *Prelude in C-minor* reminds one of flickering flames reflected in the water. If everything is thus invested with meaning, it will take on a new interest.

Finally, encourage him to compose and write down little tunes or pieces, after his regular practice has been performed. Toward this end, you might assign him lessons out of Preston Ware Orem's *Harmony Book for Beginners,* which is well adapted to whet a child's curiosity. In this way you may properly encourage the creative impulse which is evidently stirring within him.

Examination Questions

In response to my query about examinations for piano students, Miss F. M. S. sends the following list of questions which she asked of a class of beginners at the end of the first year.

1. What are the two things which we should notice before starting a piece or study? Ans. Key signature and time signature.
2. What is the quickest way to tell a key signature? Ans. The last lowest bass note.
3. How many scales are there, and how are they divided? Ans. Seven sharp scales, seven flat scales, each with its cousin, or relative minor; then the model C scale and its relative.
4. Give the signatures of G, A, and F major.
5. How do you find the next sharp scale? Ans. Count up five notes. How do you find the next flat scale? Ans. Count down five notes.
6. Name the sharp scales in order. Name the sharps in order.
7. Name the flat scales in order. Name the flats in order.
8. Give several time signatures, and explain them.
9. What is the meaning of *legato, staccato, andante, andantino, allegro, allegretto, moderato, dolce, ten., forte, fortissimo, piano, pp, D. C. al fine, adagio, lento.*
10. Give some facts about the lives of Bach and Handel.
11. What composer was called the "child wonder?" (Mozart.) What composer was deaf? (Beethoven.) What composer played duets with Queen Victoria? (Mendelssohn.) What did he write when seventeen? (Midsummer Night's Dream Overture.)
12. What is an opera? What is an oratorio? Name three oratorios.
13. What three great musicians were born about the same year as Abraham Lincoln? What composer strained his hand by trying to strengthen the fourth finger?

Do any other Round Table members give such examinations? If so, let us hear how you conduct them!

Interesting the Boy

I have found one of my problems to be that of interesting sufficiently the boy of twelve or thirteen. Younger boys "take to" a more juvenile type of studies and pieces. I have some difficulty, however, in finding music that will appeal to the boy who is just starting high school, and has studied music only a year or so. Many of the things within his ability sound "babyish" or have titles which he thinks silly. Of course, I try to give rhythmic and melodious things, such as marches, dances, and hunting songs, also a good deal of duet work; but there seems to be a limited number of such pieces of the best quality, and yet simple enough to be played by a boy at this age.

H. N. T.

I believe that a boy of this age might be attracted to the elementary classics, if they were properly presented to him, with an explanation of their forms and data about the characteristics and aims of their composers. Take, for instance, Schumann's Op. 68, which contains many bright and rhythmic little pieces, such as the *Soldier's March,* No. 2 of the set. Then there are the little preludes and fugues of Bach, and also other easy pieces of his—dances and others—also the two sonatinas by Beethoven (in F and G). All these afford the teacher an opportunity to explain the classic forms, which may be further illustrated by the Sonatinas of Clementi, Kuhlau and others. Along with these may go some attractive studies, such as Gurlitt's *The First Lessons,* Op. 117, which may be followed by Burgmüller's Op. 100. Occasionally one of the simple and tuneful opera arrangements by Krug or Löw may be introduced, as well as more modern pieces.

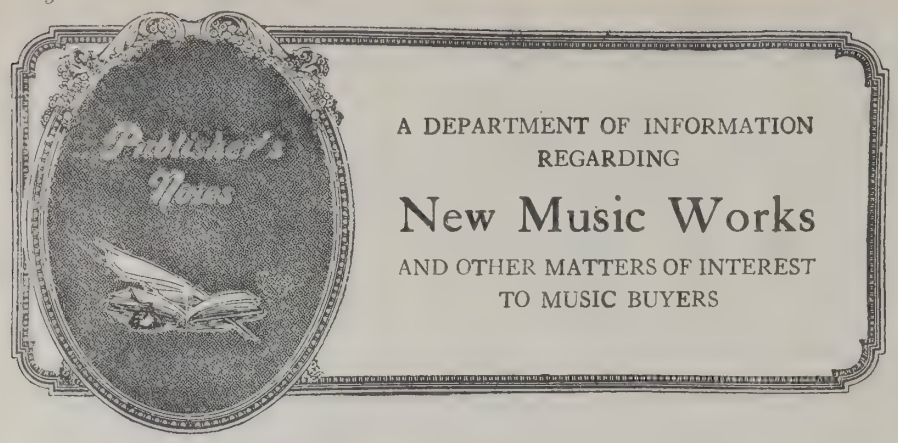
Grading of Concert Pieces

J. E. L. sends a list of concert pieces, which he wishes graded in progressive order. Beginning with the easiest, which is of about the eighth grade, the others may be arranged progressively somewhat as follows (it is impossible to adopt an exact standard):

1. Beethoven, *Concerto in C minor,* Op. 37.
2. Weber, *Concertstück,* Op. 79.
3. Beethoven, *Emperor Concerto.*
4. Liszt, *Hungarian Fantasy.*
5. Grieg, *Concerto in A minor,* Op. 37.
6. Rubinstein, *Concerto in D minor,* No. 4.
7. Liszt, *Concerto in E flat.*
8. Saint-Saëns, *Concerto in G minor.*
9. Tchaikowsky, *Concerto in B flat minor.*

A graded list of two-piano pieces (four hands), for which he also asks, is as follows:

Horváth, *Festival March,* Op. 45, grade 3.
Beethoven, *Turkish March* (Thern), grade 4.
Bizet, *Menuet de l'Arlésienne* (Renaud), grade 5.
Chopin, *Rondo in C,* Op. 73, grade 7.
Schumann, *Andante and Variations,* Op. 46, grade 8.
Raff, *Gavotte and Musette,* grade 9.
Saint-Saëns, *Variations on a Theme of Beethoven,* grade 10.



After Liszt's *Twelfth Rhapsody,* Bach's *Chromatic Fantasy* and Debussy's *Reflets dans l'eau,* I suggest giving Chopin's Etudes, Schumann's *Carnaval,* Op. 9, and Mendelssohn's *Prelude and Fugue in E minor,* Op. 35, No. 1.

Intervals in Sight-Reading

I have a pupil who, in sight-reading, does not seem to be able to distinguish intervals of the second and third, especially; and larger intervals bother her also. She is near the end of the first grade (Mathews' Graded Course) and barely seven years of age. Is this fault to be expected, and if not, how can I teach her the different intervals? She has very good lessons, and seems to be quite musical.

J. L.

I suggest that at each lesson you give her a few minutes of ear-training. At first play easy intervals, and have her name them. Then, as she acquires proficiency, increase the difficulty of the intervals, and have her write each of them as she hears it. Play the two notes of the interval in succession, and tell her the name of the first note, if necessary. Such practice should train both ear and eye to recognize the intervals on the printed page. A child of her tender years cannot be expected to read readily without considerable training of this sort.

Easter Music Should Be Selected Now

This is a reminder to the choir master that the preparation of special Easter music can no longer be delayed. An advertisement of the Theo. Presser Co., publications for Easter will be found occupying an entire page in this issue. We also can supply any other music publications for Easter that are on the market.

If you should not have any favored composition or compositions you wish to order, write us, telling the number in your choir, the solo voices available, and the grade of music that can be handled, requesting that we send for examination material that we believe would be suitable. Any items sent and charged on approval are returnable for full credit if not desired.

Remember the time is short in which to make your choice and obtain sufficient rehearsals.

Raised In Glory Easter Service By R. M. Stults

This is a complete service for use by Sunday Schools on Easter Sunday. It is well arranged, giving a very effective variety in the service, and the musical numbers are most attractive and can be sung easily and with enjoyment. No additional words are necessary to attest to Mr. Stults' ability to write bright and tuneful numbers with a sacred strain predominating. This new Easter service, "Raised In Glory," will sell for 7 cents a single copy, 80 cents a dozen, $3.25 in lots of 50, and $6.00 in lots of 100.

A single sample copy will be sent upon receipt of 5 cents in stamps.

Busy Teachers Are Helped By The "On Sale Plan"

Many large business organizations utilize thousands of dollars in advertising campaigns. The Theo. Presser Co. does not utilize money in spectacular advertising, but offers every possible convenience and economy to its patrons in order to succeed in its endeavors.

At this writing there are thousands of dollars' worth of music in the hands of many teachers throughout the country and those teachers do not have to purchase any of the music they have for examination unless it is suitable to their needs.

We maintain liberal examination privileges so that every music teacher, no matter where located, will have the same privilege as a music teacher who can walk into a music store in a large city and examine pieces of the character in which he is interested. A busy teacher secures even greater conveniences in the Presser "On Sale Plan," since the "On Sale Plan" makes it possible to examine material in the convenience of one's own studio.

Much can be written upon the features of the "On Sale Plan," but after all, the best thing is actual experience in the use of it.

If by any chance, as a teacher of music, you have never used the "On Sale" system originated by the Theo. Presser Co., give it a trial. Undoubtedly you will thus join the host of teachers who write us saying, "The Presser 'On Sale Plan' is of inestimable help to me, and I don't know what I would do without it."

Details of the "On Sale Plan" and an "On Sale" order blank will be sent cheerfully to any teacher requesting the same.

King of the Ages Easter Choral Cantata By R. M. Stults

There is always room for a good new Easter Cantata. We have now in preparation the *King of the Ages*. This will be the most recent addition to the very successful series of Christmas and Easter Cantatas by Mr. Robert M. Stults. This particular work is one of the most melodious of the series. It is of just about the right length for performance at any musical service and it is not too difficult for the average volunteer choir. There are effective solos for all four voices and several of the numbers are for men's voices and for women's voices respectively. The organ part is showy and effective. The work will be ready by the beginning of Lent, so there will be ample time to rehearse it for the coming Easter Season.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Selecting Operettas and Cantatas For Spring Production

Musical supervisors in public schools and musical directors in colleges who want a good operetta or cantata to feature in their spring exhibitions will do well to give consideration to the operettas and cantatas called to attention in a page advertisement in this issue, headed "Ideal Operettas and Cantatas."

This page gives some of the latest and best offerings in this line, and few, if any, operettas and cantatas have ever attained their performance records in such a short time.

Clubs and other organizations desiring to produce a musical play in the spring, also will find welcome suggestions in these "Ideal Operettas and Cantatas." There are numbers for soloists and choruses of both sexes, and there are offerings confined to young ladies or young men.

The liberal Presser examination privileges will help you to select the proper vehicle for the talent under your direction without having to purchase a miscellaneous lot of operettas and cantatas in order to make their acquaintance.

A Dozen Melodies For Saxophones By Clay Smith

This new book represents a new and what we feel will be a very successful departure for us. We are about to do some publishing of music for the saxophone. The well-known composer and saxophone soloist, Clay Smith, has taken twelve of his most successful songs and arranged them as solos or duets for any two members of the saxophone family. The volume of piano accompaniments will be in score, that is to say it will have the regular piano accompaniment with the part for melody saxophone printed above it, then there will be three instrumental volumes containing respectively parts for Solo and Second E Flat saxophones; Solo and Second C Melody Saxophones; Solo and Second B Flat Baritone saxophones. These songs in their original form have all achieved considerable popularity and as arranged by Mr. Smith for his favorite instrument, they should bring an added lustre. The parts for the saxophones are not difficult to play and they all lie just right for the respective instruments.

The special introductory price for the piano part will be 45 cents per copy, postpaid. The separate parts for the E Flat, C or B Flat saxophones will be 30 cents per copy, postpaid. In ordering it will be necessary to state which saxophone part is desired.

Two and Twenty Little Studies on Essential Points in First-Grade Piano Teaching By Helen L. Cramm, Op. 38

This is a new work now in preparation to be added to the splendid theories of elementary educational work by the well-known teacher and writer, *Helen L. Cramm*. As soon as the hand is set to the five-finger position, this little work may be taken up. Consequently, it can be used to supplement any instruction book. Most of the little studies have appropriate texts and all have characteristic names. Many of the studies are to be played in various keys. There are also some interesting little four-hand pieces for teacher and pupil. The whole work is up-to-date and based upon modern principles.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

First Garland of Flowers—Favorite Melodies in the First Position for the Violin By Julius Weiss, Op. 38

This is a new edition of a standard work which is to be added to the *Presser Collection*. There are very few violin teachers, working with beginners, who do not use Weiss' *First Garland*. This work is a collection of various melodies more or less well known and arranged in progressive order for violin with piano accompaniment. Some of them are very short while others cover several pages. The entire book is in the First Position and the first few melodies are so easy that they may be played after a few lessons. This will make a splendid supplement to any elementary course in violin playing.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Older Beginner's Book For the Pianoforte By John M. Williams

Mr. John M. Williams has been most happy and successful in his various elementary works for piano. These works are the product of years of practical teaching experience and of the normal classes in which Mr. Williams has trained many other teachers. This new book is nearly ready. It is intended for more mature students and for adults who are making a beginning in piano playing. The rudiments and the principles of elementary technic are all set forth in a most clear and logical manner and the material will appeal to the taste and intelligence of such students as will use this book. There has long been a demand for just such a work.

The special introductory price in advance of publication is 40 cents per copy.

A New Collection of Favorite Songs and Choruses For All Occasions

In response to a very general demand we have in preparation a new book of songs especially intended for home, school and community use. This book will contain all of the old favorites, together with many new and most desirable numbers. The book will be of octavo size and it will contain considerable more than one hundred songs. These songs will be in "short score" chiefly, so arranged that they may be sung in four-part harmony for mixed voices or else in unison. In other words, this will be a larger and more comprehensive sort of a community song book. There are many songs which practically everyone likes to sing and very many songs which are heard frequently at home gatherings. We have endeavored to include all such numbers in the new book and to present them with the best harmonies and the most satisfactory accompaniments possible. All the numbers have been prepared with the utmost care and carefully revised.

The special introductory price in advance of publication is 10 cents per copy, postpaid.

Romeo And Juliet Operetta For Men By John W. Brigham

A group of men from a club or a men's choral organization, or male high school or college students, will find this new opera burlesque by John W. Brigham just as screamingly funny, if not more so, than is "Cleopatra," which has been immensely successful in the little over a season that it has been published. The musical work is not difficult, it being partly original and partly adapted. No excessive demands are made in the four-part harmony work and a number of unison choruses appear. This musical burlesque would not take any more than one-half of an evening, and therefore can be used as a novelty in conjunction with a glee club program or a miscellaneous entertainment. Advance of publication price, 40 cents.

From the Dalles to Minnetonka Five Impressions For the Pianoforte By Thurlow Lieurance

These are five beautiful piano pieces based upon Indian Melodies. One of them is a new Concert Transcription of the famous song, *By the Waters of Minnetonka*. The others are original piano pieces not directly transcribed from songs. In point of difficulty these pieces lie in the fourth and fifth grades. They will make splendid recital numbers. This volume is just now going on the press.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Six Picturesque Studies For the Pianoforte By Paul du Val

It gives us much pleasure to recommend these tasteful and original fourth grade studies. In this particular grade good studies are scarce, but these will prove pleasing alike to teacher and pupil. So musical are they that any one of them might be used separately as a piece. At the same time, each one has a decided technical value as exemplifying some special department in modern mechanism.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Suite Op. 15 For Two Pianos, Four Hands By A. Arensky

This is about the most popular of all works originally written for two pianos. Although the *Valse* is the most popular movement, the entire *Suite* has a strong appeal. Our new edition of this work has been carefully revised. We can recommend it to all players who are interested in works for two pianos. It is not too difficult for average good players.

The special introductory price in advance of publication is 50 cents per copy, postpaid.

lbum of French Composers or the Pianoforte

Of late years, many of the most interting pieces for the piano have been proiced by French writers. The French mposers have a certain grace, finish and iginality which are peculiarly their own. is very convenient to have grouped in e volume so many desirable examples one style of writing. In this new lume of French compositions, we have sembled many of the most popular and illiant pieces by French writers. In int of grade of difficulty, the volume ay be described as moderately advanced. The special introductory price in adnce of publication is 35 cents per copy, stpaid.

echnic For Beginners reparatory To Hanon r Pischna y Anna Priscilla Risher

This may be regarded as the very first chnic book. By this we mean a book at will be used for some time for daily actice. All such devices as two-finger ork, five-finger work, holding notes, preratory scale-playing, etc., are included. it all the material is presented in such a ain and elementary manner that work this book may be started before the ident has completed the first instruction ok. It may be regarded as a preparion for all other technic books. The special introductory price in adnce of publication is 35 cents per copy, stpaid.

tudes For the Violin y H. Sitt, Op. 32, Book 1

There are twenty studies in the first ok of Hans Sitt's well-known Opus 32, of them in the first position. They ay be taken up in connection with the gular violin instructor after the student s completed the first few months' lesns, and may be interpolated in the urse of study at the teacher's discretion. ie foremost violin pedagogues use Sitt's idies in their teaching. A brand-new ition of these melodious and very pracal violin etudes will soon be issued in e Presser Collection. The advance of blication cash price is 30 cents, postid.

ew Overture Album o Be Published For Piano Solo nd Piano Duet

This will probably be the last month in ich our patrons will be able to secure ese excellent volumes at the special adnce of publication price, as they will on be published and copies distributed advance subscribers. For the benefit of e many new subscribers that have come THE ETUDE in 1926, and who may not ve seen the previous announcements of is work, we again give the list of conits: "Light Cavalry," Suppe; "Festival," utner; "If I Were King," Adam; "Marge of Figaro," Mozart; "Hungarian stpiel," Keler-Bela; "Pique Dame," ppe; "Orpheus," Offenbach; "Mignon," omas; "Jubilee," Weber; "Bohemian rl," Balfe. The solo and duet albums ay be used together, thus making arngements for two pianos, six hands—lendid novelties for pupil's piano reals. The advance of publication cash ice for the solo album is 40 cents; for e duet album, 50 cents, postpaid.

usy Studies in Early Grades or the Pianoforte y Mathilde Bilbro

First grade study books are always sirable. It is well to have considerable riety in any elementary curriculum. This ould prove one of the most successful all of Miss Bilbro's many successful rks. It may be taken up to advantage soon as the young beginner has mased the elements of notation and acired the proper hand position at the y-board. A valuable beginning is made technical work and the musical side not neglected. The special introductory price in adnce of publication is 40 cents per copy, stpaid.

Rhythmical A-B-C's For the Violin Beginner By A. Louis Scarmolin

In recent years some very attractive material has been published for beginning piano students of the kindergarten age, but very little has been issued that will appeal to the juvenile violin pupil. Mr. Scarmolin's new work is unique in violin educational publications and will be welcomed by all teachers who have in charge the education of very young pupils. It consists of a series of little tunes for piano with accompanying rhythmical figures to be played on the violin. The most backward pupil cannot fail to grasp these easy exercises; the bright child will be much benefited by them. This book may be used as a preparation for the regular violin instructor or method. The advance of publication cash price is 35 cents.

Bach Album. By Sarah Heinze

This new *Presser Collection* Volume is very nearly ready. It is a new and carefully revised edition of the well-known moderately easy collection of Bach pieces originally selected by Sara Heinze. This compilation contains numbers largely taken from the *Suites and Partitas.* It can be used to follow Leefson's *First Study of Bach,* leading up naturally to the *Little Preludes and Fugues.*

The special introductory price in advance of publication is 30 cents per copy.

Album of Octave Playing

By the time the student reaches early third grade work, it is necessary to make a beginning at octave playing. There will be some students, of course, whose hands are insufficient in span; these will need to take up some extension exercises, such as those by *Atherton* before going into octave work. When the student is able to span an octave comfortably, there should be some little preliminary drill in slow scales and repeated notes, then our new *Album of Octave Playing* may be taken up. This contains tuneful studies and study pieces based chiefly upon octave passages, all very interesting to play and profitable to practice.

The special introductory price in advance of publication is 30 cents per copy.

Standard Second-Grade Recreations for the Pianoforte

This is an addition to our series of popular volumes printed on special large plates. This new volume will contain not less than fifty pieces, and probably more. It will prove to be one of the best compilations of second-grade pieces ever gotten together. The pieces are chiefly by modern and contemporary writers, every one of whom has achieved much popularity with our readers. The book will soon be ready.

The special introductory price in advance of publication is 35 cents per copy.

Our Christmas Service

How happy we would have been if all of our thousands of good friends could have attended the Annual Christmas Services of the Theodore Presser Company which this year naturally became a tribute to Mr. Presser himself.

On Thursday, December 24th, our business closed for the day at 2.30 P. M. Shortly thereafter a procession of our employees, marching two by two between garlands of laurel, proceeded to the nearest church, which was the First Baptist Church.

Heading the procession, which was two city blocks long, was a brass quartette playing "Adeste Fideles," the Christmas hymn which Mr. Presser sang a very short time before his death. At the church the following program was given:

MUSIC
by Philadelphia Civic Junior Band
Conducted by Albert N. Hoxie.

1. INVOCATION—Rev. Dr. George E. Nichols, Assistant Pastor, First Baptist Church.
2. HYMN—"Adeste Fideles."
3. GREETING—Rev. Dr. Floyd W. Tompkins, Rector, Holy Trinity Church.
4. "THE HEAVENS ARE TELLING"—"CREATION" ..... *Haydn*
   The Presser Choral Society
   Under the Direction of
   Preston Ware Orem
5. GREETING—Dr. Herbert J. Tily, President Philadelphia Music League.
6. HYMN—"Hark, the Herald Angels Sing."
7. GREETINGS—Mr. James Francis Cooke.
   Mr. Preston Ware Orem.
   Mr. David W. Banks.
   Mr. Russel Duane.
8. CAROLS—"O Sanctissima."
   "Joy to the World."
   "Holy Night."

   Presser Men's Double Quartette—Albert Ockenlander, Alfred Clymer, Oswald Blake, H. Buddington, Guy McCoy, E. Angstadt, W. Howard, F. Phillips.
9. CONCLUDING REMARKS AND BENEDICTION—Rev. Dr. Ivan Murray Rose, Pastor, First Baptist Church.

The services were strictly non-denominational. Clergymen representing different faiths, including the Roman Catholic and Jewish, were invited to speak—some being unable to accept, owing to other arrangements, etc.

The services were attended by about one thousand in all and were most impressive. The entire service was broadcast by Radio Station WIP, Gimbel Brothers, in Philadelphia.

(Publisher's Notes Continued on Page 162)

World of Music

(Continued from page 91)

A National Orchestra of South Africa is proposed, to be formed by the amalgamation of the two important organizations of Cape Town and Durban.

A Three Thousand Dollar Prize for a symphony by an American citizen composer is offered by *Musical America* of New York. The eminent court of judges will be Walter Damrosch, Alfred Hertz, Serge Koussevitsky, Frederick Stock and Leopold Stokowski.

A Monumental "Schubert Fountain" is to be erected in the Vienna district, "Alsergrund," where Schubert lived and created many of his most important compositions. A fund of fifteen thousand dollars is desired for the purpose, and a committee has been organized to receive subscriptions.

The Twenty-fifth Anniversary of Harold Bauer's American Debut was celebrated at the concerts of the Boston Symphony Orchtstra in Symphony Hall, on December 4 and 5. He played the *Brahms Piano Concerto, No. 1,* the same work used in his first American concert with this same organization on December 1, 1900.

Noah Brandt, eminent composer, teacher and theorist of San Francisco, died November 11, at the age of sixty-seven. Mr. Brandt's compositions in the larger forms have been performed in our principal music centers and he had been largely instrumental in building up the musical culture of our western states.

The Philadelphia Operatic Society, believed to have the longest unbroken existence of any similar organization in America, and which has given early experience to such artists as Louise Homer, Henri Scott and Marie Stone Langston, gave a brilliant "revival" of Franz von Suppe's "Boccaccio" in the Academy of Music on the evening of December 16. Thelma Melrose Davies interpreted the title rôle, W. Mikolaichik was ballet master and created a sensation as *Premier Danseur,* and Clarence K. Bawden was conductor. With Mrs. Edwin A. Watrous as Director General and "Opera in English by Philadelphians" for a slogan, the organization will as the season advances present "La Sonnambula" and De Koven's "Rip Van Winkle."

The La Scala Orchestra at the close of the opera season will give a series of symphony concerts in Milan, under the direction of Arturo Toscanini, with Igor Stravinsky, Ettore Panizza and Georg Schnéevoight as guest conductors.

Charles A. Havens, for many years a foremost organist of Chicago, and for twenty-five years organist of the First Baptist Church made famous by the oratory of the Rev. P. S. Henson and by the then unexcelled quartet choir of which his daughter Medora Henson was the soprano, died on November 9, at the age of eighty-three. Long one of the leading organ-teachers of the middle west, he also was widely known as a composer of church music.

MUSICAL MERCHANDISE AND STRINGS

PROMPT MAIL ORDER SERVICE TO ALL PARTS OF THE COUNTRY

VIOLIN strings, Violin bows, cases, chin rests, rosin, pegs, mutes, bridges, Violin fingerboard charts, pitch pipes, tuning forks, Mandolin picks, Guitar picks, Ukulele picks, Saxophone reeds, Clarinet reeds, batons, kinder-symphony instruments and many other items of musical merchandise are carried in stock, making it possible to give immediate delivery on orders.

Members of Leading Orchestras and Many Violin Teachers use

Philadelphia, Pa.

Advance of Publication Offers Withdrawn

Our publishing department has been most active in releasing works that many of our patrons have ordered in advance of publication and we are pleased to announce that delivery can now be made on the six works briefly described below. With their appearance on the market, the advance of publication prices are withdrawn and the prices given below apply. Although no examination privileges were extended at the low advance of publication prices, a single copy of any of these works may be secured for examination now that they are on the market.

Abraham Lincoln, by Richard Kountz. The author has been immensely successful in his several undertakings to provide music supervisors with effective choral works of good musical quality for rendition by school students. In Mr. Kountz's latest offering, "Abraham Lincoln," there is a combination of inspiring musical and patriotic qualities. Mr. Kountz has given an admirable setting to text upon the immortal Lincoln without utilizing well known patriotic airs, yet at the same time providing a very different atmosphere of patriotism in music. Lincoln is such an inspiration to the youth of America that this work can be used at any time during the school season. Price, $1.00.

Album of Song Transcriptions and Variations for the Pianoforte. There are many beautiful song melodies that are just as immortal as the symphonic, operatic and instrumental writings of the masters, but when the original song writings are played upon the piano without the voice figuring, their full beauty is not apparent. In this collection quite a number of well known songs are translated into delightful piano compositions with new harmonies and variations enhancing their melodic beauty. Price $1.00.

Elementary Piano Pedagogy, by Chas. B. Macklin. This book is valuable to all teachers having piano beginners to instruct, and of course it is of especial help to beginners in the teaching profession. It helps the teacher solve the problem of giving the student all the necessary knowledge of the fundamentals of music in such a presentation as will hold the pupils' interest. This is an important contribution to the library of the piano teacher. Price, $1.50.

How to Succeed in Singing, by A. Buzzi-Peccia. Any publisher would be quite gratified to have the honor of issuing this work by a master teacher of singing. Many who have studied in the studio of Buzzi-Peccia have achieved great heights in the singing art. There is wise expert counsel given in understandable form in this book. Students and teachers of singing should read it. Price, $1.50.

Second Year Study Book—Piano, by A. Sartorio. Sartorio piano studies, whether covering a certain grade or a certain phase of technic, seem to possess qualities much above the average writings for piano study. This particular set of studies is just right to be taken up at the completion of the usual second grade material. Price, 75 cents.

What to Teach at the Very First Lessons, by John M. Williams. Mr. Williams' lecture lessons to teachers have been immensely successful in all parts of the country. The thousands of teachers who cannot attend these lecture lessons may obtain in this book much of the inspiration and helpfulness of the educational discussions so ably conducted by Mr. Williams. The material in this book forms an excellent guide to teachers, particularly to the young teacher who might wander into difficulties in the instruction of beginners. The price of this book is 60 cents.

Premium Workers, Attention!

If you have not received your copy of the very attractive new premium catalog, drop us a post card and one will be sent to you by return mail. Merchandise offered is of the very highest quality, and you will surely be pleased with any selection which you may make. The following selections are especially desirable:

Six-piece Brush Set. A brush for every household need. This is a premium sure to meet with the approval of every woman. Only two subscriptions.

Butter Dish. An attractive glass dish with a bright nickel cover. Only two subscriptions.

White House Cook Book. This cook book has been revised and brought up-to-date, edited by Hugo Ziemann, steward of the White House. It offers over 1600 household recipes, and is handsomely bound in white enamel cloth. Only two subscriptions.

Two Dainty Salt and Pepper Sifters. In aluminum. Simply press the button and the sifter does the rest: no clogging of salt. Only one new subscription.

Guaranteed Knife Sharpener. The very latest idea in putting a keen cutting edge on any knife; indispensable in the kitchen. Only two new subscriptions, and you will always have a sharp knife.

Ready Reminder Pad. A neat, smooth black leather case with card packet and a handy pad for jotting down memoranda (one extra pad included). Only one new subscription.

Black Leather Wallet. It fits the hip pocket, cannot work out, and is proof against theft; has open end bill fold compartment and transparent card pocket for your automobile license. Only two new subscriptions.

A Bill Fold for Ladies. At last we have secured a dainty little bill fold made especially for the fair sex. Fancy leather, full length compartment, change purse and two card pockets; folds up neatly to drop in the hand bag. Only one new subscription.

Renewals

The date on which your subscription to ETUDE MUSIC MAGAZINE expires is printed opposite your address on the wrapper. Watch this carefully. Your prompt renewal will save disappointment in the lapse of any issues, although we try to prevent this by ample notice. Of course, the yearly subscription price is $2.00; two years $3.50.

Mail Delays

The Christmas mail rush brings us the usual annual post-holiday complaints of delayed copies and those which are lost. Please bear with us. Should either the December or January issue have gone astray, a post card advice will receive our immediate attention.

High Class Magazines Of General Interest Combined With Etude

Save money on your magazine reading matter by placing subscriptions in combination with ETUDE MUSIC MAGAZINE. We have made arrangements with publishers of high class periodicals whereby our musical friends can make substantial savings. See advertisement on inside back cover. A post card will bring our new 1926 catalog which is of interest to any lover of good reading matter.

Fake Magazine Subscription Agents

Pay no money to strangers, no matter how plausible their story may be in soliciting subscriptions for ETUDE MUSIC MAGAZINE. The annual crop of letters is now coming in, showing where the over-confiding public has paid out good money to swindlers. Unless the solicitor is personally known to you, or you have convinced yourself that he is thoroughly reliable, take no chances. If you wish to subscribe, send the money to us with the name and address of the solicitor and we will give him credit if he is entitled to it.

THE PRESSER PERSONNEL

Mr. John H. Waack

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

WHEN you send an order to be filled, it is placed in our Order Department in which a large number of our employees are engaged. In order that your desires may be filled with speed and accuracy, the supervision of details comes under the direction of Mr. John H. Waack.

Mr. Waack has spent nearly a score of his 35 years in the music business with the Theo. Presser Co. Starting as a youth in 1890 with the Rohlfing Sons' Music Co. of Milwaukee, he achieved the position of Manager of the Order Department of that concern.

In 1907 Mr. Waack came with the Theo. Presser Co., serving local patrons in the Retail Department. Later he was made head of the Back Order Department, which handles practically all "difficult" orders in securing items other departments cannot locate. A wide knowledge of the bibliography of music is highly essential in this important position, held by Mr. Waack until a few years ago, when the growth of business necessitated the appointment of a capable supervisor in the Order Department, of which Mr. H. B. MacCoy, Sales Director of the Theo. Presser Co., is Manager. Mr. Waack was placed in this supervising position over this important department of the Theo. Presser Co. In this capacity he is responsible for seeing that the various sub-divisions of the department maintain a high standard of service in the prompt and correct filling of the thousands of orders received daily.

THE PRESSER PERSONNEL

Mr. George Pechstein

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

THE Foreign Department of the Theo. Presser Co. is under the able direction of Mr. George Pechstein, whom we take pleasure in introducing to our readers herewith.

At the age of 16 years Mr. Pechstein entered the field of music with Reinicke Brothers of Leipzig. Before coming to America he gained an extensive knowledge of the business during ten years with such companies as J. A. Boehme, Hamburg; Bote & Bock, Berlin; Hug & Co., Strassburg; Schott Freres, Brussels; and Augener, Ltd., London.

During his European business career, Mr. Pechstein spent some time collecting and cataloging manuscripts, written as far back as the ninth century—works of the old monks and very old masters, which have since brought fabulous sums of money.

In 1909 he came to America and joined the Theo. Presser Co., after a year spent with the Oliver Ditson Co., Boston. Mr. Pechstein occupies an important position in the Presser organization, being a leading authority on foreign musical publications. He holds the position of Manager of the Foreign Department and by virtue of his extensive musical knowledge and his excellent command of the French and German languages, he handles authoritatively the orders and correspondence of our many foreign patrons throughout the world, elsewhere than in the United States and Canada.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

Young Students

By Phyllis Cosens (Age 11)

like to study music,
learn his sharps and flats;
ts hard to please a critic
d do as he exacts.

ike a pretty melody
t do not like the scales;
times it's like a comedy
e way our rhythm fails.

ike to play one piece,
t, oh! it's hard to work;
fingering and phrasing
very often shirk.

when we take Exams., you know,
r hearts go pit-a-pat;
lay our scales so badly
d call a sharp a flat.

still we love our music
d will try a finer plan,
udy all our lessons
very best we can.

"On the List"

IAT becomes of the many pieces you and memorize? Do you just put up in your "mental garret"—with a other forgotten things? Some peo- mental garret would certainly yield a collection of things, if they could be taken out and dusted off.

know how all good housekeepers do housecleaning, especially in the spring. seems to be something in the spring hat creates enthusiasm for house- ng.

why not do some house-cleaning in mental garret this spring, paying par- r attention to your memorized pieces; ee how many treasures you can resur-

the first place, get a pencil and paper me can do any kind of house-cleaning ut some equipment), and as you go gh all your piles of old, middle-stage ew music, write down the name of piece that you have learned. You will rprised to find how many there are; lon't forget the hours you spent learn- em.

at much will probably do for the first house-cleaning, just to find out what should be, in your mental garret.

en the next day, and the next, and ext, review these pieces, one or two a polish them up, make them like new. en take your pencil and paper again, as each piece is re-memorized and fin- put it "on the list."

d what goes "on the list" is supposed y there, ready to be played for any- at any time.

Winter Sports

By Rena Idella Carver

FRANK lay very still under the warm coverlets, after a winter day spent in the open. Soon he thought he heard the tinkle, tinkle of tiny bells. Could it be? Yes, indeed. Surely they were sleigh-bells.

In a moment four tiny reindeer came into view drawing a cunning little sleigh. The team stopped in front of Frank and a very small man wrapped a fur cloak about Frank, tossed him into the sleigh, tucked the fur robes in snugly and picked up the lines. Like a flash they were off. Over the sleet-coated house-tops the sure-footed little beasts picked their way and soon reached the open country. Through white mantled meadows, past icicled farmhouses, down slick, narrow country roads and over glistening hilltops they sped.

Frank felt something cold upon his cheeks and looked up to see the snow falling. But how very queer it looked! Large oval-shaped snowflakes they were. Perhaps he did not see clearly. Yes, he did; for the bright moonlight made the world almost as light as day. How the snowflakes glittered in the moonlight! They came so quickly now that he could no longer distinguish them; so he closed his eyes, realizing that he was in a snow storm of music notes.

Over the fields the tiny steeds glided until the driver gave a brisk command and the four little reindeer stopped at once. The fur-clad man lifted Frank out of the sleigh and threw a pair of skates after him. In a twinkling he was off, leaving Frank at the edge of a frozen lake.

The boy put on the skates and joined the merry crowd of playmates on the ice. Donald claimed him first and together they went skating over the gleaming surface. Suddenly Donald burst out, "That's a peacherino of a duet that we have been assigned, don't you think so? Just as much fun as skating." Frank made no answer, he had never even looked at it yet! What day was tomorrow? Wednesday and his next lesson day. Silently they skated on, but Frank stumbled two or three times. Somehow it wasn't much fun and they parted at the end of the pond.

Frank saw some of them doing fancy skating, so he made some figures, but the onlookers only laughed.

Soon the lake was cleared for a game of ice hockey. The "reds" and "blues" assembled in the center of the pond and the

game began. Every time Frank tried to hit the ball all he could see was an immense piano keyboard. His hockey stick seemed to strike every black key but the one he wanted to strike. The taunts of the spectators angered him. "Better practice, sometime," they yelled. He just could not send that horrid ball to the right place. His side lost to the "reds" and he was glad when it was over. He threw down his stick and started for the bank.

He heard a crackling noise. The next moment he was struggling in the chilly, black water. He grasped the edges of the ice only to find that it was sheet music paper and crumbled in his hands. The hockey teams threw a rope and rescued him, wet and weary.

"Lets go skiing," said Donald, to which they all agreed. Away they glided over hill and valley. To Frank it seemed that the tracks of the ski were always lines and spaces. Ugh! Ugh! Frank shuddered as a deep snowdrift engulfed him. Could this be a Clementi Study, he thought, as he struggled out.

As he went onward he grabbed a piece of ice, intending to eat it, but it looked so much like a page of his new piece that he dropped it in dismay.

The crowd ahead had taken off their snowshoes and were throwing snowballs. The air was filled with laughter and music. He made some balls, but they all looked like whole notes for they had black lines around them.

He was enjoying rolling a huge snowball with three jolly boys until he discovered

(*Continued on next page*)

Question Box

DEAR JUNIOR ETUDE:

My music teacher lives seventeen miles from here; and as we have no car, I can not take lessons just now, much as I would like to do it.

Would you please tell me what a few musical terms mean: *"poco-a-poco; melodia marcato; senza rit.; poco rit.; a tempo; cantabile?*

My sister used to help me a good deal, but now she has gone away to finish school, so I have no one to help me.

M. E. K. (Age 14),
Canada.

Answer—Poco-a-poco means little by little.

Melodia marcato, the melody well marked or brought out.

Seza rit, without any ritard.

Poco rit., a little ritard.

A tempo, in the original speed (after a ritard).

Cantabile, song-like.

These terms, and most of the terms used in music, are Italian words. It would be a good plan for you to get a small dictionary of musical terms, which you can get at any music store for very small cost. Every music student should have one.

A person who played the cornet
Once practiced all day on a bet.
He made every one frown
And was driven from town;
Perhaps he is practicing yet!

Letter Box

DEAR JUNIOR ETUDE:

I have not written to you before, and although I think there are a great number of readers of THE ETUDE in Australia, I have never seen a letter from this sunny land.

I have taken music lessons for seven years. I have subscribed to this magazine for three years. At first my father gave me a year's subscription as a Christmas present—and now I should miss nothing more than its discontinuance. Therefore it has been my delight ever since.

I live about one hundred miles from Adelaide, so that, otherwise than through the talking machine, I seldom hear the playing of any great virtuoso. I attend every musical program given here, and last year I had the great pleasure of going to our city to enjoy "Aïda," by Verdi, given by Dame Nellie Melba's Opera Company. Most of my girl friends get THE ETUDE, and our happiest times are when we play duets from these pages. I am preparing for the A. L. C. M. examination of the London College of Music, and the examination is held in December. A number of pupils from this town are also going up for different examinations of this college, so this year Eudunda will be an examination center.

I am learning "Rustle of Spring" by Sinding and have not decided which of the Beethoven Sonatas I shall learn.

Chopin's pieces are always among my favorites and I have learned some valses and two or three nocturnes lately. I sing in our church choir and to practice and sing the beautiful anthems is one of my happiest times. I live four miles from this township, and, having a car, we go in very often. I have a music and theory lesson each week.

My brother takes violin lessons at college, and when he comes home for vacation we spend some fine times together. A number of radio sets have been installed in this district.

To hear from music students in a distant land would be a source of great delight to me, as I am too far away to enter the contests.

From your friend.
LOUISE ECKERMAN (Age 16),
Eudunda, South Australia.

The Choir Master

Each Month Under This Heading We Shall Give a List of Anthems, Solos and Voluntaries Appropriate for Morning and Evening Services Throughout the Year.

Opposite "a" are anthems of moderate difficulty, opposite "b" those of a simple type.

Any of the works named may be had for examination. Our retail prices are always reasonable and the discounts the best obtainable.

HARMONY CORRESPONDENCE INSTRUCTION, 50 cents a lesson. Keim, 2545 Cooper Ave., Brooklyn, N. Y.

TWENTY-FIVE MELODIES FOR EYE, EAR AND HAND TRAINING. By Mathilde Bilbro. Price, 75 cents

These little pieces may be regarded as second grade studies. They are intended to aid in establishing the position of the hand upon the keyboard, attaining freedom, training the eye, especially in leger lines, in staff positions and cultivating a musical ear. These studies are all tuneful and interesting to practice. Altogether this set of study pieces promises to become popular with teachers as well as students well in the second grade.

THEODORE PRESSER CO. PHILADELPHIA, PA.

JUNIOR ETUDE—Continued

Junior Etude Competition

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays and answers to puzzles.

Subject for story or essay this month—"What I Can Do for Music." Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete, whether a subscriber or not.

All contributions must bear name, age and address of sender written plainly, and must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, Pa., before the twentieth of February. Names of prize winners and their contributions will be published in the issue for May.

Put your name and age on upper left hand corner of paper, and address on upper right hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

MODERN MUSIC
(Prize Winner)

There are two kinds of modern music, the music written by good composers, and "jazz," which is also termed modern music. Modern classical music is graceful and light and entirely different from the classical music composed by Haydn, Mozart or Beethoven. Also the minuets composed now, such as the one by Paderewski, are very different from the minuets of the old masters.

If Bach, Mozart and Haydn should come to life, they would find the best music of to-day very different from the music of their time. But—what *would* they think of jazz?

PAULINE SHERMAN (Age 14).
Michigan.

MODERN MUSIC
(Prize Winner)

Years ago the number of good performers was so small that an amateur rarely had an opportunity of hearing much good music.

The effect of masses of sound, rather than fine threads of melody, and the tendency to seek expression in contrasts of quantity rather than in refinement of quality, were the features of the nineteenth century music.

This is the music we inherit, and so far as our music is harmonic, we may merit neither praise nor blame for it. Music is continually changing and developing. The music of the present is not like the past; and the music of the future will not be like the music of the present.

We may be envious of our successors who will see modern music more fully developed; but we cannot influence that development.

MARY MERRILL (Age 12),
Vermont.

MODERN MUSIC
(Prize Winner)

In olden times music was more simple and tuneful than it is now. Modern music is different. It contains many inharmonious sounding chords. One must become acquainted with modern music before one can understand it. But, after hearing a modern composition several times one may get to love it, although at first it seems incomprehensible.

As for jazz, everyone has his own opinion about that! No one should play too much of it, but mixed in with the classics, it can do no harm. It can even be made beneficial as a help in getting good rhythm.

MARGARET E. KNIGHT (Age 14),
Massachusetts.

Honorable Mention for Essays in November

Freddie Jones, Grace Carr, Richard Howes, Christine Bridges, Dorothy Stroebel, Florence Greenstone, Claire E. Horton, Gretchen Kohley, Marion Bottoms, Alfred Howell, Ruth Greenman, Marie Morrison, Helen Black, Helen McCormack, Paul Allan, Jean Towner.

Letter Box

DEAR JUNIOR ETUDE:

I invented a plan for practicing and thought you might like to see it. Start a month by practicing an hour a day. Every day an hour is completed check it off on the calendar. If the hour can not be completed it can be made up the next day. If the month is completed, increase the amount and try to complete the next month. For instance, in January I practiced an hour a day; so in February I increased it to an hour and ten minutes. But I did not succeed in February; so I had to keep an hour and ten minutes again for March. In April I did an hour and a quarter a day.

For memorizing my pieces I play three old ones every day. This keeps my repertoire in good condition. I am trying hard to become a good pianist.

From your friend,
LOUISE LANE (Age 13),
Indiana.

(*Continued from page 163*)

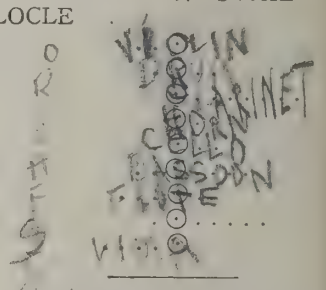
that they were the other members of quartette with whom he was supposed sing at a school entertainment next we

The crowd raced to the hill with th sleds. Frank soon quit coasting, beca somehow he could think of nothing e except playing scales up and down keys.

He made a fine snow man. When was ready to fix the nose and eyes, found that someone must have done it him, for there was Schumann's countenan

Frank joined a sledding party, but did not know that it comprised the me bers of the glee club. They began to si He tried to sing but only hideous noi issued from his throat. Was it beca he had not practiced lately? They pas through a frozen forest, and he jum out to get an icicle to eat. As his touched it, it seemed like a horn or bu and repeated a phrase three times to astonishment.

He heard the tinkle, tinkle of tiny b and a reindeer-drawn sleigh, oh so sm appeared in front of him. The dri pulled Frank up beside him and fixed h comfortably, saying, "I heard the ho Frank. One, two, Dexter. One, two, K rick." With a bound the steeds leaped f ward. "We'll have you home in a jiff cheerily sang the voice.



What pretty pictures Jack Frost h painted on the bedroom windows. H odd! Was that a page of music? W did Jack Frost know of sharps and fla Frank lay quietly yawning. He sudde realized that it was morning. He jum out of bed at once. Would he practice day? Well, he rather guessed he wo and every other day, too.

Orchestra Puzzle

By M. E. Keating

WHEN the letters of each of the f lowing instruments have been corre arranged, and placed in the order of dots, the letters falling on the circles spell a group of instrumental players.

The Most Extensively Used
PIANO INSTRUCTION WORKS

THE FOUNDATION OF COUNTLESS MUSICAL CAREERS

BEGINNER'S BOOK

SCHOOL FOR THE PIANOFORTE—VOLUME ONE

By Theodore Presser

An Unsurpassed "First Reader" In Piano Playing

Enables the Teacher to Achieve Good Results Quickly

Progresses Logically

Thoroughly Covers All Elementary Keyboard Work

An Unequalled Success Because of the Attractive and Practical Material Presented with the Greatest Possible Simplicity

THOUSANDS UPON THOUSANDS OF PIANO STUDENTS STARTED WITH THE "BEGINNER'S BOOK." Teachers who have held to the dry technical works by which they received their instruction are invited to examine the "Beginner's Book." The trained teacher at once will see why so many teachers prefer this instruction book above all others. It assures the greatest progress without sacrifice of essential thoroughness and without neglecting technical exercises, presents occasional interesting pieces and little duets that entertain and hold the interest of the pupil. The first grade of study up to, but not including the scales, is covered by the "Beginner's Book." Any teacher may secure a copy for examination, being under no obligation to pay for the copy sent unless sufficiently interested to keep it.

PRICE, ONE DOLLAR

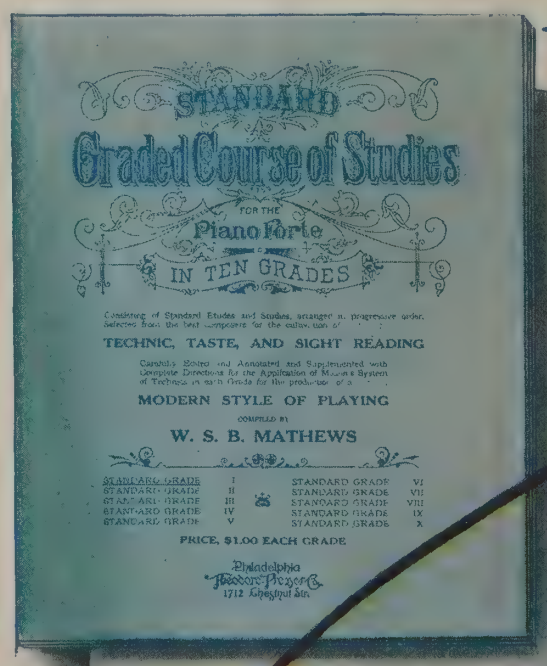
The Immensely Successful "Student's Book" and "Player's Book" are respectively Volumes Two and Three of the "School for the Pianoforte," by THEODORE PRESSER

STANDARD GRADED COURSE OF STUDIES

FOR THE PIANOFORTE

IN TEN GRADES *Originally Compiled by W. S. B. Mathews*

Unceasingly Re-edited, Revised and Kept Up-to-Date By Renowned Teaching Experts, Including Famous Virtuosi



Always the Last Word In the Most Sensible, Progressive Teaching Material

The Original of All Graded Courses of Study for the Piano

Presents the Best of Standard Etudes and Studies, Arranged in Progressive Order and Selected from the Best Composers

AMERICA'S MOST OUTSTANDING PIANO WORK is this "Standard Graded Course." These ten interesting, melodious, practical volumes have been the backbone of a very large part of the musical educational progress of America. While the course is complete in itself, from the very beginning up to artistic perfection, it is not necessary to start with the very first volume if previous instruction has been given with any other method or studies. Pupils may be introduced to the "Standard Graded Course" with the volume that meets the point up to which they have studied. Throughout this course tends to develop the best of playing ability and musicianship pleasurably and with a minimum of trouble. Any or all grades may be secured for examination by teachers.

IN TEN GRADES, TEN VOLUMES
PRICE, ONE DOLLAR EACH VOLUME

From the Veriest Beginning

to Virtuoso Proficiency

Piano Teaching Material

Recently Issued Study Material of Various Grades

Our Liberal Examination Privileges Permit Any Teacher to Examine Copies of These Works

THE MUSIC SCRAP BOOK

A KINDERGARTEN METHOD FOR PIANO BEGINNERS

By N. Louise Wright **Price, 60 cents**

From the very start the material in this book is just the right type and presented in just the right way to engage the child student. Rhymed explanations are used in most of the lessons, and the young student is brought up to the playing of delightful little pieces. Both clefs are taught in the very first lesson.

TUNES FOR TINY TOTS

By John M. Williams **Price, 75 cents**

Excellent preparatory material for use with little students prior to study from any method or larger instruction book. The child is led easily into a practical knowledge of the rudiments—the bass and treble clef, the names of the notes, their values, an understanding of time, bars, measures, tied notes, dotted notes, etc.

RECREATIVE ETUDES

FOR EQUALIZING BOTH HANDS

By R. S. Morrison **Price, 70 cents**

Here is a new set of piano studies that teachers will find excellent to introduce to pupils in the early third grade. They tend to develop independence of the hands. With their melodies and attractive qualities, these study pieces are pleasant to pupils and encourage profitable practice.

SHORT STUDY PIECES

IN THE SECOND AND THIRD GRADES

By M. Greenwald **Price, 80 cents**

Each one of these pleasing study pieces covers some particular phase of technic—one is a scale study, another a wrist study, another covers crossing the hands, and others treat with repeated notes, triplets, legato, chromatic scale, perpetual motion, velocity, broken octaves and broken chords. Truly a wealth of exceedingly fine study material here, pieces that will attract and hold the pupil's attention.

MIDDLE C AND THE NOTES ABOVE AND NOTES BELOW

By Lidie Avirit Simmons **Price, 75 cents**

A book with bright and genial qualities. The pupil starts out with Middle C and learns one note at a time, going above and below. In addition to learning the notes and naming them, the pupil writes them, also, and then plays a dainty little study exemplifying each new step. There are line drawings in connection with each little study, and most of them have appropriate texts; these tend to liven up matters considerably and to hold the interest of the juvenile mind.

PIECES FOR THE DEVELOPMENT OF TECHNIC

FOR THE EQUAL TRAINING OF THE FINGERS

By N. Louise Wright **Price, 60 cents**

Studies running from grade two to grade three, that logically cover the training of each hand to equal facility in such phases of technic as Relaxation in Chords, the Trill with the Turn, Broken Chords, Double Thirds, the Scale and Arpeggios. These technical devices have been treated very cleverly; after the right hand gets its work the same study is repeated in the left hand.

TEN BUSY FINGERS

NINE MELODIOUS STUDIES FOR THE PIANOFORTE

By Mabel Madison Watson **Price, 60 cents**

Little studies or pieces that combine melodic, rhythmic and dramatic interest with finger training. Delightful, practical material to prepare the pupil for easiest velocity studies of Gurlitt, Czerny, etc.

SIXTEEN RECITAL ETUDES

By Ludwig Schytte. Op. 58 **Price, $1.00**

These studies correspond in mechanical difficulty with Heller, Op. 47. They are agreeable and pleasant to play, having musical worth, yet enabling the student to gain mechanical control of the keyboard. Teachers ofttimes find it helpful to substitute studies such as these for the commonly used works of Heller, Clementi, Kohler and others. Schytte ranks among the best of the modern composers.

MUSICAL MOMENTS

By Mrs. H. B. Hudson **Price, 75 cents**

This book does supply "musical moments" for little pianists in the first and second grades, and is intended for use as recreation material to accompany or supplement any instruction book. There are twenty-five attractive little solo numbers, a duet and a novelty in a very easy one-piano, eight-hand number.

COMPREHENSIVE MUSIC WRITING BOOK

By Anna Heuermann Hamilton **Price, 60 cents**

Every music student should be greatly benefited by such a thorough course in notation as this. The Staff, the Clefs, making a Brace, a Table of Note and Rest Values, Measures and Signatures, Dotted Notes, Chromatic Signs, the Tie and Slur, Scales, Triads, Intervals, Chords, Abbreviations in Writing and Less Common Clefs all are covered, in addition to many other little points.

SHORT MELODY ETUDES

WITH TECHNICAL POINTS

By Mathilde Bilbro **Price, 75 cents**

These studies afford a beautiful combination of melody and technic. They range from grade one and a half to grade two. Miss Bilbro is a gifted writer of elementary study material and her works are very successful.

SIX STUDY PIECES FOR THE DEVELOPMENT OF THE WRIST

FOR THE PIANOFORTE

By Carl Moter **Price 80 cents**

The musical and melodic qualities of these pieces are good. They not only develop the wrist, but also serve as a preparation for *Bravura* study. Third grade pupils may be given this study material. Even though there are but 6 pieces, there are various styles and staccato notes, thirds, sixths, and a few octaves are introduced.

ETUDES MINIATURES

By Frances Terry **Price, 90 cents**

Twenty-six studies or study pieces in grades two and two and a half by a very successful writer of juvenile material. They are particularly good, being quite interesting musically and quite valuable technically. They exceed many offerings in these grades in that they are tuneful throughout and well contrasted, the harmonies and general treatment being most workmanlike. Both teacher and student will benefit by giving this excellent series a trial.

SIX STUDY PIECES IN THIRDS

FOR THE PIANOFORTE

By Carl Moter **Price, 60 cents**

Teachers will find this a very helpful work, as it helps to introduce in the early intermediate grades a figure of technic which is not usually met until later. The pieces are interesting musically, and pleasantly prepare the pupil for work to come.

MELODIOUS ELEMENTARY ETUDES

By Franz J. Liftl. Op. 161 **Price, 90 cents**

Franz J. Liftl is one of the leading European teachers working the easier and intermediate grades and his scholarly educational works have met with great favor. This, his most recent, is a set of studies suitable for second grade work and leading by easy stages into the third grade. They are well made musically and well balanced technically.

An Interesting Series of Albums of Study Pieces for Special Purposes

ALBUM OF TRILLS

FOR THE PIANOFORTE

Study Pieces for Special Purposes—Vol. 1
Price, 75 cents

Each of the eighteen pieces in this album contains some form of the trill and the use of this volume with medium grade pupils will be found by teachers to be the most desirable means of perfecting their ability to handle this valuable technical device. It is far better to encourage the pupil to triumph in this department with the use of attractive pieces than to discourage him by assigning only dry, mechanical studies for the development of the trill.

ALBUM OF SCALES

FOR THE PIANOFORTE

Study Pieces for Special Purposes—Vol. 2
Price, 75 cents

The tedium of scale practice is relieved by the form in which they may be studied with this album. There are 23 pieces or studies in the form of pieces in which the scales are generously introduced. The value of practicing them in this attractive form and in the variety of rhythms and harmonies that naturally occur can be appreciated readily by those who have had any experience in piano pedagogy or study. Pupils handling third-grade material are just ready for this study work.

ALBUM OF ARPEGGIOS

FOR THE PIANOFORTE

Study Pieces for Special Purposes—Vol. 3
Price, 75 cents

This latest addition to the series of albums of "Special Study Pieces" has an appeal not only to the teacher and student, but also to the many players who delight in arpeggio usage in a composition. There are 20 numbers in this collection, and there is an excellent variety due to the manner in which the arpeggios are employed, and to changes of key and of harmonies. Undoubtedly these pieces furnish the most delightful vehicle for the study of arpeggio playing. Chiefly medium grade.

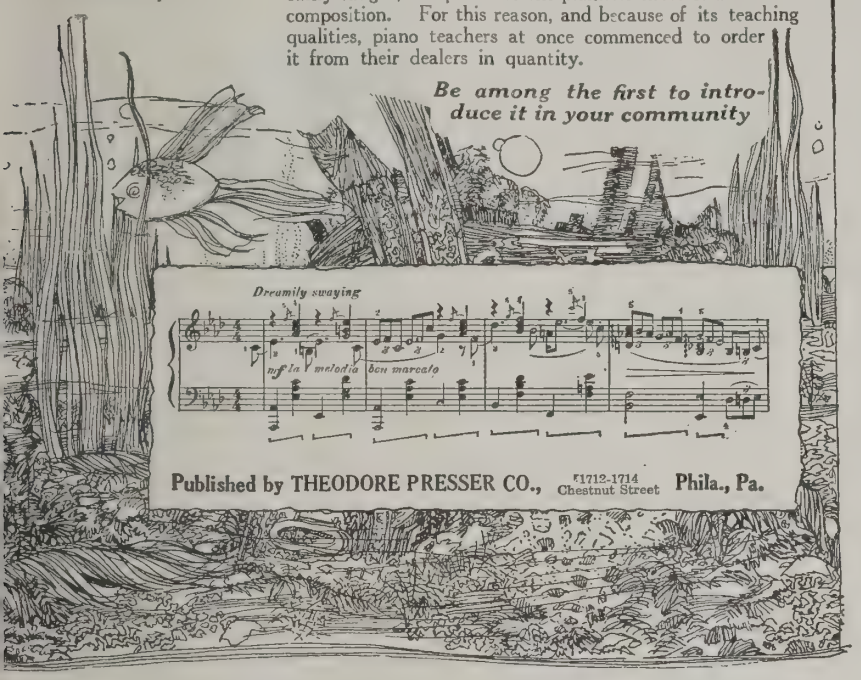
An Immediate Hit!

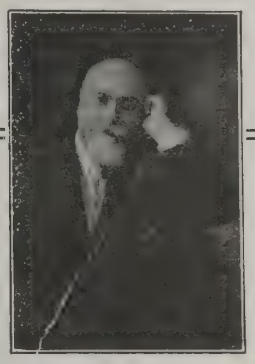
Increasing Quantity Orders Tell the Tale

PIANO (Third to Fourth Grade) Price, 35 cents



ORGAN.....In Press
Arranged by Dr. Orlando A. Mansfield

ORCHESTRA.....In Press
Arranged by the Eminent Symphonic Conductor Wassili Leps



WITHOUT any special pushing this composition has jumped into immediate demand by reason of its haunting first theme, suggesting the beauties of the colorful submarine gardens, its 'cello-like second theme, suggesting undulating seaweed and anemone, its dramatic third theme, suggesting the crashing surf and then just a breath of the coral reefs of the Far East.

It has the peculiar quality of being readily playable and easily taught, but produces the pianistic effect of a difficult composition. For this reason, and because of its teaching qualities, piano teachers at once commenced to order it from their dealers in quantity.

A. Buzzi-Peccia

A New Book that Voice Teachers and Voice Students Should Read

A Practical Guide for Singers Desiring to Enter the Profession

HOW TO SUCCEED IN SINGING

By A. Buzzi-Peccia

AS the author puts it in the preface, this book stirs up "good and bad things in vocal art-methods, teachers, students, engagements, debuts, stage life and other features of the profession."

Buzzi-Peccia knows whereof he writes, being a Master Voice Teacher and having developed numerous successful concert and operatic artists. He has no illusions regarding any phase of the vocal art from the public's viewpoint to the ludicrous affectation of some celebrated singers.

This volume is wise counsel to vocal students and should keep them from "falling into the hands of Philistines." It also will awaken voice teachers to a sincerity of effort, and students and teachers alike will find intensely interesting, the analysis and consideration of those elements that form the basis of the vocal art, as an art, and all those elements that form the practical part of a lyric career. Some very valuable examples are given.

Thirty-five short and pointed chapters cover the items mentioned in the first paragraph of this description, and then the second part of the book is devoted to "The Natural Laws of the Mechanism of the Human Voice," giving a clear understanding, with the aid of diagrams, of the vocal organs and their activities, and of other features such as the correct and incorrect placement of vowels, etc., etc.

Enchanting Operettas and Musical Comedies

Alice in Movieland. An up-to-the-minuet operetta by Hanna Van Vollenhoven. One act, 3 scenes. Three singing principals, 7 speaking rôles, 5 pantomimists. Full of action, comedy and tuneful melodies. Treble voices. **Score $1.00**

Belle of Barcelona. A picturesque Spanish operetta in 3 acts by C. R. Chaney. 15 singing rôles, mixed voices, good plot, easy to produce, sparkling comedy. **Score $1.25**

El Bandido (The Bandit). A musical comedy in 2 acts by J. W. Dodge. Two sop., 1 tenor, 4 baritones, chorus large or small. One scene. Simple costumes and inexpensive to produce. Charming music and dialog. **Score $1.00**

Pharaoh's Daughter. A romantic opera for the Young by Ludwig Bonvin. A work combining the music of the great masters with a lovely and interesing text. 3 sop., 2 mezzo, 4 altos. Within easy range; girls' voices. **Score $1.25**

College Days. A fresh, youthful musical comedy (3 acts) by J. W. Dodge. Typical college melodies, dialog and humour. One set. Everyday costumes. Mixed chorus, large or small. **Score $1.00**

My Spanish Sweetheart. A clever operetta for Treble voices, by W. S. Goldenburg. Scene in Holland during the tulip festival. Two acts, 1 set. Cast may include both grade and high schools. A wonderfully effective piece. **Score $1.25**

The Mound Builders. An American-Indian Cantata by Paul Bliss. Sop., Alto and Bass, the principal melody in the bass. Time 30 min. **Price $1.25**

On Mid-Summer's Day. A delightful operetta for Children by B. Aldermann. Costumes easily prepared. Two acts, 1 scene. Delightful story. **Score .75**

The Maid and the Golden Slipper (Cinderella). Treble voices by C. Richardson. Spontaneous and melodic. Quite inexpensive to produce. **Score .75**

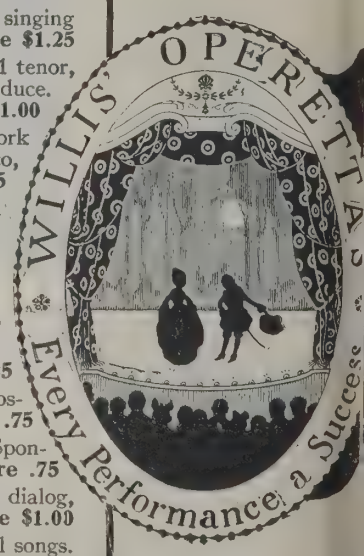
Hulda of Holland. A romantic musical comedy (3 acts) by J. W. Dodge. Snappy dialog, wholesome humor, excellent music, 8 singing rôles. **Score $1.00**

The Wishing Well. A romance of Old Ireland in 3 acts by J. W. Dodge. Beautiful songs. Costumes easy to make. Good comedy. Mixed voices. **Score $1.00**

The Pirate's Daughter. A Legend of Old Holland (3 acts) by K. C. Brown. Clever love scenes. Fine dialog. Picturesque costumes. Mixed voices. **Score $1.00**

Yanki San. A charming story of Old Japan (3 acts) by C. R. Spaulding. May be rendered by Ladies only or for mixed voices. Time about 1 hour. **Score $1.00**

Prince Charming, or **The Capture of the Queen of Hearts,** by Jos. Surdo. A fine plot, good and tuneful music and easy to produce. **Score $1.00**



Charles Wakefield Cadman

American composer whose delightful melodies have charmed the world has just completed a most fascinating operetta planned for school entertainment or amateur organizations.

"Lelawala" or **"The Maid of Niagara"** is founded on a traditional Indian legend. The libretto by George Murray Brown is full of dramatic action, wit and bright lines and Mr. Cadman has really surpassed himself in his desire to give youthful voices something really to be proud of.

"Lelawala" by C. W. Cadman will be ready about March 15th. Advance orders may be booked now.

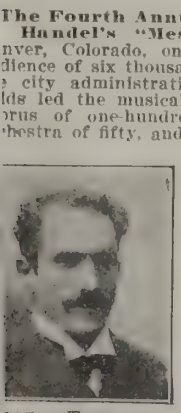
THEODORE PRESSER CO., Publishers,
1712 Chestnut Street, Philadelphia, Pa.

The World of Music

Henry G. Weber, young native conductor, is fast winning his way to a prominent place among the leaders of the Chicago Civic Opera Company. During the past season he has led the interpretations of "Rigoletto," "Il Trovatore," "Cavalleria Rusticana," "Samson and Delila," and "Lohengrin;" for the latter of which it was said that he "conducted and brought out the grandeur of the Wagner score with great skill."

HENRY G. WEBER

Paderewski added twenty-eight thousand, four hundred and twelve dollars to the Endowment Fund of the American Legion, by the four concerts which he gave in December for that purpose, in New York, Philadelphia, Boston and Washington.



"Singing," in the première habilliments of its Volume I, Number I, comes this month as a welcome visitor to our desk—an interesting event for some time anticipated. Well written, well edited, well-pleasing typographically, it enters a field entirely of its own, where there is opportunity for a big service and a big success.

The Annual Bach Festival at Bethlehem, Pennsylvania, will occur this year on May 14 and 15, rather than at the end of the month as has been the custom. The advance in date is for the sake of commanding better orchestral resources. The Friday program will be made up of cantatas not heretofore used at these festivals; and on Saturday will be the usual renditon of the Great Mass in B-minor.

The Twenty-fifth Anniversary of Verdi's death at Milan, on January 27, 1901, was observed at the Metropolitan Opera House, New York, on Sunday evening, January 24, by a performance of the master's "Requiem" with Florence Easton, Merle Alcock, Beniamino Gigli and José Mardones as soloists and Tullio Serafin as conductor.

A New System of Musical Shorthand has been invented by Fernand Masuy, director of the school of music of La Louviere, Belgium. Unlike the older systems, the pressure one does not require extra lines to be added above and below the staff, ordinary music paper serving all purposes.

The Fourth Annual Free Production of Handel's "Messiah" was given at Denver, Colorado, on January 3, before an audience of six thousand. It was financed by the city administration, and Clarence Reynolds led the musical forces consisting of a chorus of one-hundred and twenty-five, an orchestra of fifty, and popular soloists.

ARTURO TOSCANINI

Arturo Toscanini, famous conductor of opera at Milan's La Scala, began on Thursday evening, January 12th, the leadership of a series of sixteen concerts by the Philharmonic Orchestra of New York, to be given in Eastern cities. Toscanini first made a name in America as one of the best of interpreters of operatic scores, when he was brought here and was a leading conductor of the New York Metropolitan Opera Company from 1908 to 1915.

Musical Works, fallen into "Public Domain," are by a new law passed by the Italian Parliament, to pay a two per cent royalty of the gross receipt from their sale or use, to the State Treasury, this revenue to be used for the encouragement of musical enterprises of National value, whether these be theatrical, orchestral, or chamber. Trustworthy to nurture her musical art!

Mme. Olga Samaroff, because of an injury to her shoulder, has cancelled her concert engagements for the season and has accepted the position of music reviewer for the New York *Evening Post,* a position in which her eminent predecessors have been Henry T. Finck and the English journalist, Ernest Newman.

Distinguished Achievement by Colored Musicians is to be rewarded by a prize of four hundred dollars offered by the Harmon Foundation of Washington, D. C. Vocal scores, instrumental scores for solo or ensemble, oratorios, operas; or attainments as interpreters of vocal or instrumental music entitle candidates to consideration.

A Specially Designed Organ, valued at one hundred and fifty thousand dollars, and one of the largest in the world, is to be installed in the Auditorium of the Sesqui-Centennial International Exposition to be opened in Philadelphia on June 1, 1926. Plans for the organ were drawn by Henry S. Fry, President of the National Association of Organists; John McE. Ward, President of American Organ Players' Club (the oldest in America, and founded in Philadelphia); Rollo F. Maitland, Frederick Maxson and S. Wesley Sears; all of Philadelphia. Daily concerts on this instrument will be given by eminent artists.

Mary Lewis made a triumphant début as Mimi of "La Boheme" at the Metropolitan Opera House, New York, on January 28. Five curtain calls and showers of flowers followed the first act. The orchestra broke Metropolitan traditions by rising in tribute to the former Broadway beauty of the Greenwich Village Follies and Ziegfeld Follies. Since appearing on "The Great White Way," Miss Lewis has had several years of European study, followed by a successful Vienna debut in "Faust" and an even larger London triumph in "The Tales of Hoffman."

The Foundling Hospital of London, to which Handel gave its organ, for which he raised fifty thousand dollars (a great sum in those days) by the first London performances of the "Messiah," and to which he left by his will the original manuscript score of this great oratorio, is to be removed to fine new quarters in the open country, thus losing its old world atmosphere and traditions.

Mme. Ernestine Schumann-Heink is planning for next season a "Jubilee Concert Tour" in celebration of her fifty years in the singing profession. An unique record in that at her age others have been deserted while the public still seems as thirsty as ever for her prodigious art. She "was wonderful at twenty, superb at thirty, remarkable at forty, sublime at fifty, and now at sixty she is a wonder of the world."

Princess Marie-Jose, the nineteen-year-old daughter of King Albert and Queen Elizabeth, has received a first prize for passing with high honors in the chamber music class for first-year entrants in the Musical Union of Belgium Festival. Her interpretation of works by Bach, Handel, Mozart and Schumann received most favorable notice.

The Centenary of Carl Maria von Weber's death will occur on June 5th, next. Celebrations already arranged include the revival of "Der Freischutz" at the Paris opera. London, where the master died, will be sure to observe the anniversary fittingly, along with European and American organizations.

Smetana's humorous opera, "The Bartered Bride," was revived at the Metropolitan Opera House, New York, on the evening of January 28, its last performance there having been in 1912.

TAMAKI MIURA

Tamaki Miura, the little Japanese prima donna, who has sung herself into the hearts of opera audiences by her fascinating *Madama Butterfly,* which she has done more than a thousand times, recently added another triumph to her achievements when she created the title rôle of Aldo Franchetti's "Namiko-San," with the Chicago Civic Opera Company. Not the smallest part of her accomplishment was the mastery of English till she vied with her American *confreres* in its enunciation.

Not Only Big Centres of France, like Paris, Bordeaux and Marseilles have their opera houses but also such smaller cities as Nancy, Dijon, Nantes, Rouen, Toulouse and Lille have their winter season of opera. At Marseilles, Calais and Nancy the municipality supports the enterprise and the opera houses are called municipal theatres. And the smaller American cities are beginning to ask for their opera!

W. W. HINSHAW

"Mozart Opera" in America, and the inevitable influence the repeated hearing of the superlative art of the Salzburg master must have on public taste, owe largely to William Wade Hinshaw's companies, which have been organized and toured for the popularizing of the operas of "the musician's musician." Their presentations of these masterpieces have now advanced well into the second thousand, on itineraries which have touched most of the states of the Union.

Six Negro Pianists have won an honorable place among concert artists: Augustus Lawson of Hartford, Connecticut; Hazel Harrison of Chicago, Tourgee Debose of Talladega, Alabama; Carl Diton of Philadelphia; Sonoma Talley of New York; and Lydon Caldwell of Brooklyn.

The Widow of Camille Saint-Saëns, eminent French composer who died in 1921, has been awarded the usufruct of the composer's "author's rights" from all his works, amounting to one hundred thousand francs, by the First Chamber Court which thus reversed a former decision of the lower courts.

The Anniversary of Stephen C. Foster's Death was observed on January 13, in Pittsburgh and western Pennsylvania, by orchestras and various musical organizations. In Pittsburgh his melodies were heard from the chimes of leading churches in the morning, at noon and in the evening.

Sibelius, on his Recent Sixtieth Birthday, was voted by parliament an increased pension from the Finnish Government, bringing it up to one hundred thousand marks (about twenty-five hundred dollars). He received also a large gift of money by popular subscription.

Otto Klemperer, director of the orchestra of the National Theatre of Weisbaden, Germany, began on the evening of January 24 a two months' engagement as guest conductor of the New York Symphony Orchestra.

Centenaries of 1926 are interesting. Palestrina stands in proud isolation among the quadri-centenarians. Charles Burney, the celebrated English historian of music, is most prominent on the bicentenary list; while among the centenarians are W. T. Best, the eminent English organist, Stephen C. Foster, American folk-song composer, John Thomas, most famous harpist of his time, and Mathilde Marchesi, the teacher of Melba, Eames, Calve and other celebrated singers.

Maria Kurenko, already well known to European opera audiences, and who has been filling engagements in other parts of the States, made her New York début at Carnegie Hall on the afternoon of January 16th. Though announced as a coloratura, and skillful in this field of vocalism, press comments seem to indicate that she is even more proficient in beautiful lyric song. A place of real eminence should be hers.

MARIA KURENKO

LOVE'S DREAM, No. 3 (F. Liszt)—Arr. by Wm. M. Felton—Grade 5

No. 19682 Price, 45 cents

No. 14701 COASTING—Cecil Burleigh, Op. 9—Grade 6 Price, 40 cents

Send for "Thematic Catalog of Pianoforte Compositions for Advanced Players"—This free catalog shows portions of over 100 compositions by such composers as MRS. H. H. A. BEACH, BOROWSKI, FRIML, HOFMANN, HUERTER, POLDINI, RIMSKY-KORSAKOW, ROGERS, SCHUETT, and others.

FIVE HOFMANN GEMS

By Josef Hofmann

These five miniature masterpieces have received much attention on the recital programs of some of the leading pianists.

Cat. No.		Price
18690.	Lonesome. Song without words	$0.30
18691.	Wooden Soldiers. March	.30
18692.	Lullaby. Berceuse	.25
18693.	Sister's Dolly. Polka	.30
18694.	Nocturne (Complaint)	.30

BRAHMS' ALBUM

Edited and Compiled by Louis Oesterle

This fine collection of nineteen master compositions by Johannes Brahms will be a valuable addition to the repertoire of the advanced pianist. It contains the most notable works of this famous master.

Price, $2.50

MASTERLY TRANSCRIPTIONS

Here is a group of unusually attractive piano transcriptions of gems from classic and operatic writings. Each one will merit the attention of the best pianist, and will prove valuable study and recital material.

Cat. No.		Price
16909.	Melody in F (Rubinstein)—Grade 5. Transcription by E. Schuett	$0.60
16681.	Valse, Op. 64, No. 1 (Chopin)—Grade 7. Transcription by M. Moszkowski	.60
17254.	Toreador's Song. From "Carmen" (G. Bizet) Grade 7. Transcription by E. Schuett	.60
16952.	The Ride of the Valkyries (R. Wagner)—Grade 10. Transcription by E. Hutcheson	1.00
17293.	Bridal Chorus. From "Lohengrin" (R. Wagner)—Grade 6. Concert Transcription by E. Schuett	.75
16433.	Nocturne from "Midsummer Night's Dream" (F. Mendelssohn)—Grade 5. Transcription by M. Moszkowski	.40
19462.	Shadow Dance from Dinorah (Meyerbeer)—Grade 5. Concert Paraphrase by E. Schuett	.60

UNIVERSITY EXTENSION CONSERVATORY

The World's Largest Conservatory of Music

(Twenty-fifth Year)

If you have faith in yourself and faith in us—you can establish yourself in a position of greater responsibility and enjoy a better financial future. Confidence is a priceless thing. Our School was built upon the granite of confidence.

Get An Accredited Course

State Departments of Education recognize schools with high scholastic standing. Our Diplomas, Degrees and Teachers' Certificates granted by the authority of the State of Illinois.

Extension Courses Growing in Popularity Each Month

The greatest Universities in the Country more than seventy-five colleges and 200 chools—have departments for correspondence istruction. The total mail-study enrollment in ie United States is estimated at between four nd five million students, which is nearly five mes the whole enrollment in all our universi- es and colleges, great and small. Somebody i every fifth family in the United States is taking a mail course" of some sort.

The method of teaching by mail is not new. ome of the ancient Romans left series of in- ruction letters that are virtually mail lessons. n England and Germany, more than a cen- ıry ago, correspondence instruction was given ethics, morals and politics. In Germany and rance, many years ago, languages were taught iis way; and in the United States the Chautauqua movement had already eated a demand for mail instruction.

Special Certificates Awarded Our Graduates to Teach in the Public Schools without Examination

Earnest, ambitious students are invited to send for our catalog and sample lessons. Sent without any obligation and they show how it is possible to get accredited courses without having to go away from home for an expensive course.

We have been offering our courses through the ETUDE ads since 1908. If you haven't sent for literature before, *do it now*. Check on the coupon below what particular course you wish. You have back of you the organized experience of the largest music training institution in the world, the authoritative findings of able specialists, the actual procedure of the most successful teachers.

The Piano Course is by William H. Sherwood; the Harmony Course by Rosenbecker and Protheroe; History, including Analysis and Appreciation of Music by Glenn Dillard Gunn; Advanced Composition by Herbert J. Wrightson; Ear Training and Sight Singing by F. B. Stiven, Director of Music, University of Illinois; Public School Music by Frances E. Clark; Choral Conducting by Daniel Protheroe; Violin by Dr. Heft; Cornet by Weldon; Banjo by Frederick J. Bacon; Mandolin by Samuel Siegel and Guitar by Wm. Foden.

MAIL THE COUPON TODAY!

If you are a teacher of music, take the time to tell us something about yourself. It will aid us in selecting lessons for you—lessons which will show you how to get better results and save time and make more money.

Wanted: Teachers in the different Cities for affiliation to take charge of our branch schools. If interested, mention in your inquiry.

How Much Sleep Should Musicians Have?

Sleep and the musician is a problem not considered lightly. The old-fashioned advice that the adult male should have eight hours sleep each night and the female nine hours seems to be disregarded by many. Mr. Edison has always contended that if the average person ate less and used up less energy in food digestion, less sleep would be necessary.

Sleep is the balance-wheel of life. In proportion to the energy expanded, mental, muscular, nervous, so must be the dosage of sleep.

The musician rarely realizes the great amount of energy he puts forth. The nervous strain that the average teacher undergoes in one day often far exceeds that of the business man. This mostly comes from the anxiety that goes with the habit of making pupils "toe the mark." It is absolutely impossible for one who has not gone through the actual experience of teaching to know what this means.

The drain upon the vital forces of the musician must be made up during peaceful slumber.

Here are some good rules about sleep:

1. The way in which to determine the proper number of hours for sleep is entirely an individual matter. Take enough sleep to make you want to spring into action immediately upon waking.

2. If you never feel like "springing into action" the moment you wake, find out through your doctor, your dietician, or your bed-maker, what is the matter with your sleep.

Just as some people are rarely more than half awake during their entire lives, others are rarely more than half asleep. Sleep should be sound, dreamless, restful and peaceful. Some psychologists insist that absolute quiet is all-essential. How can one get absolute quiet in the modern city? It is only to be found in the "real" country and this is often the reason why people profit so much from vacations. They sleep better. Above all things, Mr. Musician, if you want to do great things in your life do a little great sleeping on the side. Long hours demand just so much of your life assets. Make up your liabilities with sleep.

After Hours

The oracles of success in addressing youth frequently recount some paradigm like this:

"Tell me what you do with your leisure hours and I will tell you how successful you will become."

As a matter of fact the subject of the leisure hours and how they are employed is one of the greatest social problems of man. In years past educators were content to devote their time to teaching the young human animal how to make a livelihood. Fine! But what about the other third of his waking time, his leisure hours? If he has not been trained so that these may be profitably spent in self-development, he will be obliged to waste them in idleness or in things which may undermine his morals, his health and his entire future.

In stating the four indispensable demands in modern education, Dr. Thomas Jesse Jones, special advisor to the United States Bureau of Education, makes the following list which we consider very wise.

1. Health and sanitation.
2. The appreciation and use of environment, material and human.
3. The household and the home.
4. Recreation and culture.

That is, education must first af all concern itself with adequate provisions for these relations to life.

Because music bears so directly upon the household and the home, recreation and culture, it is of vast importance in the upbringing of the child. The child with a good musical education need never worry about having a thoroughly delightful and profitable way of spending the leisure hours. He is placed in position to develop his body, mind and character through the most delightful of arts. He need not resort to trashy reading or questionable movies for his amusement. There is no study which excels music as a means of providing for those very important periods in our daily lives—our leisure hours.

Giant Minds and Modern Music

The process of bringing the hard-boiled educational specialist of the seventies to realize that music had within itself any characteristics which would make for pre-eminent position as a practical teaching subject was so hopeless that musicians themselves gave it up in despair.

These positive gentlemen catered to business men equally "Hard-Boiled" and, if they dared even suggest anything in school or college work which was not "practical," they were excommunicated.

About a year before the death of the late tobacco magnate, James B. Duke, we had an opportunity to converse with him on musical education. Mr. Duke had just given an imperial fortune to Duke University at Durham, North Carolina. Mr. Duke, in giving his opinions, said, "Boys have no business with music. It's all right for girls, but the boys have to work."

It was quite evident that Mr. Duke had never studied music to any extent because, if he had done so, he would not have implied that music was not work.

The educators of Mr. Duke's era looked upon music as a very pleasant accomplishment for girls and one which would serve to keep them free from bothering with what the "Hard Boiled" gentlemen considered the more serious and more important problems of life. Therefore a great part of the work in the old-fashioned girl's schools, notably in the South, was spent upon the study of music, sometimes of a very trifling kind. The result, in such schools, was that the music literally swamped most of the other academic work. Only the circumstance that music was a great revenue producer for the school insured its continuance.

Enter another kind of "Hard-Boiled" educator. He stood petrified on the rock of scholastic standards. Music had interfered with these standards according to his way of thinking. Therefore, "out with music!" That is, out with any kind of music that might show a profit in the college comptroller's report and take corresponding interest from the work of the other departments.

Scores of colleges went through this process and left the unfortunate muse shivering on the academic doorsteps. In the place of actual music study, was substituted what came to be known as "theory." The same "H. B." educators, who would have laughed themselves sick at a University which attempted to conduct a medical school or an engineering school without practical laboratories, were perfectly content to have music go without.

Then came the great change. Much of it is due to the Yankee sense of Dr. Charles E. Eliot, former President of Har-

vard College. Dr. Eliot saw music in its real worth. He saw that there was nothing in educational life which so disciplined the mind for rapid, accurate thinking in coördination with the muscles and nerves of the body as did music. Then he probably noticed that many of the greatest thinkers of the world had had this discipline and that they were glad to state their opinions of the immense value of music in actual life work in other occupations. These giant minds, these world intellects, told how music made them think clearer, quicker, sharper; how music rested their over-taxed brains; how it brought great joy to their off-work hours.

The result is that in colleges everywhere the serious and experienced members of the faculties are beginning to realize that a college without a well accredited course in applied music is greatly handicapped in the modern strife for educational preëminence. Never before has there been such widespead interest in the practical study of music, in university circles.

Are Conventions Worth While?

We went out to Dayton, to the Music Teachers' National Association convention during the last week of December. The convention was held with the backing of the local business interests, represented by Mr. Kelso and Mr. Smith, and by the leaders of Dayton's social life, Mrs. E. A. Deeds and Mrs. H. E. Talbot. The delegates and speakers had a hard time in keeping from being kidnapped by the splendid Daytonites who were most anxious that the visitors should know more of the charms of that progressive Ohio center that has given to the world the flying machine and the cash register, to say nothing of electric lighting for rural districts, electrical refrigeration, and last, but quite as significant, the remarkable Dayton Westminster Choir of sixty highly trained singers specializing in *á capella work*.

The convention was held in a fine modern hotel with excellent facilities for meetings. There were some thirty-six "papers," all discussing subjects which their authors thought it worth while to come hundreds of miles to deliver. The members received them with great enthusiasm. It is one thing to read a paper in the annual report and quite another thing to get it with the personality of the speaker combined.

If one goes to a convention for the papers alone, the investment of time and carfare are questionable. The big thing is the personal contact that one gets from other men and women in the profession. This convention was splendidly attended and soon became a kind of clearing-house for musical opinions from New York, Massachusetts, Utah, Iowa, North Carolina, Kansas, California, Pennsylvania, Toronto, New Orleans—everywhere. Was it worth while? Well, if you could have heard the hum of conversation and the enthusiasm of the delegates, you would not ask this question.

The convention was ably presided over by the President, Leon R. Maxwell, of New Orleans. Gustav Saenger, famous Voice expert, was present and delivered a notable paper. The convention will be held in Rochester next December. The president for next year is to be, we understand, H. L. Butler, Dean of the School of Fine Arts at Syracuse University.

Any music teacher may join the Music Teachers' National Association by sending $4.00 and a letter of application to the Treasurer, Waldo S. Pratt, 86 Gillett Street, Hartford, Connecticut.

As the Association was founded at Delaware, Ohio, in 1876, largely through the initiative of Mr. Theodore Presser, we are naturally interested in the Fiftieth Anniversary next December, which will be held in the home of the wonderful Eastman Conservatory at Rochester. Why not join now and arrange to be present upon this historical occasion?

America and Education

According to Hon. David F. Houston, America spends more than all other lands combined upon education. Question: How much of America's world prestige is due to this?

Another Notable Special Issue

Thousands of Etude readers tell us that they save our Special Issues of The Etude for permanent reference. Thousands of others have written us years after the publication of some of our special issues, in order to secure copies which only too often are out of print. Our Special Chopin Issue of February will be followed in April with a Special Hungarian Issue with articles and interviews from Erno Dohnanyi, Margaret Matzenauer, Yolando Mero and other world-famous Hungarian musicians. We have spent years in focusing upon the kind of educational and "human" musical material which we know our readers enjoy and which will give them information rarely found in libraries of books. We ask our friends to advise their musical acquaintances and pupils of this issue in advance so that there may be no disappointment in securing copies.

Some recent Etudes have been "over-sold" a few days after publication.

The Associated Glee Club Movement

Perhaps some of our friends who "listen in" heard the wonderful concert given at the Metropolitan Opera House in New York under the direction of The Associated Glee Clubs of America last year. There was a chorus of one thousand men under many able directors, and eminent soloists. Although we heard this great musical event in our home over one hundred miles away, we shall always think of it as one of the great musical thrills of our lives. Meanwhile the associated glee club movement has grown so rapidly under the able presidency of Mr. Orr, it will require a great New York Armory to hold the throngs who desire to attend this year. Last year every seat for the concert at the Metropolitan was sold weeks in advance. This movement promises to lead to the formation of hundreds of new male Glee clubs and a great impetus to the entire musical life of the Nation. Should any of our readers desire to have further information about the movement, they may write to Kenneth L. Clarke, the Executive Secretary, at 62 West 45th Street, New York.

Violinists or Fiddlers?

Henry Ford has been having "the time of his life" listening to venerable rural fiddlers play tunes that are dear to the heart of the great manufacturer. According to report Mr. Ford disdains music that comes from higher sources. He is a man of the people and wants what he feels is the people's music.

All honor to the old country fiddlers, who form a kind of musical species of their own. In Providence, Rhode Island, there was a convention of these folk early in January; and Joseph Shippe of Plainfield, Connecticut, was declared the champion. Being champion fiddler must be something like being a champion poet or a champion clergyman. Joseph let his bow fly and tapped off the rhythm with his aged foot, in a way that brought great joy and great envy to his octogenarian rivals. His *piece de resistance* was the "Devil's Dream;" and when he had used up all the available rosin, the crown of musical immortality was placed upon his head.

Unquestionably Joseph has reached the hearts and the feet of many of his neighbors for years. His music has as much to do with the great music of the world as school-girl doggerel has to do with *verse libre*. Perhaps he has a greater mission in his field than has Kreisler or Heifetz.

Do You Want to Play the Beethoven Sonatas?

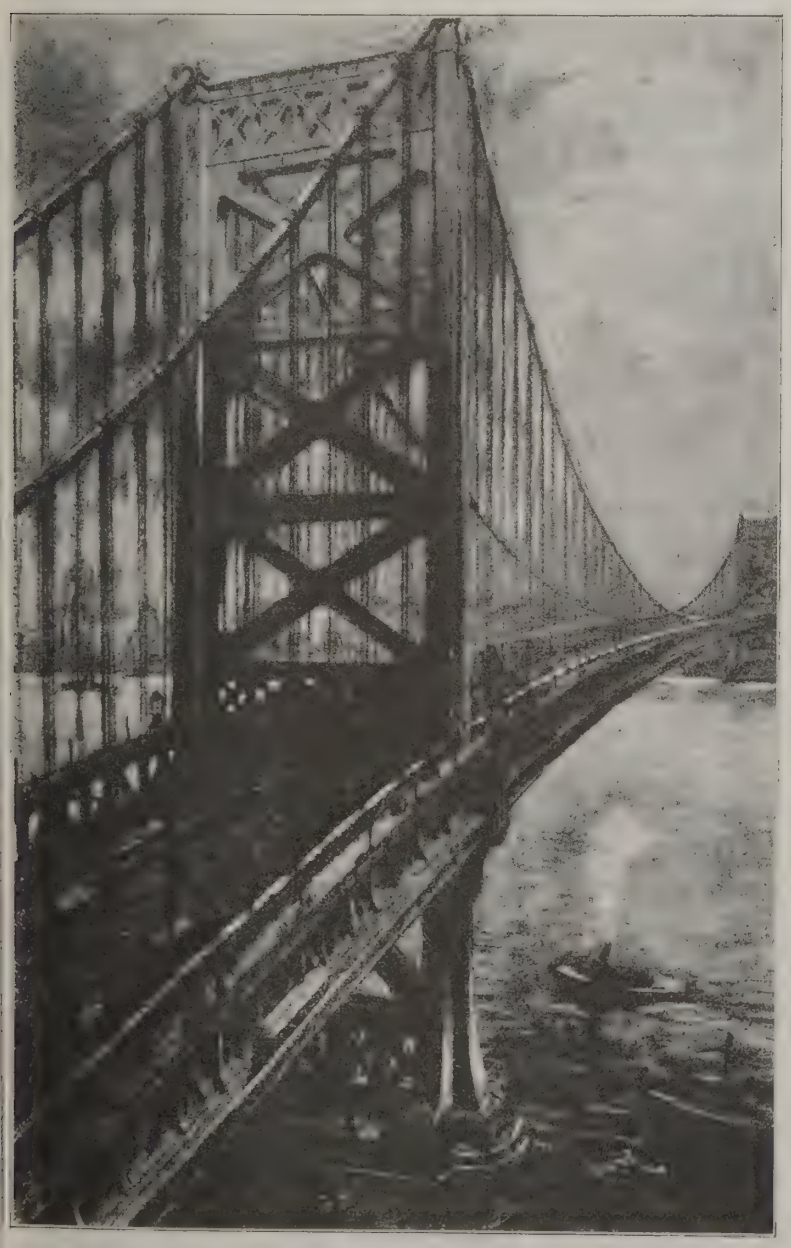
The majesty of the Beethoven *Sonatas* remains serene and noble, after a century of great musical advancements. Every piano student has a keen ambition to play this wonderful literature. In our May issue will commence a notable series of analytical articles upon these great works by one of the biggest brained musicians of the present day, Professor Frederick Corder, of the Royal Academy of Music, at London.

"Under No Consideration Would I Give Up Music"

An Interview with the Distinguished Engineer,

RALPH MODJESKI

Builder of Fifteen World-Famous Bridges



RALPH MODJESKI
The World's Greatest Bridge Builder

Biographical

Ralph Modjeski, the greatest of living bridge engineers, was born at Cracow, Poland, January 27, 1861. His father was Gustav Modrzejewski and his mother was Helena Modjeska. The family name was changed when they came to America in 1876. This was done for the purposes of naturalization. Mr. Modjeski graduated at the College Ponts et Chaussees with honors. He has designed and built many of the foremost bridges in the new world. His great achievements have brought him distinctions from many learned bodies, establishing him as one of the foremost engineers of his age. Few people know that he is a most accomplished musician, who at one time studied diligently with the view to becoming a pianist. Mr. Modjeski is a man of slender stature, extremely modest, quiet, genial and gentle in his demeanor, but with the intense intellectual force and poise so often found in the Polish race. In many years we have never presented as powerful and significant an argument for the value of music in the daily life of the busiest men as that which Mr. Modjeski has given to THE ETUDE in this most interesting conference.

"Music is an art of such an unusual nature that when I assert that every man should study music, I know that there will be some who will not grasp the reason of such a positive and far-reaching statement. No one who has not studied music is in a position to appreciate its manifold advantages, not merely to those who devote their lives to music, but to those who have a part in the everyday work of the world and feel the need for both a stimulus and a rest from the humdrum of that merciless ogre that we sometimes call modern business. Particularly in America, where every second of the working day is expected to count for so much, the man worked to the last degree of his nervous and brain capital must have something to which he can turn that will save his brain from exhaustion. Possibly this is the greatest office of music and the thing which makes it indispensable in American life.

"Fortunately, American business men are beginning to realize this in some measure (many of them, alas, too late). More attention is now being given to music in our country than ever before. The coming generation will possess far more men who have at least some musical ability than the past. It has been my firm conviction that colleges spend a vast amount of time upon every manner of sports and other activities which could be spent with far more advantage to the student in after years if more actual courses in practical music were introduced. By practical music I mean learning how to play, to interpret; not merely a few archaic facts about musical theory and musical appreciation, valuable as these subjects unquestionably are in their places.

The Longest Suspension Bridge in the World, to be Opened on July 4th
e fine drawing is presented by the courtesy of the New York *Times*.

Intellectual Discipline

"The music student should have the means to enjoy music; and music is enjoyed most when it is performed. It is my conviction that the boy who has the advantage of studying music and art is better fitted for future life, even in other professions and in business. It may very definitely contribute to his success, by giving him vision and daily inspiration to raise his soul, and by this I mean his whole being, to higher levels of human experience and accomplishment.

"The intellectual discipline of music is enormous. I am positive that it has done a great deal for me. I would not give up what I know of music for any consideration. The mind drill can hardly be compared to mathematics, except that it is a most logical and orderly art. It is inconceivable that the training that puts the human mind through a great number of beautiful melodic and harmonic patterns, all gracefully and often powerfully designed with marvelous symmetry and balance, can fail to be of great benefit to the student, particularly in the formative years. This may be difficult for the business man to understand. It may be difficult for some educators, who have never had this experience, to understand, but, if they had had the advantage of reaching that stage of advancement where they could play with comfort a few of the Bach *Fugues* from the "Forty-Eight," they would be forced to realize just what is meant by the statement made at the start of this conference.

A Thorough Training

"It was my good fortune to have an excellent musical training in my childhood. My father was musically inclined but not a musician. My mother played the piano unusually well and had a beautiful singing voice. In fact, she had expected at one time to become an opera singer instead of a tragedienne. My piano lessons began at the age of ten, and since that time I have never been without contact with music in my life.

"My teacher at one period was the father of Josef Hofmann, the famous pianist. He was Casimir Hofmann, professor of harmony and composition at the Cracow Conservatory, and also conductor of the opera in Cracow. The brilliant career of his son has eclipsed that of the father, but the elder Hofmann was regarded as one of the finest teachers of Poland. He also composed many works, including operas, which were given with success. Small wonder that the son of so able a father should become one of the greatest musicians of the time. He was a very careful and painstaking master. When I went to Hofmann I was already sufficiently advanced to have him start me upon the Tausig Clementi *Gradus ad Parnassum*—those technical stairs which have been found so necessary to many pianists. I still employ the Tausig daily studies when I need to keep up my technic. Hofmann also taught me much Chopin and some of the Mozart and Beethoven *Sonatas*.

A Story of Josef Hofmann

"My mother used to tell me many stories of Josef when he was beginning to attract immense attention as a prodigy. Once she went with the parents and the little pianist to visit a very prominent musician in Warsaw named Louis Grossman. They were very anxious to test the little child's sense of absolute pitch. It was difficult to get him interested. Finally Grossman produced some candy and the tiny Josef went under the sofa to eat his candy. From this point of seclusion and vantage the child called off the notes as Grossman struck them at the keyboard, never making a failure.

"I always wanted to become an engineer, and when it was thought that I was sufficiently prepared I was sent to the great engineering school in Paris, Ponts et Chaussees (Bridges and Roads). My first entrance examination was a failure. There were one hundred applicants to take the examination and only twenty-five openings. The system flustered me greatly. I was placed in a room with a solitary examiner and was entirely unfamiliar with the methods. The result was that I passed twenty-seventh in the list, and was rejected with great chagrin and discouragement.

"Thereupon I decided to abandon the prospect of becoming an engineer and to devote my attention to becoming a professional pianist. For eight months I studied the instrument with this in view, often studying from six to eight hours a day.

"Then I decided to take the examinations again at the engineering college. This I did and succeeded in

passing fourth in the list. Notwithstanding the application required by such an exacting science as engineering, I have always found time to keep up my music in some practical manner.

Daily Practice

"One cannot have anything without paying for it, and the price of musical ability is regular practice. I usually play after dinner. Sometimes I play for an hour or two, and often several hours on Sunday. I have tried golf and other forms of physical exercise, but I never get from these what I get from music.

"It is not easy to tell the reason why music is so restful. Possbily it is because one cannot think of anything else but music when playing. An entirely different set of mental cells is probably employed in this way and the others rested. Of course it is possible to play finger exercises and find the mind wandering to other things, but when one plays a good composition properly it demands all of the attention to the last degree.

"Then there is a great satisfaction in mastering a musical composition—playing it from memory in your own fashion. The person who does not know how to play does not understand this. When I first learned Chopin concertos I had a feeling of exaltation which is hard to describe. There is a sense of possession and intimacy with the work that can never be acquired by hearing it.

Famous Pianists

"More than this, the one who knows how to play has a new joy in life, in being able to listen to music more intelligently. This has meant much to me. One of the greatest pianists I have ever heard was one who is scarcely known in the new world. She was admittedly the greatest pupil of Chopin. Her name was Countess Czartoryska. She was very wealthy and never played in public except for charity. I was fourteen or fifteen years old when I heard her, but her wonderful playing of Chopin remains with me to this day. It has helped me ever since in understanding and playing Chopin.

"Quite naturally, my Polish ancestry has given me a great love for Chopin, and I have studied and memorized many of his Nocturnes, Polonaises, Studies and Mazurkas, but I have not made the error of neglecting the master works of Bach (I played several of the fugues from memory), of Mozart, Beethoven, Weber, Schumann and others.

"Of the composers of to-day, I am most interested in the works of Sergei Rachmaninoff. I find very little that in my judgment appeals to me in modern composition of the so-called futuristic type. Just as the cubist art is passing, so will cubist music pass. It was a fad, like the hoop skirt and the bustle, which people tolerate for a while, largely because of curiosity, but it lacked logic and organic structure. Meaningless words do not make poetry, and music without inspiration of a virile and sincere character cannot be expected to endure.

"It has been my good fortune to hear many of the greatest pianists in my time. Paderewski, who seemed to be destined for immortality from his youth, and who was known as the second Chopin in Poland long before he ever thought of coming to America, was a frequent visitor at our home, and I came continually under the inspiration of his masterly playing. Once at the keyboard he always seemed untiring, and would play repeatedly far into the small hours of the morning. Mme. Sembrich was also an intimate of our family. I never heard her play anything but her accompaniments. My mother, however, used to tell me that she was an exceedingly fine pianist as well as an exceedingly fine violinist. Once she gave a recital at which she sang, played piano and also played violin, all with huge success.

Poles Fine Musicians

"The Polish people have the credit for being fine musicians, but I often think that they at the same time have unusual opportunities from youth. They are surrounded by people who love music and to whom the ability to play is a real accomplishment; something that wins them honor and distinction and higher social recognition. Possibly this is because they have had a degree of continuous civilization for so many centuries.

"To revert to the pianists, I would like to say that I consider a ticket to a recital as good as a fine lesson to any pupil who knows how to appreciate it. To have heard Mme. Essipoff (the first wife of Theodore Leschetizky) play was a great sensation. Her extreme success and phrasing were unforgetable. I would consider her the second best Chopin interpreter I have ever heard.

"Anton Rubinstein was a most powerful talent. His playing was impetuous, and he was sometimes accused of playing some works, such as the Beethoven *Sonatas,* at far too great a speed. It seems as though he was continually harnessing a colossal force almost beyond human control. His brother, Nicolai, was a magnificent pianist. Many admired him as much as Anton, but he never achieved the same fame.

"Von Bülow, with his precise, cold, scholarly interpretations, was a great master in his way. Everything was so organically perfect that it was like a wonderful piece of musical machinery.

"Sophie Menter was a pianist of great virility and spectacular power, after the manner of Carreño. She perhaps lacked the fine psychic interpretative characteristics of such a pianist as Mme. Bloomfield-Zeisler, also always a welcome and admired guest at my home."

Are Scales Worth-While?

By Sid G. Hedges

WHY it is that nearly all of the great teachers and great players laud scale study so highly?

Scales are a fetish to some teachers and a tribulation to their pupils.

From a lesson with one of these teachers it would seem that to play scales perfectly is the end of all music study. Small wonder that the pupil finds it hard to retain interest in his study. To the learner the ability to play scales faultlessly does not appear a very thrilling goal. And the vast variety of scales swiftly revealed to the timorous student is terrifying. There are chromatic scales, harmonic and melodic minors, scales in thirds, sixth, octaves and tenths, and in double thirds; and most of these can be played both in similar and contrary motion. Besides all this there is the bewildering twin world which includes dominant and diminished sevenths in arpeggio, and major and minor triads—with numberless inversions.

It is no wonder that the poor learner is troubled.

Yet there is one thing which should always correct his, and the teacher's, perspective; it should be remembered that scales are not an end in themselves, they are merely the means to an end. They are a useful gymnasium in which points of technic can be practiced.

Supposing, for example, that you wish to play a piece in six sharps, but are not at all sure of the sharps beyond the third. By playing through the six-sharp scale a few dozen times, the fingers will become accustomed to the unfamiliar key and the D, A and E sharps will be safely recalled to mind.

Or supposing that you are troubled by the difficulty of making a clear distinction between staccato notes and notes that are merely detached. By taking any sort of study or piece, a certain amount of attention will necessarily be used up in reading the music. But by playing a simple C or G scale one's whole attention can be given to this point of technic, for the scale itself can be played without the slightest thought.

This is how scales should be used. They should be played until they can be performed without the slightest conscious thought; then one's full attention can be given to the technical manner of their performance.

One of the difficulties of every instrumentalist is to make his fingers work with perfect evenness through long, swift runs. Scales afford the ideal preparation; for evenness is the most distinctive characteristic of a good scale or arpeggio.

Arpeggios make one familiar with keys and chords and thus help tremendously in improvising or in playing by ear.

An ideal way to begin the day's practice is with arpeggios and scales, slowly at first, and working gradually up to the best pace that one can make.

So, although scales need not be worshipped, they should certainly receive that measure of respect to which, by their undoubted usefulness, they are entitled.

"Every musical work comes through impressions that crystallize in the brain, in the ear, and little by little, yet mathematically, gather substance as notes and rhythms.—Bach wrote for the harpsichord because it was the instrument of his epoch. I am living with my time. Why should I not write a piece for mechanical pianos?"

—IGOR STRAVINSKY.

Winter Musicales

By Rena Idella Carver

VARIED, attractive and interesting programs may be made up of pieces descriptive of King Winter's sway. Short poetical prefaces are worth the effort on the part of the instructor.

In this quotation from "A Drowsy Winter's Day" the effect of pale winter sunshine is drawn,

"Palely he shines, yet touching by his glow
The madder birch-tops with a tint of rose
And purple shadows, as with motion slow
The branches sway where'er the light wind blows,
Marking the hollies in their sombre green
(Clothed 'midst the naked boughs of mightier trees
Where they still keep the soft rain's glistening dew;
Or in the furze that bounds the old bohreen
Some bolder blossom than the rest he sees,
And lights this tiny speck of golden hue."

1. Winter .....*Svendsen*
2. November (Troika) .....*Tschaikowsky*
3. December .....*Tschaikowsky*

"I love blue shadows laid
Like curling plumes on snow;
And icicles—clear shafts of jade—
And dreams that a thrush flings
Against cold stars."

"The trees, all crystallized by the melted snows,
Sparkle with gems and silver, such as we
In childhood saw 'mong groves of Faerie,
And the dear skies are sunny blue as those;
Still as thy heart, when next my own it lies
In love's full safety, is the bracing air;
The earth is all enwrapt with draperies
Snow-white as that pure love might choose to wear—
O for one moment's look into thine eyes,
To share the joy such scene would kindle there!"

1. Intermezzo, Snowflakes.....*Von Wilm*
2. Coasting .....*C. Burleigh*
3. Snowflakes, Mazurka .....*Von Wilm*
4. Snow Bells (4 hands) ..... *F. Behr*

If desired, a brief paper on Christmas in different countries may be used here.

Christmas Carols of many lands may be sung by group or by all the pupils.

A tableau may be presented on the stage while hidden songsters give the carols.

1. Christmas Eve .....*Heins*
2. Christmas Bells .....*Rathbun*
3. Knight Rupert .....*Schumann*

"The morning is ten thousand miles away.
The winter night surrounds me, vast and cold,
Without a star. The voiceless fog is rolled
From ocean-levels desolate and gray;
But over all the floods of moonlight lay
A glory on those billows that enfold
The muffled sea and forest. Gaunt and old,
The dripping redwoods wait the distant day."

1. January .....*Tschaikowsky*
2. Midwinter .....*MacDowell*
3. Norwegian Love Song.....*Clough-Leighter*

A number of other pieces to select from are given also

Magic Bells.....*Geo. Martin*
Under the Mistletoe.....*H. Engelmann*
Christmas Bells.....*L. Kohler*
Chiming Bells .....*Trojelli*
The Coming of Santa Claus.....*F. L. Eyer*
Bells of Christmas Eve.....*H. Wenzel*
The Arrival of Santa Claus.....*Engelmann*
With Wind and Tide March.....*H. D. Hewitt*
Winter Tales .....*A. Czibulka*

"It may be true that we spend more millions of dollars on music than any other nation, but the question still remains: Do we get good value for our money?"

—DANIEL GREGORY MASON.

"Genuine, that is, inspired music is an expression of the eternal ideas of inner life in any of its phases. In the moment of inspiration, the 'creative genius' is not the mere spirit of the individual, but the latter merged into the spirit of life in one of its phases ('eternal ideas') beyond the confines of individuality."

—HEINRICH PFITZNER.

Equal Finger Development

By the Noted Piano Pedagog

PAUL KURSTEINER

Professor of Pianoforte Playing at Ogontz School

THIS PARAGRAPH will state at its very beginning something that may surprise students at large, may give them food for thought upon a subject which many of them have never noticed, to which their attention has seldom or never been called. It is a subject which our sub-conscious mind recognizes in our practice, there being always present the idea that our fingers are all being exercised the same, each one holding its place and pace with the others. The statement to which we alluded above is this—that the vast number of etudes and studies written as exercises, and to be practiced as such, are absolutely worthless when the idea of equal finger development presents itself. We except, of course, those studies written expressly for that purpose.

Our aim here is not to break down or destroy all faith in all etudes, but simply to call attention to the rank and file of these hundreds of them which have been written and published since the idea of their necessity was first conceived by those who primarily thought them out. It is not necessary to mention any just now by name, but we simply refer to them as a class. You may see the idols of the past arising in their graves to protest at such a sweeping statement; and many of those living will hold up their hands in holy horror at such a quasi rash summary, regarding it as false doctrine and heresy. Let them not become alarmed, for we have in mind this one, single item—Equal Finger Strength. We are now speaking technically.

Weak Fingers and Strong Fingers

THE FINGER-BOARD of our piano is so arranged and composers are forced to write so that the most work falls upon the second and third fingers, less so the thumb, still less the fourth, and least of all the fifth. It goes without saying that unless some work is done specially for those fingers naturally weak, there still exists at the end of a period of study, say, two or three years, this discrepancy of strength between the grades of individual digits. Look back for a moment, you who have practiced these numberless etudes, and see if this be not true. The acquisition of the necessary strength lost by months of neglect, cannot be effected by a few hours of spasmodic practice, as the writer knows from bitter experience in his own study and from that of his pupils.

It is a physical impossibility to regain at a moment's notice the muscular strength only acquired by steady, daily work. Any physical instructor will tell you that a certain number of minutes a day devoted to calisthenics is of far greater value than an hour's work twice a week. The reason of all this foregoing lies in the fact that most exercises for beginners (and many of the etudes for advanced players) are formed with the fingers running 1, 2, 3, 4, 5 as a basis, this being peculiarly suited to the hand.

Regarding Czerny

TAKE LOOK AFTER book of Czerny, for example, is practiced, laid aside and a new one taken up, and often no trial of strength in each individual finger in its relation to the others is made. It is without doubt a fact that when you look over your own work, besides talking over things of mutual musical interest with your fellow-students, you will find that most of your fellow-pupils have or have been studying these etudes simply as etudes, because you and they have always heard from friends and teachers that this is the thing to do in order to attain technical proficiency. It has been done for years, this course of procedure, and in a way the etudes written for piano are generally intended by those writing them to be practiced for speed and endurance. For these two things the writer can only say that he agrees with them absolutely. There is nothing so good for these two things as the etudes written by Czerny and composers like him. The etudes of Chopin, which bear that name, are far more than etudes in the strict sense of the word, being really concert pieces to be played only by those having arrived at the highest state of proficiency in the art of piano playing. So these etudes of Chopin are not included in the same class of those mentioned above, which are really to be used for preparation. One thing might be mentioned here. It is this: At the time Czerny wrote his etudes the pianos of his day were furnished with what was called the Viennese mechanism, which had a very light action and very shallow—the key being capable of a very slight depression into its bed as compared to the actions of our modern grand pianos. This action made it very possible to obtain a high degree of velocity. You will find the original metronome markings very high; for, being so light and not requiring the strength necessary for modern actions, it made one's fingers seem stronger than they were. The writer has played upon them.

On pianos of the present day it is difficult to attain those speed marks in as short a time as they used to do, because the present-day action is much deeper and stiffer, requiring more strength to make a tone than was used in that period of time, for Czerny lived 1791-1857. The great Liszt was one of his (Czerny's) pupils. He thought so highly of these Czerny etudes for his own pupils' use to attain the highest degree of proficiency in technic that one of the writer's instructors, upon asking Liszt what he should bring for his first lesson, was told to bring Bach and Czerny. So we have the greatest authority as to the benefits to be derived from those works.

In order to show just how these etudes in general do not contribute to an equal finger development, the writer has chosen the first study of Czerny, Op. 740, as an example. While you are reading this article bear this one phrase in mind—equal finger development—for that is the one idea the writer wishes to drive home in the minds of all his pupil readers. In this study only sixteenth and a few eighth notes at the end of the phrases have been selected, the further comparisons being based on those as a foundation, the chord notes not being included in the computations following.

Comparisons

THIS ETUDE is so written that there are for the right hand 823 notes, for the left hand we find 906. In the sub-division following of the number of times each finger is used, attention is called to the proportionate use of the separate digits. In the right hand the number of notes for each finger is cited:

5th finger	90
4th "	167
3rd "	218
2nd "	206
1st "	142

Computation for the left hand:

5th finger	112
4th "	209
3rd "	228
2nd "	218
1st "	139

The first thing to notice is the discrepancy between the number of times the fifth and thumb are used in contrast to the others—not to mention the fourth. Make the same computation here as is made for the scales further on in this article, but make the time one hour in extent. Put the metronome at 88. Play one note for each tick, for that is a slow, conservative tempo in which to practice while learning for the first time. This mark of 88 means you will play 88 notes a minute. Practicing for an hour this foots up 5280 notes. In this hour of practice the simple rule of proportion tells us that the number of times the fingers are used is as follows, fractions being omitted:

Right Hand		Left Hand	
5th finger	578	5th finger	652
4th "	1071	4th "	1218
3rd "	1386	3rd "	1320
2nd "	1321	2nd "	1270
1st "	911	1st "	810

This table is for but one hour's work, besides, the speed is comparatively slow. By learning the notes correctly in one hour, in the next hour you increase your speed—still increasing your speed as you become more and more proficient, you will arrive at that of four notes to the metronome set at 132—a good speed for the average second-year student studying with professionalism or some goal of earnest work in view, say, three hours a day in general. The computations you see below are almost incredible. No one would believe, unless he saw it in black and white as a calculating, cold-blooded fact. With the metronome set at 132 playing four notes to a tick, by the time an hour has elapsed (it makes no difference if you split up your hour's work in fifteen or thirty-minute periods) thirty-one thousand, six hundred and eighty notes have fallen from your fingers. The proportionate number of times the fingers are used is as follows, fractions omitted:

Right Hand		Left Hand	
5th finger	3464	5th finger	3916
4th "	6428	4th "	7308
3rd "	8380	3rd "	7972
2nd "	7892	2nd "	7623
1st "	5466	1st "	4860

Besides noticing the fewer times the fourth and fifth fingers are used, realize that the strong fingers, the third and second, are being used twice as often, becoming stronger and stronger, while the fourth and fifth seem to become weaker in comparison. How does anyone expect an equal finger strength practicing in such a manner? The question is asked kindly and not as a carping critic. When you begin to multiply that one hour's work by the number of hours you will spend on such an etude the discrepancy between the finger strokes is still more incredible.

Suppose we choose another of the Czerny studies of Op. 740, just to further our contention. It is the one numbered five, written in the key of E-flat. We will take the right hand for example. There are 896 notes for this hand; and, to look at the etude, one would say at first glance, "what a fine one to study," for it is in scale form, to be played very rapidly. Upon computing the number of times the fingers are used, it hardly seems credible that out of 896 times the fingers strike collectively, this poor, weak fifth one is used only 21 times. If you do not believe these statements, look them up and take the trouble to count, as your writer has done, because all these computations and numberings have been carefully done, checked up one by one and, what is more, they prove. Imagine what your fifth finger will gain studying this etude and similar ones written in what is commonly called the "black key" scales. Make the same kind of proportion as has been done above and know the kind of benefit the fifth finger will derive from being so frightfully neglected.

Now let us find an etude written expressly for the left hand. In looking through this same Opus 740 of Czerny we select the one in A minor, number 41 of the series. Looking it over, sizing it up for the benefit to be derived from it, we cannot help but be impressed by its possibilities. It looks as though it were just the thing, and in some respects it is; but, bearing in mind our idea of equal finger development, counting the number of times the fingers are used separately, we again find the same discrepancy between the separate finger strokes here as in the majority of the other studies of the same class. In this etude there are 432 sixteenth notes. Of this number the fifth finger is used 45 times. The fourth is used 33 times out of these 432 times all the fingers are used. Make your own computation again as to the proportionate amount of practice the fourth and fifth fingers will obtain. And so example after example might be given. Some etudes will have of necessity more or less work for weaker fingers, but outside of studies written, as has been said before, expressly for these undeveloped digits, all studies will show this same lack of work for them. This is not a mere statement from hearsay, but a veritable fact. You who read this make the most of it.

Suggestions

YOU OUGHT, from time to time, to try each finger in combination with its neighbor as a trill, for example, or some other suitable exercise, just to see if you have gained anything in excess of the speed and strength attained the month before. Let it be by the standard of the metronome which, like justice, is blind and inexorable. It ticks at a certain speed and will not slow down to help you out if you cannot keep up with it. If you can play your two-finger exercises and the like at a certain point last month and upon trial by putting the metronome a little faster you find you cannot obtain that extra

speed, you must surely have not improved in your work. This is the real acid test. You have or you have not, there is no medium. Of course one attains the limit of technic after many years' work where the speed cannot be accelerated; we all know that, but these remarks are intended for those in the developing state, not for those already proficient.

By all means do not study your etudes one after another just as they are printed in the collection. Simply because the printer and publisher have bound them in a volume the way you see them is no reason for you to follow their routine as to what etude should succeed the one you have just finished. How can they know your individual needs? Look through the book, choose the special one you need for that certain lack of technic in your fingers. Many of such studies are merely repetitions of the same form of finger work. What is the earthly use of doing the same thing over and over again after you have once learned it? Let your instructor pick out something you need if you are at all doubtful of your own powers. Think of the time you will save and the opportunity gained for learning new material. In all your work keep those computation tables before your mind's eye, for in them lies the keynote of many a persevering, honest student not attaining the end for which he so eagerly longs.

We will all agree that those fingers used the most receive the most exercise and training. The logical conclusion of this statement is that those fingers used the most become the strongest. Many students work for months, practicing etude after etude, study after study, given them by their teachers, wondering why that with all this study and work, doubtlessly conscientiously and honestly done, the fourth and fifth fingers do not become as strong as the others. This fact becomes painfully evident to them when some brilliant passage occurs which finishes with these same two fingers just mentioned. Their comparatively weak condition makes a fitting climax impossible, and although the correct idea is present in the mind, the result of their failure to be in the same condition of strength as the others causes a very mediocre effect. It is a generally recognized fact that the climax is prepared as the passage ascends—not always, but most frequently. This climax can be executed with the necessary power and brilliancy only by those fingers being in a condition to achieve the desired end. Scales beginning on black notes do not use the fifth finger at all.

Regarding Scales

WE COMMENCE this section by expressing the firm conviction that scales are the best means, so far as the writer knows, by which one can attain speed and fluency in passage work. Do not forget that conviction in reading the rest of this article. That seems to contradict the statement at the commencement of this paragraph. But when you once begin to realize that scales, as scales, are of no value for equal finger development (and do not be astonished at that statement) you will undoubtedly change your mind. Should you doubt those preceding words, you will be shown practically and conclusively just why they are true.

To return just once more to our conclusion some lines above; that is, that those fingers used the most become the strongest, bearing in mind constantly equal digital training. Take any scale, for instance, using the fingering in the scale of C, and it might be said, we are indebted to the great J. S. Bach for it. The fingering for one octave is 1 2 3, 1 2 3 4 5. We take the right hand as an example. The same truth stands for the left. When a "white" scale is finished, the fifth finger generally ends it, irrespective of how many octaves have been used, thus causing the fifth finger to be used once. Playing this scale of C, one octave in extent, the following results: the fifth finger is used once, the fourth once, the third, second and thumb twice each. Practice this for fifteen minutes as an example. Put your metronome at 80, playing at the rate of four notes to a beat. This will make forty-eight hundred notes played in these fifteen minutes, and the fingering we use will be 1 2 3, 1 2 3 4 5, 4 3 2 1, 3 2. This combination for this one octave causes the fifth to be used (the following are in round numbers) 343 times; fourth, 686; third and second, 1372 each; thumb, 1029. Mark you, these numbers represent only fifteen minutes' work.

Suppose you practice this scale or something similar fifteen minutes a day for a month—say, twenty-five working days. Let us see the result. The fifth is used 8600 times; fourth, 17,150 times; third and second, 34,300 each; thumb, 25,750. One can calculate what the result will be in a six months' period of study. Is it not proved to you by this mere mathematical calculation the contention made that scales are not conducive to equal finger development? And this is not mentioning the fact that in scales beginning on a black note the fifth finger is not used one single time!

The computation of this preponderance of work for the strong fingers given here becomes even of greater intensity when an extended scale is used, for the numbers given above indicate a scale of but one octave. Suppose you take a scale of three or more octaves. Can you not see that while the other fingers are used so many, many times, the fifth is used only once, at the top? Use your own ingenuity and make your own calculations of strokes the other fingers are used while the fifth is absolutely idle. The numbers run up into the tens of thousands. This is not exaggerated, but plain, cold, common-sense fact. Arpeggios are just as bad, the fifth finger being used only at the top, as a rule, and sometimes not at all. However, one can take a grain of comfort from the fact that scales and arpeggios are unexcelled for acquiring speed and endurance.

When you study any composition wishing to gain the most technical good from your work, do this: Count the number of times each separate finger is used separately, then make a special technical study for those fingers which are not used as often as the others.

Regarding Bach

ONE REASON why those who study the works of Bach, large and small, generally excel in almost equal finger strength, lies in the fact that polyphonic playing requires for the most part a larger proportion of fourth and fifth finger use than our modern works. Get your Bach out from your cabinet and see. Furthermore, in Bach you find countless examples of one finger holding a note, the others playing around it, thus giving a practical example of that kind of gymnastics which makes the foundation of so many exercises. Think of the time you would save and still have something to play. Yet numberless students call Bach dry, useless to study, because nothing, according to their idea, can be gained from him.

A real Bach player can execute anything of the modern school, besides that, he is generally a splendid reader at sight, because such music is made up of many voices and accompaniments to the same in contrapuntal form. These are going on at the same time in each hand, training the mind, eye and ear sub-consciously to such a degree that modern compositions seem easy by comparison.

It might be mentioned here that Chopin, in order to prepare himself technically for a concert recital, used to shut himself off from everybody, refusing all social pleasures while he practiced Bach until he felt his technic was equal to a public performance. This kind of preparation holds good even unto the present day. It has been said, and truly, that a word to the wise is sufficient. In closing, stress is laid that, without strong outer fingers, octaves, which form a large and important part of modern technic, cannot be successfully played.

The Most Musical Town in the World

By Enzo Stasio

DID you ever know or suspect the existence of a town where music has the greatest share in the people's lives? Well, Signor Mario Labroca has found it.

He has discovered that music in such a town is not confined to a municipal band or to a choral society, but it composes the very foundation of the social life, the soul of the local industries and the chief material of export.

In "Lucania" or Romans' Time

The small flourishing town is lost among the mountains of Basilicata, a region of southern Italy known as Lucania by the Romans. The name of the village is Viggiano and properly located near the city of Potenza. Its population is not over four thousand people, all vibrating as a string on high tension, all ready to communicate to you in a convincing and sonorous way the enthusiasm of their souls possessed by the passion of music.

An Immense Conservatory During Lesson Time

If you enter Viggiano in the hours of rest you will feel that you have arrived in a very extraordinary town. From all the doors, windows and from the faraway squares, music is heard and makes one feel as if they are visiting an immense conservatory during lesson time.

Harps, guitars, violins, flutes and bassoons all make their voices heard. Such voices seem to be passing through a popular cadence as if exercising on the whole a program to be given shortly.

The people of Viggiano are very studious, and not only in the hours that follow the working time, but also in the moments of leisure during the daily occupations, it is the aim of the good citizen to try to perfect his musical art. This is the reason why in the moments least expected you are reached by the sound of a flute or by the "arpeggio" of a guitar, convincing you of the musical tendency of the town.

The Druggist and the Mayor—Manufacturers of Instruments

When you visit the shops of the village it will seem strange to you that the carpenter, instead of making more tables and chairs, is more interested in the creation of a harp. You will see him all taken up by the serious work, sitting before a piece of wood, engraving upon it deep marks, drawing out with loving care a graceful arm of a harp all completed and polished. You will also have the same experience when you see the blacksmith, whom you will find all absorbed in the making of small keys—keys for guitar, for mandolin, for harp, or, and this is more remarkable, working about to repair a bassoon or a "bombardino," which promise grave and deep sounds.

By and by you will discover more uncommon things, when you hear coming from the back of the druggist's shop from time to time a sound like that of a trumpet; or when you go to pay your respects to the mayor you will note in his room some strange contrivances which, when you will have familiarized yourself with them, will appear to you to be the necessary instruments to build clarinets, flutes and bassoons.

The whole town lives sunken in music. The music staff, the use of which is known to few, because almost all play by ear, is the symbol of the town. The Lyre is the family coat-of-arms of the most humble villager. The sounds of music dominate the population, which knows nothing superior in authority to that of the little song we rendered in the square of the town.

Music in Politics

Here politics springs from music. The mayor can lose his job if from his house a clarinet is produced that is not well made, or if he is stingy with the funds needed by the municipal band, which is the pride of all the citizens. In the past a serious fight took place between two parties—one that was willing to have the musical education directed toward the string instruments, and the other that was inclined to the wind instruments. The fight was harsh and lasted many years with alternative results. The two parties succeeded themselves to power with serious loss now of the one and now of the other. Then everything became quiet, when it became known that wind instruments and string instruments could very well blend together in a surprising mixing of sonority.

The mainspring of profit for Viggiano is the export of musical instruments and the emigration of its citizen players. In fact, the men of Viggiano forward their musical instruments to the nearby towns and sometimes even conquer a little place in the market of Naples.

You can be sure that the guitars of the minstrel, the "tromboni" and bassoons of the small bands of Basilicata come out from this mountain community where a great passion for music is nestled.

The Troubadours of Modern Italy

More can be said about the men of Viggiano, who are artists; you will find them everywhere. They descend from their town regularly, distributing themselves throughout the whole world. Maria Rosselli, whose parents were from this town, is now the first harpist with the Cincinnati Symphony Orchestra of Kansas City, Missouri. Emanuel Gianturco, late Minister of Justice of Italy, came from this town also and was considered one of the greatest statesmen and musicians of that country. And because the attachment to the native land is very strong, when the minstrel of Viggiano has accumulated some money he will return to his town where, if the voice is hoarse he will give himself to the making of guitars, mandolins or any kind of wind instrument.

Harps and Drums as Girl's Dowry

Viggiano is also unique. In what country, indeed, does a girl when she gets married bring as a dowry a harp, a drum, or a bassoon? Such is *Viggiano*—the most tuneful town of Italy, and perhaps the most melodious borough in the whole world.

Mixing Heart With Art

By HARRIETTE BROWER

Author of "What to Play, What to Study" and Numerous Successful Works on Piano Playing

MANY PEOPLE play the piano with most creditable correctness and fluency, especially if they play in public and are called concert artists. They seem to execute all the notes, have much velocity, indeed they even dazzle the ears of the groundlings by rushing over the keys at headlong speed. They have power, too, for they can thunder mightily. But when all is done what does it really amount to? Such piano playing might as well be ground out of a mechanical machine. It certainly is machine-like, and means little or nothing at all; for it never touches the heart.

There is more to be desired in piano performance than correct notes, more than time and rhythm, more than power, delicacy and velocity, although all these are necessary to a great performance. There is something above and beyond these outward details, vital as they are. They are the body, and of course we want the body to be fair and perfect. But the body must be vitalized through the surge of feeling and soul from within. We all know the story of the beautiful marble statue that came to life, at the earnest desire and longing of the artist.

To take an illustration from among the piano masters of today, Wilhelm Bachaus is a present example. Years ago he came to America a great technician, to whom all difficulties were as child's play. In the years that have passed, his art has mellowed and ripened until he now unites technic with feeling; in short, he mingles heart with art in beautiful balance. He now supplies the spark which kindles his marvellous technic into flame. He himself said, in recent interview, that the greatest difficulty in piano playing does not consist in mastering the technic of a composition, but lies rather in "the far more intricate art of pouring expression into a few notes." "It is for this reason," he continued, "that Bach and Beethoven are difficult, also Haydn and Mozart. It is because of the simple outlines of the music. There are, so to say, only a few notes with which a very great deal must be done."

Mixing Heart and Soul

THE FOREMOST artists are great because of their ability to mix heart and soul with technical side of their playing. Question any of them and you will get the same idea, though perhaps from different angles. They all see the necessity of pouring heart and soul into their music, if it is to touch others. Tetrazzini of the marvellous voice, and from whom one would hardly look for great sensibility, says: "You can train the voice and make it a finished product—not so the heart. Sympathy is there, or it is not there. If it is not there, you will never move an audience to tears. You will never find sympathy responding to your lack of sympathy; tears to a tearless voice—never!"

Beethoven counselled, "Do more than simply practice the art of music; penetrate rather into the heart and soul of it." And this he said to a young girl, who may have asked his advice as to how to become a musician. We must not only "penetrate deeply," but we also must be able to prove that we have done so by giving out the spirit of what we try to interpret.

It all depends on the point of view. If, as students and performers of music, we place technic first and foremost, we shall always play in a dry, soulless fashion. If we think only of the body or form of the piece we play, we shall still be dry and unemotional. If the aim is to play as fast or as loud as possible, we need not wonder that people are not anxious to listen. But if we grasp the fact that music must speak to the heart as well as tickle the ears, we shall try to learn the new tongue. And if we go further and realize that music is the language of emotion, of feeling, of soul, then we can see that every kind of feeling can be expressed in it; it becomes the language of the heart, and we must learn to mix soul with every bit of worthy music we play.

The little boy, who, in answer to the question—"What is good piano playing?"—said: "If you play loud enough, soft enough and fast enough, *and it sounds nice*," had the right idea, though expressed in childish terms. Yes, it must *sound nice*. No doubt he meant it must touch the heart, only he did not think of just those words to express his thought. A well-known musician, commenting on a piano performance, which had been scholarly but dry, remarked; "We could do with less art and have more heart!" Several musicians who heard the remark, agreed he had hit the nail on the head.

Suppose the player has had a rich emotional experience. How shall he attain the art of putting heart into his performance? What is meant by *heart*, is far removed from mushy sentimentalism. Audiences are quick to feel the difference. They can be touched by the divine spark, where spurious sentiment only makes them smile and turn away.

Granted the player has something of the magnetism which touches the listener, is that all there is to it? Can he just turn it on at will, with no special study as to how these effects are to be made? I put this question to a group of thoughtful students. All agreed that it must be the spontaneous genius of the artist that created fine effects on the instant, without premeditation.

The artist, questioned on this subject, gives quite a different answer. If we could just slip, unseen, into his workroom, we would see and hear how tones are molded and tested, how phrases are tried out with slightly different shades of color and meaning, until at last they express more clearly and beautifully the concept the artist has in mind. So it is really mind that does it after all. We know that the master, Paderewski, works in this way. Guiomar Novaes says she "studies, listens, and thinks and thinks." And both succeed in touching the hearts of their hearers.

The Key

HERE is the key, then, to the art of playing with heart! "Study, Listen—Think—and Think." Take this little saying to heart, all ye technicians of the keyboard. You must have technic—quite right. The greater your technic, the better your chances of success on the emotional side. In these days the player must have a fine technic, of the sort that is really "an art in itself;" yet that is not all that is needed by any means. It is but the gateway to the higher field of sympathetic interpretation.

The serious student of the piano and its literature may ask what are the outstanding signs, if any, with which he can identify sympathetic interpretation in another player, and so apply the means used to his own work. Or are these things so impalpable, so subtle as to elude analysis?

Yes, it is possible to single out certain things which make for sympathetic clearness and beauty of utterance on the piano. One of the most important, it seems to me, is Accent. Accents are so endless in variety that it is almost impossible to enumerate them—one would need a volume. Christiani has endeavored to analyze them in his valuable work, *Principles of Expression in Pianoforte Playing*. W. S. B. Mathews and others have written on the subject. It is very difficult to set down in words, or books, the charms of accents. After the player has made a careful study of accent, it is finally something he must feel. He must sense the when, where, and how to use accents and also the amount of stress to be employed.

In order to be perfectly at home in the realm of accent, the player can thoroughly prepare himself through a comprehensive drill in arm-accent, as applied to scales, arpeggios and octaves, played in various rhythms. Use a four octave scale in quarter notes, accenting the first note of every measure; then eighth notes with the same accents. Then take the four octave scale in sixteenth notes and accent the first note of each group of four—which we call accents of "Fours." Next accent the first note of every second group of fours, which we call "Eights." Then come "Sixteens," which means accenting first note of every measure of sixteenth notes. After this can come accents on the first note of every second measure, or "Thirty-seconds." By the same token we have "Sixty-fours," and "One-hundred-and-twenty-eights." The value of such drill, with aid of metronome, can hardly be estimated. It gives control of accent. Bear in mind the accent should be made with aid of *upper arm muscles*.

If any one complains that such a train of study savors of the mechanical, the answer is plain. One must be able to accomplish definite, exact rhythms before one can execute artistic rhythms. When you can do the so-called mechanical rhythms and rhythmic accents, you have a firm foundation on which to build the artistic rhythms you so much desire.

Let Up on the Key Pressure

ANOTHER way to make your touch and tone in playing, more expressive, is to let up on the key pressure. Lift your hands off at end of phrases; let up on the last beat of measures, especially in the left hand, if that hand has the accompaniment. Cut off the tone in such places; let in air; "Part from your piano," as the French pianist, E. Robert Schmitz quaintly remarks. Accompanying chords need not be held to the full value of the notes, else the playing sounds heavy and dull. Give it life and air.

In this connection, a few words about pauses. This is a most prolific subject; pages could be written about the value, the necessity of the pause. I don't mean rests, nor the sign for the pause, both of which every one knows. Printed rests and pauses are obvious, and the player is expected to obey them. Speaking of rests, Ruskin once wrote: "There is no music in a rest, but there is the making of music in it." Artistic pauses are far subtler. They are not written down; they should result from the character of the music itself and the meaning of it, and through them the interpretation of the piece becomes much more expressive and soulful.

Another point for the player to think of, who desires to put heart and soul into his music and wants to know how to do it. Let him consider whether his performance has become monotonous; is it too often on a dead level of sound? If this is the case, he should study into the subject of artistic shading and *nuance*. This is a wonderful subject—let us consider it a moment.

The word *Nuance* is defined as "shading; the variations in force, quality and tempo, by means of which artistic expression is given to music."

Another writer defines the word as "shades," and then proceeds to explain that the term means the various modifications of time, force and expression. Almost all modern music requires the use of modifications of tempo and expression, impossible to convey by words or signs.

The writer goes to say, "the difficulty of steering between the error, on the one hand, of going through the composition in a dry and desultory manner, with little or no 'interpretation' of the composer's thought, and, on the other hand, of exaggerating the marks put in the piece for the guidance of the performer, and exploiting the player's individuality at the sacrifice of the composer's, is very great." Take the great violinist Joachim's playing of Brahms' "Hungarian Dances." There was no exaggerated sentiment, yet there was the greatest possible freedom of expression. "It is almost entirely through these unwritten *nuances* that the comparative merits of the greatest artists can be judged."

Which Moved You Most?

THINK OF all the pianists you have ever heard—the really great artists of course. Which one moved you most; which one would you prefer to hear above all the rest? It would surely be the player whose art touched you through tenderness and eloquence of expression, not the mere virtuoso, no matter how dazzling his bravoura, or what astonishing feats he could perform.

When Paderewski used to tour the country each season, his playing seemed to dwarf that of every other pianist, principally through this selfsame soulful quality so wonderful, so indescribable. It was this precious quality that drew the great audiences that used to pack big Carnegie Hall to the top gallery, with never an empty seat. It was because his playing was full of vitality and life, in every note.

These are just a few hints and suggestions as to how one's playing may be made more telling, more vital. A hundred other things, which the player needs, might be mentioned, did time and space permit. The few we have considered have been found through long experience, to be points too often neglected. Careful attention to them will help add more heart to the art of the pianist.

Getting the Student's Measure

By Dr. Annie Patterson

NOTHING in the art of Teaching, and particularly music-teaching, is more essential to success than the ability of the instructor to gauge the temperament and possibilities of the one taught. Certain hard and fast rules are too often followed in the educational course; a regulation set of exercises and pieces have to be prepared. Tests for musical examinations are generally run on "approved," if limited, lines. Fashion even demands that recital programs must conform to stereotyped patterns.

Whilst all this tends to carry out a time-table in a methodical manner, there is a risk of paralysing development in individual cases. Before a teacher selects study-material for any particular pupil—in piano playing, for instance—it is well to get, so to say, at the back of the mind of that pupil to understand whether the classical or romantic composers are most to his taste. But not all teachers are sufficiently gifted as psychologists to fathom the minds, or propensities, of those placed under their tutelage. Thus it often happens, unfortunately, that a fair talent for performance is fettered by having unsuitable executive work pressed upon it; or else, what is worse, a youth specifically gifted in certain departments of study is stunted in development.

Modern methods of teaching keyboard-technic are, however, sufficiently diversified to suit all dispositions. Thus there are some who find continued interest in various kinds of "touches;" others, again, there are who place clarity of execution and general "brilliancy" of rendition as of leading importance. Composers of every grade have happily given us ample instances from which to learn finger activity of all kinds, and it is just in the choice from the great galaxy of masters that the really capable teacher scores. The mistake so frequently made is to continue to give one piece, or type of piece, to all sorts and conditions of students. Whether from habit, or precedent, or that fatal facility for getting "into a groove," the professor is prone too frequently to insist that each pupil must follow the beaten track, both in the acquirement of technic and a répertoire. This sometimes tells against the teacher in that the pupil flies from one preceptor to another, feeling that if he (the learner) does not make rapid progress, it must be the instructor who misunderstands him in giving him unsuitable musical food to digest.

There is no doubt, therefore, that teachers should always endeavor to take an outlook wide enough to include the tastes and feelings of the students who come to them for light and guidance. It is all very well to talk of "raising the standard" of musical appreciation by restricting the learner to certain modes of style only. The fact remains that, like parents who want their children to "play something attractive," the great majority of music-students either like or dislike certain classical pieces given to them for study. It would then repay the preceptor to consider individual tastes a good deal more than is done at present in meting out programs for practice. This is the obvious duty of the conscientious music-master or mistress.

To arrive at a fair estimate of musical idiosyncrasies, a good idea for the progressive teacher—whether in instrumental or vocal departments—would be to give a monthly or bi-monthly recital of student-pieces from which each pupil might be allowed to name that number, be it song or piece, which he or she would take a real interest in learning. This might be the first step in ascertaining individual inclinations. Technical studies could be treated similarly. Of course the teacher's own final judgment on results would always right the balance. Such a scheme of free choice would involve perhaps a little extra trouble on the part of instructors; but it would be trouble well worth while.

Scintillations of Musical Minds

"Training the sub-conscious mind is simply the getting away from the note symbol to what lies behind it. The conscious direction of the sub-conscious mind is the only safe method of memorizing."—FRANK LA FORGE.

* * *

"I feel that, although thirty years ago the general interest in and knowledge of fine music were less in quantity than they are now, at present we are in danger of losing a certain sincerity of purpose that was plentifully in evidence in the past."—CÉSAR THOMPSON.

Some Points in Pianoforte Duet Playing

By Clement Antrobus Harris

WHY is duet-playing so strongly recommended as an educational factor? Primarily it is because of its value in developing the sense of time. But, it may be asked, is there not as much time in a solo as in concerted music? Yes, but *there is not the same necessity for keeping it.* If a soloist "jumps" a beat or doubles one, or introduces a *rallentando* or *accelerando* wrongly, the error is momentary and applies to the time only; it does not involve wrong notes. But if one of the players in a duet does so, he produces *discords* with the other player as well as an error in time; and, indeed, in all probability every chord is a discord till a halt is called and a fresh start made. From this we may deduce the axiom that *in concerted music it is always a less evil to play or sing a wrong note than to be guilty of an error in time.*

So bad is the result of rhythmical mistakes in duet-playing that usually a complete collapse follows and a fresh start has to be made. Though rare among competent musicians, such an occurrence is naturally common where one of the players is a beginner or both are at an elementary stage. If a mistake is discovered as soon as made and a halt called at once, no difficulty will be experienced in determining where to begin again. But, as often happens, the players may have been at loggerheads for some time before knowing, or being certain, of the fact, or have been trying to right themselves without stopping. And in this case finding the measure on one page which corresponds with a given measure on the other is not always so easy as might be supposed.

In some educational methods the two parts, *Primo* and *Secondo,* are printed on the same page in "score," the former above the latter. This method affords each player the opportunity of reading the other player's part as well as his own, and thus gives practice in reading from a four-part score, which educationally is of high value. And, if a mistake is made, there can be no difficulty in determining where to begin again. It has the disadvantage that for half the time each player has to read from a page at the side of the music-desk farthest from where he is sitting, and too distant to be convenient for short-sighted people.

But when the parts are arranged in the more usual way, *Primo* on the right-hand page, *Secondo* on the left, some care may have to be exercised to discover which measures correspond one with another.

Of course, the question can always be settled by counting the measures; but this is a cumbersome method, absorbing a lot of time, and a readier system of identification is desirable.

It might be thought that as there must necessarily be the same number of measures on both pages (or the turn-over would not occur at the same time), there would be the same number of measures in each score, "scheme" or line. But this is by no means the case. One part, say the Primo, may have a large number of short notes, while the other has a few long ones—it may be only *one* note, or a rest. Now, with the exception of whole and half notes, a short note takes as much space on the page as a longer one; it may even take more—two eighth notes, owing to their hooks, cannot be written so closely together as two quarter notes. Obviously, then, the many short notes will take much more *space,* though not *time,* than the few long ones. Later on the respective positions may be reversed—the *Primo* may have the few long notes and the *Secondo* the many long ones.

In a duet of an advanced, or even medium grade, this is extremely likely to be the case. It follows that there can be *no correspondence in space, measure by measure,* but only in whole movements or pages. So much is this the case that where rapid passage work is confined to one part, and the movement is repeated, this movement is sometimes written out *once* in the part having the rapid notes and marked with repeat-dots, and written *twice* in the simpler part and not repeated. Otherwise the notes in the simpler part would look absurdly "few and far between."

When a mistake has been made and a re-start is necessary, this should be done at the nearest natural division in the music—the beginning of a phrase, period, or movement. The first measure on the page does not necessarily answer this requirement. And if the breakdown were near the bottom of the book a great deal of time would be lost in going back to this point. Yet, for the reasons shown, finding the measure on one page which corresponds to a given measure on the other is not always as easy to do quickly as might be imagined. And the purpose of this article is to point out one or two factors which will greatly facilitate the process.

Where there are repeat dots in one part and not in another, the best way will generally be to count the measures. In other cases the corresponding measures will generally be in *approximately* the same part of the page. The more similar in character the two parts are, the nearer, of course, this approximation will be. Having determined the *district,* as one may call it, in which the measure needed is likely to be found, the next thing is to discover elements in common between *Primo* and *Secondo.* The most important of these is harmony. Clearly, in whatsoever else simultaneous measures may differ, they must have the same chordal basis. To profit from this, of course, requires some knowledge of the theory of music; and incidentally this fact stresses the essentially *practical* value of studying harmonies—an advantage young students are sometimes slow to realize. Having selected a measure in the part having the main theme (most likely the *Primo*) and determined on what chord it is formed, a measure having the *same chord* must be found in the other part.

The second factor lies in indications of changes in the time. These are as certain as a common harmonic basis. For there cannot be a *rallentando, accelerando, a piu mosso* or *meno mosso;* a *ritardando* or *pause,* in one part without there also being one in the same measure in the other. Nevertheless a knowledge of these terms is not an effective substitute for a knowledge of harmony. For time, directions are by no means invariably present, whereas harmony always is. To the intelligent student even an unaccompanied melody generally suggests a chord or chords.

Directions for a change of *tone* are not quite so reliable, since one part might change in this respect without the other doing so. This, however, is unusual. In the vast majority of cases a dynamic change will occur simultaneously in both parts. It would be little good for one performer to play *crescendo* or *diminuendo* if the other maintained a uniform tone. But it must not be assumed that the new tone-quality required will *always* be the same for both players. A theme played *forte* in one part may be accompanied by a passage played *piano* in the other. The same remark applies to directions in regard to *touch;* a *legato* melody may have a *staccato* accompaniment. On the other hand *style* in the nature of the case applies to a passage or movement as a whole and directions relative to this will almost invariably be given to both performers. It would be impossible to render a passage *strepitoso* and *tranquillo* at the same time!

If these few and simple points be borne in mind, it will rarely be necessary to go through the clumsy and tedious process of counting the measures.

Thought Starters

By Louis G. Heinze

The employment of the pedal is often indicated very carelessly; its use can be determined only by careful listening.

To give the pupil a poor piano for practice is the same as if you gave a child who begins to write pot paper, pen and ink.

The pedal is not a foot rest. It must not be used to cover careless playing.

When you play, do so as if a professional were listening to you.

A cheap or worn out piano, for a beginner, especially is an absurdity. The better the piano, the more valuable to the pupil.

Do not practice a piece as a whole until you have picked out all the difficult passages and mastered them.

The gymnast and athlete exercise the members of his body by preliminary exercises. The piano pupil should do likewise, saving time by getting into condition.

It is better to play an easy piece well than a piece beyond you in a faulty manner. Do not use pieces as stepping stones. Advance is to be made by exercises, Etudes, and so on; the piece, to show progress.

"Jazz is very popular in America, but I don't think that it is played more there than it is in England. A friend of mine described jazz as 'the black man's revenge upon the white man.' I think it is quite a good description."—MARK HAMBOURG.

Chopin's Preludes as Interpreted by Liszt

Compiled by SIDNEY SILBER
Dean of The Sherwood Music School, Chicago

CHOPIN wrote most of his Preludes, Op. 28, of which there are twenty-four, during the winter of 1838, on the Island of Majorca, whither he retired with George Sand (Mme. Dudevant) and her son Maurice, whose acquaintance he had made in Paris in the preceding year. They were composed in a Carthusian monastery situated on the outskirts of the town. Rubinstein has designated these incomparable and unique pieces "the very pearls of Chopin's works," while Schumann characterized them as "canons buried in flowers."

George Sand wrote a book covering this sojourn, entitled "A winter in Majorca," in which she called her lover "a detestable invalid." Despite the fact that the discomforts were well-nigh unbearable, for the climate and the strangers fretted him exceedingly, and despite the fact that Chopin suffered numerous hemorrhages, he still found time and inspiration to give to the world these veritable gems which constitute auto-biographical music in the truest sense of the term.

It was Liszt's custom to stimulate the imagination of his pupils by giving them mental concepts of the works which they tried to interpret. In addition, since his powers of mimicry were irresistible, he even enacted portions of musical works, while seated at the piano. One of his well-known pupils, Jose Vianna da Motta, tells us the following story: "While playing the E major portion of his ninth Rhapsody, Liszt represented a dialogue between a young lady and an elderly gentleman, in which the lady invited the gentleman to a dance, with all of her powers of sweet coquetry. The latter, however, always pleasantly declined." On another occasion, Liszt imitated an on-coming storm in one of the variations of the *Tarantella* from the opera "La Muette de Portici," showing how the gathering clouds are perceived, how the people buttoned up their coats, until finally, the downpour of rain caused them to withdraw to shelter.

Chopin's *Preludes* may be termed confessions of a lofty soul, wrought under the most conflicting events of his much-troubled life, due, in greatest part, to his incurable malady, tuberculosis. We are indebted to one Laura Rappoldi-Kahrer, a pupil of Liszt, for the main items of the following analyses. They have more than anecdotal value, as they are re-inforced by the statements of two of Chopin's pupils—Wilhelm von Lenz and Mme. de Kalergis.

NO. 1. REUNION

A picture of intense joy, portraying a reconciliation after a serious depression of spirits. In the stretto measure (17), this joy becomes well-nigh precipitous, finally finding a proper equilibrium. The quiet and beautified mood is represented by the tied C measures (29 to 32, inclusive) at the close.

NO. 2. FOREBODING OF DEATH

This *Prelude,* like its tonality, is very indefinite and somewhat ambiguous. It begins in E minor, leads to G, then to B, whence it loses itself to A. The moods though changing quickly, always return to one and the same leading thought—to the dreary sounds of approaching death. The two-voiced accompaniment must always be played with a heavy legato touch. In the right hand is portrayed the inexorable voice of Death, which at times vacillates, thus losing some of its insistence. The grim spectre, however, is not quite a hand—the saviour of the lonely one. It was, after all, only an illusion! This is inferred from the questioning conclusion.

NO. 3. A FLOWER THOU SEEMEST TO ME
(Du Bist Wie Eine Blume)

A guardian angel hovers unsteadily through the open window over a sleeping infant, whispering in its ears the words of Heine's immortal poem. The words *"Betend, dass Gott Dich erhalte, so rein, so schoen, so hold"* (Praying that God may keep thee, so pure, so beautiful, so sweet), are clearly recognizable (measures 16 to 26). At the conclusion, the angel vanishes.

NO. 4. A FIT OF SUFFOCATION

Here is most vividly portrayed one of those attacks with which Chopin had so often to contend. In the left hand part we hear the heavy breathing while in the right hand expression is given to his complainings. In measure 12, he turns over in bed His anguish increases steadily, until, at the stretto (measure 16), he sighs aloud. His pulse beats increasingly fast. He is nigh unto suffocating. The heartbeat grows slower by degrees, until, at the chord of the second (measure 23), it stops apparently. The concluding chords, however, indicate that the patient has again fallen asleep.

NO. 5. DOUBT—UNCERTAINTY

The tones B and B flat represent respectively the words "yes" and "no." They alternate with one another. In this manner the *Prelude* wends its way to the close, in which displeasure and obstinacy vie with one another.

NO. 6. LITTLE BELL FOR THE DEAD

In the right hand the little bell is represented as tolling. It is to be played without any rubato whatsoever and, according to Liszt's conception, without any emotion, since it tolls for all alike, without sympathy or mercy. In the left hand, the soul of the dead seems to wander about in the universe, until it finds its final haven in immortality. Toward the close we hear the little bell growing fainter and fainter, until only four very soft beats are audible.

NO. 7. POLISH DANSEUSE

The dancer raises her little feet slightly from the ground and executes her dance with consummate grace and charming postures. It is, in fact, veritable poetry of motion, portrayed in sound.

NO. 8. DESPERATION

This number owes its inception to an authentic event in the life of the composer. It is also mentioned in Liszt's book on Chopin. According to the story, George Sand went out with her son Maurice, but did not return until the following day, owing to the fact that they had been surprised by a sudden storm. Chopin was filled with unspeakable fears and, when they did return, he played this Prelude for them, seeming as one entirely absent in the flesh. In fact, he did not even recognize them. The pallor of death was on his countenance. His feverish anxiety is expressed by the short notes which resolve themselves chromatically and enharmonically, while the thumb is the means of singing forth the wonderful melody which is characterized alike by its beauty and passionate appeal. Only at the conclusion (the F sharp portion, measure 29) does Chopin become himself again and he sees his loved one as in a vision, which is soon dispelled (F sharp minor), whereupon desperation again takes hold of him.

SIDNEY SILBER

NO. 9. VISION

Chopin is convinced that he cannot write any more music and attempts to locate the spot in his brain where new thoughts are conceived. In order to do this, he splits his skull in twain. It is imperative to differentiate sharply between the sixteenth and thirty-second notes. In the third and fourth measures the trill in the left hand represents the blood trickling. The master is desperate not to find anything (measure 5). The blows of the hammer grow more and more intense, until at the A flat portion (measure 7) he succeeds in discovering his lost power. Calmed thereby, he puts the parts together again and closes in satisfied mood.

NO. 10. MOTH

A moth flies about in the room. Suddenly (the sustained G sharp, measure 3) it has concealed itself. The wings quiver lightly. At the next instant the moth flies about again, only to disappear into the darkness. Only its wings are now discernible (trills in the left hand). This transpires several times until finally, as the moth again quivers, the little disturber of the peace is made away with. It quivers a bit more and finally expires.

NO. 11. DRAGON-FLY

A dragon-fly encircles a pond, flies toward the center and returns, darting hither and thither, until it finally sinks into the water.

NO. 12. DUEL

Chopin was very jealous of George Sand, who gave him all reason for so being. Here we have another one of those scenes in which the duelists attack one another. Compare, for example, the groups of two notes in the right hand in ascending motion, which depict the encounter of the combatants who withdraw a few paces after a bit. At the fortissimo (measure 21) the clashing of shields is plainly audible. The opponents take better aim, swords flash (short chords in the left hand). Chopin is wounded. Help comes to him (eighth notes in the right hand). Confusion arises. The wounded one is carried away.

NO. 13. LOSS

Chopin is ailing. He cannot see the loved one whom he deems lost to him forever. She loves him no more. He feels it distinctly and his unspeakable pain is vented in music. Every tone expresses his mood and they recur again and again. In the D-sharp minor portion, we find the memory of the past, now in the upper voice and again in the lower voice, while the sustained tones of the right hand seem to hold fast the happy past. In the last two measures before the *tempo primo* are heard the groans and suppressed sighs over his great loss, while in the *tempo primo* resignation takes possession his afflicted soul.

NO. 14. FEAR

At this time of Chopin's life his soul was harassed by many shocks that he became increasingly a victim of dire hallucinations. At twilight, seated at the piano, he seemed to feel the ghosts pursuing him. His fears grew apace. There was a hammering in his inner being. He even believed that he heard this hammering from without. This unusual prelude is suffused with the expression of his great fears and anxieties.

NO. 15. RAINDROP

The tones on A flat, which are later changed enharmonically to G sharp, are to be played, according to Liszt, most evenly, from the standpoints of both rhythm and dynamics; for raindrops are uniform as to size. Only the melody is to express soul-full-ness. The mood of the second part is quiet, even though there is the sultriness preceding the storm. The wind is heard in the fire-place (C sharp minor part). The storm draws nigh, lightning flashes. There is a peal of thunder, the lightning strikes. (E major portion), while the rain now falls in torrents. The sky again darkens, lightning and thunder alternate and the rain comes through sundry crevices the ceiling. It is heard coming through holes in the roof. The enharmonic change signifies a brightening of the sky. The first melody is again heard. Finally, the dropping ceases altogether. Chopin, with candle in hand, looks whether the rain is still falling. In his dreams he seems

to hear the rain still dropping, though round about him everything is at rest.

NO. 16. HELL

The jaws of Hell open up. A bevy of noisy devils jump out, pushing one another with vigorous strokes. By and by, they return into the awful abyss. At the *stretto* there is a general scuffle, as if all wanted to descend simultaneously. Finally, only one of the imps re-appears. All of a sudden (B flat major) he jumps into the air with a rushing noise and falls again; the others follow suit and then all together enter the nether world. The jaws of Hell close upon the scene.

NO. 17. SCENE AT THE NOTRE-DAME SQUARE IN PARIS

A moonlight scene, in which two lovers are interrupted by the striking of the bell in the church tower opposite. Mysterious whisperings are heard at an open window, first softly, then louder and louder, with increasing intensity. Finally, very passionate expressions (*fortissimo* portion in A flat). Mystery is now expressed, with its climax in E major, expressive of blissfulness and embraces (vibrating chords in E flat). Suddenly the bell is again heard. The pair awakens from out their intoxication and whisper again. Again the bell strikes. The whispering continues during the eleven strokes, after which only a last sigh is audible.

NO. 18. SUICIDE

An unfortunate person is seen climbing a high tower, in insane excitement. The precipice lies yawning at his feet. As he looks into the depths he is overcome by dizziness. Still he continues in his mad career. Now he has reached the tower (eighth notes). One step, yet another—only four more remain; then comes the fall and his body is dashed to pieces (trill with figure). The spectators are awe-stricken and shudderingly turn away from the terrible sight. Two short chords and the tragedy is brought to a close.

NO. 19. INNER HAPPINESS

This prelude expresses utmost rapture. The expansion of harmonies in both hands, covering almost the entire keyboard, seem to symbolize the thought that happiness knows no bounds. The horizon is spanned by consummate bliss. At the diminished chords, uncertainty suddenly prevails. The subject seems to have lost the thread and begins anew, only to remain in E flat. Here (*piano*) small doubts (C and C flat) are quieted. A final turning aside, which leads to A, to the original tonality, expressing the feeling of blissfulness.

NO. 20. FUNERAL MARCH

A funeral procession crosses through a park at night. Now it disappears from view under the tree (*pianissimo*), barely illuminated by the moon. The cortege turns around a corner. The figures are discernible as shadows on a wall, where they appear in magnified form. A large black spot now appears on the wall (C minor chord). It is the coffin!

NO. 21. SUNDAY MORNING

People are seen going to church. Women, with their prayer-books and rosaries, followed by children and old men. The bells toll (G flat portion). Mass is now concluded and the congregation issues forth from the edifice (*fortissimo*). Finally, only a few stragglers appear. When all have left we seem to see the sexton ascend the steps and then lock the huge portals.

NO. 22. ILL-HUMOR

A forceful melody in the left hand represents an individual, begins in the bass, impatiently pushing his way forward, while the right hand represents another person seeking to quiet him. The angry stamping of feet is heard (*fortissimo*), which becomes more and more violent. Impatience reaches its height and both parties slam the doors in each other's faces.

NO. 23. PLEASURE PARTY

A small boat all bedecked with flags, streamers and pennants waving in the light breeze, glides over the quiet waters. It glides on and on, until it is finally lost to view.

NO. 24. STORM

The left hand figures vividly portray an intense storm, while the right hand gives expression to a dramatic motive. Lightning rends the firmament. A tree is felled. Everything is illuminated by the frequent electrical displays. Again the force of the storm is renewed, only to become more demoniacal. Still no rain falls. In the distance are heard gloomy sounds (C minor portion). They draw nearer and nearer (D flat major). All of a sudden (A in the right hand), an electrical display illuminates the entire scene. The storm draws near until a cloudburst (chromatic scale descending) transpires. Trees are uprooted, the thunder peals, lightning continues until the close. Everything is annihilated!

The "Hard" Piece!

By Mabel La Douere

In general, the fault is with the teacher when young pupils develop an antipathy toward the harder compositions. It is, in the main, because they do not understand works that require more effort on their part, rather than that the work is too difficult.

If a pupil is given a choice of two pieces, for instance, the *Berceuse* by Iljinsky, and the *Alp Maid's Dream* by Labitsky, he will invariably choose the latter. Why? Because he has something definite on which to work—the title appeals to his imagination and he can grasp the idea of what he is playing. But the *Berceuse* means nothing to him beyond a "queer name," if the teacher does not explain its meaning.

When assigning advanced work, it is just as easy to say, "John, I have a lovely piece waiting for you. In it you can imagine you are all alone beneath the stars, with the night singing a lullaby to you," as to say, "John, don't forget to bring the money for your new piece. It is a *Berceuse*."

The first way will cause him to become curious about it—interested in it; and no matter how difficult the piece may be he will be eager to play it, and he will go at it not as at a meaningless jumble of notes, hard, because he does not understand them.

In teaching the "William Tell Overture," especially to boys, it would not take much time to explain first that William Tell is the same man he reads about at school—the man who had to shoot an apple off his little son's head. Only the opera involves more of the Swiss war, in which Tell plays an important part, and the overture is a suggestion of a Swiss storm.

Or in teaching the *Barcarolle* from "Tales of Hoffman," explain that it is an imitation of a gondola song, imitating the rocking of a boat and sung by boatmen, and get him interested in the opera.

Another thing in teaching music is to use variety in lessons. I have found this most profitable. It makes it easier for the pupil and more interesting for the teacher.

If you are teaching Chopin for some particular aim, do not stress it without some interlude of lighter study. If one time you assign a difficult piece, the next lesson give a comparatively easy one; but, since most pupils dislike the idea of playing "easy music," choose something that is not so light as to detract from their interest.

Some good suggestions along this line are *Fur Elise* by Beethoven, Schumann's *Traumerei, The Shepherd Boy* by Wilson, and *The Mill in the Black Forest,* by Eilenberg. These range from the third to the fourth grade and present a pleasant recreation from the regular fifth-grade work.

Another suggestion for the teacher in teaching these "hard pieces" is that she find out how and what the pupil plays at home among his friends. Does he regard his "hard" piece as a mere composition to be played only for his lesson, and select something easy to play for company?

It is noticeable, especially in young pupils, that they invariably choose a titled piece to play for their friends.

A Beethoven sonata does not present so attractive a title for them as does "The Maiden's Prayer." And why? Simply because the teacher has not explained its meaning and interested the pupil in it. Enthusiasm is a necessary element to be displayed in teaching anything, and in conveying it to the pupil weeks of effort are accomplished.

The thing to do, then, is to get him interested, and to keep him interested, so that the "hard" piece will lose its terror in its discovered beauty.

Helps Along the Road

By E. Mendes

I cannot too strongly urge the use of these "duets," where the work is of course done by the teacher with a very occasional treble note from the gratified pupil. Many of such "duets" are of great value.

The advantages are the cultivation of

Strict time,
Ready reading,
Clear accents,
Smooth playing.

The True Chopin

By Felix Borowski

THE romantic life and death of Frederic Chopin caused much ink to flow from the pens of those who had been his friends. But did many really know the true Chopin? In the truest sense, did he have many friends? The answer to both queries must be "no." Gracious and sympathetic he was to many who were proud to call him by the name of "friend," but between himself and others an invisible wall of reserve shut out inexorably the essence of the master's soul. Nor was this unremarked by some of his colleagues. "Ready to give everything," said Liszt, "Chopin did not give himself. His most intimate acquaintances did not penetrate into the sacred recess where, apart from the rest of his life, dwelt this secret spring of his soul—a recess so well concealed that one hardly suspected its existence." And, in his biography of Chopin, Niecks, who made a more exhaustive study of the composer's character than had been made before, wrote: "Only after reading his letters to the few confidants to whom he freely gave his whole self do we know how little of himself he gave to the generality of his friends, whom he pays off with affectionateness and playfulness, and who, perhaps, never suspected, or only suspected, what lay beneath that smooth surface. This kind of reserve is a feature of Slavonic character which in Chopin's individuality was unusually developed."

But it is certain that if Chopin seldom unbosomed his emotions to his friends, he consistently poured them out on the keyboard of his piano. It was that instrument that was his confidant, the recipient of all his secrets of joy and sorrow. "How often," he once wrote to Titus Woyciechowski, "do I tell my piano all that I should like to impart to you." So again, when in a depressed condition during his sojourn in Vienna in 1830, Chopin wrote: "I must dress, appear with a cheerful countenance in the salons; but when I am again in my room I give vent to my feelings on the piano, to which, as my best friend in Vienna, I disclose all my sufferings." There is a piano used by Chopin in the possession of the house of Pleyel, in Paris. What could it not tell of Chopin's experiences of life, if only it could speak?

Slow Practice on Old Pieces

By Jane Fellows

Alternate fast and slow practice is the best way with pieces which you have once learned. The fact that you have learned a piece well enough to play it up to metronome speed, is no reason why you should discontinue slow practice on it.

Continued fast practice causes your performance of a composition to deteriorate. Mistakes creep in. The reason is that in fast practicing you cannot stop to think of every note and mark as you play them. As a result you are sure to become careless with the piece, and efforts in learning it will be practically wasted unless the old piece is practiced slowly as well as the new ones.

Resolves for the New Year

By Sid G. Hedges

To master at least one book of studies which I cannot play now.

To buy good music regularly, so that I obtain the nucleus of a library which shall be of use to me throughout my life.

To place a regular order for The Etude, that I may keep abreast of musical progress.

To do my best to fix up some ensemble playing with musical friends.

Not to waste much time playing music that will be dead in six months.

To work earnestly when I am practicing.

To keep my instrument in good, clean condition.

To learn a few standard pieces, so that I can play them anywhere without music.

To do more sight-reading.

To read at least one book on the history of my instrument, and its music.

To hear any great soloist who comes within reasonable distance of my home.

To take particular notice of the orchestra when I go to a theatre or picture show.

To try to make others enthusiastic for music.

Some Inspirations of Composers

By W. J. HENDERSON

TO BEGIN WITH, there is much foolish talk about the sources of composers' inspiration. Some of the most beautiful music the world possesses cannot be traced to any special source. Where did Mozart get his inspiration for the "Jupiter" symphony, which to him was simply a symphony in C major? Some one else, impressed by its celestial nobility, christened it "Jupiter." Beethoven never heard of the "Moonlight" sonata. He wrote a sonata in C sharp minor and some one else turned the green spot-light on it. "The devil's in the moon for mischief," sneered Byron. There have been some interesting instances of special inspiration, and I shall write of some, and there have been inspirations general and sweeping; but first of all let us clear our minds of illusions.

The composer is not in need of what may be called the urge of a life experience to cause him to produce music. Everything means music to him. A poet perceives themes for poetry in everything in life and nature. Another man is not a poet; and the primrose on the river's brim a simple primrose is to him. The painter views everything as line and color. Everything is a picture, good or bad, but still a picture. Similarly any stimulus operating on the mind of a composer brings music. A wakeful night with an over active mind may cause him to rise and begin to set notes on paper. It may have been welsh rabbit that kept him awake; but the music may float in starry spaces.

Romantic Inspirations

BUT OF COURSE this practical and prosaic view of the working of the creative faculty is not at all pleasing to the typical music lover. He would rather contemplate a charming work such as Deems Taylor's "Portrait of a Lady" and indulge in intriguing speculation about the "not impossible she who shall control my heart and me."

The father of modern music, John Sebastian Bach, lived about as unromantic a life as the mind of one could well imagine. He found his chief inspiration in his religion. The several settings of the story of the Passion are accepted by all musical nations as the highest musical expression of the religious emotions of mankind. Next to these stand the famous B minor mass and the "Christmas Oratorio." The organ preludes and chorales and the fugues all grew out of church music. Consequently we have in this one case an illustration of compositions inspired by the profound piety of the man.

When we turn to the most famous of opera writers, we find ourselves in a vastly different atmosphere. Wagner indeed dealt with religion, but only as he found it enwrapped in fable, legend and love story. The theme of "Tannhäuser" is the battle between pure and impure love, for the soul of a man. The story of "Parsifal" rests upon a similar base. "Lohengrin's" foundations are less secure; because the mystic and political elements in the story are too prominent. It is when we come to "Tristan and Isolde" that we may fairly trace a connection between Wagner's personal life and emotional experiences and the lyric creation.

His first wife, Mina Planer, rebelled against his search after ideals instead of marks; and it was only when he had met Mrs. Mathilde Wesendonck that he found the intellectual companionship of a woman so essential to his emotional life. With the details of the story we need not concern ourselves. Wagner's letters to the lady have been published and leave no doubt that he had a deep and sincere feeling for her, one which he voiced in considerable music and without any attempt at concealment. The pages of "Tristan and Isolde" contain much of the emotion which Mrs. Wesendonck inspired and the world of music is therefore under no small debt to her.

Hector Berlioz, who lived a life quite as stormy as that of Wagner, has frequently been credited with finding inspiration in his tumultuous love for Henrietta Smithson, the English actress who became his wife. He first saw her act *Ophelia;* and the impression she made upon him was so deep as to be actually painful. In later years an English critic wrote that when Berlioz first saw her she was interpreting Shakespeare's *Juliet* and that the composer exclaimed, "I shall marry that woman and write my greatest music about that play." Berlioz himself discredits the story with, "I did both of those things, but I never said that I would." However, the fact remains that Henrietta Smithson and the Shakespearean drama got themselves pretty thoroughly entangled in the thoughts of the famous Frenchman.

THE PRACTICE of associating the creations of celebrated composers with women who have entered their lives is natural, but not always correct. With Schumann, for example, it would be difficult to trace any one masterpiece directly to Clara Wieck, while on the other hand his entire artistic product for many years was strongly directed by his devotion to her and its development. The eager desire of his heart for the purification of German art ideals lay behind his creation of new piano types and methods of expression. The "Kreisleriana" are the history of a soul, the "Papillons" the imprisonment of its dreams. In 1836 he wrote to Moscheles:

"If you only knew how I feel—as though I had reached the lowest bough of the tree of heaven, and could hear overhead in hours of sacred loneliness songs, some of which I may yet reveal to those I love—you surely would not deny me an encouraging word."

In 1839 he seemed to have found the loftiest utterance of his spirit in the "Faschingschwank," the *C Major Fantasy,* the *F Minor Sonata* and the "Kreisleriana," But in 1840 his long battle for Clara Wieck came to an end and a new medium of expression was needed. He wrote in that year more than 100 songs, in which the revelation of a soul is accomplished. Men the world over have recognized the universality of their message. And yet there was still another step to be taken. In 1841 he composed the B-flat and D Minor symphonies and the "Overture, Scherzo and Finale." He had married his Clara; and in the orchestra he might cry, "Now hath my soul elbow room." That we esteem Schumann's piano works and his best songs above his orchestral pieces does not affect the record that he himself sought at each step for a larger medium of expression. But posterity will doubtless find in the amazingly profound insight of "Frauen Liebe und Leben" and the "Dichterliebe" the fullest disclosure of the soul of a genius inspired by a great love.

Mythical Stories

Some of the mythical stories of passionate inspirations have been lately disseminated by that universal publishing agency, the screen. Stories of the lives of great composers have been woven into exhilarating romances in which a grain of fact has been asked to flavor a barrel of fiction. Schubert in particular has been made the subject of a pretty romance in which he is depicted as hopelessly in love with the lady who inspired his song, "Who is Sylvia?" Vogl the singer, who made Schubert's songs known, was also in love with her and carried off the prize, leaving the sorrowing composer to wander forth into the moonlight in search of new melodies.

W. J. HENDERSON

Unfortunately there seems never to have been any Sylvia. Schubert's one little flight into the realms of tenderness was perhaps occasioned by his pupil, Caroline Esterhazy, though even this story rests on shaky foundations. Schubert apparently did not require any inspiration. If he found a new text he almost instantly found a melody for it and almost before any knew that he had read the poem he exhibited the completed song. And, after all, perhaps his most extraordinary feat was the composition at the age of eighteen of a fine mass. It was a feat paired with Mendelssohn's creation of the overture to "Midsummer Night's Dream" at the age of seventeen. The only inspiration a boy of that age could have was his own smoldering imagination, which Shakespeare's fairies and lovers fanned to flame.

The Eternal Feminine

THEN there is the legend of Chopin and George Sand. Of course, everything that comes into the life of a sensitive genius influences his thought in some measure; but can we conceive of any attachment that would have effected a radical alteration in the musical style of Chopin? We are inclined to think that he would have shed his "eagle's feathers," whether he ever saw Majorca or not, and probably some other little dog than George Sand's would have chased its tail into a vision of the *D-flat Valse.* And, whatever else may be said, it is difficult to believe that a lady who wore trousers and smoked black cigars could have fired the delicate spirit of the nocturnes or the far-flung splendors of the scherzos, and as for the "Valse du Petit Chien," the immortal Huneker with Olympian finality said: "I do not dispute the story. It seems well grounded, but then it is so ineffably silly."

There is no question that too much emphasis has been laid on the influence of the eternal feminine in the creations of composers. In the unbroken flow of musical progress the undercurrents have oftener been literary or historical than personal. At the time when opera composers threw overboard the antiquated stock of classic heroes and heroines, when the perennial *Orpheus* with his lyre at the gates of Hades gave way to *Ernani* with his horn among the mountains of Aragon, the uprising of the romantic school of literature brought with it the materials which served for the inspiration of composers. Byron and Victor Hugo wrought upon the musical imaginations of Europe more powerfully than any one woman; and to them we owe the substitution of plumed hats and sweeping bows for helmet and greaves.

Victor Hugo's "Hernani" was acted in 1830 and his "Le Rois' Amuse" in 1831. All the heroes of Byron had already strutted across the stage of Europe. And but a few years later the concentrated essence of the swashbuckling period of romantic gallantry settled itself in the persons of *Aramis, Porthos* and *Athos* and their happily found brother, the incomparable *D'Artagnan.* If any composer of this period fastened his dreams upon a lady, she must have been one of Oriental manners and customs.

It is all the more interesting, therefore, to note that one of the most polite of all romanticists, the perfectly finished Mendelssohn, basking in the sunshine of a hundred female smiles and dwelling generally in the lap of luxury, was not only Anglicized, but also quite domesticated in his inspirations. In fact, he has left us touching evidence of the importance of his sister's influence on his muse. Writing to General von Webern after Fanny's death, he said:

"It is indeed true that no one who ever knew my sister can forget her through life; but what have not we, her brothers and sisters, lost! And I more especially, to whom she was every moment present in her goodness and love; her sympathy being my first thought in every joy; whom she ever so spoiled, and made so proud by all the riches of her sisterly love, which made me feel all was sure to go well, for she was ever ready to take a full and loving share in everything that concerned me."

Liszt was as much in the good graces of the ladies as Mendelssohn; and possibly that is why we find no direct evidence in his works of inspiration from the divine sources of the Princess Wittgenstein or the Countess d'Agoult. We do not even discern a faint ray of George Sand, with whom according to Lola Montez he once departed from Paris to the infuriation of Mme. d'Agoult. Yet there are many music lovers

who believe that Liszt's compositions have more emotional force than Mendelssohn's.

The recollection of the sudden outburst of Manfreds, Zanonis and Werthers, in the first flood of romanticism, brings with it the memory of the singular fact that the last of Von Bülow's three great B's of music, Bach, Beethoven and Brahms, was apparently a reactionary. The blood of the romantic movement had not grown cold when he began to give the world his noble works, and Liszt for one welcomed him as a genuine romanticist. But one searches in vain in the records of his life and the pages of his scores for evidence that would justify the Virgilian exclamation, "Dux femina facti," or that any poet more universal than Tieck with his "Schoene Magellone" plucked at the heart strings of this sober Israfel.

Tchaikovsky's Unusual Inspiration

ONE WOULD BE pleased to trace in the alternately wild and tender compositions of Tchaikovsky the domination of some lofty woman soul; but his early and hasty marriage came nearer to wrecking his career than to helping it. The kindness of Mme. von Meck was not of the type called inspirational, but its practical results were the restoration of the composer to artistic power. One finds more clearly defined influences in the works of the younger Russians, but these influences are again mostly national and literary. Rimsky-Korsakov's "Scheherazade" tells fairy tales to an Arabian sultan who lived undoubtedly on the banks of the Volga; and in his other works the master shows clearly that he had absorbed the ideals of Pushkin. Prokofieff and Stravinsky betray a similar fondness for literary themes breathing the spirit of the age of fable, but pulsating with the blood of Russia.

It seems that, in the final analysis, we must reach the conclusion that concrete personal inspirations are not numerous in the history of musical composition. The writer has made no attempt to catalogue all that are known, since such a card indexing plan would have been unnecessary to his purpose. The broader survey of the field gives the better perspective. From it one learns that in many instances the true source of the composer's inspiration is the general trend of the artistic thought of his time. Literature has always borne musical fruit; and, while musicians sometimes explore unknown territory in search of new suggestions and occasionally find some such prize as the story of Istar and the resultant dance of the seven veils, it is oftener the writer of universal mastership who provides themes.

Shakespeare Adoration

All Europe has bent the knee of adoration before Shakespeare; and in the music of all the leading musical nations his name stands at the top of the list of authors who have fired the imaginations of composers. Inevitably such a tale as that of "Romeo and Juliet" has appealed to those who have ignored the history of "Abelard and Heloïse"; for after all *Romeo* was just a lover, whom all mankind would love, while *Abelard* was not half as much in love with *Heloise* as she was with him and was a great deal too much taken up with his remarkably dry scholasticism to arouse enthusiasm in a self-respecting Muse.

Macbeth and *Lear, Falstaff* and *Othello, Hamlet* and *Ophelia* have all been translated into melody. However, in the end one rests just where he does in considering the other imaginative arts; for, like the poet, the musician seizes upon airy nothing and gives it a local habitation and a name in the passionate phrases born of the sweet travail of his own soul. And that is now, as it was in the beginning, one of the seventy and seven mysteries of the seven arts.

Self-Test Questions on Mr. Henderson's Article

1. *From what sources do the poet, painter and composer draw their inspiration?*
2. *In what did Bach find his greatest inspiration?*
3. *What was the source of inspiration of Mendelssohn's great overture to "Midsummer Night's Dream?"*
4. *In what ways have the influences of the "eternal feminine" on composers been overestimated?*
5. *What author stands at the top of the list of those who have "fired the imaginations" of composers?*

"Chopin's music and style of performance partake of the same leading characteristics—refinement rather than vigor—subtle elaboration rather than simple comprehensiveness in composition—an elegant rapid touch rather than a firm nervous grasp of the instrument. Both his compositions and playing appear to be the perfection of chamber music."—*Manchester Guardian.*

Little Life Stories of the Great Masters

By Mary M. Schmitz

Frederic Chopin
(1810-1849)

1. Q. When and where was Frederic Chopin born?

A. He was born February 22, 1810, at Zelazowa Wola, a small village near Warsaw, Poland.

2. Q. Who were his parents?

A. His father, Nicholas Chopin, was a Frenchman and professor of French in the University of Warsaw. His mother was a Polish lady.

3. Q. Who were Chopin's first teachers?

A. Albert Zwing, a Bohemian, and Joseph Elsner, director of the Warsaw Conservatory.

4. Q. Was Chopin considered an unusually talented piano player when he was a boy?

A. Yes; he was called the "Second Mozart." He played a concerto by Gyrowitz, a friend of Mozart, when he was twelve years old. When only fourteen he played for the Czar Alexander and received a diamond ring.

5. Q. Where did Chopin go on his first concert tour as a virtuoso pianist, and what compositions of his own did he play?

A. In 1830, when Chopin was twenty years old, he gave two or three "Farewell" concerts in Warsaw, before starting on his first tour as a concert pianist. He played his own "Concerto in E Minor" and the one in F Minor.

6. Q. How did Chopin's teacher, Elsner, and the students of the Warsaw Conservatory honor Chopin when he left Poland for the last time?

A. They waylaid Chopin's coach and sang a cantata composed especially in his honor. They also gave him, it is said, a loving cup filled with the soil of his native land, soil which was dusted over the casket of Chopin when some years later he was buried in Paris.

7. Q. What famous German composers did Chopin meet in Leipsig when he visited that city in 1830?

A. Robert Schumann and Felix Mendelssohn. Schumann was one of the first to make Chopin's extraordinary talent known to artistic Europe.

8. Q. What fine tribute did Schumann pay to Chopin's genuis.

A. In an article on the French-Polish tone painter, he commenced by saying, "Hats off, gentlemen, a genius." This article is one of the finest tributes ever paid to any composer by a contemporary.

9. Q. What was the pen name of the French authoress who was Chopin's friend?

A. George Sand, whom he met in 1837.

10. Q. Where did Chopin go in the hope of restoring his health; who accompanied him?

A. To the Island of Majorca, in 1838; but his health was not benefited by the stay there. George Sand and her two children accompanied him.

11. Q. For what instrument did Chopin write?

A. The piano. He wrote a few songs and some pieces for the piano with orchestral accompaniment; but his greatest works were for piano solo.

12. Q. Name some of Chopin's music for piano.

A. The "Sonatas," "Ballades," "Nocturnes," "Polonaises," "Mazurkas," and "Preludes." He also wrote a "Tarantelle" and a "Berceuse."

13. Q. What is considered Chopin's greatest composition for piano?

A. The "Sonata in B-flat Minor, Op. 35."

14. Q. Give a short description of the "Sonata in B-flat Minor."

A. The Sonata is founded upon an ancient Polish poem written by a once-prominent Polish poet. It has four movements corresponding to the four cantos of the poem, of which it is a musical translation.

15. Q. What did Chopin mean to express in his Ballades?

A. Chopin intended his Ballades to tell stories in tones. His four Ballades are founded on Polish poems written by the greatest of Polish poets, Adam Mickiewicz.

16. Q. Which of the four Ballades is the best known? Decribe it.

A. "Ballade No. 3, in A-flat, Op. 47," is the one most played and most popular. It describes in music the tragic romance of a young knight with a beautiful and mysterious lady-love.

17. Q. Where and when did the Polonaise originate?

A. In 1573, when Henry of France became King of Poland, at one of the grand ceremonials attending his coronation, a stately procession of the nobles of his court passed before the monarch. The music accompanying this formal march was the first Polonaise.

18. Q. Which is considered by many to be Chopin's greatest Polonaise?

A. Op. 53 in A-flat. It expresses by its splendid martial harmonies the proud military bearing, the gorgeous armor, and the stately tread of the steel-clad heroes of ancient times. The second movement is a fine picture of the tramp of cavalry.

19. Q. What is meant by "Scherzo," a name applied to four of Chopin's pieces for the piano?

A. "Sherzo" means a composition in playful, jesting humorous style. But Chopin's Scherzi are composition of intense and passionate feeling. The one in B-flat Minor is thought by many musicians to be his best.

20. Q. What are the Preludes of Chopin?

A. They are short, fragmentary tone sketches, consisting of a single movement. They were nearly all written during his stay on the Island of Majorca, in the winter of 1838-39.

21. Q. Are the waltzes of Chopin real dance waltzes?

A. No; they are idealized tone pictures of the waltz and of ballroom scenes. The "Waltz in A-flat, Op. 42," is one of Chopin's best.

22. Q. What does "Nocturne" mean?

A. A composition expressing a quiet, dreamy, pensive night mood. It has almost the same meaning as "Serenade," a real or imaginary night song of love. Chopin wrote many of his poetic poems in this style.

23. Q. Describe Chopin's personal appearance.

A. Chopin was a small man with wavy hair of chestnut color, a nose with a decided crook, and hands and feet small and perfectly formed. He always dressed with care, in the prevailing mode.

24. Q. Where and when did Chopin die?

A. At Paris, in 1849.

Chopin Reflections

"It (the week before a recital) is a dreadful time for me. I do not like public life, but it is part of my profession."

* * *

"Really, if I were more silly than I am, I might imagine myself a finished artist; but I feel daily how much I still have to learn."

* * *

"In a good mechanism the aim is not to play everything with an equal sound, but to acquire a beautiful quality of touch and a perfect shading.

* * *

"I am not at all fit for giving concerts; the crowd intimidates me; its breath suffocates me; I feel paralyzed by its strange look, and the sea of unknown faces makes me dumb."

Chopin in His Last Years

By Felix Borowski

IN the latter days of Chopin's career he was naturally harassed in mind as well as body. Constitutionally highly-strung, his nerves were affected by the tubercular affection from which he died, as also by the noisy and irritating unconventionality of Mme. Sand's mode of life. But even then Chopin kept the placidity of temper which had distinguished him all his life. Only occasionally his impatience with a stupid pupil got the better of him and he would throw the music in the air or utter harsh and bitter words; but the first sign of distress on the part of the student would immediately banish the master's exasperation. He had even days in which his old geniality would return and he would divert his friends with his mimicry and imitations of famous men.

This gift for reproducing the characteristics of other people was very remarkable. Karasowski stated that the French actors Bocage and Mme. Dorval declared that they had never seen anything to approach Chopin's impersonations. He relates, too, that once, when Nowakowski visited Paris and begged Chopin to bring him into touch with Kalkbrenner, Liszt and Pixis, Chopin said, "That is unnecessary. Wait a moment and I will present them to you, but each separately." Then he sat down to the piano and imitated Liszt to the life, playing in his style and mimicing all his movements. "After that," said Nowakowski, "he impersonated Pixis. The next evening I went to the theater with Chopin. He left his box for a short time and turning 'round I saw Pixis beside me. I thought it was Chopin and I joking clapped him on the shoulder, exclaiming: 'leave off your mimicry!' My neighbor was quite flabbergasted by such familiarity on the part of a total stranger, but fortunately at that moment Chopin returned to the box and we had a hearty laugh over the comical mistake."

Can Expressive Playing Be Taught?

By the Eminent American Composer, Pianist, Teacher

ARTHUR FOOTE

NO ONE who has lived through the developments of the past fifty years can be unaware of the greater intelligence and thoroughness that have been brought to bear in the teaching of piano technic. Much that was formerly guess-work has been defined and standardized.

Among the conspicuous gains are:

(1) Abandonment of the former idea that everything in the nature of finger work must be done exclusively by the fingers, with knuckles flattened and the hand consequently rigid, the arm being not considered at all as a factor, and the principles of relaxation not being realized.

(2) A general understanding of the pedals.

(3) The employment of rhythmical devices in technical work, in exercises, scales and arpeggios.

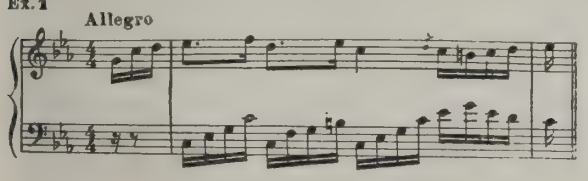
(4) The use of modulation in exercises.

Teachers owe much to William Mason and Isidor Philipp as to (3) and to Tausig for (4).

While no more exacting technical demands are made to-day than by, for example, the Op. 106 of Beethoven and the earlier pieces of Liszt (written a century ago), the average of playing is now very much higher than formerly. What then was unusual is to-day simply taken for granted with a player of any rank at all.

On the musical side there also has been a gain, artistic and expressive playing being now demanded by audiences, with technical excellence as a matter of course. No longer are we satisfied with the latter without lovely touch and sensitive phrasing.

MR. ARTHUR FOOTE



Teaching Expression

BUT whether, in the average teaching of the usual pupil, sufficient attention is paid to the musical side is another matter altogether. There is a too common idea that "expression" cannot be taught to any considerable extent—that it is a heaven-sent gift which some have, but most do not.

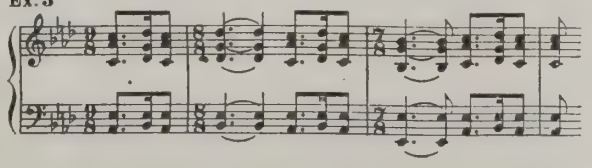
Now, while it is true that supreme beauty in playing depends finally upon individual sensitiveness and imagination, there still are certain basic principles that can be explained and taught to anyone. They enable even the average player to bring out the real music hidden away in the notes to a very satisfactory extent. In this article an attempt is made to define the most important points. The following prerequisites for intelligent playing should be taken up with pupils before any discussion of the more subtle factors of phrasing, dynamics and elasticity:

(1) The pupil must know how to choose a rate of speed reasonably near to that desired by the composer (a thing as to which most of them have no idea at all). To this end the teacher generally has to supplement the inadequate and sometimes misleading indications of the printed music. To illustrate by a queer example, in the familiar *Sonata Pathétique* every movement is written in notes whose values, as to length, give a wrong idea to the inexperienced player. Might it not be clearer if the notes of the *Grave* were eighths instead of sixteenths; of the following *Allegro,* quarters where they are halves; of the *Adagio,* eighths where they are sixteenths; and of the *Rondo,* sixteenths where they are eighths?

Ex. 1

Unluckily, also, the very terms *Allegro,* and so forth, are inexact and largely relative. They are fair indications as far as they go, however, and pupils should be well acquainted with their meaning (for example, the difference between *Allegro* and *Allegretto,* between *Andante and Adagio*). The metronome is useful for learning more precisely what is the rate of speed asked for. Now, as we often do not possess a metronone by which to be guided, it is well to know how to find approximately the speed indicated by figures without its aid. Many pupils need to be told that the figures indicate the number of notes of the kind specified (halves, quarters, and so on) that are to be played to the minute.

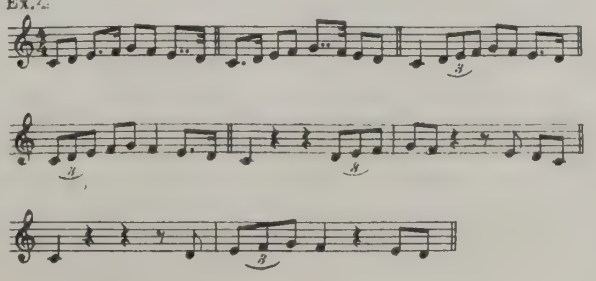
How fast the *tempo* is can be ascertained by counting (aloud) while watching the second hand of a watch in its revolution during a minute; after a few trials one learns to acquire a fairly correct idea of what various figures indicate (60, 90, 120, 160, and so on). It is a help also to associate certain familiar musical themes with their appropriate figures (for example, the first theme of Beethoven, Op. 10, No. 3, with ♩= 88-96). We also sometimes find an indication (𝅗𝅥), without a figure, this being intended to show merely the *unit* by which we reckon, exact speed not being specified. If the unit, for example, is 𝅗𝅥 (𝅗𝅥 = 𝅗𝅥), we naturally think of one that moves faster than would ♩ (♩ = ♩).



(2) Then, as to exactness regarding values of notes, dynamic and other marks, we must never be weary in demanding this from pupils. The feeling of the following is spoiled by a 64th note instead of the 32nd which is in the text:

Ex. 2

Pupils must be made to realize that *rests are quite as important as notes,* as in the slow movement of Beethoven, Op. 71; that rhythm depends upon an accurate observance of the values of both notes and rests. We too often hear such a performance as the following (Schubert, *Moment Musical,* Op. 94, No. 2).



Ex. 3

Compare this with the printed text.

An innate fine feeling for rhythm is one of the rarest things, being found less often than talent as to technic or sensitiveness in feeling for touch. Even teachers are apt to pay insufficient attention to rhythmical exactness. It is sometimes well to train pupils as to this point by exercises like the following:

Ex. 4

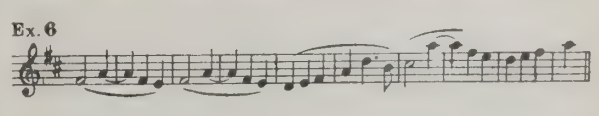
A point seldom appreciated by pupils is that a *dynamic mark (p. f, or cres.) holds good until changed by the next one. Crescendo,* for example, means that we are to be playing at that moment with the degree of power indicated by the last mark, and at *this point to begin to play louder gradually* until the climax is reached. A *crescendo* in a passage hitherto *piano* does not mean *forte* at that point, but later. In other words, we must be careful that at a *crescendo* we approach it softly enough, at a *diminuendo,* loudly enough. The case is similar with *ritardando* and *accelerando;* the natural instinct is to make these effects abruptly, instead of gradually.

Have your pupil realize that *while playing that is accurate may possess no other value, it is the material out of which musical playing can be made; that which is inaccurate cannot possibly be musical.*

(3) Since pedal marking is always insufficient and inexact, seldom being really accurate, pupils must understand the principles on which correct use of the pedals is based. They also should be trained to use their ears as well as eyes, and to listen, thereby gaining independent judgment. Never let them think of the damper pedal as the "loud" pedal. Teach them the various ways in which the soft pedal is used (a point generally neglected). The use of the damper pedal may well begin very early. There are not a few places in the Beethoven little Sonatas, Op. 49, where it is desirable; while the young pupil will learn a good deal through an explanation of *why* at these places it is wanted, but not at others (as not in scale passages).

What has been said up to here being a prerequisite for decent playing, the more subtle and difficult matters of accent, phrasing and dynamics are now to be discussed.

(4) Pupils must be taught the general principles of accent and phrasing, and acquire the musical feeling as well, that tells us, for instance, as to the beginnings and endings of phrases. For, unluckily, they cannot depend upon what is printed, so-called phrasing being nearly always slovenly and inaccurate, and consisting merely of a collection of slurs that are meaningless (except so far as indicating *legato*), through the careless habits of composers.



It would be better and more practical if slurs were written so as to show the sense of the passage. In the following, from Schütt's familiar *A la bien, Aimée,*

Ex. 5

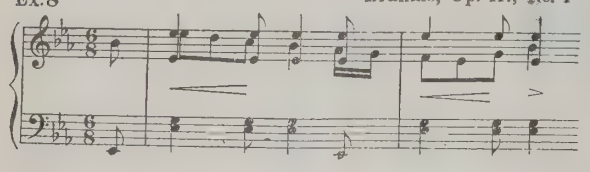
rather than as they appear in the printed page.

Ex. 6

Pupils often acquire two vicious habits from early instruction: those of (1) taking away the hand from the keys at the end of slurs (thus breaking phrases into meaningless fragments) and (2) habitually accenting the beginnings of slurs.

While phrase construction is often perfectly obvious (as in the familiar Bach *Loure,* the Haydn *Variations in F minor,* the Sibelius *Romance in D flat major),* it may often be far from clear, our only guide being a sensitive musical feeling, as in Schumann's *Des Abends,* Brahms' *Intermezzo,* Op. 119, No. 1.

Ex. 7

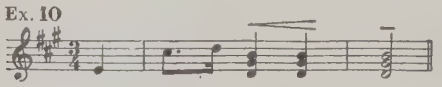


A good preparatory study is to play soprano and bass only of, for example, the Mendelssohn *Songs Without Words* (Nos. 1, 9, 14, 19, 25, 30), for the natural phrasing in these is clear, the pupil also being brought to

realize that the vital things are the voice which has the melody (usually the soprano), and the bass, which tells us as to the harmony; while the rest is, as it were, filling in. For more advanced training nothing is so helpful as polyphonic playing (as the *Well-Tempered Clavichord*), a preparation for this being the two-voice *Inventions*, and certain movements of the Bach *Suites* and *Partitas* (the French *Suites*, especially as to the imitation of one voice by another, the *Air* of No. 2 and the *Allemande* of No. 3; and of the *Partitas* the *Prelude* of No. 1, the *Fantasie* of No. 3). The pupil will be interested and instructed by being shown how frequently polyphony is present in music of a very different type, melodies also occurring often in voices other than the soprano, while they may be also used in an imitative way among the different parts (alto, tenor, bass), as in Schumann's *Träumerei, Nachstück*, Op. 23, No. 4; Tschaikowski, *Meditation*, Op. 72.

Now, while understanding of the construction of phrases is essential, we must also consider the *manner of playing expressively*, as to dynamics and the slight modifications in *tempo* needed at certain points (which, however, are never to be carried to the extent of *ritardando* or *accelerando*). This latter is one of the subtle things in expressive playing. The following, for instance, would be intolerable if played in *strict* metronomic time (try it so once, and see), or with the emphasis in the wrong place.

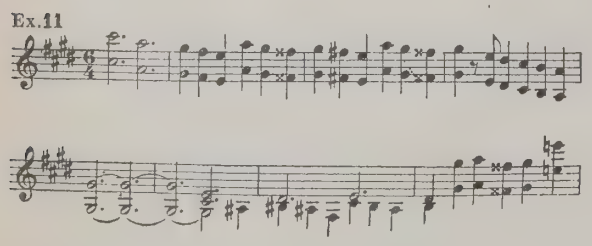
Ex. 8 Brahms, Op. 117, No. 1



The pupil must understand that in all phrases there are natural and right accents; that in double rhythm the accent will be normally on the first beat of the measure, and especially that a phrase beginning with the up beat does not accent the latter (as in Beethoven, Op. 2, No. 1, first movement). A similar thing is true of triple rhythm; but how often do teachers hear phrases played as the following from Schubert, Op. 142, No. 2:

Ex. 9

the next from Chopin's *Prelude*, No. 7:



Ex. 10

and also in the Brahms quotation already noticed.

Understanding of the construction (and hence accentuation) of long phrases is often made difficult by (1) their being broken up by a lot of meaningless slurs, or (2) by their having been made more convenient for reading by a series of short bar-divisions. The Chopin *Scherzo*, Op. 39, for example, would be easier to understand as to this point if written as follows, though harder to read at sight:

Ex. 11

There is one factor in expressive playing the most subtle of all and hard to define to pupils. While the piano has its own peculiar advantages over other instruments, it does not lend itself so readily to expressive playing as do those for strings and some of the wind ones (as the clarinet). The piano is a percussive instrument, and its tones made by putting the strings into vibration always begin to diminish as soon as made—they die as they are born, so that we are unable either to prolong tones indefinitely or to vary single ones dynamically. We can never get a *crescendo* out of a single tone (as can the violin), but must obtain it by treating a group of tones rightly.

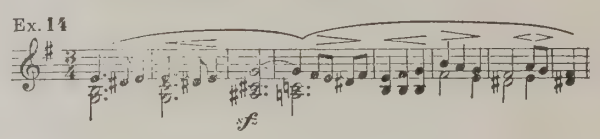
In piano playing we really inmitate the manner of expressive playing shown us by the voice, and by stringed or wind instruments. For the first natural expression of music was in singing, and soon afterwards by the simple early stringed and wind instruments, those of the piano type coming thousands of years later.

Now, how should phrases be played as to dynamics? To take a lesson from the voice or wind instruments, we find that the breath, which causes the tone, is not effective with its full force at the beginning of a phrase, for obvious reasons also diminishing in power towards the end. At to stringed instruments, we observe (unless there be some indication in the music to the contrary) that the player will instinctively bear down harder with the bow *somewhere in the middle of a phrase*, practically always diminishing at the end. We see, then, that in the beginnings and endings there is rarely as much tone as in the middle. Phrases also are seldom hurried in the beginnings and endings, and we may fairly say that these are generally to be played deliberately. So we can sum it up as follows: *The normal phrase is in the form of a* < > , *beginning and ending with very slight deliberation.*

This, however, should be qualified by the statement that very often in ascending with a melody, or even in a scale passage, we shall feel an instinctive *crescendo*, and in descending a *diminuendo*.

For instance, Arensky, *Prés de la Mer;* Chopin, *Nocturne*, Op. 32, No. 1; Beethoven, *Allegretto*, from Op. 14, No. 1:

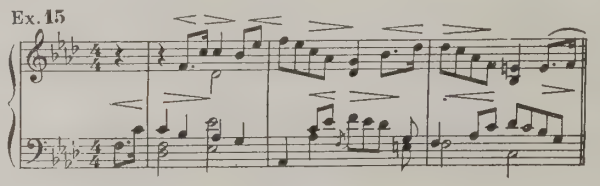
Ex. 12



the Chopin Nocturne, Op. 32, No. 1:

Ex. 13

and Beethoven, *Allegretto*, from Op. 14, No. 1:

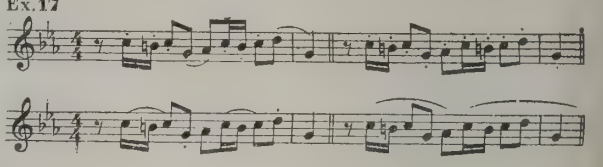


Ex. 14

(5) A special point is as to imitation and repetition of phrases. These present two quite different problems. A phrase, to be a real imitation made by a different voice, must clearly be played in the same manner as is that which it copies, while one *repeated in the same voice* will naturally be varied in treatment at its repetition, to avoid monotony.

The imitating voice in Schumann, Op. 23, No. 4, sings in practically the same expressive way as does that which it imitates.

Ex. 15



A remarkable study of this point is furnished by the Bach two-voice Inventions, in which not only dynamics, but also *staccato* and *legato* are to be imitated. The following is one of several ways in which such a piece may be treated:

Ex. 16

Again, turning to that exhaustless treasury, the *Well-Tempered Clavichord*, the subjects and counter-subjects of fugues should be consistent as to the manner of playing imitations. For example, we may conceive the subject of Vol. 1, No. 2, in any of the following ways; but whichever way we choose, ought to play it in the same manner at its every reappearance in the different voices.

Ex. 17

When, however, a short phrase is *repeated in the same voice*, our solution of the problem must be exactly the opposite; in other words, variety should be our aim. In this it is obvious that the repetition must not be played either faster or slower than its original, and that we are, therefore, restricted to either a dynamic or expressive difference. The dynamic change, partly no doubt from tradition, but also because of a natural musical feeling, is usually made by playing the repetition a shade more softly, it being also probably more *expressive* than that which it copies.

While such modifications in *tempo* and dynamics are necessary, if mechanical and stupid playing are to be avoided, common sense and good judgment as to them are equally desirable. The pupil must learn by degrees how to employ these means so that the minimum of apparent effort shall produce the maximum result. One test of an orchestra is its ability to carry through long passages in, say, a *mp* or *mf*, with the slightest possible modification in tone; so with piano playing—the *nuance* is most artistic when we can hardly detect the exact point at which, for example, a *crescendo* or *ritardando* begins or ends. The pupil, however, obviously must begin with a little exaggeration, learning later to be adroit and more reticent. After all, experience is the best teacher, and her lessons are learned little by little.

All that comes under the general name of *touch* is another part of expressive playing, but the question as to how it enters as a factor, to what extent, in what sorts of music (in melodic playing, as compared with that in which passage work predominates), all this is too comprehensive a matter to be discussed at the end of an article.

The following books are good reading: *Wieck*, "Piano and Song"; *Venable*, "The Interpretation of Piano Music"; *Spalding*, "Music, An Art and a Language"; *Hamilton*. "Piano Teaching, Its Principles and Problems"; *Christiani*, "Principles of Expression in Piano Playing"; *Gorno*, "Material for the Study of the Pianoforte Pedals"; *Reinecke*, "The Beethoven Pianoforte Sonatas"; *Josef Hofmann*, "Piano Playing, With Questions Answered"; *Franklin Taylor*, "Technique and Expression in Piano Playing"; *Matthay*, "The Act of Touch."

Teach Children to Compose

By Mrs. W. B. Bailey

"Music," wrote Carlyle, "is well said to be the speech of the angels;" and while this is a great idea and seems wonderfully true, why not teach children to talk in the language?

Why not teach children as much as possible about the actual construction of such speech?

Teaching children to compose their own simple little pieces is a very effective device for securing more interest in all the technical details of music. Drill work in scales, knowledge of half-steps in tones, keys, and, in fact, all the study that is usually so much dreaded as a sort of drudgery, becomes much more interesting to the pupil when in his own attempts at composition he sees the need of that very drudgery.

I know a teacher who gives her music pupils simple drills in composition as a further incentive to dictation. It proves the need of being able to place correctly on the staff a musical tone one hears.

For the first few lessons in composition the teacher must do most of the work herself. But it is worth all the initial trouble to see how the pupils work at it and delight in it, and how they grow in independence of construction and appreciation of many musical values which would otherwise be merely words to them.

To begin composition work with a very young pupil, first take two simple, strongly rhythmical lines of any poetry with which the child is familiar, and have him sing the words like he thinks they would sound pretty. Most young children will do this at once; but, for a few more timid ones, the teacher may have to say something like this: "Well, I think it would sound nice like this." She then sings it for him. Then they both go to the piano and locate all the tones their voices used in the little ditty.

The teacher then plays each note while the pupil puts them on the grand staff above the written words. Then they work out the rhythm of the composition.

In a short time the pupil can do it all by himself, even to writing down the notes without seeing which ones the teacher touches on the piano.

It is easy to go from this to written compositions without words.

The Music of Ireland

An Interview Secured Expressly for THE ETUDE with

AGNES CLUNE QUINLAN

"Moore Has a Wonderful Latch-Key that Opens the Hearts of All Irish People"

Miss Agnes Clune Quinlan was born in Limck, Ireland. Her first studies in music comnced in Limerick with local teachers. At an ly age she entered the Royal Academy of Mu- of London, studying piano and composition. Coming to America later in life she studied with Constantine von Sternberg. Miss Quinlan is a highly successful pianist, lecturer, composer and teacher. She has played many important engagements, including performances with the Philadelphia Orchestra and other important organizations. One of Miss Quinlan's compositions appears in The Etude for this month. It is an idealized interpretation of an Irish folk-tune, with all the charm native to this music.

OF ALL the nations and races existing in modern times, there are few that can trace their lineage with such positive directness, as can the Irish. However obscured may have been the y history of the land, the bard-historians of the country l of the Phoenician colonies and list of kings, which, ether fabulous or not, point to a very remote beginning. John McCormack says, 'Ireland was singing when breath of history first parted the mists about her sts. All down through the ages she has sung, whether the battlefield amid the clangor of arms, in the quiet n where the wandering bard tuned his harp to gentler , or out among the hills under the stars when the herd voiced the wonder of the heavens or the yearn- of the heart.'

The language of the country itself identifies it wi h great Keltic race which in the early times spread all Western Europe; and from these very early times ic became an indissoluble part of Irish life and Irish ory. The early bards, who were also, for the most , musicians, were called 'fileas' or 'philosophers.' n Caesar credited the early Druids, who inhabited and, with being learned. It is literally impossible to the first roots of song in Ireland, because the Irish ays sang and always danced, and music was as much rt of their lives as the air they breathed.

Early as Teachers

As long ago as the Seventh century, there were Irish hers of music, holding the highest rank as specialists he schools of England and on the continent. The ular instrument may have been bagpipe; but, in the ated classes, musical art was demonstrated largely ugh their famous skill upon the harp.

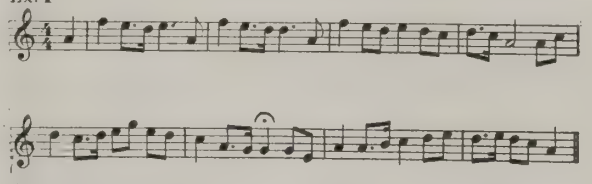
t first, the Irish scale consisted of five notes. It a pentatonic scale (the pentatonic scale is merely of the five black keys on the pianoforte, starting F sharp. It is similar to our Major scale, without ourth or seventh degree, resembling in some ways the ntal scale.) Then a sixth note was added and a nth. In Trinity College, Dublin, there was a harp was said to have been played by Brian Boru. This had thirty strings.

here is also preserved the famous Dallway harp, made 21, or one year after the landing of the Pilgrims in rica. This harp had fifty-two strings.

s in Russia and in Spain, occupational songs are a part of the life of the Irish people. In all of their ent crafts, in the field and in the cottage, they take ion themselves to sing and lighten what otherwise t have been thought hard service. In battle, the s marched at the head of the clans and this led to wonderfully spirited war songs. The last appearance ish pipers in battle was in 1778, in the American of Independence, in the corps formed by Lord Raw- of New York. In 1720 football matches were pro- with a piper who headed the contending teams as entered the field. Whether spinning, weaving, plough- milking or blacksmithing, the workers sang at all , when inspired to do so.

ne very striking feature of Irish music is the great t and depth of its melodies, the range sometimes ding over two octaves. Sir Hubert H. Parry says Irish folk music is probably the most human, most d, most poetical in the world, and is particularly rich nes which imply considerable sympathetic sensitive- Renan wrote, 'The Irish songs are emanations from gh, which falling drop by drop upon the soul, pass gh it like memories of another world.'

Weeping (Goltree), Laughing (Gauntree), Sleeping (Soontree)



THERE are three general classifications made of Irish music. The first is called Weeping Music. has to do with what is known as Caoine, which is unced 'Keen.' One frequently hears of the term, ng,' a peculiar English phonetic interpretation of aelic original. The caoiners were lamenters for the

MISS AGNES CLUNE QUINLAN

dead. When death comes to the cottage home, the old keeners get around the body and sit for hours singing these peculiar wails. The following approximates what a keener, known in the county of Cork, sings:

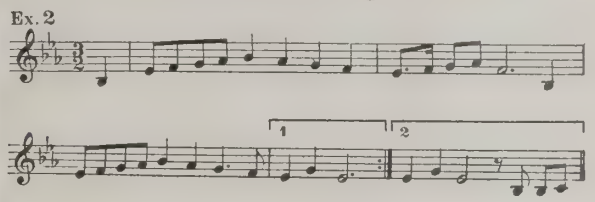
Ex. 1

"These notes in themselves mean nothing, because the keeners take the very largest possible liberties in pitch and seem to sing around or away from the notes rather than on the notes themselves; singing around the pitch with ornamentations improvised for the occasion.

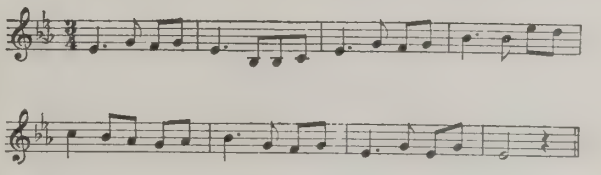
"There are keeners belonging to various sections and counties of Ireland. The keeners are in great demand at every death and poor indeed is the Irish funeral of an aged person in the rural districts that might be held without this picturesque and dramatic attention.

"Among other forms of weeping music is that of the emigrant leaving his native shore. The Irish heart is very close to the old sod, no matter how distant he may be from the little green Island. This feeling of ancestry comes down to the present and is evident, for instance, in such songs as 'The Minstrel's Song,' and 'The Minstrel Boy to the War has Gone.' It is still manifest among the Irish descendants in America, and is forever represented in the popular songs of the mother type, such as 'Mother Machree' and 'The Little Gray Home in the West.' The grandchildren of Irish emigrants of the thirties and forties sing these songs as though they were still attached to the country their grandparents loved so dearly. These songs have a very human heart appeal and they have reached out to still larger audiences and groups.

"The second classification is Laughing Music. Under this head are native dances that are of three kinds. These are marked by rhythms that are irresistible; that is, lively, spirited jigs, reels and hornpipes. Their charm and fascination, fortunately, is being revealed in this day and they are being introduced in many compositions by modern composers.



"The jig, for instance, is always in a six rhythm, and the accents are very strongly marked. Those who have never seen an Irish jig danced by a real Irish dancer do not realize how great is the emphasis upon the leading accents.



"The reels are in four time. In the reel, the first and fifth notes of the scale are reiterated, time and again.

"The horn-pipe is also in Common time and has its own characteristic rhythm. The Irish feeling for rhythm is decidedly racial. The sound of music of a lively type sets the Irish feet instantly to dancing. I have never seen a peasant in Ireland dance out of time. They have an intuitive sense that seems to carry their feet with the pattern of the music. In fact, the Irish peasant likes nothing better than to take down the half-door of his cabin and listen to the tap of his hob-nailed shoes while some fiddler plays beside the glowing turf.

"The third classification is Sleeping Music. Sleeping songs are plaintive, soothing, and soft airs. They are literally things sung at the cradle by nurses and mothers. A good example of the sleeping song is

Ex. 2

"There are several thousand of these folk-airs in existence and doubtless others that have never been recorded. These tunes are subject to enormous variation in different parts of Ireland, much as one experiences with the dialect. For instance, the tunes as sung in Donegal would be sung in Limerick in another way. One of the significant things about the Irish love for music is the fact that the Irish flag is the one flag in the world in which a musical instrument is embodied. The golden harp on the field of green is more representative of the Irish feeling for music than might be suspected.

"It is not generally known that there was an Irish Conservatory of Music in the Tenth century in Switzerland, conducted by Irish teachers, who were mostly monastic. This is believed to have been the first Conservatory in existence. It was established at Saint-Gall, because in those days it was very difficult to get to Ireland.

Irish Musical Influences

"THE RELATION of Irish music to the world at large is most striking. Very few people realize the influence of Irish music upon art, literature and the drama. Of course everybody knows that in Flotow's 'Martha' the famous old Irish tune, *The Last Rose of Summer,* was the feature of the opera. This tune, as you will find upon examination, has the characteristic of having no fourth degree.

"It is not known, however, that one of Shakespeare's closest friends was Dowland, the Irish lutenist of his day and one of the most famous lutenists of his time. It was he who gave Shakespeare advice upon music in his plays; and it is reported that there are only five of the Shakespearean plays in which the bard was not influenced in some way musically by the suggestions of Dowland. In fact in the Shakespearean plays, the following airs are believed to be indisputably of Irish origin.

Bonie Sweet Robin, sung by Ophelia in Hamlet.

Come o'er the Bourne, Bessie, to Me, in King Lear, sung to Moore's *Fairest, Put on a While.*

Whoop! Do me no Harm, sung in The Winter's Tale and known as *Paddy Whack.*

Light of Love, from Much Ado About Nothing.

Yellow Stockings and *Peg Ramsey,* sung in *Twelfth Night.*

"In many of the plays of Shakespeare not only are allusions made to Irish music, but also in many of the plays traditional tunes of Ireland were sung. Shakespeare's interest in the Irish music was so strong that he often introduced these songs between the acts, sung in the original Gaelic. When Coriolanus meets Agrippa he does so with the Irish greeting, *Caed mile failte* (a hundred thousand times welcome).

"Dowland went to Denmark, at the invitation of the King, to expand his art as a lutenest, and it was there that he is believed to have collected for his friend, Shakespeare, data that Shakespeare used in the writing of *Hamlet.*

Composers Use Irish Tunes

"IRISH tunes, have, of course, been appropriated with a very free hand by the composers of all nations; and Irish people take a pride in the way in which these melodies blossom and interpret so much of the soul of their home country, and have been employed for the joy of other nations. Here are a few instances of the indications of the appreciation of great composers for Irish music.

"Beethoven arranged twenty traditional Irish airs for the violin and piano. Handel introduced an *Irish Jig* into 'Acis and Galatea.' Haydn made use of the traditional Gaelic airs in some of his compositions. Berlioz (whose wife was the famous Irish beauty and actress, Henrietta Smithson), and also Mendelssohn, wrote Fantasias on Irish tunes. Among modern composers Percy Grainger, Cyril Scott and Fritz Kreisler, have used Irish airs in their compositions; and these appear on the programs of nearly all leading artists.

"One of Cyril Scott's most happy arrangements is that of 'The Wild Hills of Clare.' These very same hills, surrounding the town of Kilkee, caused Burne-Jones, the great artist, to say that when he feared his artistic vigor was waning, he read Joyce's *Celtic Romances,* from which he received renewed inspiration and in consequence painted his *Queen Macve* which now hangs in the National Gallery of London. Tennyson, on one of his many visits to Kilkee, wrote his beautiful poem, *The Voyage of Maeldune.*

"Thomas Moore visited America and was received at the White House during the Jefferson administration. Byron said of Moore, 'He is one of the few writers who will survive the age in which he deservedly flourished.' Moore, in a preface to one of his editions, wrote, 'I have always felt, in adapting words to an expressive air, that I was bestowing upon it the gift of articulation and thus enabled it to speak to others all that was conveyed in its wordless eloquence to myself.' In this way Moore has made known the beautiful folk music of Ireland that otherwise might not have reached the people. In his editions of Moore's melodies, the title of the old air follows that of the poem. As examples:

"'The Harp that Once Through Tara's Halls,' is sung to the tune of *Mary, My Treasure.*

"'Has Sorrow My Young Days Shaded?' is to *Sly Patrick.*

"'Let Erin Remember,' is to *The Red Fox.*

"'The Meeting of the Waters,' is to *Old Head of Dennis.*

"'The Last Rose of Summer,' is to *The Groves of Blarney.*

"'O, Believe Me, If All Those Endearing Young Charms,' is to *My Lodging Is on the Cold Ground,* and which to the words of 'Harvard, Fair Harvard,' has been the college song of Harvard for over two hundred years.

"Music in its modern form was first recognized in Ireland with the coming of such composers as John Field (inventor of the *Nocturne*), William Wallace and Michael Balfe. Possibly the most distinctive work was done by Field. Following them, some of the musicians of note, of Irish birth, have been Hamilton Harty, Charles Villiers Stanford and Victor Herbert (who spent most of his active professional life in America).

Dr. Annie Patterson, of Cork, a frequent contributor to THE ETUDE, is reported to be the first woman to receive the degree of Doctor of Music, by examination, from a great university.

"There has grown up a real literature relating to the music of Ireland. Over ninety volumes have been published on the subject. Among those who wrote most extensively and interestingly may be mentioned Petrie, Bunting, Joyce, Grattan Flood, Captain Francis O'Neill (now living in Chicago) and Redfern Mason (now living in California).

"Of the earliest printed Irish dance, dated 1613, the only known copy is in the Metropolitan Museum of New York. The original manuscript of *The Last Rose of Summer* was offered at auction three years ago, in New York, and was bought for six hundred and twenty-five dollars, to be added to the treasures of a private collector.

"A fit conclusion of this discussion of Irish music would be to quote a prophetic utterance from James Shirley's 'St. Patrick for Ireland'—a play produced for the first time at the Dublin Theatre (Werburgh Street) on St. Patrick's Day of 1639—all the more notable for having been written by a famous English dramatist of some three centuries ago:

"'This nation
Shall in a fair succession thrive, and grow
Up the world's academy, and disperse,
As the rich stream of human and divine knowledge,
Clear streams to water foreign kingdoms;
Which shall be proud to owe what they possess
In learning to this great all-nursing Ireland.'"

Music Teachers' Organizations Honor Their Founder, the Late Theodore Presser

THE ETUDE MUSIC MAGAZINE *has been in receipt of thousands of letters of sympathy and eulogy, since the death of the founder, in October. It is a very thrilling experience for those who worked side by side with him for decades, to read these magnificent tributes. Of course it is impossible to print this great volume of correspondence. We do, however, take great honor in publishing here tributes that have come from two great Music Teacher Organizations, of which he was founder.*

From the Music Teachers' National Association

(Resolution Introduced by Waldo S. Pratt)

ON OCTOBER 28, 1925, occurred the death of Theodore Presser, in Philadelphia, where for more than forty years he had been noted as editor, publisher and philanthropist. His public career has elsewhere been described and eulogized. We of this Association cannot fail to add grateful recognition of his services to us.

In 1876, Mr. Presser, then a teacher at the Ohio Wesleyan University, at Delaware, Ohio, was the animating spirit in that group of earnest men who organized The Music Teachers' National Association at a meeting held on December 26th of that year at Delaware, he being chosen as the first Secretary. For several years thereafter, though not holding office, he continued influential in the early stages of our development. Later, when he removed first to Virginia and then to Philadelphia, and became absorbed in large business enterprises, he gradually came to have but a distant relation to our affairs. He was not forgotten by us, however; and in 1919, when the Association met at Philadelphia, and when the sessions were enriched by his hospitality, and his reminiscences, he was hailed as "The Father of the Association," and made our one and only Honorary Life Member. We had hoped that he could share next year in our semi-centennial celebration.

All who knew him will testify to the gracious kindliness of his nature, to his indefatigable industry and practical skill, and to the sympathy and liberality with which, in various ways, he sought both to encourage and support those seeking to enter the profession of music-teaching, and to provide for the happiness and peace of those who had become veterans in that profession. Besides the useful periodical, THE ETUDE, by which he is best known, the munificent Presser Foundation, with its princely endowment, will stand as an enduring monument of his eagerness for service. He will long be remembered in warm affection and high esteem by a multitude who have been benefited by his life and work.

(A Resolution Introduced by Carl W. Grimm)

THE M. T. N. A. honors the memory of Theodore Presser by acknowledging its debt of gratitude for his having adopted the Association's project of a Musicians' Home; for his having single-handedly established the large and beautiful Home for Retired Music Teachers in Philadelphia; and finally for his endowing this Home from his immense fortune, in order to secure it for the future.

A Tribute from the Philadelphia Mu Teacher's Association

Theodore Presser

BENEFACTOR

"The Music Teacher's Friend."

At a public meeting of the

Philadelphia Music Teacher's Associa

held December 9, 1925,

the following Resolution was submitted and unanimously ad

WHEREAS, This Association was bereaved on October 28, 1925 of its be Founder, Friend, Patron and Honorary Presid

Theodore Presser,

through whose unfailing interest and generosity we so long have been bless **Recognition** of his great contributions to us and to the country at large his relationships as Teacher, Composer, Journalist, Publisher, Dealer, Org and Philanthropist, as well as for his modesty and simplicity of life, his ideals, breadth of vision, business acumen and wisdom; as well as his s service in the cause of musical education and its philanthropies; and **Appreciation** of his spirit of sympathy and understanding of the Music mission and problems,—for which the Presser Home for Retired Music T and the Presser Foundation will ever remain a noble monument perpe his memory; the founding of the National Music Teachers Association and organ, THE ETUDE,—then of our own local organization, in which he t part to the end,—always stressing the pedagogic purpose of the Associ and its great opportunity for service in our community. Therefore be

Resolved,

That this testimonial of our loss and tribute of our affection be suitably engr framed and presented to the

Presser Home for Retired Music Teachers

Results from Daily Lessons

By May Hamilton Helm

THE following certificate was given to a pupil: tween June 20th and November 11th, deducting weeks vacation, Julia H., age eight years, who had piano in her own home before August, learned to pla fectly with both hands the twelve major scales th two octaves. These she learned to form by tetrachord knows their signatures. She knows tonic and dor chords in all major keys on the keyboard, though yet on the staves. She has memorized and can pl curately five little pieces, including *Silent Night* a menreich's *Spinning Song.* She can read simple either bass or treble, and some first-grade solos. polyphonic exercises have been given."

Could any child, except a prodigy, have accom that much in one lesson a week? Many of my pupil done as well as little Julia, though results with be were not so satisfactory until the daily-lesson pla adopted. Now a beginner is never accepted und other system.

Analyzing the Process

By Hugo O. Bornn

A PUPIL who was having unusual difficulty l to read his notes with any degree of fluency, lead give considerable thought to the matter, and I dis that every note struck on the piano was the re quite a complicated process. The eye first sees t and telegraphs to the brain that middle C, for in is required. The brain sends an order to the fi strike middle C. The finger does this, and the final judge, decides that the right note has been This process comes easily and quickly to many; one who is finding difficulty in seeing, thinking, and hearing the note in an instant, the plan I us this pupil might be helpful.

I explained the process to him and that we w about training each action individually until the follow each other rapidly and accurately. First- brain. This was trained by reading the notes alo out playing. A portion of every lesson was set a reading and the pupil would call out the notes o ody taken at random, at first very simple, then g increasing in range and skips. When this wa fairly well, we took up the next step, brain to I dictated melodies to him which he played. and meter were not considered, but we just wo speed and accuracy. Some elementary ear-train now added, and I found after a short time difficulty in reading his notes had almost entir appeared.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries

Volume of Tone

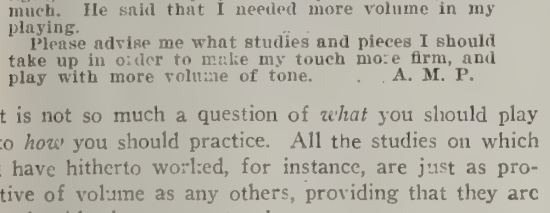
I took an examination in music last June and failed. The examiner said that my touch was too light, and that I played on top of the keys too much. He said that I needed more volume in my playing.

Please advise me what studies and pieces I should take up in order to make my touch more firm, and play with more volume of tone. A. M. P.

t is not so much a question of *what* you should play o *how* you should practice. All the studies on which have hitherto worked, for instance, are just as pro- tive of volume as any others, providing that they are ted with the proper touch.

ou are evidently using the finger touch too exclusively hout the reinforcement of the hand and arm touches, ch are made much of by modern pianists. For a cussion of the hand touch, I refer you to answers in Round Tables for May and June, 1924. The arm ches employ the weight of the forearm or of the arm, from the shoulder. These are discussed under heading *Weight Touch* in the Round Table for April, 5. Also, you may consult the following books with fit:

obias Matthay: *First Principles of Pianoforte Play-*



. W. Grabill: *The Mechanics of Piano Technic.*
lark Hambourg: *How to Play the Piano.*
etter still, study with a teacher who is up-to-date the subject!

Bach and the Pedal

"To what extent should the pedal be employed in playing Bach's piano compositions?" L. A.

ne should be very wary in such employment, for two sons: first, because Bach had no pedal whatever on clavichord, for which most of his so-called piano ks were written; and second, because the com- ated voice parts which we find in his fugal composi- s lose their required individuality and become "mussy" reated with the pedal.

n general, we may say that little or no pedal should ised in playing the fugues and kindred pieces. Works a freer, preluding character may employ the pedal give body and resonance to individual chords, or to ups of notes which, if sounded together, would pro- e such a chord. Perhaps the best example of this er case is found in the very first prelude of the *Well- mpered Clavichord,* where the pedal may well be used ce in each measure, thus:

ut be sure to use too little rather than too much l; and in doubtful cases, leave the pedal violently e.

Types of Piano Music

I have two pupils about twelve years of age who are playing Bach's *Two-part Inventions* and other pieces of that grade. One of the pupils is exceedingly brilliant, and both are fond of showy music. What kind of pieces should you recommend, so that the taste for the less showy pieces would increase?

When, as a rule, are pupils mentally ready for Nocturnes, and other music which requires to be played with feeling? Would it be a mistake to teach nocturnes (not Chopin's) to the above pupils?

Do you think I ought to require as much slow practice for clarity, be as exacting and keep these two pupils on pieces as long as I would older pupils? V. P.

e may distinguish three principal types of piano positions: (1) *Salon music*—brilliant in style, and ding dances, transcriptions, études and so on. (2) *ic of sentiment,* such as nocturnes, reveries, ro- es and (3) *Intellectual music*—the Bach *Inventions,* ies, and so forth.

ten these three types are closely united, as in in's *Impromptu in A flat,* where the first and third are of the salon type, while the intervening passage is pure poetic sentiment. In the classic sonatas, too, we often find an intellectual first movement, a poetic second movement, and a brilliant third movement.

Now, the object of piano instruction should be not only to secure technical expertness, but also to make pupils perform intelligently all styles of music. Hence the broad-minded teacher will familiarize his pupils with all three of the types mentioned above, in order that they may not become so one-sided as to play only brilliant music, only sentimental melodies, or even only Bach.

Young people are naturally attracted toward the showy style, since it is through this style that they are able to make the most startling impression. And there is no reason why they should not be given worthy examples of this style, such as Godard's *Second Waltz* or MacDowell's *Hungarian.*

But the same pupils will become equally or even more enthusiastic over the "soulful" style, if it be properly introduced to them; for music is primarily the language of the emotions, with which they are bubbling over; and they should be taught from the very first to voice these emotions in their music. Show the pupil, therefore, how to put "soul" into even the simplest of melodies, and he will enjoy this medium of self-expression. Take, for instance, the very first number of Schumann's op. 68, *Melodie*—and have it played so that each phrase sings its message to the performer and auditor.

Thence the pupil should gradually progress, until he can play such pieces as Grieg's *Albumleaf,* Op. 12, No. 7, and Ehrlich's *Barcarolle in G,* with the same intensive expression. With such training, he may tackle a Chopin Nocturne whenever his technic is sufficiently formed.

As to the intellectual type, you were wise in giving the Bach *Inventions* as a kind of background. While young people do not take to this type so eagerly, they will come to like it, if it be properly presented to them, and in not too large doses.

Certainly, I should pay close attention to every detail of clarity and accuracy in the case of the children of whom you speak; for it is precisely in this formative period that future habits are established.

The Meaning of "To Chord"

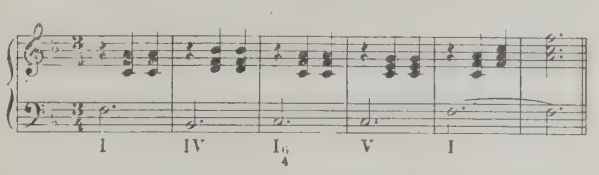
It now appears that I was wrong as to my conjecture of the meaning of "to chord" (see Round Table in July ETUDE)—an expression which is not explained in any of the dictionaries (lexicographers take notice!). Two letters recently received shed light on the subject; and I herewith thank the writers for their lucid explanations.

The first is from Mr. Louis Akin, of Corning, Iowa:

The verb "to chord" is one of quite common use among people of rural communities, both here and in New York State, where I resided some forty years. You might frequently have heard someone say: "Now, Jim will play 'Old Zip Coon' on his fiddle, if you will 'chord' for him on the organ (usually an asthmatic parlor organ), and we'll have a Virginia Reel." I have "chorded" for more than one fiddler in the hop yards of Scholaris County, in my youth, and also here in Iowa on cottage organ, with piano and guitar. It usually is a tedious and dreary performance of thumping out the three principal chords of an accompaniment to the simple dance tunes, with an occasional brief shift to a closely related key. It has no especial connection with this hideous thing they call "jazz," for which the proper verb should be "to dis-chord."

Mr. Herbert M. Schueller, of Nicollet, Minnesota, corroborates the foregoing statements, adding, in regard to dance music:

The person that played the melody told the pianist what key the piece was in, and he singled out in his mind the chords of that particular key. The melodic and harmonic inner sense of the pianist would tell him what chords were needed for a given passage.



The forms were very simple. For a two-step, key of C, the hands would play thus:

Measure 1, Beat 1: L. H. octave of C.
Measure 1, Beat 2: R. H. chord of C in root position.

So it would proceed, different tones of the C chord being used in the base, and different positions of the C chord being used in the treble whenever it seemed well. All other chords used were similarly treated.

Since all the melodies were easily memorized, little practice was needed to learn how "to chord." A waltz would have the bass note on Beat 1, with treble notes on Beats 2 and 3; and all other measures would be played as seemed fitting.

In my boyhood days I used to meet people who boasted that they could play by ear an accompaniment to any tune, in any key—although I do not recall that the verb "to chord" was applied to the process. Inasmuch as the three chords above mentioned—the tonic, dominant and subdominant—contain all the tones of a given scale, they can evidently be used to harmonize any note of the melody by playing them in any desired succession, and in such figures as the following:

To cultivate the art of "chording," therefore, one has simply to memorize a formula such as the above, to transpose it into every key, and finally to adapt it, by one's sense of harmonic and rhythmic fitness, to any given tune and measure. Another word for a similar effect is "vamping"—a word used by pianists in vaudeville shows, who must stand ready to concoct an accompaniment to any tune at a moment's notice.

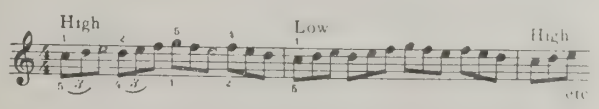
The three chords do very well for ordinary tunes, but woe betide the player who tries to fit them to the modern music of "dis-chord."

Getting Command of Technic

"I am now twenty-six years old and am self-taught. I practiced on the reed organ till the age of nineteen, when I fell in with some copies of THE ETUDE. By carefully reading these I became conscious of what relaxation means and began to apply it in my playing.

"About a year later I had access to a piano on which I still practice. I have worked through various studies, but cannot play at a rapid tempo without making mistakes. Even pieces that I can play well at a moderate tempo give this same trouble when I try to play them faster. Can you help me to overcome this?

"I can now play music of the fourth of fifth grade. What is the highest grade I am likely to attain, seeing that I was an adult beginner?



"Please suggest exercises that will help me. I have had no practice in trills, chords and tremolos.

"Is it essential for one to work through all four volumes of Mason's *Touch and Technic?* Which of these do you consider most important?—SERIOUS.

FROM what you say, I surmise that you have still much to do in the way of relaxation; for facility in playing depends largely upon this factor. There is no time when one may say, "I am now able to relax perfectly, and so need not worry further about the matter." One must constantly watch lest stiffness, especially of the wrists, should creep in. Also, it is always possible to obtain more relaxation, by patient care and examination.

Try this exercise: Sitting at the keyboard, let the arm hang loosely at the side. Raise the forearm, with the wrist dangling limply from it, very slowly, until it arrives at a position just above the keyboard. Now drop the forearm and hand, until the thumb sounds middle C. Hold the key down, and circle the wrist about the thumb as far as it will go in either direction. Repeat this circling process, holding each of the fingers down in turn.

Next, practice five-finger exercises, such as the following, keeping the wrist high during one measure and low during the next:

Begin by playing very slowly, with full tone, and gradually increase the speed, lightening the touch at the same time, until you play as fast as possible, pianissimo.

Raising and lowering the wrists as I have indicated minimizes the danger of stiffness, since the latter condition is most easily attained when the hand, forearm and wrist are horizontal. Similar exercises may be formed on the scales and arpeggios.

For works on technic I refer you to *Mastering the Scales and Arpeggios,* by Cooke, also the *Complete School of Technic,* by I. Philipp. It would be a good plan for you to work through the four books of *Touch and Technic,* which are of equal importance in a broad course of study.

THE WIT OF AUBER

WHILE it was a remarkable thing that Mendelssohn at the age of seventeen should have composed the Overture to "A Midsummer Night's Dream," it is perhaps no less remarkable that Francois Auber should have reversed this record by not even beginning his real musical career until he was nearly forty, and going steadily ahead until he died, approaching his ninetieth year. Up to that time he had been an amateur, the son of a rich father, who seemed to love only his horses and having "good times" by amusing charming ladies with charming ballads. Not until his father's death did he set to work in earnest, as a result of financial ruin, and, after a struggle to live down his former reputation, emerge triumphantly as a composer of first rank, and finally become director of the Paris Conservatoire. He retained, however, much of his social distinction and quick wit. Of a singer notorious for singing out of tune, Auber said: "He sings between the keys of the piano." Of another, whose voice was harsh and manner overbearing, he said: "Duprez shouts so that he hurts the chest of his audience." He rarely slept more than four hours, and never went to bed till daybreak. "Don't you think," a lady asked him, "that it is very unpleasant to grow old?" The white-haired octogenarian smiled. "Very," he agreed, "but until now growing old has always been regarded as the only way to live long." Yet he felt his age. When, for the first time, he heard Patti at her Parisian debut, he rushed from the theater after the first act; and, on being questioned, he replied with tears in his eyes: "I will not talk about it; I will not talk about it. *I have been young the whole evening.*" His passion for horses was lifelong, and when these were taken from him to be used as food when the Prussians invested Paris, the fact is said to have greatly hastened his end. His best-known operas are "Fra Diavolo" and "Le Cheval de Bronze."

Good taste is the progressive product of progressing fineness and discrimination in the nerves, educated attention, high and noble emotional constitution, and increasing intellectual facilities.—*Grant Allen.*

HORSE SENSE—MUSICAL

"WITH regard to ordinary domestic animals, undoubtedly the majority are fond of music," thinks Margaret Strickland, writing in the London *Strand Magazine.* "Horses, once they have become accustomed to it, delight to march to the strains of a military band, though any harsh or sudden sound, such as the beating of drums or violent trumpeting, they hate. To give an instance of how a horse can be affected by music, take the case of Double Cance, who won the Grand National this year.

"He was down to run on March 12th, at Cheltenham, and was confidently expected to win. However, on the morning of the race he was found in such a highly nervous condition that the trainer, Fred. Archer, decided it was unwise to run him. It appeared that someone had been singing, and playing a banjo, outside the horse's box on the eve of the race, and to this was attributed the animal's indisposition. I have it from Mr. Archer that the horse was sweating from head to foot.

"Horses, especially thoroughbreds, are so sensitive and highly strung that any strong emotion, whether of pleasure or distress, can easily upset their whole calibre; consequently their owners would be well advised to see that there are no strolling musicians in the close vicinity of their stables."

Curiosity compels one to ask what would happen to the calibre of an army mule if somebody was mean enough to play a saxophone in his close vicinity.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

HOW THEODORE THOMAS CONDUCTED

IN THESE days of great symphony orchestras it is well not to forget the pioneer work done by such men as Theodore Thomas, founder of the Chicago Symphony Orchestra, whose methods might well be imitated by others to-day.

"It was a fundamental principle with Thomas, in rehearsal, to keep his musicians so absorbingly interested in their work that their attention was riveted on his every gesture," says Rose Fay Thomas (his widow and biographer) in her "Memoirs of Theodore Thomas." "He permitted no talking or moving about during a rehearsal, and if he saw the attention of even the remotest singer in the back row begin to waver, he would recall the delinquent to his duty with such a sharp rebuke that not only the offender but everyone else on the stage would 'come to time.' . . . . But if the reproofs of Thomas were severe, they were, on the other hand, never insulting, and were framed to spur the inattentive to duty, not to humiliate their pride. If he had anything of the latter kind to say to one of his performers, he would say it in private. . . . .

"Nothing made him so indignantly angry as when his orchestra was treated with discourtesy by any other conductor. So particular was he about this that sometimes, when an ill-mannered or inexperienced conductor was rehearsing with them, I have known him to sit on the stage himself throughout the rehearsal, in order to make sure that nothing of the sort should happen.

"His orchestral rehearsals were apt to be long as well as strenuous—he was careful, however, not to fatigue his musicians unduly, in order to keep their work fresh and vital. As long as the music itself was sufficient to hold their attention, he would keep them closely at work. But when he saw that they were beginning to flag, he would brighten the atmosphere with all sorts of fun and nonsense, or by a little recess for relaxation."

THE MUSIC OF SNAKE-CHARMERS

A WRITER in *The Statesman* (Calcutta) tells how a nomadic tribe of Hindoos, wandering among the islands in open boats, catch poisonous snakes to sell to the Zoos and private collectors, by means of music. The author accompanied one of these snake charmers early one morning.

"There were three or four women with him from the other boats," he writes, "and on getting ashore they spread out a bit and moved into a patch of short scrub. I kept alongside the bearded one. In a short while he drew out his pipe and commenced a weird and crude melody. It started in a plaintive minor key and very, very gradually increased in volume, while the rhythm changed to a langorous waltz-like air, interspersed by sudden quaint runs up the scale. This music continued for some ten minutes, and then I heard a rustle in the grass ahead of me, and looking there, beheld a tremendous cobra, of the 'spectacled' variety, gliding forward.

"Feeling chilly about the spine, I retreated a few steps, and gazed, fascinated by the dread reptile, which glided to within ten feet or so of the piper, and then slowly erected its hooded head, with unwinking gaze fixed on him. The latter now quickened the beat of the tune, playing a lively sort of jig, while the cobra began swaying to the tune. Faster and faster went the music, while faster and faster swayed the reptile, till the charmer ran up the scale in a burst of sound and broke off suddenly on a top note. The snake stopped swaying on the instant, and remained as if stricken to stone; at that time the charmer strode forward, calmly caught it below the head and thrust it casually into his basket."

SIR EDWARD ELGAR IS SHY

WRITING in the London *Strand Magazine,* Sir Landon Ronald tells us that Sir Edward Elgar, England's foremost composer, "is a most complex character, and as a man is extremely difficult to understand. He is a mass of contradictions and paradoxes. For instance, to-day he will be most communicative and talkative, and to-morrow there will not be a word to be got out of him. He is nervous and shy before strangers, but is affectionate and hospitable to his intimates. He has an amazing brain, and is master of many intricate things which have nothing to do with music.

"He is a great reader and must have a wonderfully retentive memory, because whether the subject under discussion is Greek literature, gardening, chemistry, engineering or horse-racing, he is equally at home with all questions of the day and often takes one's breath by the depth of his knowledge. The one subject which he always declines to talk about is music, and hundreds of times I have heard him repeat the remark, 'I know nothing about music.' As a matter of fact, I can vouch that he has an enormous knowledge of music—both ancient and modern—and I cannot help thinking that what was once said perhaps as a joke has developed into a habit. Elgar plays no games, to my knowledge, but he loves to joke and chaff his friends. He is fond of walking, and is very much happier in the country than in any big city. He has a great love for animals, and like many another great man, his dog is his master.

"He has a peculiarly fine head and is of aristocratic bearing; and there is a great deal in his character and his outlook which can be best expressed by the word which he so often uses in his own orchestral scores, 'Nobilamente.'"

"When all is said, the future destiny of an art depends entirely upon that inscrutable thing called genius. Great inventors are rare, and they alone are entitled to point the way to the future, leaving it to others to define their work, not at the time of its production, but at a sufficiently later period for them to see it in a light that is at once comparative and synthetic."—*Charles V. Borren, in The Chesterian.*

TO CONSULT YOU; YES, TO CONSULT YOU!

MODERN performers of ancient m who revolt against the lengthy repetiti so characteristic of 18th century son and symphonies, may be relieved to le that contemporaries of Haydn, Mozart Schubert (who had a peculiar passion "repeats") also objected to them. Am these iconoclasts were some promi musicians, including no less a genius t Grétry. In his "Memoirs and Essays Music," Grétry ridicules "repeats" thus

"A sonata is a discourse. What sh we think of a man who cuts his sp in half and repeats twice each of halves? 'I was at your house this m ing; yes, I was at your house this m ing to consult you about a business ma to consult you about a business mat Repetitions in music affect me in manner.

"Let us discriminate, however, betw useless repetitions and a charming ph that occurs three or four times, or repetition of a delightful air. Just as may say to his sweetheart, 'I love y ten times in the same visit,' so one repeat a phrase that is full of emotion am speaking of the long repetition forms the half of a musical discourse."

"The voice is a gift of God, an end ment of nature, but singing, like any o art, requires much study and work, an that sense it is acquired."—JOHN CO

THE TOWN OF PALESTRINA

FEW of us recognize in Giovanni P luigi Sante, the composer, "Palestrina," called from his birthplace. In a biogra of this, the last and greatest of the m eval contrapuntists, Zoe Kendrick Pyne describes the little town in the Sabine H some twenty miles from Rome:

"It charms even now in its squalor decay; for, though sacked and besieged more than one occasion, it still retains m nificent remains of pediment, plinth cornice, nor can anything rob it of lovely setting in the chains of the Sa and Alban Hills, or of the flower-scen breezes from the adjacent *campa* (countryside).

"From its position the town was sidered almost impregnable. It was ther defended by fortifications, partly historic, partly Latin, against which forces of Rienzi hurled themselves in v It had not always been so fortunate. a quarrel between Pope Boniface VIII its Colonna overlords, Palestrina suff almost total destruction, and its adja acres were strewn with salt, so that green thing should grow therein."

After this reminder of the Roman tr ment of Carthage the author describes ther attacks on the city, including one took place about the time Pierluigi S was born. But "again Palestrina from its ashes, and to-day it is not un sonable to suppose that the tortuous str picturesque town-gates and fountains, water-carriers with their graceful cop pots—even the shepherds in their long v cloaks and high-crowned hats—can h changed little since this last upheaval, they are all survivors of a medieval p

"Tradition identifies a rough, two-sto structure as the home of the great m cian's family. Built almost on the t wall, it is only separated from it at back by a small garden. In front, an side staircase leads to a *loggia,* from wh a once-large room (now divided four), with high open hearth, is ente Here the father with his wife, Maria mondi, lived, and here the boy, Giova Pierluigi, was born, probably towards end of 1525."

"Melody is the kernel of music, which harmony is related as gravy roast meat."—Schopenhauer.

A Lesson on Mendelssohn's Boat Song in A Minor

By Victor Biart

A GONDOLA gliding indolently over the placid waters of Venice—the City of Canals—bearing, perhaps, a daughter of sunny Italy, basking in the dreamy atmosphere of a summer evening; at the helm a brawny oarsman singing his song to the rhythmical cadence of the stroke of his oars: this picture which, painted in tones, constitutes the barcarole or Venetian gondolier song. Its basic element is rhythm, the illustrative agency in the musical portrayal of motion. The regular cadence of the movement of the oars corresponds to the recurrent accents on the beginnings of groups of beats. The barcarole (Ital. barca. rowboat) is usually in 6/8 measure, a primary accent falling on the first beat, a secondary or lighter one on the fourth beat. The rhythmic charm of the barcarole is scarcely less than the tunefulness inevitable in music originating in Italy, that land of eternal melody. This type of composition is admirably adapted to moods that require a short piece for their expression, such as the dreamy, the contemplative, and their kindred. Furthermore the descriptive charm of the illustration of motion and the portrayal of water plays on the imagination of the hearer and stirs the fancy of the romantic composer.

The romantic composer of the nineteenth century, whose chief concern is the emotional and the imaginative, naturally found the barcarole a congenial vehicle of expression. What could, therefore, stimulate a receptive young composer like Felix Mendelssohn-Bartholdy more effectively than such a scene in the city of the Doges, as above described?

After his triumphant visit to England in 1829, followed by a pleasure trip to Scotland, the fruits of which latter were his sparkling concert overture "Fingal's Cave" and his "Scotch Symphony," he undertook a journey to Italy, in 1830, under the spell of which land more than one composer has come, before and after him. The greatest inspiration of this visit was his "Italian Symphony." But by no means of minor significance are the Venetian gondola songs—those exquisite little compositions that can never age, because they spring from that source of immortality in music, spontaneity. For this reason they have endured after many works more pretentious—including operas and symphonies—have gathered the dust of oblivion. These gondola songs are among the gems contained in that collection of piano classics—classics of romanticism—*the songs without words*. To one who disdainfully characterized these miniatures as sugar-water, Hans von Bulow replied: "No, they are noble wine!"

There are four gondola songs: the first in G minor, No. 6 in the First Book, published in 1834; the second, F-sharp minor, No. 6 in the Second Book, which was given to the public in the following year; the third, in A minor, which is No. 5 of the Fifth Book and appeared in print in 1844; the fourth, in A major, a posthumous work which made its appearance with the Eighth Book in 1868.

The third gondola song does not date from the composers first visit to Italy, it is true; the time of its composition is not known, but is believed by some authorities to have been 1842-3. The minor mode, chosen for the first three gondola songs, gives them a certain sombreness that adds to the charm of the Venetian coloring. This imparts a somewhat wistful touch to these charming lyrics—for lyrics they are, because of their contemplative character. At the same time they are descriptive miniatures, for they illustrate placid waters and the rhythmical motion of the boat. In form they are the essence of that clarity that points to the classical education of their highly cultured author.

Analysis

AN ANALYSIS of the third gondola song will reveal at once its structure, namely that of three-part song form, the Third Part being an abridged return of Part I—in this piece, as not infrequently, reduced to a single phrase. The customary repeats are also made. The piece will also be readily seen to be laid out in regular four-measure phrases, with an interludial measure inserted between the end of Part I and its repetition and between Parts II and III, the latter two being repeated as a unit. Their repetition shows a slightly altered accompaniment in the alto part, in form of syncopation, which heightens the activity and may correspond to increased motion of the water.

Each of the three fundamental elements of music plays its part in the composition of this piece: harmony, maintained by means of the damper pedal, represents the mass of water; rhythm, with its recurrent accents on the first and fourth beats in the accompaniment, describes the gently renewed impulses of the oars and consequent movement of the boat; the song and expressional element, finally, are vested in melody.

An introductory phrase reveals the functions of harmony and rhythm, producing the body of sound or tonal substance in the regular rhythmic cadence of the 6/8 measure. This accompanimental figure underlies the entire piece. A vocative motive in the treble of the second measure, repeated an octave lower in measure 3 and 4 in reverse metre, calls forth the melody, which begins with the Antecedent of Part I. The soft melody, subdued in its crepuscular pianissimo, moving in double-notes, mostly thirds, like two strands, is exquisitely tender. Like a little wash of the water against the boat is the group of graces interjected into measure 7. The semi-cadence reached on the first beat of measure 8 brings the phrase to its inconclusive end and calls forth the Consequent phrase, which gives its answer. A new light is revealed as the melody rises to G in measure 10—the climax of the phrase and of the period—illuminated by the dominant and tonic harmonies of the bright relative major key. Quite contrasting with this is the gentle poignancy produced by the suspensions C and E against the D and F of the accompaniment on the first beat of measure 11 and the touch of sadness of the fourth beat. The ending of the period is tastefully rounded off by the vocative motive from the introduction. What a charm the bright coloring produces through the treatment of the melody in combined octaves and thirds in the repetition of this Part!

A bond of unity between this and the Second Part is the series of ascending thirds with which the latter begins in the second half of measure 21. Its similarity to the corresponding portion of measure 5 may suggest community of origin. Like a new stanza is Part II, which plainly represents a new phase of the subject. No feature occasions this more than the dominant harmony to which the graceful and happy melody swings on the accented portion of each measure of the Antecedent phrase. The harmonic cadence, joining that of the rhythm, emphasizes the element of motion underlying the piece.

The Climax

THE CONSEQUENT phrase contains the climax of the piece, reached in measure 29. The impulsive ascent of melody and accompaniment through this phrase affords the outlet to the emotional stress and expansion which are the natural culmination of the expressional element. Hence the accents and crescendo which lead to the climax. The chord of the diminished-seventh which is the harmonic basis of this climax, produces what may be termed an open ending; that is, instead of concluding the piece with Part II, it calls forth the tonic harmony, into which it resolves and which, by functioning as a basis of recommencement, introduces Part III. The introductory purpose of this harmony (tonic), ushering in a part instead of concluding one, is particularly indicated by the retention of the fifth (E) in the bass and the holding of its root (A) in abeyance until the fourth measure of this phrase (measure 35).

Attention is invited to the admirable manner in which the connection of Part II to Part III is effected. The climactic effect of measure 29 is preserved by extending the duration of the harmony—the chord of the diminished seventh—two measures further, so as to avoid too abrupt an ending of Part II. Even melodic activity is maintained during this brief interlude by the appearance beneath the accompaniment of the little vocative motive from the introduction, though now so modified as to fit the harmony. The flowing continuity of these two measures produces an aquatic effect of delightful descriptive character.

Of great charm is the unexpected close of the repetition of Parts II and III (as a whole) in the tonic major key in measure 49, producing an effect of pleasant surprise. In this agreeable manner Part III is linked with the Coda, the first phrase of which employs for its subject matter the Antecedent phrase of Part II. In the radiant brightness of the key of A major the next phrase runs in flowing 16th-notes up in treble, to

THE SONG OF THE GONDOLIER
By Marcetti, by Courtesy of Charles Scribner's Sons

meander downwards to the end of the piece, during which latter process the little vocative motive appears in the left hand part in happy retrospect.

How to Render the Piece

WITHOUT further reflection it might seem that a short, characteristic piece like the barcarole under consideration, presenting no particular technical difficulties, could be played well by almost any fairly advanced amateur, without further ado. Such is by no means the case.

The fundamental requisites of the artistic rendering of this piece are the maintenance of rather strict time and a flowing tone. In but few instances are fluctuations of tempo permissible. The introductory phrase should be in strict time, for it indicates the illustrative character and purpose of the piece. There is here no emotional stress to prompt any departure from the tempo, regularity of which is, moreover, essential to the cadence of rowing. Without a tone as above described, every note will sound hard and percussive. This piece can, therefore, serve as a most opportune study for a liquid, fluent tone. To this end the fingers should be held so loose and relaxed as to depress the keys gently. This will allow the tone to flow out of the instrument, so to speak. The beginning should, of course, be the softest possible, yet the first and fourth beats in the accompaniment, which mark the stroke of the oars and stand out as rhythmical salients, should be given a somewhat brighter shade of tone color. The little vocative motive in measure 2 will be loud enough at forte. If it be appreciated how soft, yet resplendent, the melody must be then only will the difficulty of the place in the matter of touch and tone production be realized. Moreover, the lower strand of the melody (corresponding to an alto) should be subordinated to the upper line (soprano). By applying to every rise of the melody a gentle crescendo and to each fall a diminuendo, justice will be done to the tone coloring so necessary in this piece. The poise that resides in the longer notes requires that they be well held out—that the accompaniment be not allowed to hurry them. Particular attention is called to the necessity of carrying the crescendo at the end of measure 5 to a bright culmination on the peak of the melody, which, in this phrase, is reached on the first beat of the following measure. Measure 7 is rather difficult of proper treatment, on account of the series of grace-notes. The first of these should begin on the fourth beat. They must then be executed rapidly enough to bring the A of this beat in due time. Yet each note should be clearly audible. In order to avoid interruption of the flow of the melody, hold the A and C of the third beat as long as possible. An entirely different tone quality, again, is required for the series of grace-notes, namely, one of translucent clarity and softness, so that they merely ripple against the melody

notes F-sharp and A of the fourth beat. The phrase will be well rounded off by a slight broadening of the end of measure 7 and the first half of measure 8, which will bring the semi-cadence, in which some may read an interrogation, into due evidence as the end of the phrase.

An incisive touch on the fourth beat E of measure 8 will, likewise, make it felt that the new phrase begins with this note. The climax of the period, reached on the G of measure 10, can be fully brought out only by means of a crescendo of greater proportions than hitherto attained. Let this note, therefore, ring out clearly and strong, and the eighth-notes rising towards it in the alto not be allowed to overshadow it—nor to be hurried. This dominating point is followed by an abatement as the melody descends to the close of Part I. Within the course of the diminuendo a slight but effusive accent on the emotionally active first and fourth beats of measure 11—and a gentle lingering on them—will bring out their full expressiveness. To this, as well as to the illumination of the rich harmony of the first beat of this measure, due dynamic fullness of the accompaniment in the left hand on the D and F will contribute materially. A little broadening at the Perfect Cadence and, particularly, the careful holding out of the A in the melody of measure 12, will, as at the end of the Antecedent, enable the hearer to recognize and feel that the sentence here ends. This way the phrase will have been perfectly molded. In order not to dispel the repose of this ending, an infinitesimal delay of the vocative motive which follows is permissible. Admirable playing, indeed, is that which brings out in full the beauty of the silvery coloring of the three strands in which the melody is woven in the repetition of Part I.

About Part II

THE fresh impulse with which Part II begins is best reflected in a prompt resumption of the tempo. Even a slight animation will fit the character of this Part. A brightening crescendo in the rise of the melody to E in measures 22 and 24, supported by slightly emphasizing the thirds A and C and G-sharp and B on the accented beats of the accompaniment, which we have indicated in the music with upturned stems, giving to these notes a certain melodic prominence that emphasizes their rhythmical swing, will add to the vitality of the rendering. The grace-notes in measure 22 and 24 will be more expressive and tender if not snapped off too short. A little breadth will identify them more with the melody.

The climatic Consequent phrase irresistibly actuates an acceleration of tempo conjunctly with as voluminous a crescendo as can well be brought out. The seething of the accompaniment and the all-dominating chord in measure 28 will be more effective if the acceleration is checked in measure 28. More power can be given to the climatic chord in measure 29 by assigning the lowest note (A) of the treble to the left hand. Subsidence of tempo following the vocative motive in measure 30 is the means of mediating from the preceding torrential passage to the soft, peaceful quiet of Part III.

The great dynamic contrast referred to in the analysis requires due attention to the pianissimo—not merely piano—which must color Part III. The poignancy of the F in the accompaniment of measure 34, falling into the C and E of the treble, offers just the opportunity for the expression of a painful cry. The variety and command of tone color required by this piece are evident in the pianissimo demanded for the repetition of Part II, which in its first appearance began merely piano. The syncopated E's in the alto add greatly to the flowing character of the music. To produce the liquid quality of tone essential to this, the thumb should be dropped lightly and gently to the key, rather than made to strike it actively. Here, again, the slight prominence to be given to the first and fourth beats of the accompaniment is recommended.

The softer shade of dynamics here necessary to correspond to that of the treble will reveal anew this popular composer in his capacity of a delightful colorist, and will bring to the realization of many the fact that these pieces are not so easy to render with true artistry.

The return of Part III will be observed to be indicated p—pp. This latter shade is reserved for the Coda and is offset by the brightness of the major mode in which the piece ends with typical Romanic cheerfulness.

With aquatic fluency, soft and with flowing legato, the 16th-note passage of the closing phrase should ripple along to the end. A slight lingering on the first note of the vocative motive, which twice calls back pleasantly in the left hand, involving an infinitesimal broadening of the arpeggio undulating above it, will impart a touch of affectionate and fitting gentleness to this simple but lovely melodic bit.

Memorizing for Beginners

By M. W. Jolly

BEGINNERS should always be taught to play from memory their first little melodies. If memorizing it not made compulsory, it becomes more and more difficult as time passes from only occasional memorizing. For that reason it is so necessary to have pupils to do a certain amount of memory work regularly.

And how shall we memorize? Usually three or four measures make a complete little sentence. One can soon memorize the one complete thought, measure by measure, if ncessary, as if that is the whole of the selection; then take up the next thought. Some try to memorize by playing over and over the whole piece until they know it from endless repetition.

I have taught school as well as piano, and numbers of pupils try out the same method when preparing school lessons. I try to show them that the best method, for instance, in history, is to read over the lesson carefully so as to get the lesson as a connected whole, and then to take each separate heading of one or more paragraphs and learn the thought or main features of that one heading as if it were a distinct lesson apart. But lots of pupils will still insist on reading the whole lesson over and over again; and in all my teaching I have had only one boy who was able to do that and bring up excellent lessons.

So in piano, study and work up the whole selection carefully until it can be played correctly by note; then take each little sentence and memorize, going over those already learned at the beginning of each practice.

I have had pupils say that they *could not* memorize, that there was no use in trying. But when they studied memorizing this way, beginning with short selections, it became easier and easier; and so as the mind was trained, the more quickly could it grasp and retain, and memorizing became the easiest part of a musical education.

A Wrist Remedy

By Harold Mynning

THERE are some things that the music teacher must tell his students, not once, but many times. Among these are: Keep the wrist loose; count aloud; observe correct fingering, and so on. It is essential that these things be repeated, for in this way only will they make a permanent impression on the student's mind.

But in spite of the fact that many teachers repeat over and over at each lesson, "Keep your wrist relaxed," the student continues to play with a tensed arm and hand. Pretty soon he does not even hear the words of his teacher. He is not unlike the person living at Niagara Falls, who becomes so accustomed to the eternal din of the falling waters that possibly the only time he could be brought to actually realize the presence of the water would be if it ceased to fall.

But there is a remedy for this, fortunately, as there is for most things, if people actually seek it and not become discouraged if it is not found immediately around the corner. Tell the pupil to keep his wrist relaxed, but tell it to him in a great variety of ways. The first time tell him to keep his wrist relaxed; the next time tell him to let his wrist remain free from stiffness; the next time tell him to play the piano as he walks, without effort, and so on and on. In time he will actually play with a free wrist, a wrist wherein the muscles work at least to a certain degree (much depends on the individual pupil) without interfering with each other.

Trills in Sequence

By Alfredo Trinchieri

THE trill is usually defined as being the repetition of two notes on conjunct degrees. While this is really and originally true, still some of the master composers have not hesitated to introduce passages which are nothing less than trills in almost any interval.

As a preparation for facility in these wider trills, the following study serves efficiently.

Ex. 1

After the first two beats, the notation is in abbreviated form, each beat containing the same number of notes.

By transposing this into the different major and minor keys, the benefits to the fingers are almost limitless.

Practice Precepts

By George Coulter

ORAL directions to pupils are easily forgotten. Often there is little or no method adopted in their home practice, with consequent waste and failure. A typewritten sheet embodying the teacher's wishes in this matter disposes of the problem, and saves a considerable amount of explanations. Some hints may be got from the following:

1. Before beginning to practice, resolve to shut out of your mind every other thought; for, without *concentration,* practicing is quite useless.
2. Set a time each day for real earnest work, and no trifling or toying with the piano.
3. Read over carefully and find out all you can about a new piece before taking it to the piano. This saves a heap of thinking when you come to play it—*Be particular to have the time well straightened out in your head before attempting to play.*
4. Look closely at every printed note before you sound it and see that you have the right one, and thus, avoid that messy, sludgy, unbusiness-like way of translating your page into sound. . . . If you used a typewriter with as little thought for where your fingers were going, think what the result would be! You do not play with the fingers; you play with the brain. The fingers must be taught to wait on the brain every time.
5. Go slowly. Nothing hinders more than haste.
6. Take a careful look at the Key Signature and Time Signature.
7. Finger every passage as it is marked, never once playing it otherwise. This will make progress easy, rapid and certain.
8. Difficult measures ought to be practiced repeatedly (but never mechanically), until they tumble off the fingers with perfect freedom.
9. See that the finger and hand muscles are loose and supple when you sit down to play. Avoid getting them rigid and tight.

Teaching Touches to Beginners

By Charles Knetzger

AFTER pupils have mastered keyboard, notes and rests, and have learned something about legato and staccato, a lesson on the different touches is in order. The first, called percussion, which was very largely used fifty years ago, is produced by lifting the finger away from the keys and giving it a decided stroke downward. The piano, like the drum, tambourine, triangle, cymbals, xylophone, and others, belongs to the family of percussion instruments the tone being produced by striking so as to set a certain part into vibration. This stroke, when used to excess, is very tiring to the muscles, and has a tendency to produce a strain in the playing apparatus, and to hamper its action.

The pressure touch is produced by having the finger in contact with the key press it down gently but firmly. This touch is used largely in organ playing. Christiani, in his *Principles of Expression in Piano Playing,* says: "Where expression is required, the key should not be struck. Expression requires pressure—finger pressure. Touch without pressure can never produce either depth of tone or emphasis. Through finger pressure the touch receives its proper degree of force, its duration, its expression."

The touch considered of very great importance in piano playing at the present day is touch by weight, in which the weight of the playing apparatus does the work with little or no effort or strain. This tone has the advantage of producing equality and evenness of tone, for a weak finger is not required to do the work of a strong one, since the whole weight of the arm and hand is made to bear on the key. What happens when pussy walks over the keyboard? The keys are depressed by the weight of her body. So also in playing by weight the entire playing apparatus bears down on the key and produces the tone.

For some time it was thought that the fingers could be made to play with equal power by long and persistent practice. But nature never intended the fourth and fifth fingers to do the work of the second and third, any more than she intended a race horse to draw a plow.

In playing by weight we shift the weight from one finger to another, as in walking the weight of the body is transferred from the left to the right foot, or *vice versa.* A good exercise to illustrate this touch is to place the hand in the five-finger position, rotating the hand while shifting the weight from one finger to another.

KELTIC DANCE

JAMES FRANCIS COOKE

A smart modern treatment of the old-time Irish jig rhythm. The melodies are entirely original. Grade 3½.

The Recent Delays in Delivering Issues

THE last several issues of the ETUDE MUSIC MAGAZINE have been some- later than usual in appearing and it is with no little gratification that now can give assurance that all future numbers will be delivered on dule.

We feel sure that many of our readers appreciated that the last three special issues of increased size and expanded interest, prepared under stress of unusual conditions. The indulgent manner with which late eries were accepted uncomplainingly substantiates this. The January azine being a special tribute issue to Theodore Presser was unavoidably and this also affected the schedule for February.

We are deeply appreciative of the many kind and sincere wishes for future of THE ETUDE MUSIC MAGAZINE that accompanied sympathetic essions upon the loss of our beloved founder, Theodore Presser, and feel that we would be untrue to the thousands who have appreciated life and works of Theodore Presser, as well as to the memory of our der, if greater than ever efforts were not put forth to develop and expand ideals and institutions he founded. Much is being done to make future s of THE ETUDE so intensely interesting that no subscriber will want to a single page.

Advice to a Young Composer

By Alexander Henneman

compositions show that you have g matter that you are trying to aper. Your weakness lies in the on that the motive and the har- ms to hold over you. Both force es so strongly into your con- s that they keep on coming back ot permit other ideas to well up. s a common experience with all

the following suggestions:
you have sketched a part, and a begins, change your mental and l state. If mystery has been the ng feeling in the preceding part clarity, openness and frankness e mood you put yourself in. If ights have been serious or melan- eer up. "Snap out of it!" As- ifferent attitude. If your mental has been down in the valleys is dark and misty, get up on the re the view is wide and large.

I find with students of composi- o much music, too much observ- ance of rules and not enough exercise of the imaginative faculties on planes that have nothing to do with music. We do not get ideas in music itself, we get musical ideas through the impressions that come to us through the senses as well as by the act of imagining these impressions and sensations.

Aristotle says, "There is nothing in the intellect that has not entered through the senses." So too, motives, phrases, rhythms and harmonies are gained by the imagination exercising itself on planes outside of music and not directly with the elements of music themselves. The emotional disturbance that is caused by the scenes the composer visualizes, or the feelings he experiences at the time, are transformed into music with little direction or thought on his part. Once having mastered the science of music, an humble submission to these inscrutable powers in the soul of man will produce better themes, more interesting rhythms and more novel harmonies than can ever be found by the attention centered on music itself.

The Teacher's Position

By R. I. C.

shall the teacher sit? With be- pupils it is necessary to sit by demonstrate and explain positions litions. The teacher usually sits ght in watching these things and n finger exercises are begun. In ning the child stands in the rear e cannot see the keys, while the ccupies the piano chair and gives ones and dictation work. Some- instructor finds it best to stand ano, and with a pencil or other nt, point to each note in first sight fforts.

he intermediate pupil the teacher the music which the child has d and sit back. If any mistakes ist, they should be *red-penciled.* and pieces that are undergoing ning touches, let the instructor chair back or stand, so that sounds reach the ear directly. It is fine experience for the pupil if the teacher "plays audience."

When an advanced student has a composition well in hand, it is well for the teacher to test the knowledge of it by creating disturbing elements. The writer has a vivid memory of her instructor walking about the room when she was playing a review piece. To test control the instructor dropped a book unexpectedly, shoved up a window in the rear and later slammed it down. In concert hall rehearsals she sometimes asked an associate teacher to come in and slam doors with great commotion and begin an excited conversation, so that the effect on the one playing might be observed, and so that she might determine whether the composition was ready for public performance.

Musical Thoughts

TUDE:
e is fast coming when people in gen- be educated in music similarly as in school studies.
at one time, the one who could play is made much of, to-day practically plays or sings; and the standards of amateur (or amusement) playing are raised to what were formerly those of the professional.

Is it not interesting to speculate as to the future and wonder if there will not be a time when all will be musicians of a high class and none "professionals?"

LEE W. DIXON.

Louis Quinze

PERIOD MODEL GRAND

The smallest (*five foot*) and daintiest Ivers & Pond grand Its *de luxe* casing faithfully follows the artistry of the greatest period in French design. In tone and touch it is equally refined and charming.

IVERS & POND PIANOS

Combine the best traditions of old time Boston piano building with the most advanced ideas of today. Built, as from the first, in *but one quality—the best*—by the same interests, with the same artistic ideals, they are used in over 500 conservatories and schools and 75,000 homes.

Our Catalog, showing latest style tendencies in Uprights, Grands and Players, mailed on request.

How to Buy

Wherever in the United States no dealer sells them we ship IVERS & POND pianos from the factory. The piano must please or it returns at our expense for railroad freights both ways. Liberal allowance for old pianos in exchange. Attractive easy payment plans.
For catalog and full information *write at once.*

The Singer's Etude

Edited for March by well-known Teacher and Critic

D. A. CLIPPINGER

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

A TEACHER of mathematics in a college with which I am acquainted was accustomed to ask students three questions when they began the solution of a problem.

"Where are you going?"

"How are you going to get there?"

"What are you going for?"

These questions were to direct the student's thought, to help him to think logically about the problem, to help him to see what he was undertaking to do, how to do it, and what he hoped to obtain. By the time he had answered these questions the nature of the problem was clearly in mind and its solution only a matter of "carrying on."

The young singer might be asked three similar questions:

"What are you going to do?"

"How are you going to do it?"

"What are you doing it for?"

To question No. 1 he will answer, "I am going to make a singer of myself."

He could scarcely have a higher or nobler aim. A beautiful voice is the most appealing, compelling thing in all human experience; to have such a voice is a normal and legitimate ambition; but something more than ambition is necessary to such an achievement.

How to Do It

MANY are ambitious but cannot project their vision any distance into the future. They give little or no thought to the time and effort that will be required to realize anything worth while. They drift along in a more or less comfortable way, in a dreamy expectation until, after one, two, or more years have passed and the goal nowhere in sight, they lose courage, drop by the wayside and disappear.

There are others that have a consuming desire to sing well and for a time work feverishly at it. Then a reaction comes and they stop for awhile until the fever returns again. The result of this is that at the end of the year they are but little nearer the goal than they were at the beginning.

There are others who are always in a hurry. They repeatedly ask how long it will take, when the end will come, how soon they can get before the public, when they can give a recital, or, if they are first-year students, when they can have a song. Such questions always have been asked and will continue to be asked to the end of time. Nevertheless, they show a lack of vision.

There are others that are always on time, are interested in everything the teacher does. If they are discouraged they never show it. They never ask how long it will take, and they follow conscientiously the work laid out for them, and do more, rather than less, than is expected of them. Such a combination cannot fail and every year shows a marked advance. Such students the teacher counts among his chief blessings. There is no joy quite equal to helping one who is interested and appreciative. Such students always get the best there is in the teacher, for it is true that inspiration comes by way of the pupil no less than by way of the teacher.

The Elements of Success

THE teacher, no less than the pupil, learns by experience. He discovers before he has taught many years that there are certain elements in a pupil's mentality that invariably bring success. Without them nothing of importance is ever attained. These are honesty, industry, concentration, perseverence.

We are accustomed to think of honesty as relating to our conduct toward others, but we are far more likely to be honest with others than we are with ourselves. Whenever we slight our work, leave something undone, fail to live up to our ideals, we are cheating ourselves; and cheating is dishonesty.

The necessity of being industrious need scarcely be argued. The amount of work to be done, no matter how gifted one may be, is by no means small; and if one is lacking in industry or diligence he has little chance of reaching the goal. We have all known singers with fine natural gifts who have failed because of a distaste for work.

If one has perseverance he will be persistent, no matter how great the difficulties or the odds. He will never lose courage, never relax his efforts, and never listen to the suggestion that he cannot succeed or that he is wasting his time. Honesty, industry and perseverance are the things that build character, and these will make one successful in any undertaking.

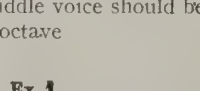
The beginner needs to be alert to the fallacy that if one has talent everything is easy. Talent is only a mental trend in a certain direction, a liking for a certain thing, but it by no means relieves one of the responsibility and joy of hard work. The love of music is almost universal; and if one will work at it as diligently as he would at one of the other professions he in all probability will be equally successful.

The second question—"How are you going to do it?" could be answered briefly. Go to a teacher whose ability has been demonstrated and stay with him five or six years. This length of time will be necessary because there is much to do. Voice training, like all truth, is simple; but it usually takes the singer a considerable number of years to discover its simplicity. If he should read all that has been said about the voice in the last century he would be forced to conclude that a great deal has been learned that is not true, and much of the remainder is shrouded in mystery and sagging with uncertainty. The human mind loves to grapple with things that are involved, while the simple, eternal truth that two times two are four fails to arouse any enthusiasm whatsoever.

Beginners are advised to defer the study of vocal physiology until they have learned what good tone production is. A good teacher will appeal to the ear of the student from the beginning. He will be wise enough to leave the mechanics of voice production alone, except in an elementary way, and go quietly about the business of forming the student's taste in tone quality. He will understand that no beginner's concept of tone is perfect, or as good as it should be, and that he must establish in his mind a correct mental picture of the pure singing tone; for until the student has this he is helpless. To the teacher these mental pictures of tone are not vague, indefinite, and unreal. On the contrary, they are real and as definite as a mathematical formula. He knows that the student's problem is psychologic rather than physiologic, and that his work from the beginning of tone production to the end of interpretation is to develop a musical nature. He never loses sight of the fact that it is the mind that is musical, not the body. That part of the body which is involved in singing does what a musical mind makes it do. The mind that is truly musical has little trouble in controlling the vocal instrument. Such a mind learns early that the vocal organs respond instantly to his thought if they are free, and his ear is so sensitive that should he sing a tone in which tension or interference is noticeable, he will not repeat it often. But where the ear does not detect such things they will continue to be sung.

Physical Sensations

THE teacher having a sensitive ear is not likely to rely upon a certain physical sensation to tell him whether the tone is good or bad. He knows that the sensation accompanying a good tone is always pleasant and satisfactory; but in the last analysis a tone is something to hear, and when it satisfies his ear that is proof positive that it is rightly produced. He never feels the necessity of calling in a physical sensation to assist him in determining a matter which is entirely a question of how it sounds.



But it may be urged that a physical sensation is a guide to the student. No physical sensation ever did or ever can do anything to train the student's ear. What he needs most of all is to learn to listen and hear his own voice. The most important thing in voice culture is training the student's ear to demand absolute purity of tone. His ear is his taste and at all times indicates his stage of development. Beginners are continually doing things which they do not hear. All manner of vocal imperfections, even that of singing off pitch, get by them because they do not hear them.

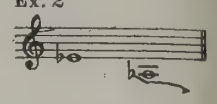
The Middle Voice

MOST voices, but especially sopranos and tenors, like to sing high, and attempting to do this before they have learned how to produce the upper voice gets them into all manner of trouble. Sometimes years of careful work are required to overcome these early mistakes. In many instances they are never overcome. A vast amount of patience and love for the art is necessary to enable one to go back and do all of one's work over again. Many do not possess this.

Before attempting to extend the compass, the middle voice should be well developed. The octave

Ex. 1

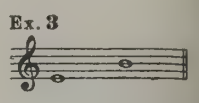
while not the part of the voice in which stunning climaxes are made, is of great importance, because no singer can get along without it. For every tone he sings outside that octave he will sing several inside of it. Take the middle octave out of all voices, male and female, and the entire vocal literature would have to be rewritten. Therefore, the middle voice should be well built before attempting the head voice.



But voices are not all alike in this middle

Mainly for Beginners

octave; so the teacher must take finds and act accordingly.

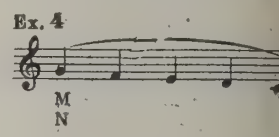


Some sopranos and altos will ha tones in this part of the compass

Ex. 2

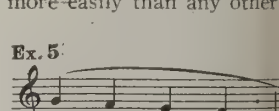
and weak tones in this part.

Ex. 3



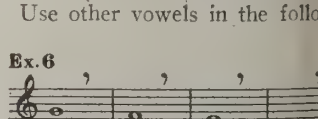
Other sopranos have no chest to when they sing down to C or B-flat the quality and mechanism of th voice. In such instances it wou mistake to attempt to develop what a chest register. If one succeeded be practically certain to create a some break at about E or E-flat. I better to carry the middle voic working into it sufficient resonanc it carrying quality.

But when there is a weak midd what is to be done? The reas tones do not carry is that the sou are not strong enough to create in the upper cavities. That is, cords are not offering enough to the breath to vocalize it perfectly times the vocalization is so imper the tone is breathy or husky; th no carrying quality whatever.



These tones may be resonated e quickly in the following way: lips and the teeth and sing this with the consonant M:

Ex. 4



Try to produce a pure string ton tice with portamento. That is, tones together in order to keep per tinuity. Practice also with the cons The string quality is evidence of r Transpose upward by half steps t When the student can produce string tone with M and N, the is to carry this resonance into the vowels. THE NEW VOCAL ART

by

P. MARIO MARAFIOTI, M.D.

TO many, Dr. Marafioti's message will be revolutionary, but what he writes in this book is the result of a life time of scientific study of the principles of vocalization, and of unceasing efforts to solve the problems concerning the art of song.

Dr. Marafioti is not only a scientist; he is the rare combination of a laryngologist and artist. Caruso and Chaliapin among other great singers have paid tribute to his principles, and Henry T. Finck, the noted critic, has written of him: "Dr. Marafioti is one of the very few men from whom I, after forty-one years of critical career, can learn something about the art of singing."

In his advocacy of *true canto* as against *bel canto*, Dr. Marafioti points out the future. He is merely asking for a vocal expression suited to the evolution of singing. The book is rich in information and suggestions and expounds an original system for the correct determination of pitch worthy of investigation. It is the outstanding book on singing that has appeared in many years.

GOOD BOOKS

but try to produce it at once. The invariable result is that the upper tones are forced, and the longer they are sung in that way the worse they become.

At this point the young singer should have careful training. Whether the vocal organ is a string, a single or a double reed, or what not, is of no importance whatever. The absolute fact that the entire compass cannot be produced with the same length and thickness of vibrating tissue must be recognized. The voice can no more do it than can the piano. Ignoring this truth, which should be obvious to any one whose ear is worth anything, has ruined voices without number and is still doing it. Doubtless in the future as in the past the startling discovery will be made from time to time that there are no registers in the trained voice. This finding will be readily subscribed to, but if by registers we mean breaks, depressions, uneven spots, and a scale with a large variety of tone qualities, then I should say that many untrained voices are chock full of them. It is the business of the voice teacher to make an even scale out of one that is uneven. The terms he uses are of little importance.

High Tones Easy

HIGH tones are no more difficult than middle tones, when they are rightly produced. This is well worth remembering. It may save the young singer much time and money.

A common belief among young singers is that a big tone requires a big effort. To state it negatively, they believe it is not possible to produce a full tone with a light hold on it; that is, with a light mechanism. This is an error of judgment. It can be done. The full voice requires more breath pressure than the soft tone, but no great effort is required. In the rightly produced voice the singer is unconscious of his throat and neither feels nor hears his tone there.

In training the head voice the student should not use more voice than he can produce without effort; he should be patient and let it grow. Voices that have a mushroom growth are likely to have the longevity of mushrooms. This does not mean that the male voice should use the falsetto, although it could do him no possible harm if he did. Where a voice has been forced until it is either the thick voice or falsetto, practice with falsetto might be valuable in getting rid of a cramped throat. When this has been accomplished the real head voice will appear. Throughout the study of voice production the student will do well to feel that he is letting himself sing rather than making himself sing.

Vowels and Consonants

THE AIM of voice training is to gain an even scale of pure singing tone throughout the compass. This will be done with vowels; but when one begins to sing a new element appears. To form words, consonants are necessary. Emotions can be awakened with vowels, but definite ideas require words which are a combination of vowels and consonants.

The construction of speech is simple. The vocal cords produce pitch, nothing else. They do not form vowels, consonants, or tone colors. All of these are formed above the vocal cords. When the vocal cords are producing pitch and the channel to the outer air is open the result is a vowel. Throw any obstruction into the channel and the result is a consonant. Thus, with the various combinations of open and obstructed channel together with pitch, the whole of language is formed. These combinations of vowels and consonants which we call words have no meaning of themselves. They are symbols which by agreement stand for ideas. The idea is the real thing. The word is but the sign.

Students are often amazed at how much easier it is to vocalize than to sing words.

(*Continued on page 222*)

An amazingly small piano

Astonishingly low in price

NO wonder there is such a sweeping demand for this astonishing little Studio Piano! Its small size and remarkably low price have put pianos in thousands of homes that could not have them before. And, in addition, music lovers have found it the perfect instrument for practice and pleasure in studios or apartments of restricted space.

It stands but 3 feet 8 inches high—this beautiful little Studio Piano. And yet Wurlitzer has omitted nothing in its construction. It has the full 7⅓ octave scale. The famous Wurlitzer golden tone is there—rich and sonorous low notes, clear bell-like middle and upper tones. And the case is a masterpiece of the design and artistic woodworking.

See it at the dealer's and you will be fascinated by its compact, graceful beauty. Run your fingers over the keys and you will be delighted with its superb, mellow tone. Learn the price and you'll know that, at last, your dream of owning a piano can now be realized.

Prices, $295 and up. Studio Player, $445 and up. Prices F. O. B. Factory. Easy terms can always be arranged.

Lectures by eminent Educators, Recitals by distinguished artists

FREE SCHOLARSHIPS

Mme. Delia Valeri will award two free scholarships to the most talented and deserving students. Apply for application blank.

Superior dormitory accommodations.
Rates of tuition moderate.

CREDITS will be given for summer courses taken, toward Certificates, Diplomas, Degrees—granted by authority of the State of Illinois.

Summer Session prospectus, regular catalog and Public School Music circular mailed free on application. For detailed information address

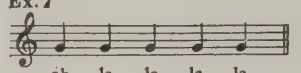
AMERICAN CONSERVATORY OF MUSIC

571 KIMBALL HALL Chicago, Illinois
JOHN J. HATTSTAEDT, President

(Continued from page 221)

The consonants are entirely responsible for this. They are points of interference in the various combinations of lips, tongue, teeth, and soft palate. In forming consonants the tendency is to interrupt the flow of tone, and to put a considerable amount of rigidity into the lips, tongue, and throat.

It does not follow, however, that this should be so. It is quite possible to enunciate consonants with none of these bad effects. There are three things to be remembered in forming consonants.



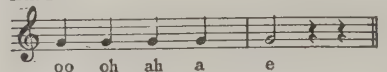
First—Consonants must be produced without tension. They should have the same freedom as vowels.

Second—Consonants must not be allowed to interrupt the continuity of the tone. If they do, legato singing is impossible.

Third—Consonants must in no way interfere with the freedom of the vocal organ. By this I mean that they must not make the larynx rigid. They must be distinct but short.

An excellent way to solve the problem of consonants according to the three rules given is to begin with a vowel and throw the consonant into the vocal stream without interrupting its flow, as in the following exercise.

Ex. 7



ah - la - la - la - la
ah - na - na - na - na
ah - ma - ma - ma - ma
ah - da - da - da - da - etc.

Practice with relaxed lips, tongue, and throat and see to it that the consonants do not interrupt the flow of tone.

They may be practiced with different vowels in the following exercise.

Ex. 8

oo	oh	ah	a	e
loo	lo	lah	lay	lee
moo	mo	mah	may	mee
noo	no	nah	nay	nee
doo	do	dah	day	dee
boo	bo	bah	bay	bee
goo	go	gah	gay	gee
koo	ko	kah	kay	kee
too	to	tah	tay	tee
poo	po	pah	pay	pee

Sing at an even power. This should be practiced until the change of vowel and the introduction of the various consonants do not interrupt the flow of tone. The consonants d, b, g are sub-vocal and k, t, p have no pitch. Their tendency is to break the tone, they require much careful practice.

Practice at different pitches.

Most students need some assistance in gaining breath control. The breath control of speaking is not adequate to singing. The spoken phrase is rarely more than four or five seconds in length, but in singing the phrase is often ten, fifteen, or twenty seconds in length. This demands a different and more perfect management of the breath. The diaphragm is the chief point of control. If the student is using that correctly he is not likely to experience any difficulty. The singer must be able to sustain long phrases without discomfort. Some can do this from the beginning. In such instances it will be well to leave breathing alone and not run the risk of unsettling the student by teaching him some particular method of breathing.

Breath Control Not All

VOCAL ills cannot all be charged to breath control. There are other things involved. It will be urged by some that good singing is impossible without perfect breath management. This is true, but it is equally true that, as at present constituted, man cannot sing without a larynx and a pair of vocal cords. The process of singing is synthetic not analytic. All things must be taught to work harmoniously together. If we are wise we shall not make one idea the basis of our system of teaching.

UNIQUE VOICE TRAINING
By W. P. Schilling

A NEW book just off the press, different from anything ever published. Unexcelled—Unequalled—In advance of all competitors. This new system will make reputation for Teacher and Singer. *Save Time—Save Money.* Secure a beautiful voice within a shorter time than ever attempted. Special exercises for acquiring high tones easily, without strain. "Unique Voice Training" has merited the hearty approval of teachers, singers and music lovers, everywhere. **Price, $5.00.** Other books by the same author, *"Ear Training," 15 cts.; "Sight Singing," 50 cts. etc.*

Musical Composition for Beginners
by
ANNA HEUERMANN HAMILTON

A Practical Course in Original Composition

THIS NEW AND IMPORTANT WORK IS THE MOST NOTEWORTHY OFFERING MADE IN RECENT YEARS TO THE PROGRESSIVE TEACHER.

From the simplest possible beginning this work introduces the pupil to the fascination of "really truly composing." Nothing is better calculated to further the musical intelligence of pupils. No knowledge of harmony on the part of the pupil is presupposed by this book and it can be used with children six years of age as well as by those of more mature years who have never been able to find "just how to go about it." Even the piano teacher who has never offered class work to pupils will find upon examining this work that nothing else would serve so successfully in keeping alive the pupil's interest in music lessons.

The Art of Singing

THE sole aim of voice culture is to give the singer the best possible instrument through which to express himself. But the voice is not the singer. It is the instrument upon which he plays. Good singing demands a background of culture. Nor is this all. The singer's emotional nature must be made sensitive to the slightest poetic suggestion. It must respond instantaneously to whatever demands are made upon it. It must not run riot, however, but at all times be under the control of musical judgment. As a foundation for this the student should have thorough musical and literary training. Experience must do the rest.

I have answered the second question at considerable length because of its importance. It covers the period of preparation; and all that follows will be the result. It is a tragedy to look back over one's life and see nothing but failure The way to avoid such an experience is to make good use of the preparatory period.

The last question, "What are you doing it for?" also offers ample material for discussion, but we have already exceeded our space though the half has not been told.

Every man should render some service to the world in return for what it gives him. On the other hand what it gives him will be governed by the character of the service rendered. Whatever the service is, it should contribute in a measure to the joy of living. This alone is constructive. The work of the singer is peculiarly adapted to this kind of service. Reputation, success; usefulness, and a reasonable amount of money are his legitimate reward.

To Improve the Voice

By Eutoka Hellier Nickelsen

I. It is not only important that the pianists be acquainted with the laws of Musical Form, but likewise the vocalists, in order that their interpretative powers may be broadened.

II. Some essentials for good singing:
(a) An "ear" for music.
(b) A pure tone.
(c) A flexible voice.
(d) Distinct enunciation.
(e) Breath control.

III. Daily breathing exercises:
(a) Breath should never be inhaled at any point wherein the act is an interruption of the musical idea.

IV. Disposition:
(a) Have a clean mind and restful conscience.
(b) To be a good singer one must live "life."
1. Sorrow puts pathos and understanding into the singing voice.
2. The cheerful and joyous things in life put gladness into the voice.

V. Read aloud the literary text, later singing it very slowly, without the aid of accompaniment, thus giving the singer "time" to think and to have a clearer understanding of the author's message.

How Soon Should Songs Be Given?

By Beatrice Wainwright

Many difficulties of articulation and enunciation are encountered in songs only; and it is necessary to put into actual practice quite early in the study of singing the various combinations of consonants and vowels as found in simple songs. This in preparation for the greater difficulties that come as the student progresses.

It is only by giving songs comparatively early that the teacher can discover what corrections are necessary to be made in the pronunciation and enunciation of each student. No two students require the same correction, even when they come from the same part of the country.

The question of enunciation in singing is vital, for several reasons. One is that the text may be understood by the listeners, and the other and very important reason is the great aid to good tone that comes from the correct use of the vowel-consonant combinations.

The interest of students is also kept by introducing songs. But the important reason is the actual development of the singer attainable only through song study.

The problems of phrasing, time, rhythm, breath control and many matters that must be conquered by the student, are best learned in songs, though vocalises also have their share in the musical development of the student and should have a prominent place in the program of studies. But the theory that the student should be kept on exercises alone for a great length of time has passed. The simple song has come to be recognized as of great value to the student when properly prepared to take up the new problems that come with the introduction of words with music.

Time to Breathe

By Helen Oliphant Bates

Do your head and neck ache? Are you nervous and fidgity? Is your brain all mixed up from practicing? Then you had better stop and breathe awhile. Here are some exercises that will refresh you and enable you to accomplish more in your next practice period.

1. Stand erect, with arms hanging at the sides. Raise arms to the side and up over the head. Rise on tiptoes and stretch up as though you were trying to touch the ceiling. In this position sway gently from side to side. Return to starting position.

2. Stand erect with arms extended at sides. Rotate arms in large backward circles inhaling a deep breath with each rotation. Let arms drop to sides and exhale.

3. Stand erect with hands on shoulders. Rotate elbows in backward circles inhaling a long, deep breath. Let arms drop to sides and exhale. The circles should always be made backward, because this forces more air into the lungs than forward circles.

4. Stand erect with hands on hips. Fill the lungs with a long, deep breath. Exhale by blowing as long and as hard as you can.

5. Let the head drop forward, perfectly relaxed. Inhale while you rotate the head in a circle to the right. Reverse and rotate in a circle to the left while exhaling.

6. Let the head drop backward as far as possible. Inhale. Exhale by blowing upward as long as you can.

"The autograph scores of the great masters of music are nothing more than their directions, saying to us, "This is how I made my music. Make it live again, as I made it live and speak."

—Rev. Dr. William P. Merrill.

The Home Beautiful Contains a Grand

An investment in happiness

THERE are few investments that yield better returns . . . in pleasure and happiness . . . than the purchase of a Brambach Baby Grand.

The Brambach is a compact, beautifully-proportioned instrument that requires no more floor space than an upright, yet provides all the delights of a grand.

In addition to its convenient size, the Brambach possesses deeply resonant tone, wonderful responsiveness, and glorious beauty of line and finish.

To appreciate its beauty, to realize the happiness it can bring, you must see it — hear it — play it — possess it.

Easy to own one

Because of the enormous Brambach production, this remarkable grand piano is priced surprisingly low, $650.00 and up, f. o. b. New York City. On convenient terms, if desired. Distributed by leading music houses everywhere.

Mail coupon below for further information and for a paper pattern showing the exact space requirements of this beautiful Baby Grand. The pattern will be mailed with our compliments.

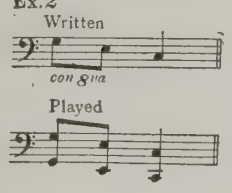
The Curtal was an old English in- about 1688), now replaced by the Its predecessor was the French r *Courtaud* (about the fifteenth rom which the English name was nother form was used, belonging e family, called the Double Curtal d the Racket or Sausage-Bassoon) was an octave lower than the Cur- anuscript in the British Museum Handel's *Acis and Galatea* required Curtal for the accompaniment to . (ii) The Monochord was an in- sisting of a single string (mono- tched across a sound-box, used for in musical physics. It also he Middle Ages to determine the ingers. It must not be confused words *Manichorde* (French) and (Italian) which respectively desig- lavichord.

Several Very Interesting Questions—A Bouquet

Q. (i) Is there any real difference between the terms "rit.," etc., and "rall?" What must pupils be told when a dictionary says "Ritenuto—much used incorrectly for rallentando?" (ii) Just what does an 8 under a bass note signify? To play the full octave, or only the single note eight keys below the printed one? (iii) Is there any reason why broken chords are sometimes written with a wavy line to the left, and sometimes written out in small notes? (iv) Is the second note struck in



Ex.1

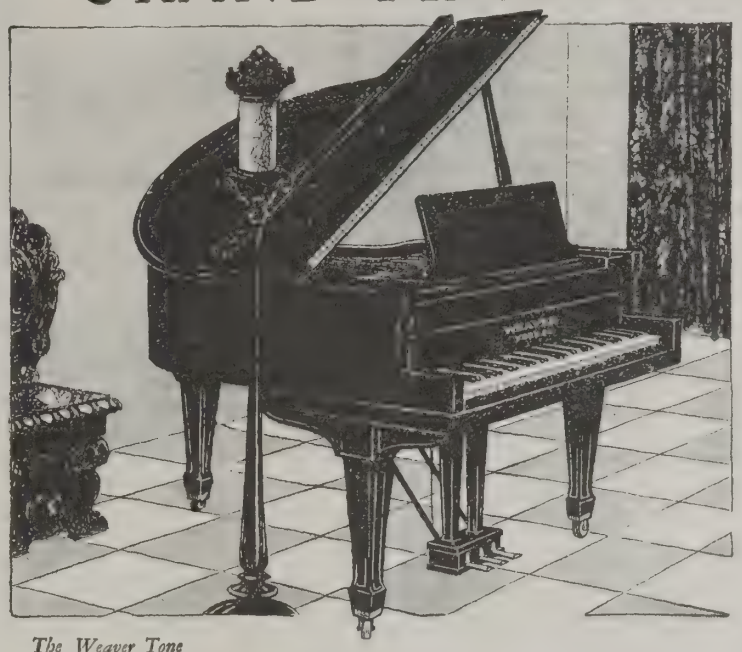
(v) How shall I teach "crescendo?" I usually instruct pupils to increase the force of the regularly accented beats. But what if the printed sign reaches its climax on an "unaccented beat," as in some Bach selections now before me, sent herewith? (vi) Where phrasing is not very definitely marked, how shall the young student decide when to break (e. g., from the aforementioned Bach example)? One is driven to be definite and concrete in teaching details to beginners, if one would be thorough—and I am anxious to be right.—V. A. P., Beloit, Kansas.

A. (i) *Rit.*, an abbreviation for *ritardando, ritardato* (Italian) signifies a *gradual slackening* of pace. *"Rall."* an abbreviation for *rallentando* (Italian) meaning just the same as *rit.* or *ritardando;* whereas *riten.* is the proper abbreviation for *ritenendo, ritenente* and *ritenuto* (Italian), meaning a sudden *holding back the pace*; when applied to one note or to one chord alone the abbreviation is *ten.* (ii) The figure 8 under a bass note signifies that the note is to be played as a single note one octave lower than it is written. When it is desired to play octaves for single notes, the sign must read: *con 8vi.*

Ex.2

in Haberbier, Op. 53, No. 8, we find:

Ex.3



(iii) None whatever; they mean the same thing. However, it is occasionally necessary to write the single notes of an arpeggio, particularly where the choral notes are not to be sustained, as in Mendelssohn's so-called *Spring Song.* (iv) Yes, the second note is struck and held for three-fourths of its time value. (v) In this example, as is frequently the case, it is a printer's error of carrying the printed sign for *cresc.* a note too far. The climax should be carried to the accented note just before the weak beat, the latter being played softer than the climatic note. (vi) The construction of the melody must be studied and analyzed; sometimes, also, the harmony of the accompaniment. The example in question, Bach's well-known air, *My Heart Ever Faithful,* is beautifully regular, and therefore easy to analyze; but, unfortunately, the copy supplied is not well edited. It consists of a continuous series of phrases of eight quarter-note beats, beginning with the fourth beat of the measure. They persist to within sixteen measures from the end, when, for eight measures, the phrasing is broken up, indicative of a coming conclusion—the last eight measures resuming the steady eight-beat phrasing which has persistenly continued throughout. Permit me to congratulate you upon your earnest endeavor to make your teaching "thorough and right."

Staccato—Legato

Q. I have been studying several styles of staccato playing and I think I understand them fairly well. I am now told that there are just as many different styles of legato playing, which I do not understand at all; that is, from my conception of the word. Will you kindly put me right about it.—FRANCES BROWN, Boston, Mass.

A. Evidently you have the right idea. "Legato" means *ligatured* together, united, bound, connected. There may not be the most infinitesimal suspicion of a silence between any two legato notes. When playing a legato passage the sounds must flow from one to the other as smoothly and continuously as would the voice in singing the scale of an octave, to one single vowel sound, without hesitation, and without stopping for breath. Thus, there is only one legato—consisting of closely connected sounds.

WEAVER
GRAND PIANOS

The Weaver Tone . . . undimmed by age but steadfast through the years.

CREATED for those who have a desire for the finer things of life and the judgment to select wisely.

The unqualified approval of world-famous musicians and the thousands of Weaver owners is proof, beyond cavil, of its supremacy.

The Organist's Etude

Edited for MARCH by WELL-KNOWN SPECIALISTS

It is the Aim of THE ETUDE to make this Organ Department "An Organist's Etude Complete in Itself"

A BOOK that should be in every organist's library is *A Primer of Organ Registration* by Nevin. Another valuable book is entitled *A Dictionary of Organ Stops* by Wedgewood. *Organ Registration* by Truette, is also to be highly recommended; and *Organ Stops and Their Artistic Registration* by Audsley, might be procured for much better reason than merely good measure. If the organist is in affluent circumstances (and most of us are!), he might invest in Audsley's other books: *The Art of Organ Building,* together with *The Organ of the Twentieth Century.* After he has read, marked, learned, and inwardly digested the contents of all these books, he will know a great many things.

Some American humorist said, "It is better not to know so much as to know so much that is not so." It is equally true that it is just as well not to know so much that is of little use, and not much that we read is of great use under all circumstances. It is said that the doctor's first case defies all his books and clinical experiences. It is somewhat the same with the young organist; and whatever may be said here is intended primarily for the young and inexperienced organist. After reading everything he can procure, he may possibly feel equal to any task. On taking up a new work, he may glance at the suggested registration, which, among other things, calls for a Gamba, Clarabella and Clarinette. The nearest Gamba is forty miles away. There is not a Clarabella in the state, and the only available Clarinette is an old yellow one in the barber-shop! If he has a real honest-to-goodness Oboe, it will be out of order most of the time. If it is a make-believe Oboe, then he has none at all. Then again, his Melodia may resemble the musical (?) instrument that brings up the rear of the circus parade, and many open diapasons are more fitted for factory whistles than anything else. The four foot registers are, often as not, far from musical, being unfit for individual use, and only serve to render the full organ harsh and screamy. These circumstances may be extreme, but they often exist; and where they do the organist is entitled to a heart-felt sympathy, and that is about all that he need look for. There is nothing to be done about it. But, in the case of the average small organ, even when it is equipped with a fairly musical set of registers, books on registration, like the books of the young doctor, may not be of much use; and the young organist, like the young doctor, must do what he can and see what happens.

In Composition

BEING an organist presupposes some amount of musical insight, a discriminating ear and a fair quota of artistic taste. These, together with patient concentration, and intelligent experiment, may reveal tonal possibilities that were never dreamed of by the composer when he suggested the registration. While *all* music may not have been composed *at* the organ, there is no doubt but that the writer is guided in his suggestions by the stops that he himself may happen to have at his disposal.

With two manuals, five or six great registers, seven or eight swell registers, the usual manual and sub- and super-octave couplers, it becomes an exceedingly pleasant and profitable occupation to try out the large number of combinations that are possible with even this limited equipment. Try every stop separately, in pairs, and in threes. Theoretically, a four-foot stop and one of sixteen-foot tone are not a fortunate combination. But there *are* organs on which this tonal disparity produces a fine solo effect. Again, very few amateur organists ever try the experiment of using a sixteen-foot stop and playing an octave higher than the notes indicated, or a four-foot stop and playing an octave lower.

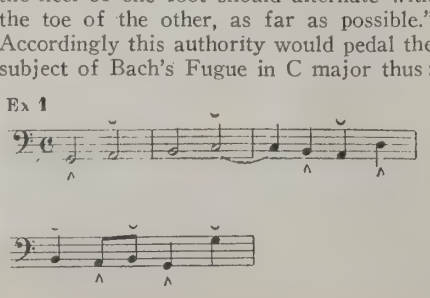
Registration

By T. L. Rickaby

In the great majority of American organs, the sub- and super-octave couplers have taken the places of "mixtures" and other multiple-rank registers which are practically always found in English and European organs. These "mixtures" are used in obedience to certain acoustical laws. Whether the substitution has resulted beneficially or the reverse is a disputed question among organists; but one thing is certain, these couplers have furnished the means of providing some interesting musical effects—perhaps some very odd ones, too. But it must not be forgotten that an odd effect is often acceptable, if only for a few moments change. They are the tonal olives at our musical feasts! It may be remarked in passing that this work becomes still more useful and effective if the organist can hear the results, not at the organ only, but also with the help of an assistant, from a distance. Distance lends enchantment to a view, we are told. It may lend *disenchantment* to a tone. And many a favorite solo stop or combination might be given a much needed rest if its effects could be heard from a more or less remote pew.

Buy all these books by all means. For the young organist they contain indispensable musical knowledge. To know even the names of stops is worth while, even where the immediate opportunity to use them does not exist. The opportunity may come some time. To know their effects is still more worth while, that is, to know what they are supposed to sound like and what they *will* sound like if they are correctly made and artistically voiced. But on *your* organ the stops may not give out the sounds that the books say they should. Never mind a little thing like that. Make a special study of the resources at your command. The results may be pleasantly surprising.

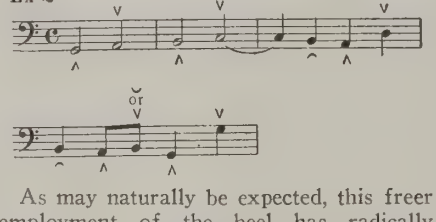
Coda. Do not "kick," or "grouch" and cause the music committee to think and perhaps say things. If the organ is an old one, very quietly start a movement for a new one. It may be hard to start, but a long and varied experience in church work has proved that once such a movement *is* started, it soon gains momentum. On the other hand, if the organ is a new one, begin a campaign to raise funds for additions and improvements. The chief thing is to begin. Something will come of it. Complaining or finding fault never did any good.



All Hail, Sir Heel!

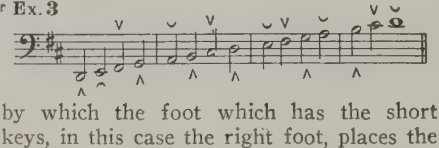
By O. A. Mansfield

PERHAPS nothing illustrates the progress made in organ technic during the last half century so well as the freer use made of the heel in playing pedal passages to-day as compared with the rendering of the same progressions fifty years ago. For instance, Sir John Stainer, in his excellent *Primer of Organ Playing,* lays down the rule that, "The heel is used only immediately before or after the toe of the same foot. *Separate single notes are never played by the heel!"* The italics are ours. Let us see how this last statement of Sir John agrees with the practice of modern pedagogs.



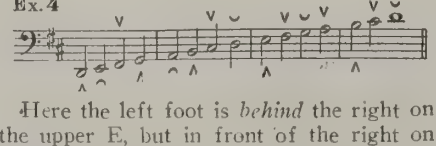
Dr. Eaglefield Hull, in his recent work on organ playing, asserts that "A system which is founded largely on the use of the toes for long notes (he means long pedal keys) is *false,* because it takes the key of C as the normal one, whereas the C scale is abnormal from a pedalling point of view. It is the only scale which does not use a short key." Amongst other things Dr. Hull goes on to recommend that in all passages "consisting entirely of long keys and requiring any turning under or over, the heel of one foot should alternate with the toe of the other, as far as possible." Accordingly this authority would pedal the subject of Bach's Fugue in C major thus:

Ex 1



whereas the older practitioners would have "footed" it on this wise:

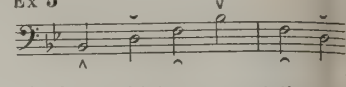
Ex 2



As may naturally be expected, this freer employment of the heel has radically changed the footing of scales and arpeggios. Taking, for example, the scale of D major, our method, a fairly modern one, would be,

Ex. 3

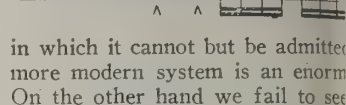
by which the foot which has the short keys, in this case the right foot, places the heel on all its long keys. But our friend, Mr. Ellingford, in his (the latest) book on *Pedal Scales and Arpeggios,* would pedal the scale in this manner:



Ex. 4

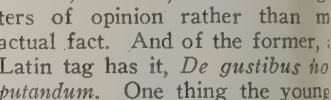
Here the left foot is *behind* the right on the upper E, but in front of the right on the upper B.

These examples may also be compared with the oldest method of all in which the right toe was employed on A instead of the heel. Then, by way of exemplification of the heel and toe in both feet, following pedalling for the scale major, as suggested by Mr. Elling



Ex 5

This would have scandalized o fathers who would have pedalled age with alternate toes, and of c arpeggio may be and still is by m ers still "footed" in this way.



But the advantages of this emancipation of the heel are m obvious when we come to the pe broken intervals. Here is a fine —the fugue subject from the Mendelssohn's 4th Sonata. T players would have executed thi with the toes. We would sugges

Ex 6

in which it cannot but be admitte more modern system is an enorm On the other hand we fail to see modern system has any advantag over the old plan of plain toein a passage as this—from the Mendelssohn's Second Sonata—c similar passage employing the l keys only. We show a moder the older and superior one of alte we do not think it necessary to e

Ex 7

Here, however, we are drifting ters of opinion rather than m actual fact. And of the former, Latin tag has it, *De gustibus no putandum.* One thing the young will have to remember and that i heel has at last come into its kin he is wise in reading the signs of it will not be long before he disc that kingdom is likely to be and will exhibit a tendency t rather than to diminish. It woul therefore, to get acquainted with power in the quickest possible tim

General Principles Registration

By Helen Oliphant Bate

IN the accompaniment of voice tone should predominate because with and supports the voices an used for some time without fear ony. Diapason pipes, especially t ones, produce a tone that is lackin partials. For this reason they in combination with other stops to counteract this deficiency. their clear and fundamental q are valuable for hymns, which ally announced on the swell m then played on the great when t gation sings.

For passages of quiet charact flue stops of the swell and ch sufficient. When more volume are required the swell reeds are great reeds are used only for t fects and fortissimo parts. Re be used sparingly because they come tiresome.

The string tone stops brighter and are effective alone and in co They do not give as much suppor as diapason stops. It is advisab bine them with other stops, no cause this will make them blend the voices, but because it wi quicken their naturally slow spe should be used judiciously be soon become monotonous.

Compound and mutation stop the upper partials of foundation

ing brilliance to the tone. All fancy
)s should be used with great care, in
er to avoid a cheap style of playing.
tops of eight foot pitch should form
basis of all accompaniment. Four
t stops may be added to a suitable foun-
ion of eight foot stops, provided the
es are sufficiently brilliant. They will
g a dragging congregation back to tem-
r up to pitch when the tone is flat. When
bining four foot and eight foot stops it
ore interesting to select stops of differ-
color than it would be to choose the
e quality of tone. Four foot stops
ed an octave lower provide many con-
ts to the eight foot stops.
he sixteen foot stops on the manuals
ken the tone and add weight and dig-
. They are seldom used on the great.
the swell they can be added when full-
and body are desired, as in accom-
ying a large chorus. Sixteen foot flue
combined with eight foot flue tone
help to keep the pitch when the ten-
cy is to sing sharp. Sixteen foot stops played an octave higher are effective for variety.

Just as eight foot tone forms the basis of the manual registration, so sixteen foot tone forms the basis for the pedal. Eight foot stops on the pedal add firmness and distinctness to the sixteen foot tone and prevent that big gap between manuals and pedals which would result if only sixteen foot tone were used. The deep reed notes of the pedals assist in giving that effect of grandure characteristic of large organs.

Stops should be added or taken off at the beginning of phrases or sections. When for special effects they are added in the course of a phrase it should be upon an accented beat. Changes of registration should never be made when to do so would cause a break in the rhythmic flow of the piece. Such breaks make a piece sound fragmentary and disconnected. It is better to execute organ music smoothly with few chances than to disturb the movement for the sake of pushing buttons and pulling stops.

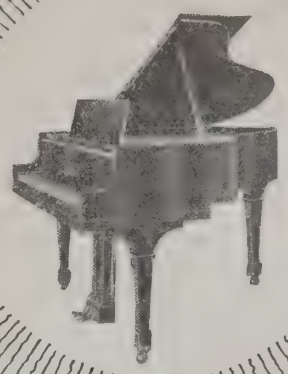
The Crescendo Pedal

By Helen Oliphant Bates

WHAT a wonderful piece of mechanism
he crescendo pedal! It will bring on
the speaking stops, with a few excep-
s, and some of the couplers, beginning
the softest stop not already on, and
ng one at a time in progressive order
the full resources of the instrument
in use. Close it, and they will be taken
in reverse order until everything that
added has been released. Instead of
ning the crescendo slowly, bringing on
stop at a time, it may be done quickly,
ng into action the full organ immedi-
; and instead of spreading the dim-
ndo over several pages, it may be
e in a fraction of a beat.
ne crescendo pedal also facilitates
ges to lighter combinations and dim-
ndos which are not preceded by cres-
os. For example, if the first section
. piece is forte, and the second piano,
are the organ for the soft or second
. and open the crescendo to forte for
louder part. When the second divi-
is reached, close the crescendo and
soft combination will be ready. If the
part is to be reduced gradually, all
is necessary is to close the crescendo
l slowly. This method of registra-
requires forethought, because, when
s are drawn, they cannot be removed
the crescendo pedal, and therefore
essential to know at the outset the
st quality that will be needed until
or pauses permit the hands to make
ges.
s the crescendo pedal brings on stops
set order, specific combinations can-
always be obtained. If, for example,
stopped diapason alone is drawn, the
cannot be added without all the soft
s which are brought on first. By com-
ng individual stops and composition
ls and pistons with the crescendo
l, the possibilities are greatly in-
sed.
nother use of the crescendo pedal,
h should, however, be employed spar-
, is to produce accents. Immediately
ding the accented note, partly open
rescendo pedal and close it the instant
note is struck. Satisfactory results
obtained only at the beginning of a
se or such other places where the
s can be removed from the keyboard
the crescendo is being opened.
some organs it is not practical to use the crescendo when playing on the swell manual, because the great to pedal coupler is brought on at the outset, and, if the pedals are in use, they become too prominent. When such organs do not contain a great to pedal reversible, a slight movement of the crescendo pedal will prove an acceptable substitute.

As the crescendo pedal does not affect the swell pedal, it is necessary to operate the latter in connection with the former. On first thought it would seem that the swell pedal should only be opened on the crescendo and closed on the diminuendo. But on further consideration it is evident that both opening and closing the swell pedal on the crescendo and both closing and opening it on the diminuendo produces the most satisfactory results. Whenever the addition of a single stop makes a noticeable difference in the volume of tone, the swell pedal should be opened just before the stop is brought on and closed as soon as the new color is gained. In the diminuendo, when the removal of one stop causes a gap, the swell pedal should be closed just before the stop is taken off, and opened immediately after.

But along with this momentary opening the closing of the swell pedal is the steady and gradual opening which will generally be completed by about the middle or last part of the crescendo, to remain until the diminuendo is begun. The same is true with regard to the closing of the swell pedal in the diminuendo. Care should be exercised not to get the swell pedal entirely closed too soon. In fact, if the final portion of the swell pedal is closed on the last note of the diminuendo, the dying-away effect will be most realistic.



Concentration, an important element in practice, is particularly essential in the study of the crescendo pedal, because without it one cannot be cognizant of the stops which have been called into action and those which have not. As the crescendo pedal is easy to manipulate, as well as being effective, the danger of employing it too frequently is great. It cannot be denied that many good and legitimate results can be thus obtained; but, if you would have your playing interesting, you must study and take advantage of each and every resource of the organ, in order to gain that variety which is such an essential factor in all true art.

---

ach was absolutely healthy in all his tic manifestations; there was a time eep feeling, there was also a time when physical exuberance resulted in corruscating, rapid-fire music (like the Fugue à la Gigue), meaning nothing and expressing nothing beyond the mere joy of living."

—HAMILTON C. MACDOUGALL.

PROFESSIONAL APPROVAL

The Premier Aristocrat Model

5 feet, 3 inches long. Price, $725. f. o. b. New York

TEACHERS, students, studios, colleges and conservatories have selected this instrument the country over, because of its combination of inherent quality and attractive price.

Quantity production and specialization have made the Premier Baby Grand the dominant, popular priced Small Grand Nationally.

Be sure to *see* and *hear* the Premier before you determine upon your choice. Sold by leading dealers. If you are unable to examine it locally, kindly communicate with us.

Premier manually played Small Grands, Period Models and Reproducing Instruments are illustrated and described in "The Magic of Music." Send for your copy and paper pattern, showing floor space requirements.

A Summer Session

Beginning June 21st

Length of course arranged to suit individual convenience

Study

~at an amazingly low cost, averaging $150 or less for a full course of study under master teachers

Master Classes

Master Classes in Piano, Voice and Violin, conducted by renowned artist teachers, at so low a cost as to be within reach of all.

Classes in Teaching Repertoire, Music Pedagogy (Normal), Public School Music, Harmony, Counterpoint, Composition, History and Appreciation of Music; Accompanying, Ensemble Playing, Sight Singing, Orchestra Conducting, Choral Conducting, Dramatic Art, Dancing and Languages; a special course in Community Music, and another in Motion Picture Organ.

Teachers' Certificates may be earned by completion of prescribed Courses.

Private instruction available from the entire Faculty of more than one hundred instructors, in any subject desired.

Dormitory accommodations provided at moderate rates.

Vacation

All the good times of a real vacation along with the advantages of summer study

Eight Vacation Excursions

All the good times of a real vacation can be enjoyed in a series of eight vacation excursions, conducted by the School. The schedule includes: 1. An automobile trip through the Chicago Parks, concluding with a visit to the studios of the famous sculptor, Lorado Taft. 2. A visit to the Art Institute. 3. Capitol Theater Party. 4. A visit to the Field Museum. 5. A boat ride on Lake Michigan. 6. A visit to Newberry Library and the Chicago Historical Society. 7. A visit to the Chicago Tribune, to see the printing plant, the great Radio Station WGN, and the Observatory Tower. 8. A journey in chartered car to Ravinia Park. Picnic supper in the Park. *Opera in the evening with Metropolitan and Chicago Opera Company artists.*

Free recitals will be given every week by artist teachers of the School.

Opportunity

~for professional advancement

Teaching Positions

The Sherwood Music School now has Thirty Neighborhood Branches in Chicago. These Branches give rise to positions for advanced students and teachers who wish to teach and at the same time continue their study under our artist teachers. There are also excellent positions available for our students, when qualified, in the thousand and more Branches of the School, located throughout the country. *Additional teachers for the 1926-27 teaching season in the Chicago Neighborhood Branches will be engaged from those in attendance at the Summer Session. The number of openings is so large that any talented, ambitious student or teacher, with reasonable preparation, may be sure of an opportunity in our organization.*

t-named book is specified for use in Science Churches, but the character positions makes it available for use ic Churches.

tion to this list there are numerous many individual pieces by the well- tholic organists of France, that may uch as the Compositions of such men Guilmant, Vierne, Bonnet, Marcel, l others.

Q. Would you kindly tell me in "The Etude" if in singing hymns by choirs, should notice be taken of the commas, semi-colons, and other punctuations, at ends of lines, or when the music ends the line with three beats, leaving the next line to start with one odd beat, should strict time be kept? In some hymns it would appear to spoil the meaning of the context, if strict time is kept.—A. S.

A. Except in the singing of Chorales (where the last note of the line is frequently lengthened by a pause) hymns should be sung in strict time *but* the time necessary for a stop or "breath" should be taken from the last note of the phrase, by not holding it quite its designated length. If the note is held for its full time, the subsequent stop or breath will delay the entry of the new line, which should not occur. Usually a breath may be taken at the end of a line—but sometimes the sentence is improperly broken by doing so, in which case it is desirable, if possible, to take the breath at some more appropriate place and carry the phrase over without a stop. It is no doubt true that at times strict time may spoil the context, but set rhythms bring this about at times. It is for this reason that the freedom of plain song is sometimes preferred.

Q. I am a pianist—have played pictures for years. Studied organ one year with a in a sanatorium. Can I study the organ in good teacher, using "Stainer's"—practiced on a four-manual organ. I took sick and am now any way lying in bed, by reading books? Can you suggest anything that will help me when I do get back to the organ? Can you suggest a good harmony course that I could take by mail, and do you think it would help me on the organ?

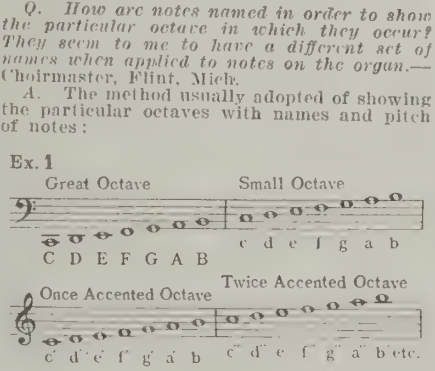
A. Would suggest your reading works pertaining to the organ—from which you might gain much information that will be of use to you on your recovery and return to the instrument. The following might be of interest to you:

Organ Playing, Its Technique and Expression ..... Hull
Musical Accompaniment of Moving Pictures ..... Lang and West
Organ Stops and Their Artistic Registration ..... Audsley

A harmony course should be of much value to you. Such a course may be obtained from the following:

Alfred Wooler, Mus. Doc., 171 Cleveland Ave., Buffalo, N. Y.

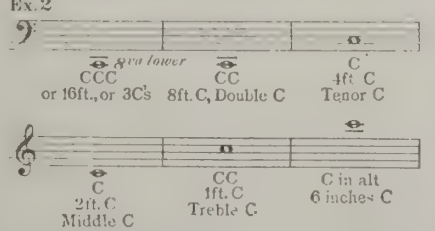
University Extension Conservatory, Langley Ave. and 41st St., Chicago, Ill.



F. E. Keim, 2545 Cooper Ave., Brooklyn, N. Y.

Nomenclature of the Pitch of Respective Octaves

Q. How are notes named in order to show the particular octave in which they occur? They seem to me to have a different set of names when applied to notes on the organ.—Choirmaster, Flint, Mich.



A. The method usually adopted of showing the particular octaves with names and pitch of notes:

Ex. 1

Notes in the octave next below the great octave are shown by the use of larger capitals C, D, and so forth. Those above the twice accented 8ve c''', d''', and so forth. But the pitch of organ pipes is still named after the old method:

Ex. 2

The 8ve below CCC is CCC; that above C *in alt*, C *in altissima*.

"To the Singers: Distinctness, the large notes come of themselves, the small notes and their text are the main thing. Never say anything to the public. In monologues always look up or down, never straight ahead. Last wish: preserve me your good will, my friends." Notice posted by Wagner behind the scenes at Bayreuth.

Pianos
With Individuality

People with years of experience back of them; people with that cultivated taste for the best; people who love good music, and insist on having none other, invariably turn to the Jesse French & Sons Piano when it is the ideal instrument they want.

We picture but one of our many artistic designs. You have your choice of a large number in all the fancy woods.

Liberal allowance on your old piano. Easy terms, if desired, anywhere in the U. S. Ask for our Illustrated Catalog.

Letters From Etude Friends

Miss Blank's Method

To THE ETUDE:

My daughter and I were invited to the birthday party of Janet Morrison. The young people played games and danced and had a jolly time.

When this sort of amusement grew rather tiresome, a gentleman in the crowd said to Janet, "Please, Miss, will you play a few selections on the piano? All of us would love to hear you play."

Janet, pausing a moment, said, "Oh! I cannot play anything."

"Oh, yes," said the young gentleman, "I know you can."

The girls, too, began asking, and still Janet hesitated. Finally the crowd insisted and began coaxing until the situation became very embarrassing. Then someone in the crowd suggested that my daughter play.

Without being asked the second time she stepped to the piano and played three beautiful selections from memory, whilst listening ears enjoyed every moment. How nice it was not to be coaxed until people give up asking.

After these selections the jolly crowd gathered around the piano and sang a lot of high school songs, while Patricia played. My daughter's music teacher always taught her not to be coaxed and begged to play, either at home or any place where she might be asked; and this, I think, is an item of interest a teacher should take in his pupil.

I had another interesting experience with my daughter when she started to take music lessons at the age of ten. We were walking by the home of her teacher who was playing a difficult selection on the piano. She stopped and said, "Mother, I wish I could play like Miss Blank."

I replied, "You can, dear; as you are getting along so fine under Miss Blank's instructions, and it takes courage, time and practice." Just then the thought came to me: When a teacher sits down to play during her spare moments, if she would imagine that some of her pupils might be listening, in some way there would be an inspiration there that a pupil would grasp and some day use advantageously. I have heard some teachers play about one-third of a piece and then hurriedly turn to another. This seems very impracticable, and no one would care to stop and listen.

LUCILLE BATES.

Self-Study at Home

To THE ETUDE:

When I had reached about the fourth grade my teacher became ill, and gave up her work for over a year. It was during this time that I decided to study alone, and have kept at it persistently, never allowing a day to pass without a little practice, if only to go over my scales and arpeggios. I am sure my technic and ease in playing have improved one hundred per cent.

It has been during this time that THE ETUDE has become so indispensable to me. The various helpful articles and suggestions all serve to take the place of a teacher; and when I opened the number containing the wonderful lesson on "The Harmonious Blacksmith," by Mark Hambourg, I was simply over-joyed. It is all explained in such a simple and understandable way that the wayfaring "girl," though a fool, cannot err therein.

When passing through our town last winter Mr. Hambourg gave a concert. His wonderful playing has been an inspiration to me ever since; and I have read with keener interest some of his articles in back numbers of THE ETUDE. That same quality of clearness seems to pervade them all. I am now hoping that the other lessons you have promised during the year, by eminent pianists, may be within my grade and be explained as well as this one.

With best wishes for future success,

MYRTLE BERNICE FOSTER.

The Piano-Accordion

To THE ETUDE:

I am a subscriber to your magazine, THE ETUDE, and will be nineteen years of age in July. I play, and am studying the piano-accordion. Please do not let that name, "piano-accordion," suggest a toy or a mere jazz instrument. The best of music can be played on it. Also one can play in any key.

The right side, or treble, is the piano keyboard. It has a range from the first F below middle C to the A (inclusive) in the third octave above middle C; a little over three octaves, or about the same as a violin. The modern accordion has a double set of reeds with a switch, which is the same as a keyboard twice as large. The reeds are metal. There are no strings to get out of tune.

The left side, or bass, has one hundred and twenty keys, or buttons. Some have less, but that is really insufficient. Some have one hundred and forty, but that is not at all necessary. A base of one hundred and twenty keys has forty single notes, and eighty chords; major, minor and others. I mean that a chord of four notes is had by pressing one key. The bass side is at all times out of sight of the player. A lot of complicated stuff, not worth while, you think? Not at all. Compare it to a typewriter. A good typist never has to watch his or her keys. (The accordion bass keyboard consists of many buttons, looking similar to a typewriter.) Of course, there is a system to it.

Now, for expression. All of the expression is controlled by the bellows. It can be played as softly as a violin; and, although I have never tested them side by side, I venture to say it can be played louder than a strong man at the piano. Certainly there is more volume. One can swell a note—I mean "p < ff > p"—without breaking it or rolling, as it is necessary to do on the piano; this by varying the pressure on the bellows. Then there are many tremolo effects besides the natural reed tremolo. They can be produced by vibrating the right hand (fingers on the keys), which in turn vibrates the bellows, to produce the effects.

The modern "piano" accordion is very different from the old kind that the name "accordion" suggests. As you can easily find, the majority of the public who have ever heard it, like it. It *is* a high-class instrument. All the fine overtures and other classics can be played on it. Some musicians say it is not high-class. Either they have not heard it, or have only heard a few simple jazz pieces from it, and do not understand it; or possibly they are jealous because so much music can be produced from it. Those who feel that way talk against the accordion and help retard the progress of the popularity of it. It is not merely a toy or a plain jazz instrument. The possibilities of it are unlimited. It is mainly a solo instrument, and produces the effect of an orchestra.

If you think it worth while, listen to some phonograph records of Pietro Deiro, who is known as the world's greatest piano-accordionist. If you have a representative in New York, or can get in touch with Pietro in some way, to get first-hand information, it would be appreciated by thousands of accordionists throughout the United States to be able to get help and information concerning the instrument from THE ETUDE.

The reason the instrument is not well known is that there are very few good players, and that is because there are *very* few capable teachers.

DAVE ALBERT,
(California.)

Musical Smiles

The Worm Turns

A GERMAN scientist has discovered that earthworms can produce musical sounds.

Among the variety entertainments of the future, we may expect, will be the worm doing his celebrated turn.

* * *

AN IRISHMAN, watching a parade, said to his friend, and pointing to the bass drum, "That's the instrument I can play."

"Like fun you can," responded his friend.

"Sure I can," said the first one. "How could I miss it?"—*Blue Notes.*

* * *

The Scotch of It

"THE verra best music I ever heard whateffer," remarked one of the pipers at a Bobby Burns night, "was doon at Jamie MacLaughlan's. There was 15 o' us in Jamie's wee back parlor, all playin' in different chunes. I thocht I was floatin' about in heaven."—*Everybody's Magazine.*

A MAN determined to begin in business as a touring theatrical manager. He knew nothing about the stage, but bought a musical comedy, engaged a company and started rehearsals. At the end of the first performance the conductor turned to him and said, "Well, what do you think of it, guv'nor?"

"It's all too loud," he replied.

The conductor pointed to the score and told him it was marked "Forte."

Whereupon the "guv'nor" replied, "Forty, is it? Well, make it thirty-five."

* * *

A PROFESSOR of music was asked to decide on the relative powers of two vocalists whose talents existed entirely in their own imagination.

After hearing them he said to one, "You are the worst singer I ever heard in my life!"

"Then," exclaimed the other, "I win!"

"No," answered the professor, "you can't sing at all!"

"Mum" is the word!
Every woman needs "Mum"

The use of "Mum", the dainty deodorant cream, is not a matter of mere fastidiousness. It is common sense and good breeding. "Mum" neutralizes the odor of perspiration and all body odors.

"Mum" cannot injure the finest fabric. Its general use with the sanitary napkin proclaims its entire safety.

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Is It Genuine?

BY FAR the greatest number of requests for information which come to the Violinist's ETUDE have to do with old violins which the owners consider very valuable on the strength of labels bearing the names of great violin makers, which they find pasted inside the violin, or branded on the outside. Many people who have heard that millions of these violins are only imitations, and usually of no great value, want to know how they can tell the imitation from the genuine. Not a few write that they have heard that the great makers each had a private secret mark which they put on their violins; and they wish to know what this mark is and where it is to be found on the violin. They never reflect that the imitator of a valuable violin would duplicate this private mark on the imitation violin. As a matter of fact there are very few instances of such marks having been used.

Imitations?

As with everything else in this world, there are imitations, and *imitations*, some good, some bad, and some indifferent. It requires a real expert, one who has had years of experience, to distinguish an imitation Cremona from the real article, in cases where the imitation has been made by a master workman who knew all the tricks of the trade and who could duplicate all the characteristics of the great maker whose work he was copying. Many of these imitation violins were made many years ago and consequently show signs of genuine age and genuine wear, thus making the detection of the fact that they are imitations all the more difficult.

To qualify as such an expert requires years of study and the opportunity of seeing and studying thousands of violins, new and old, genuine and imitation, and of all schools of violin making. Some of the people who want to know how to distinguish genuine violins by the old masters of violin making have never even seen a genuine Stradivarius violin, or violins made by the other great makers. How then can they hope to distinguish the true from the false? As well expect a jeweler who had never seen a real diamond to set up as a judge of diamonds.

While it is one thing to learn to distinguish imitations of violins where the workmanship is of the highest artistic excellence, it is not so difficult to distinguish comparatively crude imitations and workmanship of the "factory fiddle" order, even although the violins contain labels of the great makers. Makers of fiddles of this type in Germany, Austria and France, who turn out violins by the thousand, put labels of the great makers in their violins, less from any intention to deceive the purchasers than because it has become an established custom of the trade, and used by way of trade mark.

Easy Identification Marks

A few of the things, by which the most palpable imitations can be recognized by the ordinary violin student, will no doubt interest our readers. For instance many violin owners send copies of Strad labels which they find in their violins.

The staining and varnishing can be made to help very much in giving an old look to the violin. The stain is left lighter in color on portions of the violin subject to wear, giving the impression that the varnish is worn in such places. The varnish is often slightly chipped in places, to give the idea of the violin having met with hard knocks; or the varnish will be rubbed in places to give the semblance of wear. It is really astonishing how a violin can be doctored up to make it look old.

As every violinist is expected to be a good judge of violins, student should make a habit of examining every violin he comes across. It will not be long before he can learn to detect the imitation marks of age which are met with in many factory violins. He should also let no opportunity go by of examining genuine old violins by the masters of Cremona, and those of France, Germany, and other countries. In the larger cities, such as New York, Chicago, Boston and Philadelphia, the leading dealers have collections of genuine violins by the great makers, which occasionally may be inspected. Concert violinists will, as a rule, show their violins to students who go back to the artist's room, after the concert. Violin students who live in the smaller cities often find it difficult to get to see real Cremonas. Their only chance is to see the violins of traveling artists.

Factory Made or Genuine

There is as much difference in the appearance of a genuine Cremona and a common factory fiddle as between an oil painting by a master, and an ordinary chromo, or a cheap daub by a sign painter.

The main thing in learning to distinguish the true from the false is to see a great many violins of all kinds. Real experts have usually worked all their lives in repair shops of famous violin dealers, where great artists bring their violins to be repaired. Such an expert acquires an instinct in judging violins, just as a bank teller who handles money all day long acquires a skill which instantly detects a counterfeit.

People who have only a slight knowledge of the violin are usually impressed by violins which are inlaid with mother of pearl or, with designs in wood; also violins which, instead of the conventional scroll, have heads of human beings, lions, griffins, angels, and so on. They get an idea that such violins are very rare and of great value. The very opposite is true. Occasionally great makers have indulged in "fancy work" of this description, but very rarely. Violins with this fancy inlaid work can often be bought for a few dollars wholesale. Work of this kind is rarely met with in either new or old violins of the better class. Good violinists and concert artists usually frown on ornamented violins and violins with carved heads instead of the conventional scroll. They prefer a violin like those which left the hand of Stradivarius at his best period.

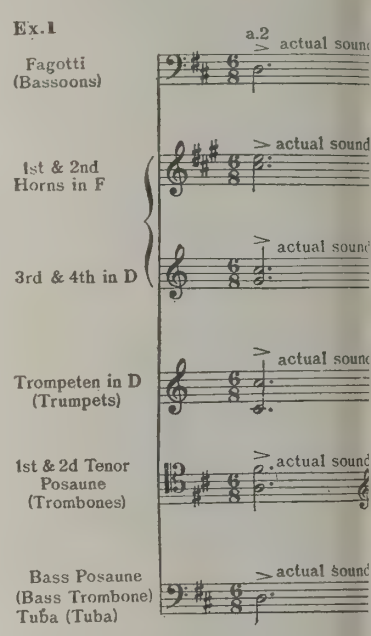
The student will find much information on the great masters of violin making in the following works; "Old Violins and Their Makers," by Fleming; "Old Violins," by Haweis; and "The Violin, Its Famous Makers and Their Imitators," G. Hart. The latter is a work of great value, but rather expensive.

"Jazz is crude and superficial. It may have technical elements which are of interest to the musical craftsman. That is open to discussion. But it is far from a finished, cultivated art, which appeals to what is deepest in the hearts and minds of humanity."

—CESAR THOMPSON.

A Great Conductor with Great Violins

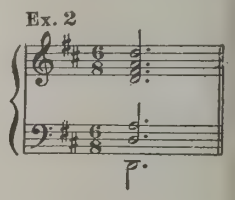
Leopold Stokowski (above), famous conductor of the Philadelphia Orchestra, is shown inspecting the collection of rare Italian instruments owned by Rodman Wanamaker. He is holding in his hand the "Swan", the last violin made by the master Stradivarius in 1737, the year of his death. This instrument cost Mr. Wanamaker $55,000; and the collection in the photo is valued at $250,000. Besides the "Swan" there are three other Stradivarii, a Montaguana, a Goftiller and a Guadagnini viola. There are also two cellos, a Ruger and a Teochler. Members of Mr. Stokowski's orchestra demonstrated the tones of these rare instruments for the conductor.



Score-Reading

By A. S. Garbett

ANY student of music interested in word puzzles ought to find an equal of interest in reading orchestra sc he has not done so already. Every cian sooner or later wants to know thing about the orchestra and its and the most thorough way of doi is to read a book on instrumentatio as the excellent one by Frederick and then to follow it up by studyi orchestral works of the masters in " ture Scores," such as are so readily able nowadays.



But, alas! At the very outset t dent finds himself up against the p of reading in at least four differen and at the same time mentally trans the horns, trumpets and clarinets i right key. Here, for instance, is the ing chord for wind instruments fr overture to the "Barber of Bagda Cornelius, as it appears in print:

Ex. 1

In the above chord the clarinets playing; but if they were they wo scored in "A" and would need tran down a minor third. Also the stri omitted, to save space, though the offer the additional problem of t clef. Yet, even so, there are diffi enough for the beginner. The actua involved in the above musical cr puzzle are simply these:

Ex. 2

The best way to study a score i the orchestra is playing; and now have a machine that reproduces th sounds, this is easy. The advant the talking machine is that passa be played over repeatedly until the mental effects are thoroughly m Doubtless in the near future ever conservatory will conduct score- classes with the aid of these instr and miniature scores.

"I do not attach so much import the age of a violin, but rather look ability of the maker as exhibited instrument. If age were a great merit, then the violins made by the Magginis and others would be bett those made by Stradivarius and G ius."—*Eduard Remenyi.*

Management of the Orchestra

By Dr. Perry Dickie

(Continued from Last Month)

illing and coaching—in groups or —at times other than at the rehearsal absolute necessity to any amateur or- ra in which the members have any itions above mediocrity.

st and foremost in all cases where are several first violins—no matter well they may be able to play as ts—they must undergo a certain nt of drilling so that they will play ner as we hear in our first class sym- orchestras. In order to accomplish uniform bowing should be exacted, should be marked on the music. The fingering should be strictly required ne fingering done by a good violinist. result of a neglect of uniformity in ngering could be easily imagined, in ase of passages playable in several if each one followed his own ideas, necessarily there would be a lack animity that would be perceptible at and possibly mar the rendition of passages.

Drilling in Groups

s drilling of the violins in groups, in tral technic as well as their parts in eces they are learning, should be done frequently if good results are desired. line of work laid out we advise the ing: Attack, sustained notes, slurred staccato, accents, phrasing, nuances, ndo, diminundo, piano and double all must be gone over until they can yed with fluency and, above all with d tone and perfectly true intonation. second violins are already employed organization, unless it is an exception general rule, they will be poor and conductor, if a musician, they will veritable thorn in the flesh. If for ason they must be retained—usually ncial matter—some efforts must be to improve them if it is possible to . Second violinists will need the drilling and coaching that we have y specified for the violins in general, hat they will need an extra amount ention in double stops which pre- ate largely in their orchestral parts. will be found to be invariably their ully weak point and which is so fre- y heard as a discord in the playing orchestra.

ninteresting Second Violin Parts

course the reason of all this trouble hard to understand when we but that in all but classical and modern of a high class the second violin are most uninteresting and decidedly onous to say the least. Hence, good ir violinists do not care to play them. ally we cannot blame them for ng" at them. In the case of a pro- al who is paid for playing second it is an entirely different matter; r one who does this in the expecta- f getting any pleasure out of it, we see where it is coming from.

e conductor possesses—as we would a bowing acquaintance at least with instruments of the orchestra—and is more likely to be the case if he anist or organist—he can personally to all the drilling and coaching that ired, and which he can expect to be from the very beginning and hout the whole life of the orchestra. s if he desires correct renditions of nd the proper interpretation of the of the composers, which latter is en entirely ignored and the rendi- vors rather of the character of the rgan than anything else.

e seems to be a lack of the proper ion that perceptible orchestral effects are not only intended to be heard but are most effective when given prominence as they are intended for this purpose. Especially do we find this to be the case with the 'cello, even in its solos and obbligatos, where in many cases the players on these instruments are seen going through all the motions of playing on them but not a sound is heard from them. An exemplification of the old adage of children being seen but not heard. The same trouble we find to be the case although to not quite as great extent with the clarinet.

It is, however, a fact that in these same orchestras where the monotony of tone prevails as far as hearing these parts, one has no fault to find in the double bass or drum which are at all times in evidence.

However we would say regarding this that while a happy medium is at all times the best, as the parts for the 'cello and clarinet are usually melodious and interesting, we would prefer rather to hear them too prominent than not at all or even too weak.

When brass instruments are already in the orchestra—which however we do not advise—their chief fault will be usually a poor intonation, playing out of tune with the orchestra and often with each other, and especially so with those playing the middle parts. If these faults cannot be corrected the players should cease to be members of the organization. However, we have found that a great help in preventing the instruments from changing their pitch, when not in use during rests, is an occasional breathing through them to keep them at an even temperature.

Special Attention to Wood Wind

The wood wind—flutes and clarinets—should receive attention; and, as the clarinet is the most important of these and absolutely necessary for the rendition of orchestral music, it should be the especial aim of the conductor that it be at its best.

A clarinetist who has not had the opportunity to hear his instrument played as it is in our symphony orchestras cannot realize what delightful tones can be obtained from it in the hands of virtuosos as these players are. In lieu of this, however, a very satisfactory idea can be obtained as to what to aim for by the use of phonographic records of clarinet solos, of which several excellent ones have been made and which, if used as studies and followed closely, would prove valuable educational factors for the musician who is trying to get the best from his instrument.

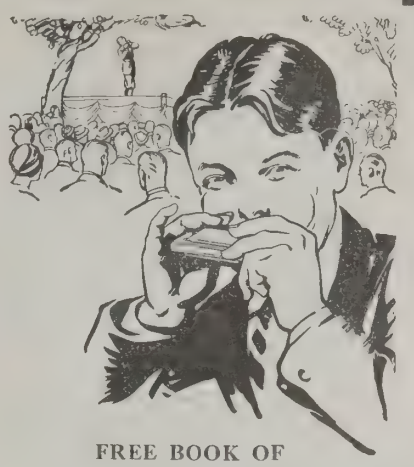
Those of us who have had any experience, even in listening to this instrument, know that the clarinet when well played is one of the most beautiful of instruments; but, in the hands of one who cannot play, it is capable of producing the most fiendish of noises.

In a large number of amateur orchestras are to be found saxophones; however, as there are no parts written for them, in orchestral music of the better class, they are used as substitutes for other instruments the tone qualities of which they in no way resemble as they are very essentially themselves and nothing else. They are also employed for doubling with other parts; but in this case it is very like the case in the Scriptures of the "lion lying down with the lamb" only here the lion (saxaphone) arises and the lamb (the other parts) is entirely swallowed up and unheard.

"I use a steel E string and one of my bows has black hair. My pupils develop quickness of finger action in various ways."

—Anton Witek.

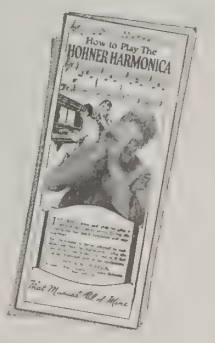
The Child's Approach to Music Study



To win the enthusiastic interest of the boy or girl at the very outset has always been one of the biggest problems in music teaching. Leading educators agree, today, that this can be best accomplished by enabling the youngsters to *make music in their own way* with the aid of that universal musical instrument—the Harmonica. After they have become proficient on this instrument they will take naturally and enthusiastically to the study of the piano, violin and other musical instruments.

A Hohner Harmonica for the boy or girl will help solve the problem. With the newly perfected Chromatic Harmonica they can play the complete chromatic scale. It is not a toy, but a real musical instrument which will promote self-expression, rhythm, and accuracy, and lay the foundation for serious musicianship.

Hohner Harmonicas are endorsed by such prominent group educators as—



Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal. Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

Recitals

"GRAINGER IN PIANO RECITAL"

By W. J. Henderson

"Percy Grainger has long been regarded as one of the interesting personalities in the world of music. The B-flat partita of Bach with which he began the program was all reticence, repose, suavity and vocal beauty. It was the perfection of contrapuntal clarity and the very pith and point of rhythm. It abounded in subtlety of detail and in suggestiveness of melodic treatment. In short it was a reading in which charm and skill were admirably combined."—*Eve. Sun,* New York, November 17, 1925.

"Percy Grainger grows in artistic stature and popularity every season. His recital in Carnegie Hall filled the huge auditorium with enthusiastic listeners, hundreds of whom remained after the conclusion of the regular program for a generous assortment of encores.

"The Brahms sonata gives a pianist the opportunity for a thorough test of his powers, from the majestic first movement to the delicately whispered intermezzo, and Grainger passed every test with flying colors. There was never a pause in his clarity and brilliance of tone. The audience was steadily and tumultuously enthusiastic, the boxes were all full and it was altogether an enormously successful recital. Grainger is accumulating a following to equal Hoffman's and deservedly so."—*Eve. Post,* New York City, November 17, 1925.

"THRONG HEARS GRAINGER"

"Pianist's Interpretations of the Masters Meet with Appreciation"

"Grainger is one of the few pianists who succeed in filling a large concert hall. . . . Four shorter pieces, among them a song by Fauré arranged for piano by Grainger, were greatly applauded, leading to several recalls and a double encore . . . three works by Chopin all of which won fervent recognition."—*Times,* New York, November 17, 1925.

Photo by Morse, N. Y.

"PERCY GRAINGER IN FINE RECITAL"

"Pianist Delights Large and Enthusiastic Audience"

By Philip Hale

"This recital was one of the most delightful we have heard fo many seasons. Grainger did well in playing Bach's Partita t omit the Courante. What beautiful music is in this Partita. Th sonata of Brahms chosen by Grainger contains undisputabl lofty and fine thoughts. If Mr. Grainger played in a poetic ma ner the music of Bach, with exquisite tonal quality and the requ site intimacy, without any attempt at giving the movements undu swollen significance, he bestowed an epic character on the sterne pages of the sonata without sentimentalizing the relieving an lyrical episodes.

"Here was a program that called for a performance to prov that Grainger is not that fearsome creature, a musical specialis Bach and Debussy, Brahms and Albeniz in turn appealed to hi and he was their faithful, illuminating, glorifying interpreter."— *Herald,* Boston, Mass., December 16, 1925.

"BRIMMING PLEASURES"

"For an evening of pure enjoyment what can equal a piar recital by Percy Grainger? Once again Jordan Hall was fille And an enthusiastic company of listeners it was that filled i Bach began and Chopin ended the program; between stood Brahm Ravel, Fauré, Debussy, Albeniz.

"But the greatest revelation of the evening came in the lar broad playing of three pieces of Chopin. For once a closi piece furnished a true climax in all possible ways: musically, brilliance and power, in performance. The A-flat major polonai was the piece. All the best of the Percy Grainger of the eveni was in this piece, the gripping sense of rhythmic compulsion, t power to proceed to unheard-of climaxes, beauty of tone, in melod divisions, directness and simplicity of interpretation throughou No pianist hereabouts in recent years has so magnified it. Seldo has bigness in all its phases so thoroughly entered into eve corner and every crevice of a piece of music, all without sac ficing delicacy or finesse or on occasion songful melodic playin Here was an example of 'the greater Chopin' with greatne raised to the *n*th power."—*Eve. Transcript,* by A. H. M., Bosto Mass., December 16, 1925.

Violin Questions Answered

By MR. BRAINE

Genuineness of Violins.

M. J. It is quite impossible to say whether your violins are genuine without seeing them, since there are millions of violins containing labels exactly like those you send. All but a very small fraction of these violins are imitations. You will have to show your violins to an expert.

Professional Courtesy.

O. B. H.—Where a pupil is under instruction I make it a rule not to try to mix in and interfere with the work of the teacher, by trying to map out a course. Besides, I cannot possibly tell you what is best for the pupil without hearing him play. No good teacher uses the same beaten track with all pupils, because every pupil differs.

Value of Maggini.

F. E. H.—A genuine Maggini, in good condition, would be worth several thousand dollars, but there is hardly more than one chance in a hundred thousand that your violin is genuine. As there are no experts in the town where you live, your only course would be to ship your violin for examination to a leading dealer in old violins in one of the large cities. This would involve trouble and expense, but you would have to take the risk of being disappointed. No one can tell you if your violin is genuine without seeing it.

Callused Fingers.

A. E. J.—Your letter does not state the exact nature of your callus trouble. However, if the callused places on your fingers are too thick, and interfere with proper fingering, you might try the advice of a leading New York City physician in treating calluses. Soak the callused parts in very warm water for ten or fifteen minutes in the evening, and then apply warm linseed oil. Leave the oil on all night and in the morning scrape the calluses with a knife.

A Buchstetter.

W. H. T.—The translation of the label in your violin would be as follows: "Gabriel David Buchstetter, Stadtamhof, near Ratisbon, String instrument, and violin maker. Year 1752. No. 26." Buchstetter was a German maker; and, while he can hardly be classed among the famous violin makers, he made some good instruments. Stadtamhof is a town near Ratisbon, a city in Germany.

Playing Harmonics.

M. F.—The chances are that if you cannot execute difficult compositions and harmonics on your violin, which you say cost $100, you could not execute them on a more expensive violin. It is quite true that harmonics come out better on a very fine instrument, but, at the same time, they can be made reasonably well on a lower priced instrument. Without hearing you play and examining your violin, it is only guess-work for me to try to locate the trouble. Possibly your violin is out of adjustment, or in need of repairs. Would advise you to ship it to some good violin maker to be put in order. It may be, also, that you have not had a sufficiently thorough course of instruction in violin technic to fit you for playing compositions by Paganini and Sarasate, which you say you are working on. These works require a very advanced technic. It also takes much study and great talent to play harmonics well, especially in the case of artificial harmonics.

Gabrielli.

R. C. H.—Gabrielli was a Florentine violin maker of some note, and his violins would be easily worth the sum you name. However, the label states that the violin is only a copy of the Italian maker and made by a German violin maker of no special note. It is impossible to give you any idea of the value of the violin without seeing it. It may be a cheap German factory fiddle, or it may be a well-made copy worth the sum you name. No one can tell you without seeing it.

Another Imitation.

W. W.—Your violin is evidently an imitation Stradivarius, as the label bears the word "Germany." Original Strads. were made in Italy. The chances are that the violin is a factory fiddle, made for export by German manufacturers, and of no great value; but I could not say without seeing the violin.

Selling Violin.

J. B.—I would suggest that the first thing to do, as a help to selling your violin, would be to obtain a certificate from some well-known violin expert that the violin is genuine. Otherwise it would be very difficult to sell it. There is a great demand for genuine Strads., and almost any firm of dealers in old violins would buy it, or find a customer for it, if it is genuine.

Velocity Study.

W. F. Van O.—To learn to play velocity passages like those in sixteenth notes which you send, I know of nothing so effective as practicing them with the metronome. In this manner you are sure to get them with absolute equality, that is, if you follow the beats of the metronome faithfully. Set the metronome at a very moderate tempo at first, so that it is easy for you to play the notes at the indicated speed. As you gradually gain facility from day to day, you can set the tempo faster, until you are able to play the passages at the required speed. 2—If you are ready for them, I know of no studies better than the Kreutzer Etudes, which you say you are studying.

Strad. Labels.

T. C.—There are millions of violins containing Strad. labels like you send. You would have to send your violin to an expert in order to tell whether it is a real Strad. or not. But as the chances are so overwhelmingly in favor of the violin being only a copy, you would no doubt go to useless trouble and expense in so doing.

Light or Heavy Bow.

A. E.—You have probably misunderstood the violin teachers you write about, some of whom you say advise always bowing lightly, and some heavily. In playing very softly you naturally have to bow very lightly, while in playing loud tones more pressure is applied. Beginners invariably bow too heavily, letting the whole weight of the arm press down on the string. At the beginning the bowing should be very light until the student learns to apply pressure without stiffening the wrist and elbow joints, which produces a rough, scratchy tone. 2—I naturally cannot estimate the talent of an individual I do not know and have never heard play. However, according to your history of your friend's musical studies and success in professional work, I should think she would make no mistake in keeping on with her musical activity.

A Stainer.

E. M. J.—According to the label in your violin, it was made by Jacob Stainer, at Absam, near Innsbruck, in 1710; but there is not one chance in many thousands that this is true. There are great numbers of imitation Stainers about. It is impossible to tell you anything of the value of your violin without seeing it.

Stringing the Violin.

L. G.—In stringing your violin it would be best to use only the E of steel, with the little patent tuner which is in such universal use. All orchestra violinists, and most of the concert violinists, now use the steel E string. Its use will not harm your violin, especially if you use the string which has the little sliding pad of silk which fits over the notch in the bridge. Concert violinists, many of them, use the steel E on their Cremona violins worth many thousands of dollars.

G Out of Tune.

H. W. S.—If your G string has become thoroughly stretched, and still will not stay in tune to a reasonable extent, three things might be the cause of the trouble: your peg may not fit exactly; the string may not be put on properly; or in playing you allow your chin or jaw to press on the tail-piece, which alters the tone of the string. 2—To remedy the trouble you have with your fingers slipping up the stick of the bow towards the middle, you might slip a piece of thin rubber hose two or three inches long, on the stick where the hand holds the bow in playing. You can get rubber grips to put on the stick at the music store.

Helps for Beginners.

H. G.—There is a series of five miniatures for violin and piano (Theo. Presser Co.), by Frederic A. Franklin, the violin parts of which are entirely on the open strings. These can be used to advantage in the very first few weeks of violin study. The melodies are carried by the piano; the compositions as a whole make a very pleasing effect and are a wonderful incentive to the young player.

Buying a Violin.

J. P. W.—It would be of no use for me to send you lists of makers, and prices, as you can get these from violin dealers. Besides, I could not recommend any violin, no matter who the maker was, without seeing it, as the quality of violins by the same maker differ so much. Get catalogs and price lists from various dealers in old violins; and have them send you a selection of violins at about your price, to choose from. It would hardly pay you to bother with European dealers, unless you could go to Europe and pick the violin out. It would be endless bother (owing to the customs regulations) to have a violin sent from Europe on approval; and if you should buy without seeing the violin, you would have to arrange to import it, and pay the duty, and then it might not suit you after all. Better stick to the American violin dealers.

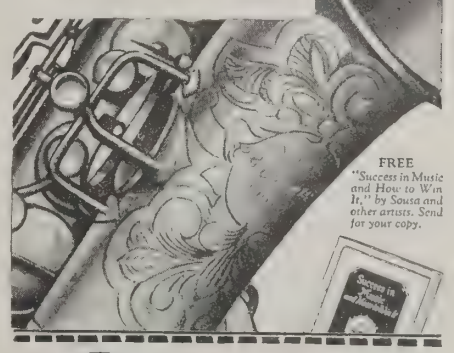
Shall I Study Violin?

G. H.—I should want to know your son personally and have him for a pupil for a few months before I could feel justified in advising him to take up violin playing for a profession. A really competent violinist is usually sure of a fair income; but the chances of making large sums do not begin to compare with business or with the professions of law and medicine. No one should become a professional violinist unless his love for the work is so great that he feels he could not be satisfied in any other profession. The only way is for you to send your son to a conservatory in one of the large cities for a few months. He can tell at the end of that time whether he likes the musical life; and his teachers and the friends he makes can tell him if he has sufficient talent to make it worth while to go on.

Widhalm.

C. A. B.—Leopold Widhalm, Nuremburg, 1765-1788, made some excellent violins, some of which are of considerable value. He imitated the violins of Stainer with great success. It is impossible to value a violin without seeing it.

There's a big place in music *for* *You*



Popularity, pleasure, a big income, all may be yours if you start now to cultivate your musical "bump" with a Conn saxophone!

You're sure of quick success because of Conn's exclusive features: simplified key system, patented tuning device, foil vacuum pads, perfect scale, beautiful tone, *easy blowing.* If you can whistle you can learn to play. The big stars, Isham Jones, Ted Lewis, and hundreds more, choose the Conn.

As a doubling instrument for those who now play or sing, the Conn saxophone opens great opportunities. Used now in all combinations, including even the symphony orchestra, the saxophone ranks as one of the most important modern instruments.

Send coupon now for details of **Free Trial; Easy Payments,** on any Conn. We are the only makers of every instrument for the band. The Conn C-Melody Saxophone is the beginner's "best bet." Ask us about it, now.

Musical Traditions

By Robert Price

THE need of musical traditions in our small communities is becoming each year more apparent. Frontier life and mushroom-like growth, which are comparatively recent history in many sections, have not been favorable to the establishment of perennial musical interests. Consequently this lack is one of the chief faults which distinguish American music life from that of the Old World.

Everywhere in Europe one finds musical traditions. Often they date back into the twilight of the Middle Ages. In England and Wales practically every town has a choral society or two which meet every week to rehearse and prepare for several public concerts a year. Often the repertoire of these local organizations is nothing short of staggering. Only last year the author's native community in south England celebrated its 204th Choir Festival, with a program consisting of Mendelssohn's "Elijah," Handel's "Messiah," Elgar's "Dream of Gerontius," Rossini's "Stabat Mater," Brahm's "Requiem" and Bach's "B Minor Mass," along with several minor works. Such a program is astonishing to the average American, particularly when it is noted that most of the singers were local persons who had never had any training outside of the three church choirs participating in the festival.

We are making some progress along this line, however. College towns and the larger cities are paving the way to a new era. A small town in central Ohio gave its 16th annual performance of Handel's "Messiah" last year, and there are other encouraging developments here and there. But everywhere there are limitless possibilities going constantly unnoticed.

Music teachers and choir leaders have great opportunities ahead of them in this field. What achievement can be more worthy than the placing of a festival or oratorio or concert on the community calendar as a looked-forward-to annual event, or the founding of an instrumental or choral club that will last down through the years? Small town musicians will accomplish their noblest work in the establishment of musical traditions.

Kisses and Cash

By Merritt G. Watson

MUSICIANS and music teachers are reported to live on "praise." Praise is a fine thing, but it will not pay board bills. The music worker should be substantially and richly rewarded for what he has to give to the world.

Papa Mozart said, when he was touring with his marvelous son, "If the kisses bestowed upon Wolfgang could be transformed into good Louis d'Or we should have nothing to grumble at. The misfortune is that the hotel keepers have no desire to be paid in kisses." Later, he said, "We have swords, laces, mantillas, snuff boxes, gold cases, sufficient to furnish a shop; but as for money it is a scarce article, and I am positively poor."

Honor your teacher and your organist, but see to it that they are abundantly and richly rewarded, that their splendid work for the happiness of man and the betterment of the world may continue without the hampering pinch of small means.

Who Created the Sonata?

HISTORIANS have not agreed as to just who should have the credit of creating the sonata. Dr. Burney gave this honor to Turini, the organist of the Cathedral of Brescia, about 1634. However, in 1611, Banchieri, of Venice, had already published two sonatas. Giovanni Gabrieli, organist of St. Mark's, of Venice, designated some of his compositions as Sonate da Chiesa, or Church Sonatas. These first sonatas were for several instruments in concert, as two viols and a bass, or a violin, violone and organ.

It is certain, however, that the first harpsichord sonata was written by Johann Kuhnau, who preceded Bach at the St. Thomas Church of Leipsig. In an appendix to a collection of his compositions he placed this First Sonata, to which he referred in the preface: "I have added at the end a Sonata in B Flat which will please music lovers, for why should not such things be attempted on the clavier?"

"I give forth what is in me. When I think of the Divine Being, my heart is so full of joy that the notes fly off as from a spindle, and as I have a cheerful heart He will pardon me if I serve Him cheerfully."—Haydn.

Lesson Day

By Russell Gilbert

1. Be sure of the day and the hour. Know just how long it will take you to get there. See that all your music is in your case the night before. Be sure to take the case along with you. You will need the music.

2. Strive to arrive ahead of time. This will give you a few moments to collect your thoughts and your breath before the lesson begins.

3. If something has delayed you, rather arrive late than rush and push to get there and arrive on time in a disturbed condition.

4. On the way to the lesson think of what you have done with your music since the last lesson. If there was anything that you did not understand, remember to ask about it.

5. A heavy meal eaten just before the lesson may give you indigestion. It will surely make your mind work slowly as digestion takes the blood from your

6. Do not meet the teacher with chain of your troubles upon your Meet him with a smile and he wil back.

7. Do not make a question mark o self. Ask only questions essential understanding of your work.

8. When you meet other pupils reception room be polite but reser first. Do not treat them like lo brothers at the first meeting.

9. Never brag about your work o compositions you are studying. Th whom you do so may hear you them and smile at your conceit.

10. Refrain from telling the other about their mistakes. If you hear about another pupil, say that you believe it; and never repeat it for ge it is not true.

The Conductor's Baton

By E. H. Pierce

IN EARLIER days it was the custom, even in the case of symphony orchestras and the large aggregations of voices and instruments taking part in operas and oratories, for the leader to sit at the piano (or the harpsichord, its predecessor), and set the tempos by his own playing, aided to some extent by occasional motions of the head or hands. In some cases, however, the chief first-violinist served as conductor. This arrangement is still in constant use with the smaller theater orchestras, but for adequate guidance of large bodies of singers or players, nothing takes the place of an efficient conductor who directs with the baton.

One of the earliest musical directors to adopt this now almost universal custom was Lully, the great French composer, but the baton he used was a large heavy staff or cane. The motions he made with it must necessarily have been quite different from those customary with a small light stick, but doubtless they served the same purpose. Unfortunately, he became a martyr to his use of the baton: in the year 1697, while conducting a large choral work, he brought it down on his own foot so heavily as to cause a wound which developed into an abscess from which he ultimately died.

It is impossible to say at just what date the use of the baton became general in European orchestras, but in 1820 Spohr as "guest conductor" introduced the custom into England. By the time of Mendelssohn it had become so well-recognized and general that Berlioz published an instructive essay on the art of conducting with the baton, which is still one of the standard works on the subject. When Berlioz and Mendelssohn met at Leipsic in 1841, they exchanged batons as a gesture of mutual respect and friendship, Berlioz accompanying his with a clever little note couched in the vein of our own James Fenimore Cooper, whose "Leatherstocking Tales" were at that time having a tremendous vogue in Europe as well as in America: "To Chief Mendelssohn. Great Chief! We promised to exchange our tomahawks; here is mine. It is bigger, yours is plain; only the squaws and palefaces love ornamental weapons. Be my brother! And when the Great Spirit shall send us to the Happy Hunting-ground, may we hang up our tomahawks together at the gate of the council-house!"

American Musical Criticism of Other Days

By Adrian Anderson

A YOUNG gentleman, attached to an American paper, went to hear Emma Abbott sing, and this is the way it affected him:

"Miss Abbott is beautiful as an angel, and was dressed in green. Her voice is sweet as the tender accents of a mother crooning her only babe to sleep, and strong as a tempest when it roars in the forest and smashes the monarchs of the woody vales. Listening to her, the soul is lifted on the wings of infinite joy, and soars into the realms of eternal glory. When she ceased singing we fell back again to earth, and were stunned by the concussion as though we had fallen from the top of a four-story house or been hit in the stomach by a mule."—*from a very old newspaper clipping.*

New Music Books Reviewed

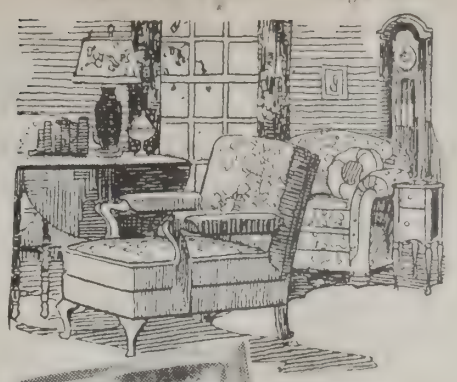
Self Help for the Violinist ("The Strad." Library, No. XXV 11). By Sid. G. Hedges; 168 pages, several illustrations, and musical examples; bound in cloth. Published by the Strad, Office, 2 Duncan Terrace, N. 1, London, Eng.; Chas. Scribners Sons, 597-599 Fifth Ave., New York City.

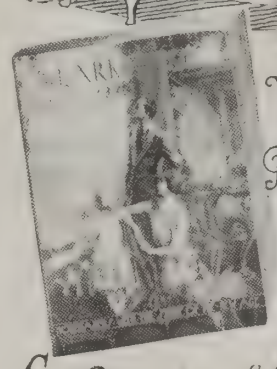
This work, by Sid. G. Hedges, the well-known English writer on musical topics, should be in the hands of every young violinist, for it is full of helpful ideas, and contains many hints not ordinarily found in books of this character. Mr. Hedges has the happy faculty of making everything interesting which he writes about, and the present work is no exception. This book will be of especial interest to the student who is trying to learn violin playing without a teacher, or with a limited amount of instruction. Among the chapters of unusual interest are those on: "The Teacherless Student," "Teaching as a Profession," "Why Play Scales?" and on "Making Lessons Interesting." It would take a great amount of a violin teacher's time to tell his pupil the information contained in this valuable volume, which the pupil can learn for himself by getting and reading it.

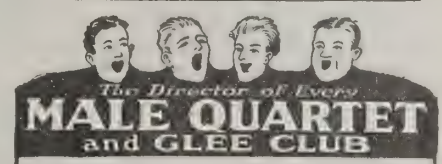
Voice Training. By W. S. Drew. Bound in boards; seventy-five pages; illustrated. Published by the Oxford University Press at $1.20 per copy.

This small volume does not attempt to deal with those subjective sensations which accompany the production of a well-produced tone—that part of voice culture which can be successfully pursued only under the personal direction of a skilled teacher. It does point out to the student the relation of the theoretical to the practical side of the art; and at the same time gives warning of some of the things which cannot be done safely with the voice. Taken in all it is a most practical little book whose councils may be taken as a quite reliable guide for the young singer.

Bach's B Minor Mass. By C. Sanford Terry. Flexible paper cover; forty-seven pages illustrated. Published by Oxford University Press at 50 cents per copy.







The object of the series which includes this book is to provide students and concert-goers with reliable guidance to the classics, more solid than that afforded by annotated programs. And this one serves its purpose more than well. The history and structure of the work are carefully noted. Each movement is carefully analyzed and the leading themes quoted for the guidance of the student of the composition. The perusal of this little book would be a most valuable preparation for anyone contemplating a hearing of this great masterpiece of choral music.

The Margin of Music. By Edwin Evans. Bound in boards; seventy-one pages. Published by Oxford University Press at $1.20 per copy.

The contents of this interesting little book are taken from articles contributed to *Musical News and Herald* while the author was editor of that journal. In the various chapters he has discussed fearlessly certain themes of interest to the professional musician as well as the attendant at concerts and opera. Evidently the writer has delved deeply into musical annals as well as into the fundamentals of the art; so his affirmations may well be given careful consideration by the profession and student.

Fugitive Notes on Some Cantatas and the Motets of J. S. Bach. By W. G. Whittaker. Oxford University Press (American Branch); 298 pages; numerous notation examples. Bound in cloth. Price, $4.20.

Twenty-one of the cantatas and motets are carefully analyzed as to their harmonic structure, their form and their spiritual contents in this interesting book. Many examples are given of Bach's marvelous skill in the use of the orchestra and his unerring choice of the instrumental tone color best suited to produce the effects he desired. Some suggestions upon the interpretation are given, and how to obtain the proper balance of tone between chorus and orchestra and solo voices and orchestra. The dangerous subjects of the replacement of obsolete instruments by those in use to-day is touched upon with discretion. Three appendices will be of great use to the conductor and the student. The first contains an alphabetical list of all the cantatas and a summary of the instruments required in the performance of each of them. The second contains a list of the cantatas translated into English with the names of the publishers, while the third gives a list of the secular cantatas. Altogether it is a remarkable work, admirable alike for its erudition and its practicality.

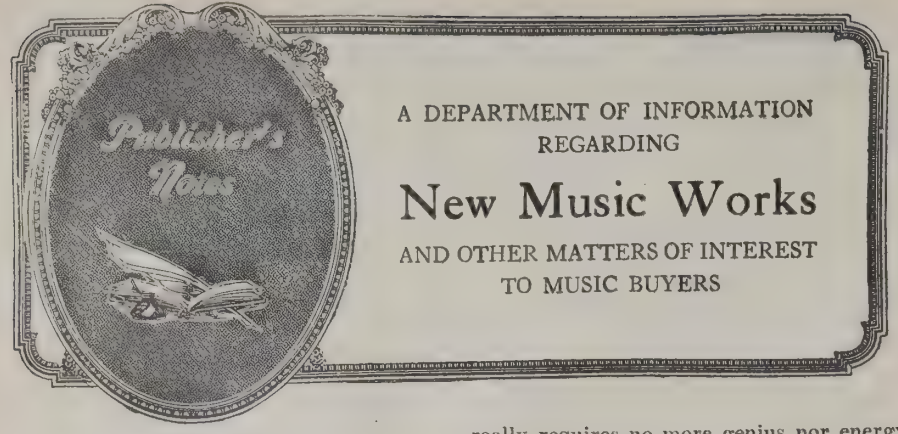
Harmony Book for Beginners
AN IMMEDIATE SUCCESS
By PRESTON WARE OREM
Price $1.25
ADMIRABLE FOR SELF-HELP

Brief, Simple, Vital, Practical, New and Distinctive

Lays a strong foundation for future musicianship by giving the main essentials of the subject in such simple, understandable and interesting manner that it will prove invaluable in the class or for self-help work.

Read this letter from JOHN PHILIP SOUSA, Famous Composer and Conductor:
The system adopted in your Harmony Book is admirably adapted for the student who requires an instruction book that is "as plain as a pike." The text is so lucid that he "who runs may read"—a decided virtue in any text book. I congratulate you on your work and commend it to the student of harmony.

THEO. PRESSER CO. SHEET MUSIC MUSIC BOOKS PHILADELPHIA, PA.



SUMMY'S CORNER
WORKS SPECIALIZING IN CERTAIN IMPORTANT FEATURES OF MUSIC DEVELOPMENT

THE LITTLE HANON by Robert J. Ring - - - Price, $1.00
(S. E. No. 100)
Elementary Technic for Beginners. A series of simple exercises designed to cover step-by-step the various elementary finger movements.
The usual drudgery attending technical drill is eliminated in this work by the diatonic progression of the technical figure through an entire octave. A plan that stimulates practice, thereby promoting satisfactory progress.
Patterned after and preparatory to the "Hanon Virtuoso Pianist".

SYNTHETIC SERIES OF PIANO PIECES by Florence A. Goodrich
Part 1 (S. E. No. 11) - - - $ .75 Part 2 (S. E. No. 12) - - - $1.00
Part 3 (S. E. No. 13) - - - $1.00
An intelligent plan of memorizing that avoids all mechanical and rote processes.
It calls for a complete understanding of a composition through the observation and analysis of its sequence figures; to memorize through a correct idea of the melodic and harmonic features of a composition; to apprehend the musical pattern and design.
Each book contains five musically attractive pieces to be analyzed and, aside from their use in this training, they provide excellent practice in phrasing, tone production, pedalling, arm freedom, finger facility, etc.

WORK AND PLAY BOOK by Mrs. Crosby Adams Price, $ .75
A Help to Musicianship
Covering elementary principles of Transposition. A familiar Folk Song melody is given and space is provided for its transposition into all the major keys. There is peliminary work in the writing of all musical signs, scale construction and triad building in all the keys. In this way each new key is familiarized from all angles before the actual work of transposing is begun. A second piano part is provided for the teacher.
The results of this work are permanent and far-reaching. A direct benefit to accurate sight-reading and a decided help in the future study of Harmony, Theory and Composition.

The World's Largest Stock of Music at Your Service

Did you ever stop to think of the intelligent industry, of the care and responsibility and the large investment represented in such a wonderfully complete stock as that of this Company?

It would take years of patient and well directed toil to duplicate this stock even partially; its complete duplication would be literally impossible. It contains the published music of all periods and of all styles, compositions that pleased the ears of bygone days, the music of the centuries, that of yesterday and that of to-day. As between the old and the new, it is no secret that age in itself has no depreciating effect on real music. There is vitality, even immortality, in the works of the masters of all time. While some of the older works survive only for the delight of the few, many of the newer works may not achieve even that distinction. A process of elimination is always going on but the builder of a real stock of music knows that someone somewhere will sooner or later want just that particular vocal or instrumental composition that may lie for years undisturbed in its alphabetically placed shelf wrapper.

We surprise and delight music lovers every day by supplying many of those "I-wonder-if-I-can-get" things that most dealers regard as valueless and which are consequently lost or destroyed.

The service we offer to music buyers is exceptional as regards promptness and completeness. It is also notably economical.

Plan a Special Summer Course With Our Help

Teachers who may wish to continue their work along special lines during the vacation period should consider the possibilities suggested by forming classes in Musical History, Theory or Harmony.

There are in all communities many students of music whose regular work does not include any of these important branches of music study. These subjects do not require intense application, they are interesting and each contributes so much to the student's general knowledge and they are so useful that none may be neglected, except at a distinct loss to the individual.

Organizing a class in summer is not nearly as difficult as might be supposed. It really requires no more genius nor energy than may suffice to build up a class in the fall or winter. It is only a matter of presenting the idea attractively and of making it interesting to the prospective students. Take the subject of Musical History alone. What earnest student of the piano does not want to know something about the origin and development of music, particularly piano music? What musical student cannot derive greater satisfaction from study if a knowledge of harmony is there to help the understanding? Or of theory?

There are many excellent text books on these subjects and we could easily submit the names of several pertaining to each, but just now we shall concentrate upon a few that have won special places for themselves in their respective lines, so we direct special attention to the popular "Standard History of Music for Students of All Ages," by James Francis Cooke ($1.50), "Harmony Book for Beginners," by Preston Ware Orem ($1.25) and "Theory and Composition of Music" also by Preston Ware Orem ($1.25).

These works or others of the same general character among our successful publications may be had on request for examination and they cost so little that no active music teacher's library should be without them.

Beginning With the Pedals of the Piano
By Helen L. Cramm

Young pupils are always anxious to use the so called loud pedal. The resonance produced by raising the dampers is appealing, but the study of the pedal must be systematic. It may start in the latter part of Grade One, or in Grade Two. Helen L. Cramm's new book, which we are now announcing for the first time, is admirable for the purpose. It gives very easy studies at the beginning and develops the taste and the experience of students, so that gradually they come to know insinctively when to use and not to use the pedal.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Rhythmical A-B-C's for the Violin Beginner
By A. Louis Scarmolin

Every progressive teacher will be keenly interested in this novel work for young violin students, the object of this little book being to develop a sense of rhythm even before taking up fingering. Little tunes in the piano part with the accompanying rhythmical figures for the violin develop, through the ear, this all important requisite to the student.

Special price in advance of publication is 35 cents per copy postpaid.

Standard Second-Grade Recreations for the Pianoforte

This book is very nearly ready for the press. It contains one of the best assortments of genuine second grade pieces, that it is possible to assemble in one volume. This book, it is well to remember, is printed from special large plates, consequently, there will be a far greater number of pieces than may be found in volumes of the ordinary size.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Music for Commencement

Musical material available for commencement exercises is plentiful and so varied that every need of this kind may be met without difficulty. Every teacher, supervisor or musical director has a fairly definite idea as to what to use in each particular case and where to get the best need not be the least bit of a problem.

For many years we have studied and supplied the wants of those annually concerned in the musical part of this important event in the school year. Each season sees the return of the usual host of interested ones encouraged by past experiences with our service in suggesting and in supplying music for special occasions. We offer the facilities of our "Selection Department" and its able staff to all who wish to take advantage of this service. We have everything in the line of choruses, unison, two-part, three-part or four-part, piano duets, trios, duos and quartettes. Of these classifications liberal assortments will be sent for examination on request. We urge early ordering so as to have ample time for preparation.

Two and Twenty Little Studies On Essential Points in First Grade Piano Teaching
By Helen L. Cramm, Op. 38

Who does not know this writer's *New Rhymes and Tunes for Little Pianists?* Those who know this work will have no hesitation in ordering this, the latest addition to her successful series of works for young students. *Two and Twenty Little Studies* is a genuine first grade book beginning from the five-finger position and developing gradually various important points in elementary technic. All of this is accomplished in the most tuneful and interesting manner and it is very much aided by the accompanying verses attached to each of the little exercises.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Easy Studies in Early Grades For the Pianoforte
By Mathilde Bilbro

This is a very good book to take up after the first instructor has been completed or even before. The studies are short but melodic in character and each one has a distinct technical value. The use of this book will tend to develop both technic and musicianship. This volume is now on press and it will be ready very soon.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Older Beginner's Book For the Pianoforte
By John M. Williams

This book is intended for older girls and boys, as well as for those who begin the study of the piano later in life. The older beginner usually has little trouble with the notation but sometimes there is trouble with the technical side. Older beginners want to play "songs" or else favorite melodies. In consequence of all these conditions, this book differs from the average instruction book and in doing so, it fulfills its purpose most admirably.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Six Picturesque Studies For the Pianoforte
By Paul du Val

Paul du Val is the pen name of a well known English composer and educator, who uses this appellation upon certain works of popular or brilliant type. These are genuine fourth grade studies and it so happens that there is a scarcity of such studies in this grade. These studies are so interesting that they might well be used as pieces, but at the same time each has the special advantage of being based upon some important technical passage.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

A Dozen Melodies for Saxophones
By Clay Smith

The many Saxophonists perfor entertainments and concerts and Lyceum, Chautauqua and Vaudevil forms, will welcome these offeri their repertoires.

Clay Smith beside being a comp numerous well known and b songs is a Saxophone soloist of repute. Twelve of his most su songs, melodious songs of the s type that never go out of date, ha arranged as Saxophone numbers collection.

The collection is made up so tha be used for solo work for the vari ophones or as duets for any two of the Saxophone family, in eit with piano accompaniments if There will be a volume for Solo a ond E Flat Saxophones, a volu Solo and Second C Melody Sax a volume for Solo and Second Baritone Saxophones.

These Saxophone volumes ordered at the advance of pub price of 30 cents per copy, postpa piano accompaniment volume ordered in advance of publicatio special low price of 45 cents.

Romeo and Juliet Opera Burlesque for Men
By J. W. Brigham

A new musical burlesque on play and one that will rival the of Mr. Brigham's popular "Cle Scored for men's voices only this w a capital offering for high school lege students. Nothing elaborat way of costumes is needed and ruses written mostly in four parts at all difficult.

Those interested in productions kind may obtain a sample copy special advance of publication, ca 40 cents, postpaid.

From the Dalles to Minnetonka—Five Impres For the Pianoforte
By Thurlow Lieurance

This new book of original pia by Thurlow Lieurance is now on t The number of pieces has been i to five; the additional number is *From My Cabin Window.* The o plete song transcription among pieces is a new concert arrang *By the Waters of Minnetonka.* four numbers are straight pian based more or less upon Indian or having an Indian atmosph pieces are in the fourth and fifth

The special introductory pric vance of publication is 40 cents postpaid.

Album of Octave Playing

The new album of study pie upon octave technic is now w way. Students who are begi cultivate octave playing will find ume a very pleasing medium for therance of their efforts. Althou the pieces have decided technic nevertheless, all of them have als merit. Some of them might ever separately as pieces. The book the early third grade and adv little beyond it.

The special introductory pric vance of publication is 30 cents postpaid.

Bach Album
By Sara Heinze

The well-known collection, k the *Bach Album* and originally by Sara Heinze, contains twenty- bers selected from the various *S Partitas.* Our new edition of pilation has been prepared utmost care. It serves as the bes introduction to Bach's *Invention* polyphonic playing in general. will be ready very soon.

The special introductory pric vance of publication is 30 cents postpaid.

Lost in the Mails

liday rush is over but copies of ne are sometimes lost in the mails os names and addresses have not arly written so that they may rrectly registered on our list. If ers of Etude have gone astray, vise us at once and we will gladly The January and February re a little late in coming off the The March number, however, ach you on time and regularly hereafter. There should be no elay in delivery.

Etudes for the Violin By H. Sitt, Op. 32, Book 1

Years of effort have resulted in the Presser Collection being built up to a fine representative library of the standard study works and classical collections. The standard violin works are well represented and one by one we are having other works that are favorites with violin pedagogues carefully edited by experts, adding these latest up-to-date editions to the Presser Collection.

Hans Sitt's Etudes Op. 32, Book 1, is one of the violin works now in preparation and teachers may become acquainted with this new edition of these very helpful and melodious studies at the low advance of publication price of 30 cents, postpaid.

A Special Spring Etude Bargain Price Offer

Until April 15th, 1926, we shall accept two year subscriptions to Etude Music Magazine for only $3.00. The regular price of the magazine being $2.00 per year, this makes the very substantial saving of $1.00 cash and insures Etude reaching you regularly for the next two years without further worry. Those whose names are at present on our subscription list can make this very substantial saving by remitting before April 15th, with the understanding that the two year subscription will not begin until the present paid for subscription has expired. Remember the date—April 15, 1926. No two year subscriptions at the special cut price of $3.00 will be accepted after that date.

Advance of Publication Offers Withdrawn

The withdrawals from advance of publication this month include two Easter numbers, the new Easter cantata, *King of Ages, by R. M. Stults,* and the Easter service, *Raised in Glory.* The regular price of the Easter cantata is 60 cents, which of course is subject to discount for quantities. Choir Masters may secure a copy of this cantata for examination. The Easter service now sells for 7 cents a single copy, 80 cents a dozen, $3.25 in lots of 50 or $6.00 in lots of 100.

Suite—Two Pianos, Four Hands, by Arensky; New Overture Album for Piano Solo and New Overture Album for Piano Duet also are withdrawn from advance of publication. The *Arensky Suite* is issued in the *Presser Collection* and teachers or pianists desiring this Suite will do well to specify the new edition in the *Presser Collection.* The price of it is $2.00.

The *New Overture Album for Piano Solo* is $1.00 and the *New Overture Album for Piano Duet* is $1.50. Many have looked upon piano Overtures as being only within the domain of the accomplished pianist. These excellent volumes give delightful Overtures of the lighter type and the average pianist who loves good music will enjoy these numbers. Both these Albums should be in the pianist's library and the piano teacher will do well to examine them for their possibilities, not only in piano teaching but also for what they suggest for pupils' recitals.

Splendid Magazines Clubbed With Etude At Special Spring Prices

You may have neglected to supply yourself with a year's reading matter, or perhaps your friends may have overlooked you during the holiday gift season. Nevertheless this is your opportunity to obtain the best periodicals clubbed with Etude at decidedly low prices and substantially to your financial benefit. We have selected only those magazines in combination with Etude which are bound to please.

World of Music

(*Continued from page 167*)

The American Grand Opera Company, of Portland, Oregon, has been incorporated for purpose of presenting only unpublished Grand Operas composed by American musicians. Composers and others desiring detailed information may secure the same by writing to the American Grand Opera Company, 408 Fine Arts Building, Portland, Oregon.

Eurydice Chorus Award of One Hundred Dollars, offered through The Art Alliance of Philadelphia, for a chorus for women's voices, has been voted to Franz C. Bornschein, of Baltimore, for his composition "Arethusa." Honorable mention was given to Adolf Weidig, of Chicago.

The Matinee Musical Club of Philadelphia, on December 19, presented "Hansel and Gretel" in English, at the Metropolitan Opera House. All the cast were from the Opera Class of the club; the chorus was chosen from the Matinee Musical Club Chorus; and the orchestra consisted of members of the Philadelphia Orchestra. Alexander Smallens conducted the performance which was of excellent quality throughout; while Marie Stone Langston as *The Witch* made her rôle the most distinctive, vocally and histrionically. The opera was followed by a pantomime-ballet, "A Night of Enchantment," under the direction of Caroline Littlefield, which was a real triumph of terpsichorean and theatrical art.

Berlioz' House in the Montmartre district of Paris, where he composed "The Damnation of Faust" and others of his works, is to be demolished. A protest has been raised by the admirers of the composer who passed in procession before the house as a token of farewell.

A Mozart and Wagner Festival of opera is to be held at Munich, beginning the first of August and continuing till the middle of September.

Eugene Gigout, noted Parisian organist, died December 30, at the age of eight-two. Gigout was especially noted for his improvisations, in which he was somewhat of a pioneer. He had toured largely in England and on the continent.

The 102nd Performance of Handel's "Messiah," by the Oratorio Society of New York, was given in Carnegie Hall on December 26, with Ethyl Hayden, Nevada Van der Veer, Judson House and William Gustafson as soloists, and the bâton in the hand of Albert Stoessel.

A National Opera Trust, with the Earl of Clarendon as chairman, is in formation in England. An appeal is being made for subscriptions to a two-and-a-half-million-dollar fund, the income from which is to be used to promote opera throughout the Empire. Many of the most prominent British musicians are in the movement.

Franco Alfano's "Resurrection," a four-act opera based on the thrilling novel of Count Leo Tolstoi, had its American premiere at the Chicago Auditorium, by the Chicago Civic Opera Company, on December 31, 1925, with repeated ovations for all concerned in the performance. Mary Garden, in the principal rôle, accentuated the brilliance and success of the interpretation.

Eugene Goossens, on January 7, conducted the first of a series of six performances of the New York Symphony Orchestra, at Carnegie Hall, to be given under his bâton. For three seasons Mr. Goossens has been conductor of the Rochester Symphony Orchestra. He has led concerts of the Royal Philharmonic and London Symphony Orchestras at Queen's Hall and performances of the British National Opera Company at Covent Garden.

Covent Garden Theatre, among the most famous of opera houses of the world, is reported to have been declared unsafe, and pressure is being brought to bear on the London County Council to have it razed.

The Fiftieth Anniversary of the M. P. Moller Organ Company at Hagerstown, Maryland, was celebrated on December 8 by a "Jubilee Banquet," at which the three hundred and fifty employees of the firm and two hundred and fifty invited guests entered heartily into the festivities.

"Liana," a One-Act Opera by Dorothea Beloch, who is partly American, has had a successful production during a brief season of opera at the Teatro Nazionale of Rome.

Fraud Agents

Although we have warned music lovers for years against paying money to strangers, the annual crop of complaints is now coming in. Pay no cash to anyone casually calling on you unless you are convinced of his reliability. Our especially appointed representatives carry official receipt books. We employ no traveling agents. It is sad but it is true that unscrupulous men and also women repeatedly victimize our subscribers and ourselves. Look out for the fake ex-service man, the man who is working his way through college and similar stories. We cannot be responsible for cash paid to swindlers.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Mr. Frederick Phillips

THE Theodore Presser Co. is an institution that endeavors to render every possible service to the profession, and accordingly invites inquiries upon everything pertaining to music or music publications. Many inquiries require such expert attention that authorities well known throughout the music world answer them. Queries upon music publications, details of our service, prices, etc., necessitate the maintenance of quite a correspondence department, and this month we introduce its manager, Mr. Frederick Phillips.

Mr. Phillips was engaged by the Theodore Presser Co. in 1906 and virtually has grown with the organization, since then there were around 100 employees, whereas now there are over 350.

Like many others who for years came in close daily contact with Mr. Presser, he is imbued with the idea of giving patrons of the Presser Co. unexcelled, accurate and prompt service.

In addition to having gained a wide knowledge of music publications in the years he has been with this company, Mr. Phillips has obtained much that makes him well equipped to direct so important a department, in his extensive study of music and professional activities as an organist and choir director for 25 years.

Mr. Phillips can boast of an excellent *esprit de corps* in his department, and has attained his splendid record of efficiency with the aid of the whole-hearted support he has secured from the members of his department.

Beautify Your Garden with Etude Subscriptions

See full page advertisement on inside back cover. It offers splendid high class seeds and roots guaranteed to grow by the nursery man. For new ETUDE MUSIC MAGAZINE subscriptions you can have a lovely flower garden this year without one penny cash outlay to say nothing of the pleasure and health derived in watching seeds and roots grow as the weeks roll on.

Changes of Address

It is of the utmost importance when subscribers change addresses that we be immediately advised, giving both old and new addresses. Notifying the postmaster of a change of address is not sufficient in the case of second class mail.

FOR SEVENTY-FIVE CENTS YOU CAN ADD TO YOUR MUSIC LIBRARY ANY ONE OF THESE ALBUMS

YOUNG PLAYER'S ALBUM
70 melodious second and third grade piano pieces.

POPULAR HOME COLLECTION
46 excellent numbers for the average pianist.

POPULAR RECITAL PLAYER
31 pieces that will delight the family good player.

STANDARD BRILLIANT ALBUM
27 showy piano pieces, yet none very difficult.

EXHIBITION PIECES
22 brilliant solos for accomplished pianists.

OPERATIC FOUR-HAND ALBUM
22 excellent piano duets or operatic airs.

THE STANDARD ORGANIST
43 good pipe organ compositions.

VIOLINIST'S POPULAR REPERTOIRE
29 melodious violin and piano numbers.

STANDARD SONG TREASURY
48 recital, concert, classic and sacred songs.

Ask for our little catalog that lists the contents of the above and other albums that sell for 75c.

THEO. PRESSER CO. PHILA., PA.
1712-1714 CHESTNUT STREET

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Mr. Howard A. Harner

ONE might call the Presser Co. stock the most complete library of music publications in the world, but everything ordered by patrons is not always found in stock; sometimes because someone else has just bought the last copy; sometimes because it is no longer procurable; and very frequently because the order is incorrect.

This requires a Back Order Department that must secure the out-of-stock items from the proper publishers or supply correct "translations" of incorrect or phonetically spelled titles.

Mr. Howard A. Harner, who is in charge of this vitally important division of the Sales and Order department, has been connected with various phases of the music business for 35 years. Earlier years in the business were with J. W. Jost and the J. E. Ditson Co. of Philadelphia.

Joining the Presser organization in October, 1901, Mr. Harner soon established himself as a capable and dependable music clerk, and moved right up to more responsible positions as each opportunity was presented.

Mr. Harner not only directs the Back Order Department, but also is relied upon for his excellent knowledge of the vocal works of all publishers. When one remembers that in the Presser catalog alone there are around 25,000 publications, one can appreciate the years of experience necessary to become acquainted with the majority of all American and Foreign publications.

A NEEDED WORK IN A NEGLECTED FIELD

POLYPHONIC PIANO PLAYIN(

PART PLAYING—COUNTERPOIN

BY

THEODORE PRESSER

EVERY pupil should be given s(
instruction in polyphonic play
Students confined to exercises te
ing to develop only mechanical d
terity are apt to acquire involunt
ily defects that leave no charm
their playing. These defects n
be remedied by timely and frequ
use of studies that are polypho
in character. In this import
branch of piano playing the p
receives a training differing fr
the usual technical routine and
prepared for the study of the wo
of Bach and Handel and the cl
ical composers. Polyphonic me
many parts; that is, there are
eral parts or voices produced s
ultaneously; in other words, co
terpoint.

This volume can be introduced ea
in the career of the piano stude
between the second and third y
is not too early. The material u
is especially pleasing and, altho
it has been selected from m
sources, it all has been especi
adapted and arranged for this w

What Educators Through

instrument of Scotland—the bag-
on which he is very proficient, al-
only fourteen years old. How
Junior readers have heard, or have
ied to play a bag-pipe?

Marjorie's Secret

By Evelyn Nutter

LITTLE MARJORIE was so excited that her cheeks burned redder and redder when the train stopped. She kept very close to her father as they walked through the huge depot. Marjorie thought she had never seen so many people in her life, and she wondered why they were all hurrying so fast. Then she saw grandmother coming toward them hurrying as fast as the others. Before long they were in grandmother's car, being whisked through the streets.

Marjorie was to stay with grandmother all winter. She had lived on a ranch far out in the hills, and now everything in the city looked strange and wonderful to her. She thought everything in grandmother's house was very beautiful, especially the piano. She stood looking at it before she would even take off her coat and hat, because on the ranch they had no piano.

"Grandmother," she begged, "will you teach me to play on the piano this winter?"

Grandmother laughed. "Why, dearie," she said, "one winter is not very long; but I'll try and, if you really practice, perhaps you will learn to play a little."

Marjorie smiled happily, for she had a secret. Her father knew it, but he did not tell, of course. This was her secret: Out on the ranch her father had marked out a keyboard on a table, and had shown her where all the notes were. And he had made up finger exercises for her to practice. None of the notes made any noise at all, but the practice had made her fingers limber and strong and obedient.

"Will you give me a music lesson tonight, grandmother?" asked Marjorie.

She could hardly wait to begin.

So after supper grandmother played the most beautiful music for Marjorie. Her fingers marched up and down like soldiers; they danced here and there like fairies. It made Marjorie think of the brook running over stones, and the birds trilling, and horses galloping—galloping.

Then Marjorie had her first piano lesson. When it was over grandmother looked at Marjorie's father, and her eyes twinkled.

"Now," she said to him, "tell me the joke. If Marjorie never tried to play a piano before, why does she know so much about it?"

Then Marjorie and her father laughed.

"Shall we tell her, Marjorie?"

"Yes," replied Marjorie. "We might tell her now. I thought she would be surprised."

So they told grandmother about the funny table and everything.

"Well, Marjorie," said grandmother, "any little girl who has enough perseverance to practice on a table like that, ought to have a reward."

"I thought it was fun," said Marjorie; "and if you teach me to play now, that's a pretty good prize."

"If Marjorie learns to play some this winter," said her father, "there will be a prize for her."

Marjorie clapped her hands.

"What will the prize be?" asked grandmother.

"The prize will be a piano of her own, out on the old ranch!" said her father.

"Then," said Marjorie, throwing her arms around his neck, "I will never have to practice on that flat old table again."

"Never again!" said her father.

"Never again!" said grandmother.

And she never did.

Pricilla A. Holdom.

Forming the Scale

By A. B. Phillips

Listen, children, and I'll tell
A rhyme you all should know;
Of sharps and flats, and what they mean,
And just where they should go.

In ev'ry diatonic scale
Two half-steps you will find;
Twixt three and four, and seven and eight,
Now keep this fact in your mind.

For signatures—some sharps or flats—
You'll find in ev'ry key;
Except the one we build upon—
Which is the key of C.

To form a sharp scale, start on G,
A fifth above the old,
Then sharp the seventh as you go;
This rule will always hold.

The last sharp is the seventh tone
Of every scale, you know;
The line or space above this one
You may be sure is "do."

But if you wish a scale in flats,
Count four from middle C,
Then flat the fourth—the scale is formed—
'Tis plain as plain can be.

The last flat shows the place of "fa,"
The fourth note of the scale;
Now children dear, observe these rules.
They'll never, never fail.

Question Box

DEAR JUNIOR ETUDE:

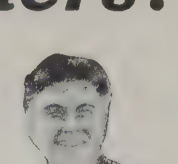
In case you did not receive my first letter, I am writing another. Will you please tell me the interpretation of *Souvenir*, by Drdla and *Prelude in C♯*, by Rachmaninoff. I have tried to find this information myself.

L. McL., *California.*

Answer—There are no real "stories" connected with either of these pieces. Some say the Prelude represents the Bells of Moscow, but this is not correct. Play the *Souvenir* in a happy, graceful way, and the *Prelude* in a more sombre, tragic manner.

DEAR JUNIOR ETUDE:

I have never written to you before, though I have taken the ETUDE for almost two years. There are several junior music clubs in town; almost every teacher forms her pupils into a club and gives recitals. I do not take lessons from any of the teachers in town, but my mother knows a lot about music and so does my father. He took a course in the university and they teach me. The piano in our home is going most of the time. I do not need to be urged to practice. I always try to keep the pieces I've learned a long time ago fresh in my memory. Some of my friends make fun of me for this. I have been wondering if it is not better to remember the old pieces and keep them in one's mind than to learn them and then forget them. I wish you would tell me, and I would like some opinions of the other Junior readers, too.



From your friend,
ELSIE BENDER (Age 13).
Nebraska.

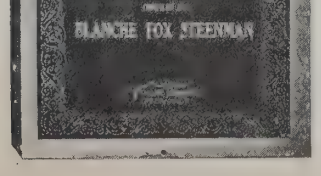
Answer—It is ever so much better to keep the old pieces fresh in your memory, and that is what all good musicians do. Some day your friends will be sorry that they did not try to do likewise. Some of the great concert pianists play pieces in public which they learned many years ago.

Mothers! Teachers!

With children hearing so much hilarious popular music how can a keen sense of beauty in sound be developed unless the true forms of music are heard frequently in schools and homes ?

BLANCHE FOX STEENMAN

has made a valuable offering to all interested in developing the musical appreciation of young folk in the volume



Gems of Melody and Rhythm

For the Pianoforte

AN idea of this volume may be had in a glance at the contents given below. These excellent numbers are accompanied by interpretative hints for suggesting to the juvenile mind how one number has the rhythm of *Skipping,* another of a *See-Saw,* and still others that suggest a *Stately Procession, Rocking, Hammering, Flying Waves, On Tiptoe, Peace at Even, Surprise, Dreaming,* etc. In adopting rhythmic music of the old masters and other good writers to some physical activities of the young and to the moments of rest and quietness, music that is uplifting in character, we have the ideal way for developing in children the love of the best in music. Altogether close to seventy numbers are in this compilation, some in their original form, while others are arranged or simplified. This keeps the rhythms clear, and also keeps them within the range of the average performer.

CONTENTS

Composer	Title
BACH	Gavotte, from "6th 'Cello Suite."
BRAHMS	Valse, Op. 39, No. 15.
BEETHOVEN	Andante, from "Sonata, Op. 26."
	Andante Celebre from Op. 14, No. 2.
	Menuet in G, No. 2.
BIZET	Carmen March (Toreador).
BROUNOFF	Indian War Dance.
CADMAN	In the Pavilion.
CHOPIN	Funeral March.
	Prelude, Op. 28, No. 7 (in A).
	Prelude, Op. 28, No. 20 (C Minor).
	Valse, Op. 34, No. 1.
DURAND	First Waltz, from "Spinning."
DUTTON	Juggler.
DVORAK	Humoresque.
FONTAINE	Swing Song.
GLUCK	Dance of the Spirits, from "Orpheus."
GOUNOD	Flower Song from "Faust."
	March Romaine.
	Waltz, from "Faust."
GRIEG	Anitra's Dance, Op. 46, No. 3.
	Watcher's Night Song, Op. 12.
HANDEL	Harmonious Blacksmith, The.
	Largo, from "Xerxes."
	Lascia Ch'io Pianga.
HAYDN	Andante, from "Surprise Symphony."
	Gipsy Rondo, from "Finale Trio in G."
	Oxen Minuet.
	Theme, from "Symphony No. 20."
ITALIAN FOLK SONG	Santa Lucia.
MASCAGNI	Intermezzo, from "Cavalleria Rusticana."
MENDELSSOHN	Consolation, Op. 30, No. 3.
	Kinderstuck, Op. 72, No. 1.
	Priests' March, from "Athalia."
	Spring Song.
	Tarantella, Op. 102, No. 4.
	Wedding March.
MEYERBEER	Coronation March.
MOZART	Allegretto, from "Quartet in F."
	Don Juan Minuet.
	Minuet, from "Symphony in E Flat."
	Theme, from "Sonata in A."
OFFENBACH	Barcarolle, from "Les Contes d'Hoffmann."
REISSIGER	Weber's Last Waltz.
RHODE	Boys on Parade.
ROSSINI	Fanfare, from "William Tell."
RUBINSTEIN	Melody in F.
SCHUBERT	Marche Militaire, Op. 51A.
	Serenade.
SCHUMANN	Album Leaf, Op. 68, No. 30.
	Cradle Song, Op. 124, No. 6.
	Hunting Song, Op. 68, No. 7.
	Joyous Peasant, Op. 68, No. 10.
	Marseillaise, from "Two Grenadiers."
	Nocturne in F, Op. 23, No. 4.
	Slumber Song.
	Soldiers' March, Op. 68, No. 2.
	Traumerei, Op. 28, No. 19.
	Wild Horsemen, Op. 68, No. 8.
STRAUSS	Beautiful Blue Danube, The.
THOMAS	Gavotte, from "Mignon."
VERDI	Anvil Chorus, from "Il Trovatore."
	March, from "Aida."
WAGNER	Lohengrin Bridal Chorus.
	Song to the Evening Star.
WEBER	Invitation to the Dance.
WILSON	Shepherd Boy, The, Op. 4.

PRICE, $1.00

This volume is ideal in the material it furnishes for playing to the young and also will prove attractive to others who want good music to *just play* but at the same time are limited in their pianistic proficiency.

THEO. PRESSER CO.

Everything in Music Publications

1712-1714 CHESTNUT ST., PHILADELPHIA, PA.

JUNIOR ETUDE—Continued

Junior Etude Competition

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays and answers to puzzles.

Subject for story or essay this month—"Music for Boys." Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete, whether a subscriber or not.

All contributions must bear name, age and address of sender written plainly, and must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, Pa., before the twentieth of March. Names of prize winners and their contributions will be published in the issue for June.

Put your name and age on upper left hand corner of paper, and address on upper right hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

WHAT MUSIC IS DOING FOR ME
(Prize Winner)

As music is one of the best arts known to man, it is doing much for me. It is strengthening my mind, which enables it to function more rapidly. It helps me to appreciate classical music. As I play in different concerts it raises me to the best of society and also enables me to perform before the public. Music affords me great pleasure during my leisure time. Music inspires me to greater service of the art. It is teaching me to practice the motto, "Whatever is worth doing is worth doing well."

DONALD RUCH (Age 14),
Ohio.

WHAT MUSIC IS DOING FOR ME
(Prize Winner)

If I have the talent of music, either vocal or instrumental, which I have, it is my duty not only to myself but also to my friends and society in general, to improve these talents. These talents are not given to everybody; neither can they be successfully acquired. For those reasons, then, I should make good use of them. While I may never use them in gaining money, I can use them in giving back to society some of the things I have received from it. Music makes me feel that I have something I can share with others, which I am surely going to try to do. Music helps to interpret some of the finer things of life. It also helps me to determine my future.

BERNICE HUFFMAN (Age 12),
Iowa.

WHAT MUSIC IS DOING FOR ME
(Prize Winner)

Music is the language of the angels. What could be more sweet, beautiful or strengthening than the voice of an angel urging one onward and upward? Music is doing great things for me. It makes life happier and pleasanter for me. In my spare hours it is a useful pastime. Music assists me in entertaining my friends. It is the life of a party. When I hear a piece of good music I can understand the author's emotions. Music helps me to appreciate God's great gifts and strengthens me to do His will. At church the hymns seem to lift me higher and nearer to God. MARGARET SCHWIND (Age 12),
Texas.

Honorable Mention for January Essays

Dorothy Miles, Gwendolyn Lodge, Eleanor Fisher, Frances Lawson Scott, Dorothy Schulman, Elizabeth Wright, Grace Lewenhaupt, Crystal Stevens, Virginia Magruder, Phyllis Wallace, Donna Kendall, Ruth Goodale, Katherine Kamper, Genevieve Reising, Genevieve Johnson, Sarah Bess Renfroe, Madeline Coffman, Mary Jane Pearce, Dorothy Klump, Catherine Hennessy, Mary Phalen, Gertrude Helm.

Letter Box

DEAR JUNIOR ETUDE:

In as many of your letters as I have read I have not seen any from this State, so I shall try to present Montana to the musical circle, although it offers really no opportunities for the musical student. In the larger towns and cities musical entertainments are more frequent. They have music in the town in which I live, but it is not what the musician would call real music. There is no music club here of any kind, and there seems to be no desire to start one, so from what little I have written you may see that America has not spread and tried to advance music to the best of its abilities as yet, even within its own borders.

From your friend,
MURIEL MCDONALD (Age 14),
Montana.

All three for One New Subscription

PLANT A FEW SHRUBS THIS SEASON

They beautify the home and add dollars to the sale price. The following five shrubs have been carefully selected by us. They are field-grown, healthy, thrifty and are sure to satisfy.

SPIREA VAN HOUTTEI (Bridal Wreath)
covered with white flowers in early summer, it makes a round and graceful bush.

ALTHEA (Rose of Sharon)
Nearly everyone is familiar with this beautiful shrub, blooms late in Summer when few other shrubs are in flower.

BUSH HONEYSUCKLE
makes a handsome bush with pink and white flowers in the early spring followed by beautiful and showy red berries during the fall.

FORSYTHIA (Golden Bell)
The first shrub to bloom in the early spring. Branches cut off in the winter and put in a vase of water will bloom in the house.

SYRINGA (Mock Orange)
A fine tall shrub, white flowers and very fragrant.

All five of the above ground shrubs, suitable for any climate, for One Subscription

Twelve Mother Goose Melodies

By W. Berwald **Price, 60 cents**

The Mother Goose rhymes always interest young children and the clever musical settings given them in this little album add to their charm. The text is given, although they are not intended for singing. Early Grade 2.

Musical Moments

By Mrs. H. B. Hudson **Price, 75 cents**

Twenty-five little piano solos, a duet and a novelty for one piano—eight hands comprise this collection of attractive recreation material suitable for use with the instruction book. Grades 1 and 2.

Celebrated Light Overtures

Piano Solo Album—Price, $1.00 Piano Duet Album—Price, $1.50

Piano arrangements of the standard overtures are always in demand and performers who supply the musical background for motion pictures, teachers who have pupils somewhat advanced and all good piano players will find much that is attractive in these volumes. These arrangements, if desired, may be played together as pieces for two pianos, six hands. Probably the best description of these albums is the list of contents: *Bohemian Girl,* Balfe; *Festival Overture,* Leutner; *Hungarian Lustspiel,* Keler-Bela; *If I Were King,* Adam; *Jubilee,* Weber; *Light Cavalry,* Suppe; *Marriage of Figaro,* Mozart; *Mignon,* Thomas; *Orpheus,* Offenbach, and *Pique Dame,* Suppe.

MUSICAL READINGS

Popular Pianologues from the Repertoire of Coyla May Spring

By Clay Smith **Price, $1.00**

The outstanding successes of these well-known Chautauqua performers have been included in this volume. The variety is excellent, one being patriotic, another optimistic, some with a touch of pathos, others sentimental, then there is a comedy, a juvenile number and last, but not least, a sacred selection.

SONG ALBUM

Each in His Own Tongue

THREE ART SONGS

By Thurlow Lieurance **Price, $1.00**

Real American "art songs" these. The verses by William Herbert Carruth are superb in thought and Thurlow Lieurance has made eloquent musical settings which are strongly emotional in content and require a rather declamatory style of rendition. The book is most artistically printed and bound.

MUSICAL LITERATURE

Elementary Piano Pedagogy

By Chas. B. Macklin **Price, $1.50**

Those first pupils are a problem; and the teacher who arrives at a solution of holding their interest while trying to get into their consciousness a working knowledge of the fundamentals of music, has made a real achievement, and this is just the thing that the author of this book has made many times easier. Every teacher and prospective teacher should read this book.

How to Succeed in Singing

By A. Buzzi-Peccia **Price, $1.50**

When a man has achieved a notable success in any field of endeavor, his opinions on that subject bear the stamp of authenticity. Senor Buzzi-Peccia, who has had as pupils some of the most prominent artists of the operatic and concert stage, gives advice in this book that should prove of almost incalculable benefit to any singer desiring to enter the profession.

PIPE ORGAN

Organ Transcriptions

By Orlando A. Mansfield

Price, $1.25

Taking some of the best piano and violin compositions in our catalog, Mr. Mansfield has made playable, interesting pipe organ transcriptions of them for this album. None of these pieces are difficult; most of them are in Grade 3.

CHOIR MUSIC

Anthem Glory

Price, 35 cents

The success of our anthem books is due to the fact that they supply, at a very reasonable cost, a generous collection of good anthems for a variety of occasions. "Anthem Glory" should equal, if not exceed, the success of its predecessors.

Excellent Sacred Cantatas

RECENTLY PUBLISHED WORKS

Suitable for Presentation "Between Seasons"

Many church choirs, encouraged by the success of the Easter program, will welcome the opportunity of presenting an attractive cantata before the summer holidays. Choirmasters will find ample time in the intervening period to rehearse one of these short, effective cantatas.

Any of These Cantatas May Be Had for Examination

BELSHAZZAR

Choral Cantata for Mixed Voices

Time, 35 Minutes

By R. M. STULTS **Price, 60c**

The thrilling narrative in the *Book of Daniel* of the great feast given by Belshazzar with the mysterious hand-writing on the wall has been used as the subject of this cantata. Mr. Stults, in his inimitable style, has composed a score that utilizes the dramatic possibilities of the story but which is not too difficult for the average choir with a few good solo voices.

THE VISION OF DEBORAH

For Soli, Quartet and Mixed Chorus

Time, 35 Minutes

By RICHARD KIESERLING **Price, 75c**

The story is taken from the well-known episode as told in the *Book of Judges*, the text being slightly versified by Mildred Correll for the musical setting. The music is excellent, with an exotic flavor, and the solo possibilities will appeal to artists of ability. Every good choir will enjoy the preparation and presentation of this work.

THE WOMAN OF ENDOR

For Soli, Chorus and Organ

Time, 35 Minutes

By R. M. STULTS **Price, 60c**

The highly dramatic adventure of King Saul with the Woman of Endor has been selected as the text of this cantata. It is a story that will hold the interest of the audience throughout and, with the effective musical setting as given in this score, should prove very attractive. The solos are not lengthy and the chorus work is not too difficult for the average volunteer choir.

RUTH

For Soli and Women's Chorus

Time, 30 Minutes

By PAUL BLISS **Price, 60c**

Choirs composed entirely of women's or girls' voices will welcome this excellent cantata. Founded on the beautiful Biblical story of Ruth and Naomi the text is charming in its poetic simplicity. The choruses are scored for four part singing, but the second alto part may be omitted, if necessary. The solos are short, pleasing and effective.

SPLENDID MUSIC FOR COMMENCEMENT

Operas, Operettas and Cantatas

Note: The operas and operettas are easy to sing, easy to costume and easy to stage. There is ample time yet—before Commencement—to rehearse and produce any one of them.

THE MARRIAGE OF NANNETTE

A Comic Opera in Three Acts

Book and Lyrics by Agnes Emelie Peterson — **Music by Louis Woodson Curtis**

There is a romantic charm in the lyrics and melodies of this opera, closely associated with the atmosphere of France and Spain of the eighteenth century. Its tuneful measures are direct and forceful. There is opportunity for group and solo dancing.

One costuming suffices for all acts. Stage settings and effects may be "home made." The opera is so constructed that it may be curtailed.

Vocal Score, $1.50 **Libretto and Guide, $1.50**

CAPT. KIDD or THE DAUGHTERS OF ROBINSON CRUSOE

Libretto by Frederick H. Martens — ***A Comic Operetta in Two Acts*** — **Music by William Beazley**

How Robinson Crusoe's daughters came to be on their father's famous island, and how they passed the time before Captain Kidd made his appearance in those parts, and the various adventures which then befell them until in the end Captain Kidd turns out to be Dr. Kidder, and a rousing fox-trot carries all concerned into matrimony is all told in a sparkling musical score with delightfully humorous lyrics.

Vocal Score, $1.00 **Stage Manager's Guide and Libretto, $0.75**

THE QUEST OF THE GIPSY FOR A COOK

A Musical Comedy in One Act **By H. Loren Clements**

A charming little musical comedy. Male character parts can readily be taken by women satisfactorily. The tale of how seven pretty Boston cooking-school graduates and the chief of a band of "bachelor gipsies" are happily and humorously scrambled in Cupid's chafing-dish. Gay dance rhythms and bright colorful gipsy music. Costumes can be readily improvised. **Vocal Score, $0.75**

THE MAGIC WHEEL

Book by Alice C. D. Riley — ***An Opera in Two Acts*** — **Music by Jessie L. Gaynor**

This opera, by one of the most gifted of American women composers, tells a delightful love story in a half-humorous, half-sentimental fashion that is bound to please. Book and lyrics are clever. Mrs. Gaynor's music is in her best vein—essentially melodious, taking and effective. There is much attractive incidental music; as well as the dances now demanded in the best amateur operettas.

Vocal Score, $1.50

THE NATIONAL FLOWER

An Operetta **By Carrie B. Adams**

This operetta has simplicity of construction and refinement of thought to commend itself to both teachers and pupils. Its study will develop good taste and a capacity to enjoy music. For pupils in sixth, seventh and eighth grades.

Price, 60 cents

FANS AND LANTERNS

By Eduardo Marzo

An operetta for girls. Clever and witty text. Attractive music. Easy to sing; easy to costume; easy to stage. Entirely different from the usual Japanese type.

Characters: The King of the Lanterns; Queen of the Fans; Royal Keeper of the Parasols; Village maidens and the fascinating "villain" who seeks to rule the kingdom, Mr. Electric Light. For young people; not children.

Price, $1.00

CHIMES OF YESTERDAY

By Carrie B. Adams

An entertainment for both children and adults; together or separate. Distinctively American—exploiting a period in American history dating from 1845 to 1865. Colonial costumes. Easy to sing; easy to stage. Lovely old songs that will delight the heart of all good Americans. **Price, 75 cents**

A MID-SUMMER NIGHT

Cantata for three-part chorus of women's voices with soprano, mezzo-soprano and alto solos. Piano accompaniment. Text and music by Paul Bliss.

The solo parts are: Spirit of Silence of the Night, Spirit of Storm, mezzo; Spirit of Danger, alto.

The chorus: Stars and Fireflies, Shadows, Stormfiends, Raindrops, Birds and Sunbeams. For either adult or young treble voices or both. Orchestra parts obtainable.

Vocal Score, 60 cents

RETURN OF PROSERPINA

Music by Jessie L. Gaynor

A cantata depicting the beauties of Springtime. Text from Nathaniel Hawthorne's "Wonder Book."

Soloists: Mother Ceres and Proserpina. Choruses for older girls; choruses for children. Songs and dances alternate. Can be given with special costumes—if desired. Special costumes and stage effects unnecessary, however. A fine out-of-doors musical play.

Price, 60 cents

NATURE'S IDYL

A school cantata for three-part singing, by John Charles Donovan. For school grades—six and seven. Captivating verse and charming music.

The melodic beauty of the composition has been applauded at many a school concert—notably by the singing of three hundred children in the open at one of the parks in Cincinnati. **Vocal Score, 40 cents**

THE LAND OF HEART'S DESIRE

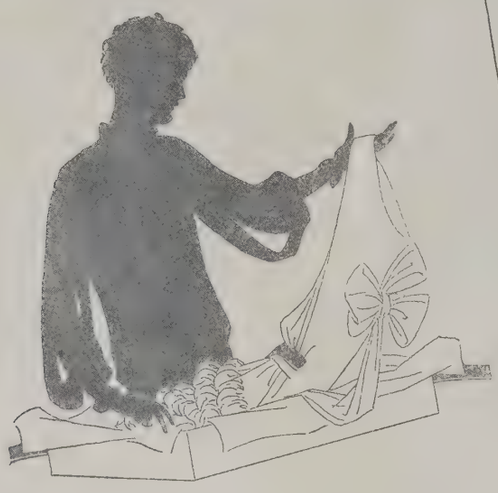
Cantata for baritone solo and three-part chorus of female voices. The text by Randolph Hartley. The music by Ethelbert Nevin, arranged by Deems Taylor.

Ethelbert Nevin wrote but one choral work, "The Quest." This is for mixed voices. Had he lived he would undoubtedly have arranged the work for female voices. But this was not to be—so Deems Taylor—none could do it better—has arranged it under the title "The Land of Heart's Desire." He has made Nevin's "The Quest" a new, glowing, supremely singable and taking contribution to the repertory of American choral music.

Vocal Score, 75 cents

NEAR TO NATURE'S HEART

Cantata for two-part chorus of female voices, solos and duets, with piano accompaniment. The verse and music selected from many sources by W. F. See.



Contents: Morning Invitation, chorus. Invocation, solo. Seed Time, duet. Blossom Time, chorus. The Murmuring Stream, chorus. Two Episodes in the Life of a Tulip, (*a*) The Sunbeam, solo; (*b*) The Naughty Tulip, solo. The Wind and the Sunbeam, duet. The Primrose, chorus. Ringing the Flower Bells, solo. Invitation to the Dance, duet. Maypole Dance, chorus. May Longings, duet. Eventide, chorus. Night and the Fairies, chorus. **Vocal Score, 60 cents**

The House Devoted to the Progress of American Music

Your New Frock will STAY *New—*
if you protect it with

Kleinert's Dress Shields

ONE of the fastidious woman's real problems is underarm moisture. She prefers not to check it and she knows from sad experience what havoc it can work in a short time. She *must* protect her frocks and she has discovered there is just one way that is *always sure*—the suitable Kleinert's Dress Shields.

CRESCENT

Yet of all the women who rely on dress shields, only a very few really make the best use of them. There are—literally—shields specially designed for *all* dresses and *all* occasions. Consider the Kleinert's Dress Shield Garments—dainty affairs of net, lace, and satin, with shields attached. They answered a demand for shields ready for instant wear with a number of different garments and as easily laundered as fine lingerie. They are made in styles to suit every sleeve line and every sort of material.

REGULAR

NUERA
With a sewing edge under the curve

ONYX
An inexpensive shield for black dresses

ON-AND-OFF
Very useful indeed for wash blouses

GUIMPE
Takes the place of a dress lining

SHIRLASTIC
Cut low enough for decollete

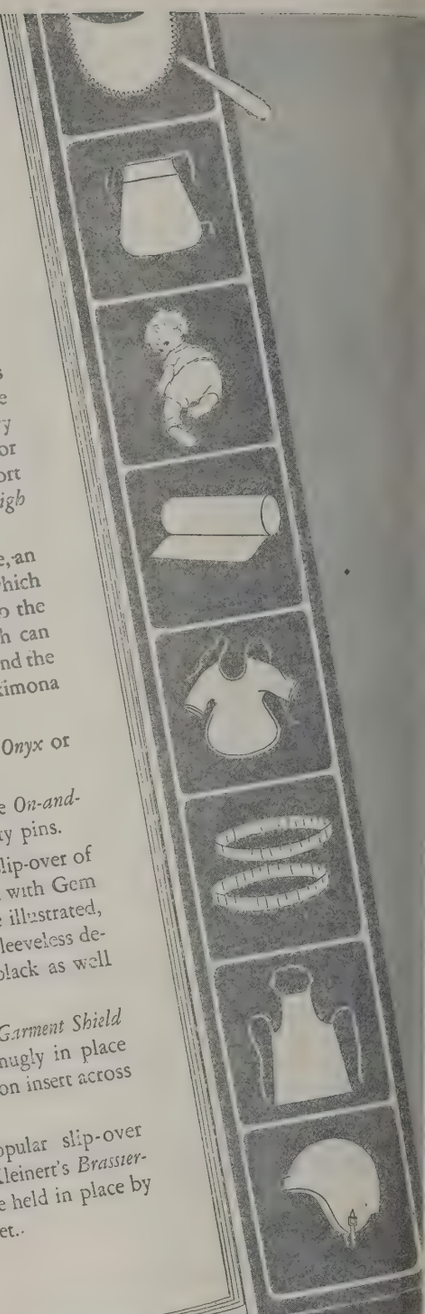
BRASSIERETTE
Very convenient and easily laundered

For the dresses in which a sewed-in shield seems desirable, Kleinert's make four different shapes in several sizes.

In choosing shields, it is well to explain to the saleswoman for just what sort of dress you wish them, and also to consider the special purposes for which they were designed.

For maximum protection, ask for the double covered *Gem;* if you can use a lighterweight shield, there is *Featherweight.* Both of these are made in four shapes: *Regular,* for heavy cloth or silk dresses; *Crescent,* for lighter fabrics; *Opera,* with a short sleeve flap for evening wear; *High Point,* for excessive perspiration.

The *Nuera* has a unique feature, an edging under the curve through which the shield may be sewed fast to the armhole—the *only* shield which can be sewed anywhere except around the edges—especially good for kimona sleeves.



For black shields, ask for *Onyx* or *Panne.*

A handy time-saver is the *On-and-off* equipped with tiny safety pins.

Kleinert's *Guimpe* is a slip-over of dainty white net equipped with Gem shields. Besides the style illustrated, the Guimpe is made in sleeveless design, and in flesh and black as well as white.

Kleinert's *Shirlastic Garment Shield* is cut low and held snugly in place by the Shirlastic Ribbon insert across the back.

Another very popular slip-over garment shield is Kleinert's *Brassierette*—the shields are held in place by bands of shirred net.

omo Setaccioli, prominent com- nd one of the best known teachers , died recently in Sienna, in his fifty- year. His compositions include many ic writings, choral works and piano His Requiem in honor of the Queen Margherita, won the prize of the hilharmonic Academy of Rome.

0,000 Per Annum is now being y the municipalities of the United s for the encouragement of musical s, according to latest reports.

John Alden Carpen- ter achieved almost the im- possible when, on February 19, his ballet, "Skyscrapers", introduced saxophones, banjo and tom-tom into the orches- tra of the staid Metropolitan Opera House of New York, for its première. The plot is unique in theatrical miming, as it portrays through chore- ography the activities of the erection of a modern cloud- reaching building. The ap- estowed indicated the approval of the as to the success of the composer in orial music.

Handel Festival at the Crystal London, has been fixed for June 5th, h and 12th. Florence Austral, Ben Robert Radford and Marcel Dupre are nong the leading soloists; while Sir . Wood will be the conductor.

British National Opera Com- fter four years of successful work, is ed with having to abandon its spring because of lack of funds. The Na- pera Trust has found itself unable f assistance.

The State Symphony Orchestra of New York is reported to have abandoned the latter part of its season of concerts, because of lack of funds. Alfredo Casella, the eminent Italian composer and conductor, had been engaged to conduct these last performances of the series.

"El Retablo," a puppet opera based on the adventures of Don Quixote, and composed by Manuel De Falla, was presented at the Town Hall of New York, on December 29, by the League of Composers. It is a miniature lyric drama of less than thirty minutes, and the music received warm commendation at this American premiére.

Fortune Gallo, impresario of the San Carlo Grand Opera Company, has been decorated by King Victor Emmanuel of Italy, with the third order of knighthood in the Order of the Crown of Italy, as a recognition of his services in the spreading and advancing of the cause of Italian musical art. This is his third decoration since the war.

Dame Nellie Melba is now singing a farewell tour of Great Britain. Her formal farewell to London will be at a concert in the Royal Albert Hall on May 13. Dazzling the musical world in the early 1890's as the "Second Patti," with a voice about as near as humanly possible perfect in scale and technic, hers has been a long career, and full of honors.

Boys in Opera has become a living question in England, as a consequence of a season of three weeks at Todmorden, where Mr. Ronald Cunliffe produced a repertoire of "The Magic Flute," "The Golden Cockerel," "Pagliacci" and "The Secret of Susannah," the entire stage personnel of soloists and chorus being composed of boys with unchanged voices. According to the *Musical News and Herald*, "the standard was high, and much of the singing was so beautiful that it will never be forgotten."

A Statue of Cesar Franck has been unveiled in Liege, where he was born in 1842. A special night at the Opera, with the Queen of the Belgians in attendance, was given in honor of the event.

The Waldorf College Choir, under the direction of Oscar Lyders, is making a name for itself in the middle west as an interpreter of *a capella* music.

The National Federation of Music Clubs began 1926 with three thousand and thirty-six affiliated clubs with an aggregate membership of more than two hundred thousand. Forty-nine states and territories, including Alaska and the Philippines, are organized; Texas and Missouri leading with more than two hundred clubs each.

Roland Hayes, the Negro tenor, is nearing a unique position in the concert field. Three times within two months he has filled Carnegie Hall and at the last program the audience overflowed onto the stage.

Seventy-three Years as Organist of the same church would seem to be a unique record. Mrs. Kemp, an English lady, at the age of eighty-six has lately finished such a service to the Biggleswade Parish Church.

Miss Agnes Zimmer- mann, internationally known to the last generation as a remarkable pianist, died recently in London. Born at Cologne, July 5, 1847, she was taken as a child to London, where she attracted much notice as a student at the Royal Academy of Music and then made her dèbut at the Crystal Palace, in 1863. She edited many of the classics and translated many of the standard opera repertoire. Her fortune of about one hundred and eighty-five thousand dollars was left mostly to the Royal Academy of Music and to the Royal Society of Musicians.

AGNES ZIMMERMANN

A National Music Memory Contest is being planned by the National Federation of Women's Clubs in association with the National Music Week Committee. The better development of a general appreciation of music is the main object back of the movement.

An "Infantry Song" Prize of three-hundred-and-fifty dollars is offered for the best song—words and music—expressing the spirit and achievements of the Infantry of the United States Army. The contest closes June 1, 1926; and full particulars may be had from the Infantry Journal, 1115 17th Street, N. W., Washington, D. C.

Descant Singing, a custom of the Elizabethan days, has been revived at St. Paul's Chapel, Columbia University. This old-time method of harmony consists of a group of sopranos singing a counter melody above the others and has been recently revived with much success in England. A group of selected sopranos soaring above the melody of the hymn as sung by the worshippers, produces a beautiful effect, and is to be given a thorough trial at Columbia.

The Music Supervisors National Conference will be held in Detroit on April 12-16. All phases of musical instruction and activity in the public schools are programmed for presentation and discussion by leaders of wide reputation in the work. This will be the nineteenth annual meeting of the organization, and a real thrill of inspiration awaits all who attend. Further particulars may be had from Thomas Chilvers, Book-Cadillac Hotel, Detroit, Michigan.

Maurits Leefson, one of the most eminent piano instructors of Philadelphia, and widely known throughout America, died February 16, after a long illness. Born in Amsterdam, Holland, on January 26, 1861, he was educated in the school there, and at the Cologne Conservatory. For thirty-eight years he had been a teacher in Germany, Holland and America, numbering many successful pianists and teachers among his pupils.

American Negro Jazz was heard for the first time in Russia, during the week of February 15. An organization of six colored musicians, who had been enlivening Paris, went to Russia under official invitation with the Soviet Government for a tour of four months.

The Haslemere Festival of Chamber Music of the 16th, 17th and 18th Centuries will be held this year from August 24 to 31. The festival is under the direction of Mr. Arnold Dolmetsch, a recognized authority on the music of that period, for flutes, viols, harpsichord and clavichord. Full information regarding accommodations to be had from Mrs. Arnold Dolmetsch, Haslemere, England.

American Composers of serious work for the orchestra are to be encouraged by further commissions to furnish compositions to be interpreted by the New York Symphony Orchestra, according to the lately reported statements of Walter Damrosch, conductor of that superior organization.

The Heugel Prize of 100,000 Francs, for an opera by a French composer, has been awarded to M. J. Canteloube, for his "Le Mas (The Manor House)." Jacques Rouché, director of the Opéra, has accepted the work for production there.

J. C. BREIL

Joseph Carl Breil, widely known American composer, died on January 24, at his home in Los Angeles. He was particularly known as a writer of musical scores for screen dramas, his music to "Queen Elizabeth," with Sarah Bernhardt in the title role, having been the first score composed especially for a film production. His opera, "The Legend," was produced successfully at the Metropolitan Opera House, March 12, 1919.

"Mozart," the musical play by Sascha Guitry, with the score by Reynaldo Hahn, has been such a success that the author and composer have been asked to collaborate on an opera with the Salzburg master as the central figure. The work is announced to be presented at the Opéra Comique of Paris in March, 1927.

The Swedish Naval Band, under the direction of Erik Hosberg, will tour the eastern States this spring. It comes with the official cachet of its home government and recognition of the United States Government, as it will participate in the ceremonies at Washington in honor of John Ericsson, the Swedish-American inventor of the Civil War Monitor, at which the Crown Prince will represent Sweden.

A Selected List of

Commencement and Baccalaureate Music

It is almost time to select music for Graduation Exercises. Music Supervisors will find excellent material in these lists of selections, any of which may be secured for examination. They include many excellent publications, in addition to established favorites of previous years.

COMMENCEMENT CHORUSES

UNISON

Catalog No.	Title	School Grades	Price
20226	Anchored.....*M. Watson*	5-8	$0.10

8536	Bella Bocca.....*Waldteufel*	

PADEREWSKI Endorses Sherwood's Normal Piano Lessons For Teachers

Use Sherwood's ideas in your own teaching. Make it more valuable and thus increase your earning capacity

Many teachers possess talent and ambition sufficient to place them at the top where they could command higher tuition rates and larger classes, but they lack the necessary expert knowledge. Thus, the difference between their present standing and leadership—between large and small classes—between high and low tuition rates—is only a difference of a little broader knowledge. Every person who has risen to the top in the profession either as singer, player or teacher had the instruction of some great teacher. Recall who taught any of the noted musicians and artists and you will find that every great musical career is based on the instruction of some MASTER TEACHER.

Sherwood, who gained early and world-wide recognition as one of America's greatest pianists and most successful teachers, was a pupil of Deppe, Kullak and the great Liszt, all pupils of Czerny, who received his instruction at first hand from the master Beethoven himself. And the sum of this knowledge and the result of his own life-time study and experience Sherwood put into the

Normal Piano Course and University-Extension Lectures on the Art of Teaching Music

This course was especially prepared for teachers. It solves the difficult problems met with in your teaching, practice, and study. It will enable you to improve your teaching ability, to enlarge your class, to demand higher tuition rates, to improve your skill in playing, and to give your pupils better, sounder, more correct and scientific instruction. It will enable you to develop your talent, to acquire a more flexible and sure technique, to make your tone bigger, richer and more sympathetic; and to become a broader and more cultured musician in every way; in fact, a leading music teacher—without the expense of leaving home.

State Departments of Education recognize schools with high scholastic standing
Our Diplomas, Degrees and Teachers' Certificates granted by the authority of the State of Illinois

You are invited to send for a catalog and sample lessons. They will be mailed without any obligation

Many teachers do not give instruction in Harmony. If you have not studied the subject thoroughly, don't delay any longer.

Learn to analyze compositions—to identify the chords used and thereby get an intimate knowledge of the intention of the composer. You get at a real understanding of the basis of phrasing and accent, which is interpretation, through a knowledge of the chords used. A knowledge of Harmony helps to satisfy the natural curiosity of every player, which is, "How did the composer write it?"

By the study of Harmony you learn to correct errors in notation, which occur even in the best editions of music; also to know when apparent discords are correct.

Our course includes Counterpoint, Composition, and Orchestration. Every piano teacher should give instruction in Harmony. It is easy to teach this subject with our carefully graded lessons. You can get them to use in your class work.

Send the coupon for sample lessons. Improve your own work at the same time you are teaching. BE AN EXPERT!

Piano actions

MADE AT CAMBRIDGE, MASS.
SINCE 1888

The Highest Quality Piano Action in the World

Because quality is built into every part, from the most minute screw to the resilient maple hammer stems, the Standard Piano Action enjoys an enviable position as "the highest quality Piano Action in the world." The action is often the "make" or "break" of piano technique. If the piano action is Standard, that is made at Cambridge, Mass., you may rest assured of perfect transmission of touch from key to string. When you select your new piano be sure that it is Standard equipped.

SEND TODAY for our booklet describing what is essential in a good piano.

Have your piano tuned at least twice a year by a competent tuner

The Child's Approach to Music Study

To win the enthusiastic interest of the boy or girl at the very outset has always been one of the biggest problems in music teaching. Leading educators agree, today, that this can be best accomplished by enabling the youngsters to *make music in their own way* with the aid of that universal musical instrument—the Harmonica. After they have become proficient on this instrument they will take naturally and enthusiastically to the study of the piano, violin and other musical instruments.

A Hohner Harmonica for the boy or girl will help solve the problem. With the newly perfected Chromatic Harmonica they can play the complete chromatic scale. It is not a toy, but a real musical instrument which will promote self-expression, rhythm, and accuracy, and lay the foundation for serious musicianship.

Hohner Harmonicas are endorsed by such prominent group educators as—

Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

HOHNER HARMONICAS

"That Musical Pal of Mine"

114 East 16th St., New York

A book to interest lovers of fine piano music

Standard Modern Piano Pieces

It is perfectly safe to say that no such wonderful array of modern piano compositions has ever before been assembled under one cover, and that no one of these pieces has appeared in other collections. Contains 34 pieces all of unusual beauty by contemporaneous composers which have a peculiar interest at the present time. Read this complete index.

COMPOSERS' INDEX

Albeniz, I. ..... Cadiz
Arensky, A. ..... Ne m'oubliez pas
Barmotine, S. ..... Norwegian Scene
Blumenfeld, F. ..... Prelude, Op. 12
Brahms, Joh ..... Intermezzo, Op. 117
Catoire, G. ..... Prelude, Op. 17
Chaminade, C. ..... Pièce Romantique
Debussy, C. ..... Ballade
Devereaux, A. ..... Londonderry Air
Dvorák, A. ..... Largo
Fibich, Z. ..... Poème, Op. 41
Floersheim, O. ..... Elevation
Franck, C. ..... Danse Lente
Granados, E. ..... Spanish Dance
Gretchaninow, A. ..... Caresses
Grieg, Ed. ..... Puck, Op. 71
Kopylow, A. ..... Rêve d'Enfant
Liadow, A. ..... Music Bo
MacDowell, Ed. ..... Poéme, Op. 3
Massenet, J. ..... Entr'acte-Berceus
Merowitsch, A. ..... Spring, Op.
Moussorgsky, M. ..... Un Larm
Palmgren, S. ..... Les Adieu
Posca, G. ..... (Am Strande
Rachmaninoff, S. ..... Mélodi
Rimsky-Korsakow ..... Chanson Arab
Schütt, Ed. ..... Dreaming Pierro
Sibelius, J. ..... Impromptu, Op.
Skabo, S. L. ..... Prelude, Op. 1
Skabo, S. L. ..... Legende, Op. 1
Stojowski, S. ..... Mélodie, Op.
Strauss, R. ..... By the Spring, Op.
Szalit, P. ..... Intermezzo, Op.
Tschaikowsky, P. ..... Trepa

An Inspiring Eulogy

It is always pleasant to hear nice things about ourselves. Criticism may be more valuable but at the same time such an article as we reprint herewith from the Sackbut (London) should serve the double purpose of bringing Americans to realize our great opportunities and to work humbly and persistently to attain those ideals which the whole world must expect from a nation blessed with the facilities and development which the noted English composer, Mr. Arthur Bliss, very generously expresses in the following article which we feel deserves reproduction upon our editorial pages.

"America gives at this moment the impression of unexampled musical activity—as if some hundred-headed hydra were, after many years of fruitful voice-training, to lift each of its young voices in lusty song: the fact that some of the throats emit a distinctly foreign intonation does not affect the general exuberance, wherefore it is no small wonder that the ensuing chorus bids fair to drown the husky and aging voice of Europe, gradually enfeebled, as it is, by the economic pressure on its windpipe.

"It is hard on one's sense of patriotism, but in America lies the future of music. On the West side of the Atlantic are found more and finer orchestras, larger audiences, countless more clubs for the study of music, infinitely more schools, and withal every sign of still further development. Hardly a year passes without its crop of new orchestras and musical institutions, into which European artists are being continually absorbed—a process which in time will inflict the Old World with pernicious anæmia.

"One feature of this growth struck me forcibly—it is almost exclusively the professional element that sustains the interest; of amateur choral societies similar to the English ones, of amateur chamber music organizations, so prevalent on the continent, there are few signs. Almost always the clubs rely for their entertainment on their own or visiting professional artists, to which attitude I ascribe the fact that the American audience is most swayed by the heart, and little by the head. They have not yet learned to make music in the true amateur spirit—for the love of it—and the constant dependence on others has kept their critical instinct in a somewhat primitive state. Hence, in America, personality and the glamor of an anecdotal private life have a dangerous advantage over mere musicianship. As soon as for every paid symphony orchestra there spring up two purely amateur orchestras, and for every paid choir three amateur choral societies, I prophesy a great change for the better in the critical attitude of audiences.

"As it is, they possess a vitality for the absorption of music far exceeding ours. It is almost awe-inspiring to scan the list of concerts advertised at the beginning of each season in New York alone, and to gauge thereby the appetite of the average concert-goer. It is well-nigh impossible to get a seat at any orchestral concert in Boston or Philadelphia, and although symphony concerts in New York are as numerous as divorces, they are invariably as well attended. In Chicago and farther west, one finds the same demand for orchestral music, and if bulk alone counted in audiences as in other essential commodities, the scales would undoubtedly tip in favor of the Stadium in New York and the Hollywood Bowl.

"There is one distinctive feature about American audiences. They have not yet had time to acquire deep prejudices, judging rather by a simple criterion as to whether a work interests or moves them, irrespective of whether it is what their fathers and grandfathers would have termed 'music.' If it be a new and unfamiliar piece of music, the audience, as well as the composer, will have the undoubted advantage of knowing that the presentation will take place under the best possible conditions. I have heard composers say that they never realized what a performance of a new work could be until they heard the Philadelphia Orchestra play it, for with that as with other fine orchestras there, they could rely on a plethora of rehearsals and a conductor who would direct with the conviction that a new work was more worthy of a fine rendition than a familiar one. It would seem that with these many advantages, some truly American school of composition would arise, either a group having some technical and imaginative points in common, and in contrast to European methods, or individuals representing strongly the districts in which they lived and worked—why not, for example, the New England school, the Middle West and Pacific Coast composers! With all wish to illustrate this attractive prospectus, one must admit the truth that, so far, there is no American school of composers as such.

"The majority working in America so obviously bring the traits of their original country with them that for many years no distinctive school can grow up—until indeed, the country has absorbed its foreign blood and welded a characteristic style out of the fusion. At present the country is in danger of becoming Europeanized. In addition to the swarms of artists who conduct, play, and lecture, some distinguished composer is sure to arrive who sets his stamp on the students of the country. One year it will be Casella, last year Stravinsky, next year Bartók, later Honegger or Schönberg, and each time some trick or mannerism from Europe is absorbed.

"Most of the really living music in America draws its inspiration from outside the country, viz.: Eichheim from the Orient, Loeffler from the inspiration of the Schola Cantorum, Bloch from the traditions of his own race, Carpenter from Paris.

"I heard an American composer trace the musical stream of his country to the two-fold sources of 'jazz' and 'negro spiritual.' Personally, I think he was unjust to his music.

"Jazz has been grossly overpraised, and when the experiment was tried of supplanting this hot-house flower from the dance hall to the rarefied regions of the concert platform, it withered to boredom as would the slapstick suddenly introduced into a sparkling Sheridan comedy.

"As for the beautiful negro spirituals, in any other form they appear to me but barely disguised interpolations for effect, like the conscious dressing up of folk-song in symphonic guise, of which we have seen so much, with the difference that the former tunes belong to an entirely different race from that of the composers who make use of them.

"At present there is nothing in American music comparable to the architecture of the country, which has all the impulse of a new creative effort. Only Varèse shows something that may prove the American uncut diamond meet to be polished by others who come later. But even he lives in and reflects New York—and is that not now the most cosmopolitan city in the world?"

The Sacred Fire

This editorial is an answer to some 5273 questions (more or less), and to many thousand more that will surely come to the editorial desk, asking, "How can I make music interesting to my pupils?"

There is only one answer. By giving interesting music. But there is always a problem. The boy who is interested in analyzing a clock with his broken jackknife, and who will spend

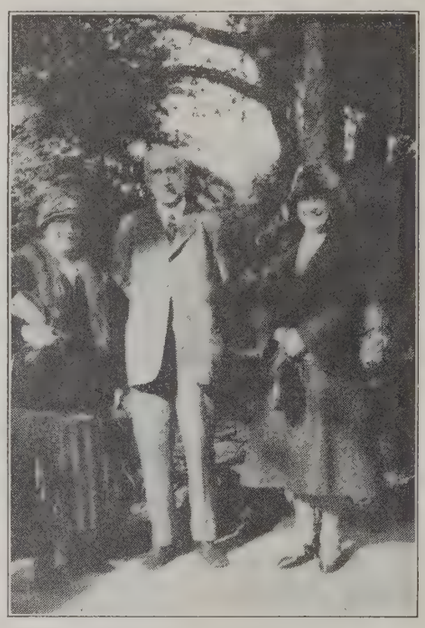
hours in trying to synthesize it, will perhaps be content with the somewhat prosaic studies of Loeschhorn. On the other hand, the little big-eyed dreamer will want nothing short of the Schumann *Jugend Album* or Heller's tuneful studies.

The interest in piano playing often consists quite as much in the interpretation as in the composition itself. When you play for your pupils, let them know that it is possible for them to make their music interesting, if they will illuminate it with the light of their little souls, the sacred fires that cannot begin to glow too young.

Professor Edward Dickinson, in his new and excellent book, *The Spirit of Music* (Scribner's), ably says:

"In my long experience of piano recitals, one of the most interesting observations which I retain is that in case of certain famous players I remember little in regard to what is commonly called technic, while I hold vivid impressions of certain personal, inexplicable emanations which, imparted to old familiar compositions, brought new revelations of beauty and significance. It was impossible to escape the conviction that the composer's conceptions were receiving new heat from the fire of the performer's imagination."

The Village Band



The *Democrat-Chronicle*, of Rochester, New York, has been conducting a local survey of band conditions. Some reports indicate that bands are a great success in some communities. In others they "died out;" while in still others the success of the local Jazz Band units has obliterated the town band. In some villages the band is such a success that traffic is tied up whenever a concert is given.

There has never been a time when the interest in bands and band music has been higher. More music is sold and more band instruments are sold. This is due partly to the enormous increase in interest in school bands. That the ability to play will lead to the creation of other bands in the future is certain.

More than this, there is likely to be a competitive interest through the transmission of band concerts by means of the radio. Bands at different points can learn how the other bands play without traveling miles to hear them.

With the oncoming of younger bands the old organizations should thrive, particularly if they solicit new members, get fresh music, purchase new uniforms and buy the latest and finest instruments.

We look for a great future for band music in America. That the interest exists there can be no doubt. The receipts for one of the recent tours of the Sousa Band were over one million dollars.

THE LAST PORTRAIT OF THEODORE PRESSER

This kodak snap-shop was taken at Mr. Presser's residence a short time before his passing on October 28th, 1925. With him are his niece, Mrs. Casper, and his cousin, Mrs. Wolf. The photograph preserves the genial smiling expression so familiar to all who knew him.

Singing Towers

Fashion affects all things. The Rockefeller Carillon installed in the Park Avenue Baptist Church of New York, has created a new demand for bell music. What used to be the belfry with a few more or less strident chimes cast in poorly equipped foundries has now become, after the centuries-old fashion of France, Holland and Belgium, the "carillon."

The size of the modern carillon is often quite astounding. Of the forty-six bells in the Rockefeller Carillon in New York, the largest is over eight feet in diameter. The clapper alone of this huge bell weighs as much as two large men (four hundred pounds). Amid these resounding instruments the carillonneur sits in an especially constructed cabin with shuttered windows so that he is protected from the terrific mingling of vibrations. In former days the carillonneur played the bells from keyboards with handles for each key not unlike those of the oar of a rowboat. The performers had to possess the strength of a locomotive engineer to manipulate these levers. Now the touch required to play a huge carillon with the modern installation is little more than that of the piano.

The physical effect of a huge bell heard at a short distance is difficult to describe to anyone who has not heard one. The vibrations are so powerful that the body is shaken as though by some mechanical force. Many years ago in Paris, when they were building the imposing Cathedral of the Sacred Heart, on top of the butte Montmartre, the monster bell known as *La Savoyarde* stood at the entrance preparatory to being permanently installed. For a small fee we induced the attendant to ring it for us. The terrific sound apparently struck straight for one's solar plexus and we immediately parted with a very excellent French luncheon. In no more delicate fashion could we relate how great is the purely physical force of these vibrations.

America apparently stands very well in its number of carillons. William Gorham Rice, author of the excellent "Carillon Music and Singing Towers," ranks us fourth, thus: Netherlands 63, Belgium 44, France 25, United States 15, Germany 10, England 7.

The interest taken in the art may be indicated by the fact that there was a sizable Congress of Carillonneurs in Mechlin in 1922. Carillon recitals are frequent in Europe.

Deep Appreciation

Thousands of letters have been received at the office of The Etude *from our good friends who have taken this method of paying their last respects to our beloved founder, Theodore Presser. Though he is no longer with us in bodily form, he still lives with us in spirit. His ideals, traditions and principles are now even more active than ever in the present great expansion of our institution.*

We desire to thank our friends deeply and sincerely for their kind words of sympathy. It has brought us more and more to the realization of the altogether unusual bond which exists between The Etude *and its hosts of readers, a bond which we are proud to feel is far closer now than ever before.*

Hungarian Music in America

We often have a feeling that contributions of Hungary to the American "musical melting pot" have not been properly appreciated. To the uninitiated, Hungarian music often means "Gypsy Music." While everyone is entranced with the intoxicating rhythms of the Tziganer, musicians know that this does not by any means compass Hungarian music.

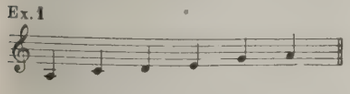
In the pedagogical field Hungarian educators have contributed enormously to American musical progress. Franz Liszt trained at least a half dozen of the best American pianists of past years, including William Mason and William H. Sherwood. In this issue of The Etude we have been fortunate in being able to present the opinions of many of the Hungarian artists who have done so much to contribute to the advance of musical art in America, by bringing to us the best from the music of Hungary. Mme. Yolande Mero, through her great charm and mature pianism, has an epochal position for herself. Mme. Matzenauer is probably the finest mezzo-soprano actress who has appeared at the Metropolitan. Erno Dohnanyi is regarded as the greatest of present-day Hungarian composers, conductors and pianists. Carl Flesch, virtuoso of eminence, is also one of the greatest pedagogs of the violin. All in all we take great pride in presenting to our readers this Hungarian issue which, in part, has been in preparation for many years.

Hungary's Undying Love for Music

An Interview Secured Expressly for THE ETUDE with

ERNO VON DOHNANYI

Foremost Living Composer of Hungary, President and Conductor of the Philharmonic Society in Budapest, and Former Director of the Hungarian Government High School for Music at Budapest



Erno von Dohnanyi (pronounced doh-nahn-ye) was born at Pozsony (Pressburg), Hungary, July 27th, 1877. He received his first lessons from his father, a professor of mathematics and an amateur 'cellist. Among his other teachers were Carl Forstner, Stefan Thoman and Hans Koessler. In 1897 he studied for one year with d'Albert, after his graduation from the "Landesmusikakademie." Since then he has devoted practically all of his time to musical composition and to his numerous highly successful world tours as a pianist. He has toured America six times, his first tour being in 1900-1901. For ten years (1905-1915) he was professor in pianoforte playing at the Royal High School for Music of Berlin. His compositions include numerous masterly pianoforte pieces, symphonies, concertos, and chamber music.

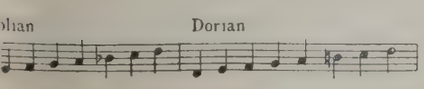
HE NATIVE Hungarian love for music is so strong that it is impossible to any of the phases of on's life without music form. There has been spread belief in other f the world that our essentially Gypsy music in. This is radically and it is in some ways a to state just what Hun- es to the Gypies in the bringing its music to the the world.

Gypsies are a strange, people of Asiatic origin. and, they were credited ng Egyptians; and from irce the English name traced, since at one time ere called in England . They appeared in Europe about the four- ntury. Ethnologists have es declared them to be endants of some obscure ribe. The way in which ve spread over the face globe as well as their s race persistence are a to many. Their lithe tawny skins, large eyes black hair are evidences lvantages of outdoor life. gary they found a coun- ch geographically pro- hem with the variety such a race naturally Together with this was more of a spirit of toler- l liberty than they found e other countries; and e the race flourished as it ily a few other countries. ough the influence of is impressed upon some to some degree, they re- vpsies, a race apart and and nearer by far to the Gypsies and the English han to the Hungarians.

n the Gypsies came to the country had already commenced to develop folk music—its folk tunes as they have been y Bela Bartok and Kodaly (pronounced Koh- ndeed they found that the people had developed which was none other than a pentatonic (five- cale which may be written thus:

Ex. 1

irst observation might be that this is none other Chinese pentatonic scale; but this is not the he Hungarian scale is distinctly a minor scale e Chinese is major and should be written thus:



Ex. 2

of the old Hungarian folk themes were lost ough the efforts of Bartok and Kodaly, large have been preserved through taking phonograph of songs sung by peasants. These now have efully stowed away in the National Museum at

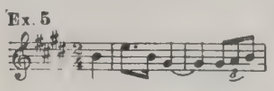
tunes represent the first source of Hungarian music. The second source is to be found in at may be traced to the old Church modes, the n tones of the middle ages, particularly what vn as the Dorian and Æolian. But very likely of these tunes were originally also based on the scale, extended to seven tones in the course of

olian Dorian

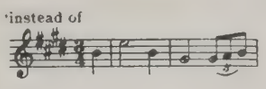
"The third class is music which has been deliberately influenced by the Gypsies. Just as it is possible for the American Negro so to syncopate an ordinary tune that it takes on a new character, so have hundreds of Hungarian tunes been gypsyized. The Gypsies did the same thing to some of the native melodies of Spain; and thus it comes to pass that Hungarian music and Spanish music often seem to bear a resemblance.

"From all of this there was evolved what is known as the Hungarian scale:

Ex. 4



"This scale has an unquestioned flavor which distinguishes music written in it from other music; but it is by no means the only scale that is native to Hungary. Add to this the languorous, sometimes frenzied music of the gypsy temperament and there is something which many identify as Hungarian, but which is really only a small part of Hungarian music. The Hungarians are a proud race; and, although they are always glad to recognize all of the good efforts of Gypsies, it must be realized that even the peasants in Hungary look down upon the Gypsies as a class. The Gypsy loves liberty and freedom, above all things. I have never known of a case of a Gypsy who has risen to any great height in life through effort. For this reason, Hungary has never looked to the Gypsies for great achievements in the art. It is not in them to work persistently and steadily. I have known of instances of domestic servants employed in excellent homes. The time comes when their Gypsy instincts arise and nothing can persuade them to stay in fine employment where they are really happy. It is in their blood to take to the road and they are miserable until they begin to wander.



"In the coffee houses in Budapest there are many excellent Gypsy orchestras. Some of the players have a truly wonderful technic, equal at times to virtuosos of the highest rank. Formerly they did not read music, but now they do. With many it seems impossible for them to read music accurately in rhythm.

"When I was studying in Budapest, under Koessler, there was a young Gypsy in the class who played the Czimbal (or dulciner). He used to play the *Pilgrim's Chorus* from the "Tannhauser" of Wagner. He invariably played the opening measures thus:

Ex. 5

instead of

"Many times I tried to show him what it was, but it was useless. In fact it is difficult to teach them to play a single melody as written. Thus it comes that one of the most musical races of the entire world has never produced a really great musician. The reason is their unsuppressible love for freedom and a hatred for convention. When the Gypsy steals he rarely steals money, because money means convention. He merely takes those things which enable him to live his wild, free, wandering life. His thefts are therefore confined to poultry, horses and food.

"Hungary, nevertheless, owes a great deal to the Gypsies, because their wandering nature has taken them all over the globe and with them has gone the Hungarian music. Liszt was fascinated by their music and was unquestionably influenced by it. Not only Liszt, but also Haydn, Schubert, Brahms, and other composers unquestionably felt the impress of Hungarian and Gypsy influences. The peculiar arabesques which the Czimbal player employs to embellish the tune, and which are imitated by the other instruments, are to be traced in the arabesques employed by many great masters.

"It is sometimes thought that the Brahms 'Hungarian Dances' are by old unknown writers of folk tunes. This is not the case. They were written by known composers shortly before the time of Brahms. It is reported that Remenyi gave them to Brahms and that Brahms made the arrangements therefrom. Brahms' publisher, Simrock, was sued by the real composers of the melodies. They are, of course, exceedingly beautiful and unquestionably were immortalized by the masterly Brahms arrangements.

"The government Music Akademie at Budapest was founded with Franz Liszt as president in 1875. From that time may be dated the constructive period in Hungarian music. Apart from Liszt, the most notable figure in Hungarian music in his day was Franz Erkel, who was conductor of the National Theater in 1837, and who later became the first professor of pianoforte and instrumentation at the National Academy. Erkel is best known in Hungary for his operas, which are nine in number, and include 'Hunyady László,' 'Erzsébet,' 'Kunok,' 'Bank Bán,' 'Dozsa György,' and 'King Stefan.' Like the Russian composer Glinka, Erkel employed native themes, but treated them in the style of the Italian opera.

"As for Liszt, he would have been a towering master entirely apart from his connection with the essentially Hungarian in music. A great deal of his music is more the evolution of classical models than Hungarian. He was much more the musical ancestor of Richard Strauss than was Wagner, for instance.

"The Wagner of Hungary was Edmund von Milhalovich, little known in America, but greatly admired in his native land. He was born in Fericsancze (now Slavonia) and was a pupil of Mosonyi, Hauptmann and von Bülow. He succeeded Liszt as director of the Landes-Musickacademie. His operas include 'Toldi' and

'Hagbarth and Signe.' His music is a mixture of German and Hungarian. He was a very fine musician with not any too great originality.

"The works of Jeno Hubay, for violin, are well known throughout the world. He was a pupil of his father, Karl, and of Joachim. He was a very successful violin virtuoso. For a time he was principal violin professor at the Brussels Conservatory. He has written several operas and a great many works for violin. Now he is director of the Music Akademie. (Jeno Hubay died July 13, 1925, after the writing of this interview.)

"Hungary has produced a very great number of virtuosi, only a few of whom are known in the United States. Rafael Joseffy was born at Hunfalu in 1852. He first came to America in 1879 and remained in this country until his death, in 1915. Among other splendid virtuosi should be counted Joachim, Remenyi, Auer; also Flesch, Vecsey and Telmányi.

"Hungary has produced many remarkable conductors, including the unsurpassed Artur Nikisch and Hans Richter. Fritz Reiner, conductor of the Cincinnati Symphony, is also Hungarian.

"Leo Weiner, one of the younger Hungarian composers, has shown very great ability. It will be recollected that he won the Coolidge prize last year.

"Among the moderns are Béla Bartók and Kodály, both of whom are distinguished for their brilliant work in the futuristic school.

"Among the lighter composers are to be remembered Franz Lehár and others of the men who have added greatly to the gaiety of life.

"Unfortunately the world knows but little of various phases of Hungarian art and literature. Franz Molnár is known because of the success of his plays. The world, however, hears little of the works of Alexander Petoefy, our foremost poet; Karl Mikszáth, our foremost novelist; M. Jókai, our leading romancer; J. Arany, our leading classic poet; or of E. Medách, the author of 'The Tragedy of Mankind.' Our painters, however, have suffered a better fate. The foremost works of our greatest painter, Munkacsy, 'Christ Before Pilate' and 'The Crucifixion,' are in America in the private collection of the late John Wanamaker and are rarely seen by the public."

Self-Test Questions on Mr. Dohnanyi's Article

1. *What is the origin and character of the Gypsies?*
2. *What is the Hungarian Scale?*
3. *How does the Hungarian differ from the Chinese Scale?*
4. *What is the source of the national Hungarian music?*
5. *Make a list of ten Hungarian musicians who have won world fame.*

Waiting for Inspiration

By Frederic Hitchinson

Inspiration comes from within. Whether it be the inspiration to write a great composition or merely that to practice profitably, the great accomplishments of the world have come through the spirit moving in us. We are affected by outside circumstances, by outside forces, by friends, by pictures, by scenery, by books; but, after all, unless we have it within ourselves to bring forth fine works, we shall never get the inspiration from other sources.

The trouble is that many students are "waiting for inspiration." They long for some expensive trip, an elaborate studio, fine clothes. Usually these are the students who never arrive at success.

The greatest inspiration of many of the greatest men has come in a garret. Listen to the words of the poet Mayrhofer describing the room he occupied with his friend Franz Schubert. "It was in a gloomy street. House and room had suffered from the tooth of time; the roof somewhat sunken, the light cut off by a great building opposite; a played-out piano, a small bookcase—such was the room which, with the hours we spent there, can never pass from my memory."

Compare this picture with your present surroundings. Are you producing anything that even remotely resembles the works of the half-starved Schubert? Wait for inspiration, and ten to one you will never meet it.

"Better commercialization of music for the American musician can come about only through a national music and the preponderant use of our own language."

—Music News.

Slow Down!

By D. Little

Two little girls were talking and one said, "My teacher can play awfully fast, when a piece is supposed to go quickly. I like to listen to her playing my pieces, but"—a wistful note entered—"I know I can never play like her."

"Oh, Miss Brown plays my pieces through for me sometimes, but somehow the next lesson I can play just as fast as she did; then the next week, we go a little faster. If I stumble she says, 'We had better go a little slower or we will have a smash-up soon.' Then I wait a whole week before I play it any faster."

I wonder which pupil is getting the most out of her lessons and giving the most in? Why does everyone have the speed mania? Even in small towns, one is in danger of a "speed-fiend" coming along unexpectedly. It is a common habit for every one to hurry. And in doing so we lose half the beautiful in life. Play a group of chords fast, and then slowly. Are they not grand and beautiful when slow and a mere jumble when fast?

When you are showing a pupil how to play a certain part, play it over slowly and the pupil will be able to understand more easily. It is the easier way to ex as the young beginner can grasp the full meaning passage and will hear the beauties of the composit

Ask a pupil to play a trill on the piano, with the hand, then with the left hand. Which is clearer? sometimes they are equally clear, but nine times o ten, the honors would go to the right hand. And Because the right hand has had more practice an perience.

I have found that much better results may b tained from the method of drilling the left hand u has gained the same confidence as the right. In thi the young pianists feel surer of their playing and duce better music. And when a trill or run does in the left hand of a particular study or piece, th no need of spending the time *then* to work up th hand in order to play the passage clearly, as is u the need (although harder parts should be pra more), because it will have been already prepare the work in store. So why not try developing th hand first?

Don't Play Your Hardest Pieces in Public

By Ben Venuto

At the time I was a student in the Leipsic Conservatory, they had one rule, which, though I never was strongly tempted to break it, seemed to my inexperienced mind somewhat arbitary: A student who ventured to play in public without the knowledge and advice of his teacher was liable to immediate expulsion. After years of experience as a teacher I have come to realize that this rule was most wise and proper; for there is nothing in which a young musician stands in more need than wise and kindly advice on this very subject.

Ambitious pupils, of high ideals, need it even more badly than the common run, for it is just they who are most apt to attempt something beyond their powers. For example, I once started a young man on Weber's well-known *Concertstück*, judging inwardly that with intensive practice and the aid of certain special technical exercises, he might be able to play it in about a year, though during that time he might master also a few easier pieces. About two weeks later he told me of taking part in a concert gotten up by some church society.

"What did you play?" I asked.

"Weber's *Concertstück*," he replied.

He had played it without accompaniment, and from the notes, not even having memorized it at the time. It is scarcely necessary to add that the performance did nothing to add to his teacher's reputation or his own. Had he taken me into his confidence, I would have named any one of several smaller pieces which he might have played excellently well, even at short notice.

One is seldom if ever criticized for playing pieces that are too easy, if one does them *really well;* but even an uninformed listener can tell when one is bungling. The best pieces to play in public are those which have been mastered so thoroughly that you are no longer conscious of the least technical difficulty, and which you understand so entirely that no part anywhere seems obscure or doubtful in effect. Memorizing is not absolutely necessary; but it will usually happen (unless you are one of those to whom memorizing is much difficult than sight-reading) that by the time you studied a piece enough to have really mastered it will find you have almost memorized it automatic

One difficulty with playing a new piece too ea public is that (unless it is a slow piece) you wi play it fast enough. To secure a good clean ren the first practice *must* be slow, the fast practice begun at a later date. On the other hand, if you h correct feeling for the tempo, and force yours play it at proper speed before you have master technic, you will be sure to strike many wrong Then, too, there are many little matters of phr position of climaxes, and other details, which c arrived at only after the piece gets to be, as it an old story.

Even for pupil's recitals it is much better poli choose some piece which has been mastered month and laid aside, giving it of course such review a seem necessary, than to be too anxious to mak pupil's appearance bear witness to his most recent of advancement. A really good performance is of more importance than a high-sounding composer on the program.

But, if one must not play the hardest pieces in p I hear some one ask, how do professional concer ists manage with some of the masterpieces of t passed technical difficulty? As an answer to this tion, I will narrate a little conversation that my f teacher told me he had with the great Spanish vio Sarasate. Sarasate said that the most difficult in his repertoire was the *Othello Fantasie,* by H that he had taken a great fancy to the piece w young man, but never, until shortly before the of this conversation, felt that he had mastered it ficiently for concert performance. He had, ho at last ventured to play it in public, *after twenty of practice.*

Regular Practice Counts

By Florence Belle Soulé

Few people seem to realize the necessity for regular practice. Some pupils practice only when they feel like it. Others say they can get their lessons without work. Another class shirks all week and works very hard on the day preceding the lesson.

It is so easy for someone to say, "How I do wish I could play as well as Miss S——!" The wish is the only easy thing about the matter. When the long years of preparation, hard work and self-denial are considered the entire subject is usually dropped in a hurry.

One may read well, finger nicely and possess a good touch, but these things are not enough. After the notes, time values and proper accents of the piece have been learned, the real work begins. The scales may be played more brilliantly, the touch improved, and hours spe expression. But the art of finishing up a piece do appeal very strongly to the average pupil.

The pupil who says, "Oh, I practiced four hour terday," is apt to be very disappointing when "How much did you practice the day before?" answer usually is, "I did not touch the piano." The that idles away nearly the entire week, and tries to it up on the day before his lesson, is always flustere plays poorly.

The daily practice of even an hour, carefully pl and faithfully followed, will bring more assuranc better results in every way than many hours of miss work.

The Psychology of Reading Music at Sight

A Notable Article of Keen Interest to All Who Read Music and Want to Know How to Improve Their Reading Ability

From an Address by

PROFESSOR RAYMOND H. STETSON

Of the Department of Psychology of Oberlin University

is notable address was delivered by Pro- r Stetson, at the Forty-ninth Annual ention of the Music Teachers' National As- tion, at Dayton, Ohio, last December. The subject was one which aroused great interest upon the part of the noted teachers assembled, because Professor Stetson treated his theme from many new and practical aspects. The Science of Psychology is continually throwing new lights upon the fascinating art of music teaching. The researches of James Seashore and others are of great importance to music teachers.

TRAINED musicians differ widely in their skill in reading at sight; some read very little and some are able to read far more than they can play. It is recognized that the experience of ayer has something to do with the ability to read; ists, accompanists, and ensemble players usually well, and it is possible that a musician be able to fluently in one style and yet find even simple things lt in an entirely different style.

find that people differ also in skill in reading d words at sight; some stumble badly in reading ple thing aloud, while some read far more rapidly they can pronounce the words before them.

se differences in reading music and in reading words d in some degree on native ability, but native abil- ays only a small part in such differences in reading If musicians were properly trained to read, they differ about as much in the speed and accuracy ir reading as they do in the speed and accuracy ir playing. The great differences in skill in reading ie to practice and experience, and not to differences ive ability.

The Reading of Printed Words

CE the problem of printed words is of vital im- ortance in the schools, the process of reading has carefully studied of late and some interesting results ed. The reading of printed words aloud is com- le to the reading of music at sight, although the ss of reading words is much simpler.

reading words aloud the material to be read must epared in advance of the voice; the eyes and the organs do not move together. But there is no such as "reading a sentence at a glance;" we do not the eye across a line of print and so take in the . Careful experiment shows that the eye moves tle jerks, stopping from four to five times in the e of an ordinary newspaper line. We are not aware is series of stops along the printed line, but it is to note the jerking of the eyes of a reader as he s from stop to stop along the line. These move- occur at the rate of four to eight per second . 120, two to the beat, to 120, four to the beat). e eye movements are, of course, always well in ad- of the voice, and they are not always forward nents. The eye frequently retraces; there may peated backward movements. The process of izing the words for pronunciation goes on in ad- of the actual process of speaking. Although the an read but a few syllables at each stop, the words hrases are like musical figures and must be shaped ntelligent reading. The eye scouts ahead, picks up ial bit by bit in these frequent stops, and arranges ords to be fed through the reading machine. The ng machine of the voice travels steadily along while e goes back and forth, stopping here and there to ie words in order and flashing back now and then e very word that is going through the reading ne.

s reading process is amusingly illustrated in the nt method of teaching children to read. When the is not yet able to feed the reading machine so that y run at ordinary speed, he stops the reading until s picked up and organized the words to the next a. Then the reading runs at full speed, only to abruptly at the next comma, until the eyes work up material for the next run.

The Reading of Music

IE reading of music is a process similar to the reading of words, but much more complicated. The al material must be organized in advance of the rmance; it must be read bit by bit and put together ne fingers or voice.

the reading of music, also, the eye moves by little and can take in at each stop no more than five to eight notes, horizontally in a figure, or vertically in a chord. The notes read at each stop can easily be covered by a dime on the ordinary page of music.

As one is not conscious of these jerks and stops, one is apt to feel that the eye grasps much more than that "at once." But it is easy to prove this scope experimentally. It is apparent, then, that there is a physical limitation on the speed of actual reading. Probably fifty notes per second is a maximum for actual reading. But it is to be noted that this would provide for one part with a speed of sixteen per second (M.M. 160, six to the beat), which is maximum speed for a run, two parts each with a speed of eight per second (M.M. 160, three to two beats). Such musical material is well beyond the possibilities of solo performance. A type of reading in which context and inference figure, is possible beyond this reading of the actual notes, and probably plays a part in the reading of some orchestral scores.

Since the eye takes in so little at each jerk, there must be some definite order for the movements of the eye in this advance reading process, if more than one staff is involved or if the material on one staff is elaborate. The reading must be vertical or horizontal. Either the eye must jerk back and forth, up and down, from staff to staff in vertical reading, or the eye must travel horizontally along one staff or part and then flick back to read the second staff.

It is obvious that the horizontal order of reading is by far the better; it involves less eye movement from the one staff to the different material of the other staff; and of course the organization of a melody is horizontal, not vertical, and the chord progressions of an accompaniment are phrased together horizontally. If the material to be read is in any sense contrapuntal, vertical reading becomes difficult or impossible and can never be intelligent.

The Units to be Read in Each Part

THE reader must decide which part is to be read first. The skilled reader chooses the more significant part; this is usually the more elaborated part which probably contains the essential musical idea. He reads enough of this to make sense for the moment; in the ordinary eight-measure strain this means perhaps two measures. Then the eye returns and takes up the most important of the other parts. In a four-part choral written for the keyboard, the soprano and alto are usually read forward first as a single series, and then the eye returns and takes up the bass staff; if there is difficulty the tenor is dropped to make the bass series simpler.

In reading a part it is important to shape it into the proper figures; if it consists of a series of chords of four notes or more there must be a stop for each chord, but in a passage of single notes or of thirds, fourths, or sixths, the eye is able to take in a rhythmic figure at each stop. The figures must be clearly grasped and the accent in the figure noted which indicates the measure-beat.

How the Parts are Brought Together

IF the staves are read separately in any case, and if the parts must be organized in advance of the playing process, how are the separate parts adjusted to each other? In organizing the music and formulating the playing movements in advance of the actual performance, the measure-beats are the essential thing. Unless the reader has sensed his rhythms and noted his grammatical accents he cannot hope to organize the material in advance of performance.

A common type of bad reading proceeds one beat at a time; the eye movements are mainly vertical and the reader depends on the immediate measure beat for the accent of the figure.

Another common form of bad reading involves reading the upper parts forward in a vague fashion, getting the notes, but not the exact rhythm, and then returning to read the bass notes or chords, note by note, or chord by chord, just as each one is played, depending on the playing of the bass to furnish the measure-beat for the treble. This type of bad reading often compels frequent vertical eye movements during the reading of the bass to adjust the treble figures to the bass, and the reader is often absurdly dependent on the spacing of the notes on the page for the placing of the measure-beats.

In good reading the material is completely organized in advance of the playing for one, two, or more measures. This is possible only when the reader is capable of grasping clearly not only the notes, but also the rhythms, and therefore of setting the parts together without difficulty.

Suggestions for Practice in Sight Reading

IT is obvious that the reader must be able to grasp the notes instantly; he must recognize the chord or note at once, without counting ledger lines, or referring to signature. For teaching, flash cards may be used. Although this instant recognition of the musical signs requires much practice, it is not the fundamental difficulty of most readers.

Practice in reading different rhythmic figures is a requisite. Most pupils need to be taught the doublet, the triplet, the quadruplet, the dotted-eighth-sixteenth, and the few other fundamental figures, so that they can recognize them in all their various forms, and beat them clearly and accurately, without the assistance of the actual tones. If one has occasion to give rhythm tests to music pupils, one becomes aware how few advanced pupils can read or execute ordinary rhythms without the help of the melody and harmony.

If the rhythms are clearly read, it is easy to organize the parts to the measure-beats. The great advantage of ensemble work in learning to read lies in the fact that one *must* observe the measure-beats, and read everything in terms of figures with a definite grammatical accent. Other advantages of ensemble reading are, that the process goes right on, and that one learns to read the most important thing and, where necessary, to omit without spoiling the effect.

We may take a leaf out of the method of teaching children to read printed words. If a simple hymn is chosen, with obvious pauses at the ends of the sections, any elementary pupil will be able to play a section, two measures, of the treble, and to keep it in mind while he reads the bass chord by chord, just before performance. It is then an easy step to organize the complete section before any note is played, and to play it with the eyes off the page, like the child reading from comma to comma. The final step involves organizing the coming section, during the performance of the present section.

Whatever capacity for musical inference the pupil has developed, by familiarity with the type of composition, or with the composer, should help him in his reading. Anything that the pupil has actually assimilated from the study of harmony and counterpoint, and any practical musical analysis he can make, will help him to know what to expect next.

When the pupil has some facility in organizing the material in advance of the actual playing process, it is possible for him to study his composition, away from the instrument. He can organize the music, and work out the playing movements and thus eliminate tedious blundering in actual practice. This should be especially important for organists who find the time of practice at the organ limited for various reasons.

The Silent Reading of Music

THE method of working out a composition away from the instrument, is a form of silent reading. But it may be that the pupil is able to work out the detail of the playing movements without sensing the actual effect. It is possible to teach a type of silent reading, which will enable the pupil to grasp the music as well as to master the playing movements.

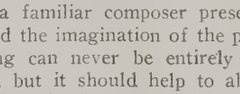
The basis of all silent reading is memory. One remembers the effects of similar chords, of similar progressions, of similar intervals and turns of melody, previously heard and made familiar; it is thus that one gets a sense of the effect of the music read. The silent reading of music is a matter of the imagination; and all imagination is merely modified memory.

We may turn to familiar compositions. Students of very ordinary attainment can go over a familiar composition and get the effect in some detail; they can remember it. This memory of the familiar composition is a starting point for silent reading. If a second composition be made of the material of a familiar composition, the pupil should still be able to follow it. The rhythm may be changed, passages may be in new keys, chords may be developed into figurated forms, or passage work condensed into chords; and still the pupil should be able to follow with occasional assistance from the piano. A good piano transcription of a song with which the pupil is thoroughly familiar should make an excellent exercise in silent reading. The more literal parts of Liszt's transcriptions might be suggested.

It would be possible to construct exercises containing all the new items of melody and harmony in a given composition. After the pupil has played these exercises repeatedly and made himself familiar with the effects, he should be able to work out the composition for himself. In case he cannot image certain passages, let him revert to the exercises rather than resort to playing from the composition itself. The time should come when a work from a familiar composer presents only a few passages beyond the imagination of the pupil.

Silent reading can never be entirely substituted for actual hearing, but it should help to abate the scandal of having pupils write harmony and counterpoint, which they do not sense at all, and of having pupils make musical analyses which yield them nothing musical.

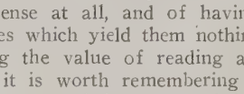
In estimating the value of reading at sight and of silent reading it is worth remembering that our most talented pupils are not being prepared for concert playing. Public solo performance will be the primary activity of not one in a thousand. For the actual life work of our professional music pupils, the ability to handle music intelligently in a practical way is at least as important as the ability to play with finish a limited repertoire. For such practical, intelligent handling, sight reading and silent reading are essential; and they ought not to be left to chance. The teaching problem involved should receive attention.



Dead Notes

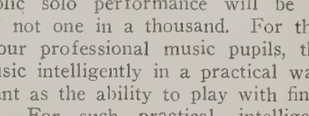
By Charles Knetzger

THE other day as I went to play the organ I found a slip left by the tuner, containing an itemized list of repairs made by him. One of the items was: "Dead notes in Great." This called to my mind a beautiful flute melody spoiled by several pipes failing to speak. Thereupon my thoughts recurred to some of my little piano pupils whose playing shows many gaps—dead notes—and this through no fault of the instrument.



Here, for example, is Evelyn intending to play

Ex. 1



but this is all that is heard:

Ex. 2

When playing a bass like this

Ex. 3

she often fails to strike the low D—the hand merely making a motion towards the key without really depressing it. When playing octaves, often only one of the two notes is heard. To correct this fault we play the game of dead notes, counting all those that were missed and performing the obsequies by playing a funeral march. The impression is not easily obliterated.

"In this country they have looked quite condescendingly upon these small forms, taking the silly notion that these forms arise incidentally in music. Yet the song-form is really one of the chief foundations of our art."—ROBERT FRANZ.

Little Life Stories of the Great Masters

By Mary M. Schmitz

Carl Maria von Weber

(1786-1826)

1. Q. Where and when was Carl Maria von Weber born?

A. At Eutin, Holstein, Germany, December 18, 1786.

2. Q. What great German composers were living when von Weber was born?

A. Haydn, who was fifty-four years old; Mozart, who was thirty years, and Beethoven; who was sixteen years old.

3. Q. Was Weber's ancestry a musical one?

A. Yes; there were several generations of musical Webers. The first known was Johann Baptist Weber, who was made a Knight or Freiherr in 1622. This gave the prefix "von" of which Carl Maria was so proud.

4. Q. How was Carl Maria von Weber related to Mozart?

A. Weber's Uncle Fridolin had four daughters, one of whom, Constance, became the wife of Mozart, thus making Mozart a cousin by marriage.

5. Q. Tell something about Carl Maria's early life.

A. Carl Maria's father, Franz Anton von Weber, was a violinist, a viola player, double-bass player and traveling theatrical manager. His mother was a singer. The family's traveling from city to city interfered greatly with Carl Maria's musical education, but he gained a knowledge of the theater that was of great value to him later when he wrote his great operas.

6. Q. Who besides his father were Carl Maria's teachers?

A. When the boy was ten years old the family stopped in Hildburghausen where Weber had lessons from Heuschkel, a fine oboist, pianist and organist. The next year he studied with Michael Haydn (brother of Joseph) in Salzburg. After that he had lessons in composition from Johann Kalcher, and in singing from Valesi.

7. Q. How old was Weber when he wrote his first opera?

A. He was thirteen years old when he wrote his first opera, "Die Nacht die Liebe und des Weins" (The Night of Wine and Song). It was destroyed by fire before completed.

8. Q. Name some other early works.

A. "Silvana," which was given at Frankfort in 1810, in which Karolina Brandt, who was later to become his wife, took the leading part. "Abou Hassan," a one-act operetta, written in 1811.

9. Q. Upon which of von Weber's works does his fame chiefly rest?

A. Upon the opera "Der Freischütz, written in Dresden, in 1817.

10. Q. Is the opera "Der Freischütz" in the style of Italian opera?

A. No; this opera shows a decided change from Italian type. It is often called the first German o

11. Q. What great German composer was influe by "Der Freischütz" and by what means?

A. Richard Wagner. By von Weber's use of is called "leading motives" or "Leit Motives."

12. Q. What is meant by "leading motives"?

A. "Leading motives" are short characteristic ph associated with a special meaning. In "Der Freisc there is a "Zamiel Motive" and an "Agathe Motiv

13. Q. What other operas did von Weber write?

A. "Euryanthe," in 1823 and "Oberon," in 1826.

14. Q. Tell the circumstances connected with the c "Oberon."

A. While Weber was ill from tuberculosis, Ch Kemble, the great English actor who was head of Co Garden, London, asked him to write an opera in Eng Von Weber was to be paid the handsome sum of thousand dollars; but he must assist at the first perfo ance. Von Weber, although ill almost unto death, ag as he was anxious to leave provision for his family." physicians advised him against it and told him of probable dangerous consequences. But he disrega their advice and reached London March 5, 1826.

15. Q. When was the first performance of "Obe given?

A. April 12, 1826, and with great success. The ex ment was too great for von Weber and he die June 4, 1826.

16. Q. Was von Weber buried in London?

A. Only temporarily. The body was taken bac Dresden in 1844, when Richard Wagner gave the fu oration.

17. Q. What instrument did von Weber play? he write much music for it?

A. Weber was considered a very fine pianist. He w much music for the piano, which is played with pleasure and profit by pianists of the present day.

18. Q. Name some piano music von Weber wrote.

A. "Sonata in C. Op. 24," of which the Rondo kn as "Perpetual Motion" is the finale. The "Concerts in F Minor," which is rated as one of the classics the piano. The lovely "Invitation to the Dance," w is a piece of idealized dance form.

19. Q. What movement in the musical art did Weber originate?

A. The Romantic Movement.

20. Q. How does Romanticism in music differ Classicism?

A. In the Classic spirit pure beauty is sought th expressed, largely through perfection of form. In mantic music this perfection of form gives way to expression of the "story" of the work.

The Strength of Silence

By Ben Venuto

THE best teacher is not he who talks the most. There is such a thing as telling a pupil more than he can remember at one time. There is also such a thing as giving admonitions and reproofs so constantly that the pupil grows callous to them and they pass over his head merely as unpleasant noise, thus defeating their own end.

The late S. E. Jacobson, a noted violin teacher of Chicago, who trained probably a greater number of successful symphony orchestra violinists than any other one teacher that could be named, was a good illustration of the contrary trait. Listening with undivided attention to a pupil's playing, he scarcely would say a dozen words during the lesson hour, but the few words he did say were exactly what were necessary to the case in hand, and were uttered with an air of good nature and with a serene confidence that they would be both understood and remembered, as indeed they were.

In the writer's earlier years he served for a time as accompanist in the studio of a very successful vocal teacher, who had much the same habit. To be sure, in the first lessons, when this teacher was endeavoring to "place" the voice properly, he was by no means sparing of advice, illustration and admonition; but later on, in the study of vocalizes and repertoire, he was almost as economical of words as the violin teacher alluded to above. In my youthful inexperience I had an uneasy feeling that perhaps his pupils were not getting taught at all—that they were receiving next to nothing in return for the somewhat high price they paid, but the results showed I was mistaken. Practically all of his pu turned out good, well-taught singers, the few excep being those whom he refused to teach further, as as he saw that they were absolutely deficient in v talent or application to practice.

Perhaps a little comparison drawn from the stee of a ship or boat may help to illustrate the matter i true light. Once started on the right course, the he man may keep the rudder nearly stationary for m and miles, making merely the slightest possible cha as they may be necessary to follow the route. A su nearness to rocks or shoals might make necessary s quick and violent work with the rudder; but the m skillful and experienced the pilot, the better he un stands how to keep out of such emergencies altoge Of course, in a narrow and crowded harbor, moven of the rudder might need to be more frequent and i cate; but only a greenhorn could imagine that the st man who kept the rudder turning back and forth a better earning his wages than the one who held it ste

Now that is what a teacher really is—a skilled p The motive power is furnished by the pupil's own p tice. *If there is not motive power, the best steerin the world will not advance a ship an inch.* And, on other hand, mere motive power without skilled stee will be extremely dangerous. If we happen to be the right course already, for the time being, it is w just as much to have the skilled assurance of that as it is to have the direction properly changed when proper time arrives.

HUNGARY for centuries has been known as the Land of Rhythm and Melody. In modern times, thanks to Bartok and others, it has, the rest of Europe, become a land of revo- nary harmonies. The last time I was in gary I was amazed at the modern tenden- In some cases it seemed as though the posers were trying to vie with each other ee which could be the most iconoclastic. is very different from the music that the d identifies as Hungarian, marked as it lilting melodies and inebriating rhythms. he true music of the Hungarian is the of moods. Some of the modern music y native land might make one think that perpetual mood of the Hungarian is in- y. This, however, is ridicuously far from ase. The Hungarian spirit remains the . It is direct, often naive, natural, un- ted and sometimes terribly intense. There old proverb that the Hungarian enjoys lf when he cries. Most Hungarian love s, for instance, are very sad. Love is a us matter with the Hungarian peasant. e is rarely an element of frivolity about He loves deeply and passionately; and his must fit the mood.

Almost everyone who any pretention to culture plays a little, at least. people of high social standing play unusually well. act, I have often been astonished at the virtuosity en and women who make no claim whatever to be ssionals. It is all taken as a matter of course.

ne of the most striking men of this type was Geza (pronounced Zitt-chee), otherwise Count Vasony (He is an uncle of Count Czchenyi, American Am- dor from Hungary). Zichy was born of a noble y, in 1849. When he was fourteen he lost his right as the result of an accident while on a hunting lition. Notwithstanding this, his great love for decided him to become a pianist. He practiced his left hand so persistently and with such extreme rness that he became one of the wonders of the cal world. It is doubtful whether his like will appear again. Among his teachers were Mayr- berger, Volkmann, and notably Liszt, who took a great interest in the young Count. In addition to his musical studies, he became a lawyer and received many high positions. Notwithstanding a very busy life in the law, he found time to give a great many concerts on tour, bestowing the receipts upon various charities in which he was interested.

MME. YOLANDA MËRO

Hungary, the Land of Rhythm and Melody

An Interview with the Noted Hungarian Piano Virtuoso

MME. YOLANDA MËRO

Biographical

Mme. Yolanda Mëro, one of the most brilliant and accomplished of the present-day pianists, was born in Budapest. Her father was a musician who recognized his daughter's pronounced musical inclinations and started her musical studies at the piano at the age of five. In one year the little girl was admitted to the Hungarian National Conservatory, although she was then far below the age limit. There she became the pupil of Auguste Rennebaum, who had herself been a pupil of Liszt and was known for the excellence with which she transmitted the Liszt traditions to her pupils. Mme. Mëro made her debut with the Dresden Philharmonic Orchestra, playing the "E Flat Concerto" of Franz Liszt. She then made tours of Europe, playing with pronounced success, and her American debut was made in 1909 with the Russian Symphony Orchestra, in New York, when she played the Chopin "Concerto in F Minor" and the Liszt "Concerto in A Major." Her subsequent tours of the United States have made her name known from coast to coast as one of the most feted pianists of the times. In 1909 she married Herman Irion, in New York, and has since made the American metropolis her home.

"When one heard this remarkable man there was no sense of pity at his misfortune, but rather one of astonishment and envy. With one arm and one hand he managed, by extreme dexterity and rapid use of the pedal, to produce effects that many pianists with both hands could not equal. To hear him play the *Second Rhapsody*, of Liszt, was so amazing that with one's eyes closed one could hardly credit that he had ever been injured. His programs looked like those of the ordinary virtuoso pianist's recital. Of course, his great wealth and aristocracy and his 'affliction' may have drawn some to his recitals, but musicians went to hear extremely beautiful performances by a born musician. Count Zichy became director of the Hungarian National Academy of Music. He was also intendent of the National Theatre and Opera and President of the National Conservatory. He composed numerous works for orchestras, stage and piano. Hungarians are proud of the wonderful achievements of this man who, by reason of his birth, wealth and affliction, might easily have resigned himself to a life of worthlessness, but who by reason of enormous energy and an indomitable will made himself one of the great figures of Hungarian history.

Dilettantism

"DILETTANTISM is one of the obstacles of art. Dilettantes are needed in all countries. The professional artist must depend upon them as does the teacher; but in piano playing even the dilettante should aspire for solid and thoroughly artistic results. Possibly one of the reasons why there are so many unusual pianists in Hungary is that they may regard music more seriously, and more earnestly than in America. They love music for music's sake, and are willing to make great sacrifices in order to attain the skill that will entitle them to be considered worthy musicians.

"Personally, I believe that the students in America should depend more upon the teachers. The students are like the mob; they should be led, not permitted to run wild. Respect and obedience are traits which in youthful democratic America should be cultivated. The teacher should be respected and obeyed implicitly. If he does not deserve this, he does not deserve to be a teacher. The American student should listen to the teacher's directions with the greatest possible concentration. They are the result of years of experience and thought.

"Remember that one cannot become a Carreno in two years, nor in four years, even with great native talent. You cannot blow up a career like an omelet souffle. I know that this is not the popular doctrine in America; but I think that the student at a certain stage of his career should not attempt to do too much individual thinking. Trust in the wisdom of the teacher a little more. I am amazed at the audacious opinions ventured by young students afflicted by the "superiority complex," or what used to be termed the "swell head." They give criticisms of methods of practice which sound ridiculous, coming from young lips. Nothing can take the place of work and hard cruel drilling under a really experienced teacher. The students who try to dodge the gymnasium of scales and arpeggios are likely some day to find themselves technical weaklings.

Original Thinking

"OF COURSE, the day comes when the artist must do a great deal of original thinking, when he must be free to let his emotions sway, but that time should not come until he has had a most thorough training. It does not seem to me that pianists are playing with anything like the emotional feeling they used to exhibit. Possibly people in this highly mechanical age are ashamed to show their emotions. Perhaps there is too much intellectuality, too much artificial reserve, too much analysis. The modern player does not "let go" enough. There seems to be a fear that one's poetic imagination will run away. That is one of the reasons why people in this day still hark back to the playing of Liszt and Rubinstein.

"There is an enormous amount of pianistic talent in America; but, with it, there is an altogether insufficient amount of persistence. One is worthless without the other. American students are too willing to consider themselves artists, when they are often only amateurs. In Hungary the case is quite different. I have heard

many, many amateurs, who have played so astonishingly well, that if they were American, they would be thinking of giving recitals at Steinway, Carnegie or Aeolian Hall. Better reserve your recitals until you feel that you can give something that is far superior to that of fine contemporary artists. Meantime, work unceasingly. This should not be construed to mean that there are not Americans who have done just this and have done it splendidly; but that does not excuse those who give exhibitions of their shortcomings under the guise of public recitals. More teaching, fewer recitals, more hard work, fewer failures."

Self-Help Questions on Mme. Mëro's Conference

1. *What is the true music of Hungary?*
2. *What may be said of the sorrow of Hungarians?*
3. *Tell something of comparative Hungarian tempos.*
4. *Is the "Second Rhapsody" of Liszt strictly Hungarian?*
5. *Tell something of Count Zichy.*

Reveling in Music

By B. P. Spenser

When all is said and done, in order to get the most out of music we must enjoy it. Fortunately, the art may be enjoyed in a dozen different ways.

The Analytical mind enjoys music as does the entomologist dissecting a beetle (Prototype, Carl Reinecke).

The Pensive mind enjoys music as the dreamer is carried away by visions joyful or sorrowful (Prototype, Frederic Chopin).

The Active, decisive mind enjoys music in proportion to the accuracy of time, accent, rhythm (Hans von Bülow).

The Rhapsodic mind enjoys music as we would enjoy airplaning over a volcano or shooting through a rapids (Prototype, Franz Liszt).

The Dynamic mind enjoys music as a mighty cosmic force, well-nigh impossible to control by tonal bonds (Prototypes, Richard Wagner and Ludwig van Beethoven).

The Vigorous, well-balanced mind enjoys music as a healthy, human expression of life (Prototype, John Philip Sousa).

The Aesthetic mind enjoys music for the beautiful and delectable sound combinations (Prototypes, Debussy, Cycil Scott, even Mendelssohn).

These are just a few of many types. The average music lover in America is perhaps too reserved, too restricted to enjoy music at its best. We hold on to our feelings. We do not give in enough. We are habitually undemonstrative. We have an idea that to be proper we must be frigid. Not until we learn to revel in music as a healthy child revels in the June clover fields will we get our real reward from the art.

After all, it is the music we make rather than the music we hear which gives us the utmost joy. The person who hears music has one of the great blessings of life; but the person who has the musical ideas go in through his eyes, pass through his ego and out again in some form of expression, has music in his very soul.

Little Mary, fingering out her first piece at the piano—mastering every little note and count—has a hundred times more joy than has the multi-millionaire who, ignorant of the practical side of the art, may hire a great symphony orchestra for his private enjoyment.

Chord Playing

By Iva Dorsey-Jolly

Raise hands over the keyboard and let them fall without any resistance on the chord, and *then sink with the wrist.* Now take up the hand exactly over the notes, keeping the hand extended. There is quite a little knack in letting the hand fall so; but when after careful practice it is once achieved, the chord sounds much richer and fuller.

Deppe said, "The principle of scale playing and of the chord are exactly opposite. In playing the scale one must gather his hand into a nut-shell, as it were, and play on the finger tips. In taking the chord, on the contrary, the hands must be spread as if going to ask a blessing." This is particularly the case with a wide interval. Deppe further said, "There is nothing cramped about Rubenstein's playing. He spreads his hands as if he were going to take in the universe, and takes them up with the greatest freedom and *abandon!*"

Imitation in Musical Compositions

By S. M. C.

"Isabel Gary, who is learning Bach's *Inventions,* says that they are full of imitations. What does she mean? I always thought that Bach was such a grand composer that he had no need of imitating anybody else."

"Your opinion of the great master is correct. His *Inventions* and fugues, which are full of imitations, as you say, are original creations of the highest order and have never been surpassed. But imitation in music does not mean that one composer copies or imitates another (though there are many such as these); it merely means that a melody or phrase which has been used by one voice is repeated by another. When the imitation is carried through an entire movement, or through a passage of some length, it is called a canon. If you examine Bach's *Invention No. 4,* for example, you will find two melodies, a bass and a soprano, running through the whole piece, so that it could be performed by two singers."

"This seems to be different from the music we ordinarily hear."

"So it is. It is called polyphonic music, from the Greek, *poly,* meaning many, and *phonos,* meaning sound. In other words, it is music having several melodies running along at the same time. This distinguishes it from homophonic music, in which the melody is the principal factor, all other parts being subsidiary; that is, simply accompaniment. To return to Bach's *Invention No. 4,* the first eight notes are the subject for imitation. Throughout the entire first period the treble leads, and the bass afterwards imitates. In the seventh measure the second period begins and the bass leads. Now listen carefully while I play, and count how many times the bass imitates the treble throughout the piece."

"Seven times; in measures 1, 2, 15, 16, 17, 18 and 20."

"Correct. Now listen again, and see how many times the treble imitates the bass."

"Four times."

"Correct again. Now can you tell me one respect in which you think this music differs from the merely 'pretty music' you are accustomed to hear?"

"Let me see. . . . It makes you think, for on

"To be sure it does, and for this reason it is son times called intellectual music, for it appeals rath to the mind than to the heart."

"I never thought of that before. How many thin there are to learn in music!"

"We also mentioned the fugue, which is a form composition in which one voice announces a subject theme which is taken up in turn by the other voic each one entering after the previous one has complet the subject. But in the fugue the imitating voice do not enter upon the same degree as the antecedent, n on the octave, but answers in a different key, in accor ance with certain rules which govern this intricate fo of composition. If you ever study counterpoint you w learn how these forms are constructed."

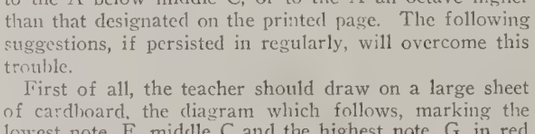
"What is counterpoint?"

"It is the art of writing two or more melodies that they may be satisfactorily performed at the sa time. Ages ago it was defined *'nota contra notam punctum contra punctum,'* note against note, or po against point. Notes were formerly called points, hen when another set of points was added above or bel the points of the theme, they were called counterpoin We distinguish between strict and free counterpoi In the former we build one or more melodies on a giv melody, called the *cantus firmus."*

"Is the study of counterpoint of much importance

"To be sure it is, for free counterpoint enters in the construction of all modern compositions which worth while. Strict counterpoint was, broadly speakin the only kind of composition known and practiced un about the year 1600. From that time on until the pr ent, the art of composition has steadily developed, a harmony has grown in importance, so as to produce complete change from the old polyphonic style to t modern or homophonic."

"Music that makes one think so much must be ve interesting. I am anxious to try those *Inventions,* ev though Isabel does think they are dry and dull."



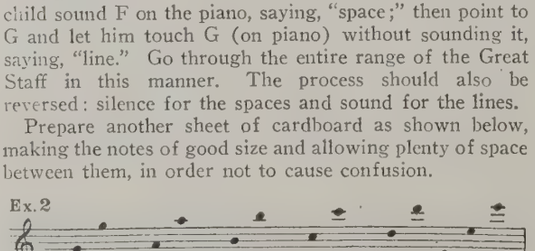
Aids for the Slow Reader

By Mae-Aileen Erb

Occasionally, in the class of the most conscientious of teachers, there will be found a pupil whose mental processes work slowly, and who, despite careful drilling, will continue to confuse the location of notes when finding them on the keyboard. Such a child when the music calls for, say, A, second space, treble staff, will possibly point to the A below middle C, or to the A an octave higher than that designated on the printed page. The following suggestions, if persisted in regularly, will overcome this trouble.

First of all, the teacher should draw on a large sheet of cardboard, the diagram which follows, marking the lowest note, F, middle C and the highest note, G, in red ink or crayon.

Ex. 1



On the keyboard, with red crayon, mark the three corresponding keys with an X.

Point to the first note on the diagram (F) and have the child sound F on the piano, saying, "space;" then point to G and let him touch G (on piano) without sounding it, saying, "line." Go through the entire range of the Great Staff in this manner. The process should also be reversed: silence for the spaces and sound for the lines.

Prepare another sheet of cardboard as shown below, making the notes of good size and allowing plenty of space between them, in order not to cause confusion.

Ex. 2

At first point to the notes in the order given and h the pupil point to them or sound them on the piano. W it is deemed advisable, skip around. As facility is gain set the metronome at 40 and gradually increase the spe

Next is a written drill which will require concentrat and will stimulate action in the child's mind. Our fi diagram showed us the twenty-three notes which co prise the Great Staff. Again call the pupil's attention these same keys on the piano. Now point to any of th keys at random and direct him to write the notes in th proper places on the staffs drawn in his music tablet.

For the pupil who is more advanced but who re slowly, a thorough drill in the recognition of famil chords in the various keys will prove a decided help his reading. Prepare diagrams for each key showing tonic and dominant seventh chords and their inversio as:

Ex. 3

Train the child to recognize each chord as a unit so t no matter which chord you point to, he can play it i mediately without resorting to the painful habit of pick out each note of the chord.

Effort along these lines will bring most gratify results, and whether given to the dull or to the alert pu will prove to be an important aid to rapid sight playing.

"The pianoforte is the ideal instrument for musical joyment of the highest type, when the mastery of its k board is combined with thorough musical proficienc —Carl Faelten.

he Irresistible Lure of Gypsy Music

By JUDGE TOD B. GALLOWAY

Composer of "The Gypsy Trail" and many famous songs

"Tis a Romany tale
That up in the moon
Each midnight a gypsy
Is playing a tune."

O SAYS an old French legend. But the gypsy is not confined either to midnight or the moon in his making of music. He is ready with it at any and all times.

race of people lives in history through the things have contributed to the world's happiness and better—in other words, by what they have added to civil-on. In all the hundreds of years since the gypsy first me known in his wanderings over the earth, he has 1 but one thing of real value to man, and that, his c.

e may remember him for his romantic life and sur-dings, his folk tales and his wanderings; but if these all forgotten we would ever be his debtors for his less harmonies.

e have known Romanies, as fortune tellers, horse ers, horse doctors, tinkers, metal makers and workers, ers of rugs and baskets, child stealers, rogues, cheats, ockets, thieves, swindlers—but the term which we gratefully apply to them is—musicians. For each every gypsy is a musician at heart who can not only but also compose.

ay back in the far off days when the gypsies set on their endless wanderings, they brought with them only their Oriental love of music but also the very uments with which to make it. When we listen to rchestra today we do not realize that many of the uments we hear were introduced to the world by wandering outcasts. A Romany is a natural fiddler. gypsy legend in regard to the origin of that instru- is, that once a maiden was deeply in love and her was not returned. In despair she appealed to the for aid. He promised that he would help her if would give him her parents and her four brothers. ted as she was to them, she loved her sweetheart ; so she gave them to the Evil One. He made of father a box, of the mother, a bow, and of the ers four strings. He then taught the maiden to play iddle; and with it she won her lover. But the devil and seized them both, and the fiddle was left in forest. A poor gypsy came by, saw it, and began ay on it. Wherever he went, into town, village or tryside, he made everyone laugh and weep as he ; and so Romanies have done ever since.

The Tinkling Cymbal

HEN the Apostle Paul said, "I am become as sounding brass or a tinkling cymbal," he did not refer to the cymbals we see in the orchestras to-for surely they could not be called tinkling. He ed to the instrument which we now call the cembalo mbal which is descended from the psaltery of the and is the great-great-grandfather of the piano. ou have ever seen a gypsy orchestra, you will re-ber the box-like instrument which resembles a l piano with the strings exposed.

ese strings are struck by the player with hammers red at one end with soft felt and at the other with leather. The cembalo player, with marvelous dexter-ills the place of several instruments in the orchestra. an make it loud and strong and in the next moment the tinkling cymbal to which the Apostle alluded. Cembalo," says one, "builds a mass of harmony like blossoms and leafage that completely envelop the al trunk and branches of certain tropical trees.

hile we associate pipes or flutes with Greece, be- Pan the god of shepherds is said by mythology to invented them; as a matter of fact, they were played in India long before Greece was known. The gyp- brought with them what they call the mishal, a le, a vertical flute which today we call Pan's pipes. onsists of anywhere from seven to twenty flutes ned in a row or curve and closed at the lower end. unless you happen to hear Roumanian gypsies play, re not likely to see them, as the Hungarian gypsies se we hear the oftenest—do not use it. It came the East and was used there long before Pan sat id on damp, moss-covered stones and piped to shep

e bag-pipe is called the national instrument of Scot- To tell a native of that land that it did not originate there would be almost an insult. There is no instrument of which a people are fonder or prouder than the Scots of "the pipes." Wherever they live they have the bagpipe and its shrill music. We remember it was the quick ear of a Scotchwoman who caught the far off skirl of the pipes when the exhausted British garrison at the siege of Lucknow was about to surrender, and she cried: "Dinna ye hear the slogan?" She knew that relief was coming; and she was right.

We must, however, give the wandering gypsy the credit for bringing the bagpipe from the ancient to the modern world. We read in the Bible that King Nebuchadnezzar set up a golden image on the plains of Babylon, which he commanded every one to worship. "That at what time ye hear the sound of the cornet, flute, harp, sackbut, psaltery, dulcimer and all kinds of musick, ye fall down and worship the golden image that Nebuchadnezzar had set up." The sackbut is the bagpipe, and the dulcimar is the cembalo. The oboe is also said to have been first known to the gypsy.

Music for Tribal Use

GYPSY songs composed of their own verse and music are not often heard by outsiders. These they keep to themselves, for themselves, for the expression of joy or sorrow on various occasions. As a rule their vocal music is not very good. Few Romany women have good voices. Too much open air life, too much wild dancing and their cries in executing them, too much fatigue in caring for many children, rob their voices of freshness and charm.

But the instrumental music of the gypsies has an indescribable power and appeal which, once heard, cannot be forgotten. They have woven their secret life story into their harmonies. Their music, in its making and in its style, is as mysterious as their lives. In the first place there are few Romanies who can read notes. They play almost wholly by improvising. The leader with his violin will take a strain or air and follow it out in any manner that his mood may fancy; and all the rest of the players, with marvelous intuition, will build up an elaborate and difficult accompaniment around it. If a Romany once hears an air, he never forgets it and can reproduce it entirely. The story is told that on one occasion Strauss, the waltz king, was rehearsing with his orchestra, a new unpublished piece. A gypsy was lingering around listening, but no one paid any attention to him. The same evening Strauss went to hear the gypsy orchestra play and was dumbfounded to hear it reproduce his new waltz perfectly. The gypsy leader had caught the theme and from that his orchestra was able to improvise the entire score.

The verbs "to command" and "to obey" do not exist in the gypsy language; and as this race admits no laws, rules or discipline, so is their music. It follows no musical laws or precedents. Liszt, the great scholar, composer and pianist, made a life study of it; and he tells us he could not unravel the mystery of their compositions. He says they are "like great birds shyly moving among thorny bushes in full bloom." All the great musicians—Beethoven, Bach, Schubert, Schumann, Liszt, Von Weber, Brahms and Berlioz—owe a deep debt to gypsy music; and it has influenced all modern composers. It is always passionate and sings the sorrows and joys of all mankind. From heart-breaking sadness it suddenly turns to a whirlwind of gladness and joy, just as the Romany does himself.

Schubert was once invited to visit a Hungarian nobleman; but on the way he met a band of gypsies and was so captivated by their music that he forgot all about his invitation and remained with them all summer.

Playing by Ear

ONE REMARKABLE thing in connection with gypsy music is what they call "playing in the ear" of a listener. A leader picks out from his audience one person to whom he and his band will devote their attention until the listener is fairly hypnotized by their

GYPSY DANCE

music. The gypsy, in a way which seems uncanny, reads from the expressions on his hearer's face, his emotions and feelings; and these the Romany translates into the most beautiful and appealing strains. Many writers have described this marvelous power which belongs to the Romany alone. There is a story of an Austrian nobleman, a fine looking war veteran, familiar with the variations of gypsy music, who was seated one evening in a café where one of their orchestras was playing. After gazing thoughtfully about, he drew from his pocket a 1000 crown note and, tearing it in half, he gave one half to the gypsy leader and pasted the other half on his own forehead to indicate that if the music was satisfactory, the leader would receive that also. Fixing his eyes on the old soldier, the gypsy began playing on his violin, slowly advancing down the aisle, his body swaying like a panther, his eyes aflame.

One by one the other players joined him until the whole group was gathered around the nobleman's table, swaying like a corn field under a wind, as they played. With every nerve atingle they poured forth melodies of love, pain and rapture. Now gay, now intoxicating, living and dying like a great plaintive sigh. Tears began to fall from the old man's eyes. The music had conquered and he handed the leader the other half of the 1000 crown note.

Elizabeth Robbins Pennell describes a similar experience of her own in which she says: "There was a scent of dry rose leaves in their music, the windings of the river in the moonlight, the voice of love."

The Story Teller

IF YOU were to go into the Orient today, in every city, at every camp-fire in the desert, wherever men gather together, you will find the professional story teller, the man whose only occupation in life is to recount marvelous tales like those we read in the Arabian Nights—of fairies, demons, dragons, fairy carpets, genii and adventurers. So the gypsy, true to his Oriental inheritance, has been our greatest story teller.

From him we have the large majority of the folk-tales, legends and fairy stories which have delighted us from early childhood and which no one is too old to enjoy. Hans Christian Andersen and the Grimm Brothers, whose names are household words, owe, as we do, an everlasting debt to the gypsies. Liszt calls them "human birds nestling where they would in the forest or upon the bosom of the mountains—human birds granted a musical soul." Yes, a soul for music and for romance.

Self-Test Questions on Judge Galloway's Article

(1) What did the gypsies bring with them on their early wanderings?

(2) What is the nature of the Cembalo?

(3) To what origin is the Bagpipe traced?

(4) Do the Romanies ever record their music?

(5) What gift have the gypsies for "playing by ear?"

A Practical Method of Teaching Treble and Bass Notes

By Mary M. Pleasants

No saying is truer than "The proof of the pudding is in the eating."

My plan of securing ability to locate quickly any note of either staff—*above or below*—has been tested with hundreds of students, even with a child of eight years, who learned them perfectly in *two* lessons. Perhaps the system may help others; so here it is.

After a student is *perfectly* acquainted with the extent and names of the keys, and is thus impressed with the recurrence necessary of the same A, B, C, D, E, F, G in different degrees of sound, teach that it was necessary also to *invent* some *signs* for these keys.

What is a way to identify *certain* keys with *certain* notes? This way is suggested as *thorough* and *not hard.* Notes are written on two staves called treble and bass, and each staff might be likened to a long ladder of five lines and four spaces with a short ladder above and a short ladder below, making it easy to *see its number,* in case of *each note.* Now, begin with the long ladder of the treble clef or staff and its first line is middle E of the *piano* and go up from it. Of course, as we utilize spaces—G, B, D, F, up the piano are other lines, and F, A, C, E are in the four spaces.

For the short ladder above, begin with G, in *first short space,* and add B, D, F, A for other five spaces. Then next to G is A on the first line and C, E, G, B, on the other lines. This brings you to the last high octave C—C which is written 8 va, and not necessary to learn.

Then going down the piano take D, first space below the treble staff, and other spaces will be B, G, E, C; and, starting back four lines, take middle C for the first line and others down, A, F, D, B. Thus you have provided with notes—not hard to memorize or read—keys ranging from the fifth short ladder line above down to the fifth below and each of them is a B and four octaves apart—another help to memory and playing.

For a good reason—not important to our purpose—notes must be written differently on the bass staff, but teach that every treble note known must be made a third higher for the bass note in corresponding long or short ladders of it. Then, it is easy for the student to change E, G, B, D, F of the treble long lines to G, B, D, F, A of the bass; and F, A, C, E, of the treble long spaces to A, C, E, G. But in the short ladders, for practical purposes, you need only to learn short spaces above B, D, F, A, and lines C, E, G, B, but down, short spaces below F, D, B, G, E and short lines E, C, A, F, D, B thus keeping B as the extreme of each staff and four octaves each and means of quickly recognizing every key by its note. It remains to call attention to the fact that the two lowest octaves of treble staff and the two highest octaves of bass staff mean identical keys to be recognized by their treble or bass notes, as the case may be.

Five Reasons Why You Should Study The Piano

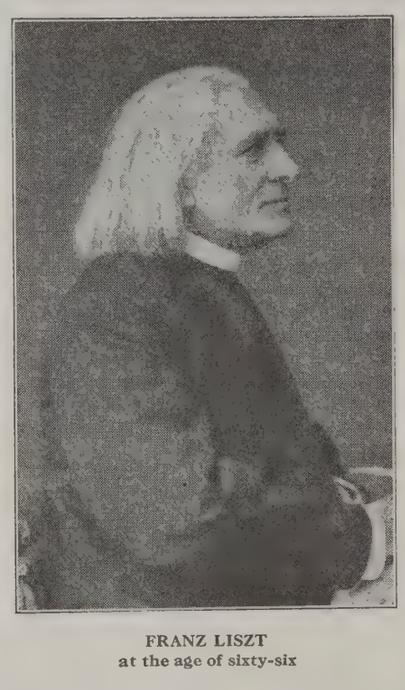
By Harold Mynning

Because it teaches you how to concentrate. "Music," says president-emeritus Eliot of Harvard, is the greatest mind trainer in the world.

Because it cultivates a sense of the beautiful. And a thing of beauty is a joy forever.

Because the whole progress of the human race since the stone age is wrapped up in the development of the hand. It therefore becomes plain that anything that tends to enhance the skillful use of the hand makes for progress.

Because music brings you in contact with the fruits of the most inspired minds of the ages. Like nothing else, perhaps, it teaches you the universality of man.



Because it teaches decision. Lack of decision is one of the bugaboos that keeps many back. If one practices correctly on the piano, the decision habit is cultivated. The brain gives an order and the finger immediately carries out this order. In time this is done with great rapidity. Indeed the study of any musical instrument is an object lesson in the importance of cultivating good habits and of not acquiring bad ones.

Nervousness

By Francesco Berger

WHEN A PUPIL, who can play a piece quite correctly, has, on a particular occasion played it very badly, bungled its passages and made a hash of it generally, she is prone to excuse herself by declaring that she felt so overcome by nervousness as to lose all power of command of her fingers. When this has happened, I have mostly endeavored to console her with the assurance that, after all, nervousness is the index of an artistic temperament; though even while administering this consolation, I have wished that if Mr. Artistic Temperament *must* have an "index" at all, he would select some other method of announcing his presence.

Nervousness betrays itself differently in different persons. A man who ordinarily is a quiet, almost serious one, has been known, when under its influence, to behave in quite opposite fashion. He will make jokes, laugh at his own witticisms, move parts of his anatomy into contortions, and play the fool generally. While another, though normally talkative and even funny, will, when nervous, become tongue-tied, absent-minded, or even forgetful of elementary etiquette.

FRANZ LISZT
at the age of sixty-six

Some of our greatest artists, on stage or platform, whose public performances have always been highly successful, have never been able to shake it off completely. Though free from it on one occasion, it will return on the next. If a singer, the voice will tremble; if a violinist, it will mar intonation; if a pianist, it will all but paralyze the fingers; and in all these cases lapse of memory is a super-added trouble.

What is known as "stage fright" does not affect novices only. A celebrated actor, when playing a new part, often succumbs to this overwhelming impediment; and a scandal-loving public is generally ready to attribute his hesitation to intoxication, which is as ungenerous as it is unfounded.

If we analyze what causes nervousness in an adult performer, we shall discover its most tyranical ingredient to be his acute sense of responsibility, which, of course, is absent in a child. The adult is never without latent fear that his performance may fall short of his best, or may not happen to be to the taste of that particular audience. If he fails, his next engagement may be jeopardized, his future earnings may be reduced, his dependent belongings may suffer. These considerations make him anxious, and anxiety makes him nervous. The infant-prodigy is a stranger to this mental worry. When once he has mastered the technical difficulties of his task (and being a prodigy this has not cost him much trouble) he has no further cares, and is as ready to play to two thousand as to half a dozen. If he can do it right once, he can do it equally well over and over again. And he does. He runs off the platform laughing and happy, though his performance had been a joke or a game.

Apropos the fatal effect of nervousness, I recall re ing an instance of it when I was myself a youthful pia forte desperado, and this it is: A certain Oriental pri possessed a magnificent pearl, which he wished to s pend from the neck of his favorite wife. He sent the most accredited jewel worker in his city and co missioned him to pierce the pearl at both ends, i pressing him with its enormous value and commandi him to be most careful in executing the job. He pro ised to promote him to the rank of nobility if his wo gave satisfaction, but threatened to behead him if spoiled the pearl. In fear and trepidation the craftsm set to work and had but partially succeeded when extra tremor of his hand shattered the gem. He hurr to his employer, flung himself at his feet, and w promptly beheaded, still clasping the fragments.

The tyrant sought high and low for another pearl equal beauty and value, and at length secured one. T time he sent to foreign lands in quest of an expert pearl piercing, and, having found one, entrusted his or to him, with the promise of a huge fee for his rewa and the threat of slow torture before death should fail to accomplish his task. The man did not dare thwart so powerful a prince, though he undertook order reluctantly. Day by day his anxiety grew, a his fears of possible failure increased. But lured by prospect of enormous wealth, he tried to overcome nervousness by potations of strong drink. These m his hands still more tremulous, until, by a very sligh miscalculated screw, the pearl split, and its fragme scattered the floor. He did not wait for the fulfilm of his dire sentence, but rushed to the nearest river a committed suicide.

Still bent on his purpose, the prince obtained a th pearl. But this time he sent for an apprentice to a to maker and, without promise or threat, handed him pearl, with the remark: "Here, my lad, just bore t holes in this little thing, and do it as quickly as y can." The lad, who had never seen a pearl and theref knew nothing about its value, did as he was bidden wh humming a tune, and returned to the palace early n morning to deliver the pearl, duly perforated at b ends. He was rewarded not only by a large fortu but was ordered to take possession of the lady, of wh during the intervals, her brutal owner had grown tir The moral of this tale is, I think, quite obvious.

Nervousness mostly results from insufficient prepa tion. If you try to do something with which you not familiar, you are likely to be overcome by the sin effort, but will cease to feel so if you accustom yours to make effort. To play a piece correctly once is guarantee that you will be able to do so the next ti Until you have played it correctly *countless* times in s cession, without one intermediate failure, you cannot confident that you have mastered it. Repetition, howe wearisome, is the only safe road to ultimate certain and certainty begets confidence; and confidence ann lates nervousness.

It took many days to build Rome; it needed confide to sail across the ocean and find the land which Col bus *knew* was there; and William Tell could never h hit the apple on his son's head, had not his hand b steady, his aim perfect, and his heart a stout one. C petence and confidence are twin-sisters, in whose voc ulary there is no such word as "failure."

Do You Know

THAT the first concerts in London, at which an audie was admitted for an admission fee, were those of J Banister, between 1672 and 1678?

That the Concerts Spirituels of Paris have been in c tinuous existence since the first one on March 18, 1 except for a lapse from some time in 1791 to 1805? T were founded as a means of entertainment on chu festival days when opera could not be given.

That Frederick the Great, like the young Handel, be his musical studies in secret and with his mother's c nivance, contrary to his father's command?

That *O Deathe, O Deathe, rock me asleepe!* written Anne Boleyn shortly before her execution, was the f known song to be written with an independent accomp ment?

That as early as 250 B. C. Ctesibius of Alexandria vented an organ which embodied most of the vital pri ples of the modern instrument?

That fifteen Bachs became sufficiently famous as m cians to leave distinct records in musical history?

That the first Sonata for the piano was written Johann Kuhnau who was the predecessor of Bach as ganist of St. Thomas's Church of Leipsig?

"Get a Musical Education First"

An Interview with the Internationally Famous Dramatic Mezzo-Soprano

MME. MARGARETE MATZENAUER

Biographical

me. Matzenauer was born at Temesvar, gary. Her father was an orchestral conduc- nd her mother a dramatic soprano. Her first lse was to become an actress, but with the lopment of her voice she was placed under nstruction of Mme. Neuendorff, in Graz, and Antonia Mielke and Franz Emerich. Her debut occurred as Puck in "Oberon" in the Opera at Strassburg. This was followed by a three-year engagement. From 1904 to 1911 she sang the leading contralto parts at the Court Opera in Munich and at the Prinz-Regenten Theatre. In 1911 she sang at Bayreuth. In the same year she made her debut at the Metropolitan Opera House in New York. Since then she has sung at Buenos Aires as well as London, Paris, Madrid, Berlin, Vienna, Hamburg, Frankfurt, and has also devoted much of her time to concert tours all over the U. S. A. Few singers of her time have vied with her in the union of opulent voice with rare dramatic instinct.

GET A MUSICAL EDUCATION FIRST.' That is a sentence which should be written over the door of every vocal studio and every school where voice is taught. There umberless singers who have been crippled through- heir entire careers because they have not had any ıg of the background of music. In their childhood, have perhaps aspired to become singers. Some parent has discovered what he believed was an ıal voice. Then either one of two things happens child is sent to a teacher with experience and a ience, who tells the parent that it is not safe to vocal instruction in childhood; or the child is sent ignoramus or a charlatan, who will do anything t money and actually tries to teach the child things ı should be given only to the mature person.

ıis is particularly the case with girls. The girl sings about in her childhood in a natural way, rarely any harm to her voice. Let her fall into the hands ıe ignoramus or the charlatan—particularly the atan with a method—and a burden is placed upon oice. The child's pride is aroused. She likes to off before her friends. She likes to "hit" high and does so all the more when she finds that they he sure bait for ignorant applause. Before she is old enough for proper instruction in singing oice will already show signs of wear. Now and a particularly strong voice survives; but there are rous instances of children who did show a great of promise whose voices have been destroyed by ant teachers. It has always seemed to me that teen or eighteen years of age is sufficiently early ıe girl to commence actual vocal study.

o actual time will be lost by waiting until sixteen seventeen. In fact the girl should keep very in- ously employed every day of her youth in getting sical background. Music has advanced so enor- y that it is difficult to get the right kind of a ation in ten years. In the same time the girl is sed to get a good general education, keep her health ıave a little of the fun to which all young people ıtitled.

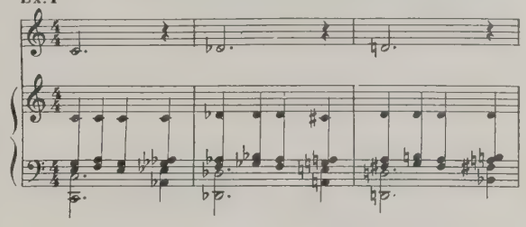
y strong advice would be to have all vocal students with the piano at about the age of six or seven ier if the conditions are propitious). After a knowl- of the literature of the piano has been secured, so he student can play with facility, attention should ven to the operatic scores. It is assumed that the nt has also had lessons in harmony and knows hing of the instruments of the orchestra.

Study Piano First

MY FATHER was a conductor at the Opera and my mother was a prima donna. Fate had not been ther kind to them; and, owing to various political tions, positions in the opera houses were not any ecure. It was for this reason that it was decided was not to follow a stage career. My father and r expected me to become a pianist. Therefore, a very careful training. I was not advanced to the so stage, but I was able to play such things as in *Nocturnes* and Beethoven *Sonatas*. This has of enormous advantage to me all my professional In the first place, I have not been dependent upon ich;' and in the second place the piano is an instru- which gives one such a fine insight of the whole round of music that it enabled me to learn scores ughly and accurately in far less time.

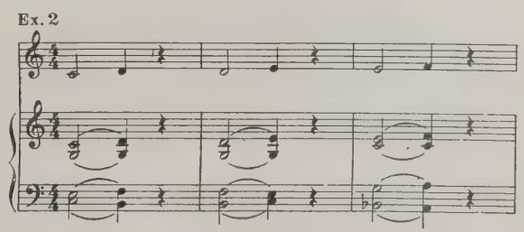
oreover, it is extremely difficult for the singer to the piano later in life when there is so much else ırn and so many other things to think about. There- if you have a daughter whom you expect to have ne an opera singer at some time, do not fail to her a thorough drilling at the keyboard. My father to play with me such works as the *Euryanthe Over-* and the *Meistersinger Vorspiel* in four-hand arrange- ments. Thus I had the opportunity early in life of absorbing certain musical characteristics which can come only from long experience with operatic music.

"One of the greatest curses of the operatic stage is the coddling of mediocrity. There is no profession in the world more terrible than that of opera, if you have not climbed to the top of the ladder. Unless the child shows indications of being something very extraordinary, better not think of a stage career. Get a fine musical education, of course, that will be a delight and a joy as long as you live, but keep away from the professional side of opera. I believe in this firmly. My daughter does not show distinctive operatic talent, and for that reason I am not giving her such training. It is far better for the girl to be happily married and at the head of a fine home than to struggle through the terrific battle of operatic life, unless she is endowed by nature with exceptional gifts.



"One other word of caution seems necessary in addressing American girls. They do not seem to realize that the voice has to be trained and built like the muscles of the athlete. The strain of singing in opera is nothing short of enormous. Only the very best voices, housed in strong bodies and carefully and thoroughly trained, will stand this strain. The average parent has no idea of this. Let him stand in a huge armory and try to talk for an hour in a loud tone of voice and he will grasp what I mean. The American girl who steps from the studio (after a few short months of training) to the operatic stage, is very likely to be doomed to tragic disappointment. She should have acquired her strength under a skilled trainer, just as the athlete trains in the gymnasium and on the track. The impatience of the American girl and the American parent to get quick results and sudden fame has been responsible for many failures. Wait! Don't hurry! There is plenty of time! The period of study may be expensive, but it is far more expensive to fail.

"My mother, fortunately, had been a pupil of Mathilde Marchesi, and she started me with my first vocal work. Some readers may possibly know the famous Marchesi *Elementary Exercises for the Development of the Voice* (*Exercises Elementaires Gradues pour le Developpement de la Voix*). Marchesi believed that the first exercises should be in half-tones, thus:

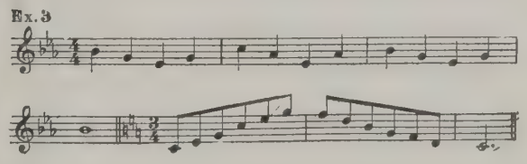


MADAME MARGARETE MATZENAUER

Ex. 1

"In this way each scale within the range of the voice was treated, the exercises being sung very slowly indeed. This chromatic study of the scale was excellent for intonation—that is, correct pitch. It is possibly better than starting with the regular scale tones. The regular scale was, however, Marchesi's next step, in an exercise like this:

Ex. 2



The Teacher's Ear

"THESE Marchesi exercises advance to the trill, the mordent and the grupetto, and, while not difficult technically, do nevertheless embody all those simple things which are, after all, the most difficult to do when they are done well. While the exercises in themselves are important (and the Marchesi Exercises may be obtained in many editions), the manner of singing them is more important. Voice is one of the arts in which a teacher in person seems imperative. Few artists succeed in doing entirely without a teacher. One's own ear is treacherous. The teacher who fearlessly points out faults and suggests remedies for their correction often hears the singer far better than the singer does herself. Nevertheless, one must form the habit of incessant self-correction and self-analysis. As long as the singer lives there are the daily problems of how to improve, how to advance in art. Without these the life would be very dull and uninteresting indeed.

"Rest is very desirable for the voice. I know that there are singers who contend that they exercise their voices every day, even while on their vacations. I don't. I am convinced that if the voice is properly trained one may take even a long vacation and resume work again after a little preliminary practice, with definite gains for the voice. One does not forget how to walk, or how to swim, or how to speak; and if singing is natural, one should not forget how to sing.

"Personally, I believe very greatly in humming exercises, especially if those exercises are done so that all strain is removed from the throat and the tones placed high in the pharynx and nose so that they ring naturally. Such an exercise as the following, sung easily and naturally, but with sonority, always proves beneficial to me:

Ex. 3

"Even after the singer's voice has been thoroughly trained, there still remains the matter of getting a repertoire—a truly enormous task for the dramatic mezzo-soprano in these days. The lyric and coloratura sopranos of yesterday sang music that called for very little dramatic action and comparatively little study outside of gaining a flawless coloratura and a lovely tone. The dramatic soprano must be an actress of power to succeed. She must have a vocal technic to sing Wagner, Strauss, Moussorgsky and other composers of extremely difficult and intricate music. This takes years to acquire. I consider the seven years that I spent with Felix Mottl, in Munich, the most valuable in my career. This great disciple of Wagner knew just what the master wanted every moment the singer was on the stage. He was most exacting in securing it. The training was very hard, but invaluable.

"In the matter of acting, a great deal is due to the stage director. Anton Fuchs, in Europe, and Wymetal, at the Metropolitan, have been priceless guides to me. Such a rôle as that in 'Jenufa' demands as much histrionic skill as vocal and musical skill. One has to learn the score so thoroughly that one can give all one's emotional strength to the acting part of the work. Wymetal rehearses exhaustively, and his productions move with the sureness and naturalness of the finely staged drama. In fact, if the music were taken away entirely, they would stand as powerful dramatic productions."

Self-Help Questions on Mme. Matzenauer's Article

1. How have the careers of many singers been crippled?
2. Does the girl vocal student who waits until the age of sixteen or seventeen lose time?
3. What should vocal students study at the age of six or seven?
4. What is one of the great curses of the operatic stage?
5. Are humming exercises valuable?

Our Musical Esperanto

By Alfred V. Frankenstein

One of the minor developments of modern music that, both when performing and when reading program notes, has been at times disconcerting to the writer, is the tendency of composers to write their tempo directions in their native languages.

To be sure this is no new thing. But never before in music has the custom been so widespread. Schumann frequently wrote his directions in German, but not until after Wagner did the custom become general.

The objection to this sort of thing is easy to see. If every composer wrote his tempo directions in his native tongue a musician would have to know English, German, French, Spanish, Hungarian, Roumanian, Bohemian, Gælic, Norwegian, Swedish, Russian, Polish, Hebrew, Hawaiian, Welsh, Dutch, Portuguese, Arabic and a certain amount of Japanese and Sanskrit, to get their meanings.

There exists a musical Esperanto—the Italian language. Italian tempo directions are understood from Madagascar to Maine, from New York to New Guinea. *Allegro* has a definite meaning to all musicians, regardless of race, color, religion or political convictions; whereas *fast, lebhaft,* or *vif* may not mean much in Moscow.

Another thing; *allegro* implies a more or less definite speed, sanctioned through long use of the word. *Fast, lebhaft* and *vif* are even more vague than the Italian terms, which are misty enough.

The inconsistencies of the practice are manifest. Throughout Wagner appear such directions as *Ein wenig rallentando.* He uses *ausdrucksvoll* and *espressivo* during the course of the same tune, a few bars apart. And naturally he uses such nuance indications as *ff* and *pp* and *sfz,* as do all those who follow his example in this matter, which is the crowning inconsistency of all, for these letters are simply abbreviations of Italian words.

On the other hand there are points of interpretation that must be written in a piece of music the Italian of which is not universally known. Leaving aside for the moment such directions as Erik Satie's "let the blood flow from the nostrils," a good example can be found in Francis Poulenc's Sonata for clarinet and bassoon, wherein appears the phrase *en dehors,* literally "out of doors," signifying that the clarinet part should stand out, well separated from the bassoon. Some of Scriabin's directions, such as *haletant aile* ("breathlessly winged") and *mystericux, tragique, legendaire,* are of this class also.

But these are interpretative directions; cases like the above are not very often in occurrence; and it is the tempo directions with which these lines are concerned.

On Temper in Piano Teaching

By Clement Antrobus Harris

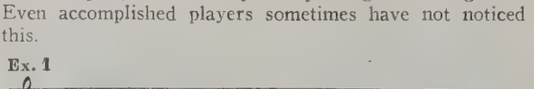
Undoubtedly teaching, and especially of an art like music, is a nerve-racking occupation. But even with this we must recognize that ill-temper implies blame. However, while all errors need correction, only those call for blame which are due to some such faults as laziness or carelessness; for, as a rule only a negligible number of pupils ever make a technical mistake on purpose.

While want of practice and slipshod study are certainly very common, defects in the system of teaching are equally so. In music the chief of these may be summarized as follows:

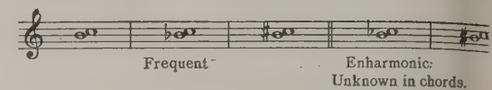
(1) The purely arbitrary character of musical notation which cannot be clear to the most intelligent pupil, without explanation.

(2) The inexactitude and confusing nature of certain features of notation.

(3) The lack of any clear explanation as to when two adjacent notes, played simultaneously, are wrong and when not; or, in other words, the lack of any distinction between a discord in a general and in a technical sense.



(4) The inadequate explanations given in many instruction books, by individual teachers, and in proper grading of the music given.



How arbitrary our nomenclature is may be seen in the fact that so philosophical a people as the Greeks called the sounds "high" which we call "low," and *vice versa.* The reason for this was that the term "high" was applied to the note produced by a *long* string which, because stretched from the ground upwards, reached *high.* So there is nothing stupid in a beginner playing a scale upwards when told to play it downwards, unless these purely metaphorical terms have been clearly explained to him.

Then, could anything be more illogical and confusing than the employment of a single sign, a curved line, for *seven* different purposes:—as a slur, for legato; over dots, for semi-staccato; as a tie, when between notes of the same pitch; to indicate *portamento,* in singing; to indicate that two or more notes are sung to the same syllable of the text; to indicate bowing, for the violin; and as a guide to phrasing. If the teacher is to stamp his impatient foot, it should be at least sometimes against the authors of our notation system, and not against the unfortunate readers of it.

Again a Sharp, Flat or Natural sign each covers or touches several lines and spaces; and, unless *told* that only the middle part (the open space) of the sign affects the note, there is nothing stupid in a beginner reading such a sign and applying it to the wrong line or space. This is particularly the case when an inflection sign is applied to one of two conjunct degrees in a chord. Even advanced pupils frequently err in applying these. Better than losing one's temper in such a case is to explain that in the great majority of such instances the inflection throws the notes (tones) farther apart and but very rarely brings them together. Even accomplished players sometimes have not noticed this.

Ex. 1

Perhaps nothing is more exasperating during a day's teaching than to find a lot of pupils making same mistake. And yet this is precisely the class of take which should *not* excite anger. Obviously, which is common to humanity cannot be due to vidual dullness. Far better than sharp words, in cases, is the habit of analyzing them. The common the mistake, the more interesting and u will be such a diagnosis. One becomes so absorbe the investigation as to forget to be vexed.

A common error of the average student, when meeting A-*sharp,* is to play it as A-*flat.* Getting about it is of no use: they all do it. Therefore, must be some natural reason for the mistake. No we need to search long for it. The upper one o group of three black keys is the *fifth* in the orde sharps and the *first* of the flats to appear in the si ture. The learner has thus fixed it in his min *B-flat* long before he comes across it as *A-sharp;* when this latter note confronts him he thinks it mu some other black key.

Moral faults are chiefly evidenced by a pupil ma the same mistake many times. Yet, even in this analysis is necessary. For example, a careful with a small hand may repeatedly underspan a chord.

Wrong notes also call for careful distinction. note may not be what the composer wrote, and yet be what he *might* have written, and may sound To play such a note without detecting the err much less culpable than passing over an ill sour mistake. In this connection it is obviously unfa lose temper with children for not detecting *error* discords when many *intentional* discords occur in music given them, unless the latter have been care explained to them. Not an easy task; for, with a to avoiding difficulties of execution, objectionable monies are more common in children's music tha that intended for adults.

Economy of nervous force, and therefore contr temper, are as necessary for the teacher's own sal for that of the pupil. Much irritation is due sole misunderstanding and will be avoided by clearnes to the note or passage to which reference is made

Students who have made a mistake in one hand and are checked, so often alter the *other* hand v was quite correct, that it is best to begin correc by naming the hand concerned, as, "Right hand upper note is E, not F." But perhaps the frequent cause of friction between teacher and t is the constant occurrence of passages which begi same but end differently—a characteristic of music. Here the student should be trained to ca observation.

Finally, philosophic equanimity is best obtained b combination with physical well-being. There is pe no better prescription for an irritable temper th plenty of outdoor exercise.

How to Get Acquainted with Your Piano

By Thomas A. Hendricks

When the piano tuner comes to tune your piano do you do as most others? Do you show him the piano and then get out of sight until he has completed his task? If so, you make a big mistake.

If you will let him know you are interested he will show you a number of things about your piano that you possibly have never known.

While he has the piano apart, have him to show you just how the damper and soft pedals operate, how the hammers "let off," how the dampers are released at each stroke of a key, and a number more of interesting details about the way the action performs its many duties.

Watch how the rubber wedges are used to mute strings; have him let you listen to the tuning for the first note is tuned; pay attention to the settin the temperament, as this is the most important p of the entire tuning. By listening carefully you easily hear the "beats" in the major thirds and son the other intervals.

If your piano is a "player" you will find any an of surprises as to the way in which a vacuum is to take the place of the fingers in doing technical st

Do not be afraid to ask questions, as most tuner interested in showing what they can about their v

---

The writing of scales, a valuable part of the musician's education, can be made interesting by turning the exercise into a practice record. One note of the scale is added for each hour practiced. At the rate of one hour a day, it takes eight days to write a scale up one octave, or fifteen days to go up and down. As soon as one scale is written, the next scale in order is started, unt major and minor scales have been completed. Rew may be given at intervals upon the completion of a s fied number of scales, and a prize offered the pupil finishes the scale first.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered Department. Full name and address must accompany all inquiries.

PROF. CLARENCE G. HAMILTON

Inaccurate Reading—Chords

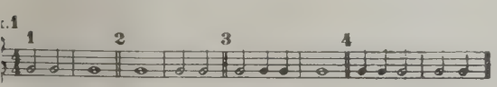
(1) I have a boy of ten who is very talented, but who is a hard pupil to manage. He plays much by ear, and, when sight-reading, either skips notes or plays them incorrectly. Is it best to insist on correct reading, or could you suggest some remedy?

(2) In what manner should one present chords to pupils? I have been teaching the three important chords of each key, namely, tonic, dominant and sub-dominant, having the pupils write them.

E. G.

1) Many would-be pianists have been permanently ed as players by contracting careless habits in child- d. Hence I say, yes, by all means insist on accuracy ccuracy of notes, of time, of fingering of touch; and the sight-reading go until careful habits have been ily established. Have your pupil practice each new gnment for the first week with the hands separately, nting out loud continually. When he puts the hands ether, let him practice each section of two or four sures by itself, until he plays it as nearly perfectly ossible. Finally, he should memorize much, at least, he music that he studies.

2) The chords of which you speak may be treated a variety of ways, first in "broken" forms, with a le position of the hand, and then in longer arpeggios. haps the best chord exercises of all are those formed the diminished-seventh chord; since in playing this rd all the fingers are employed, at even distances rt. Here are some samples of the figures that may be l with a single position of the hand:



ch of these exercises may be indefinitely repeated, inning in turn on each white key.

Ear-Training

Could you give me any help as to what simple ear tests could be given in the first two or three years of work, to the average pupil who takes a half-hour lesson?—D. M. B.

Devote about five minutes of each lesson to ear-train- playing certain progressions, and having the pupil te them in his note-book, from hearing them played. ese progressions may be of three kinds: (1) pure thms, (2) intervals, (3) the combination of these in simple melodic fragments or, finally, in chord gressions. The first two kinds may be alternated in early lessons.

Under (1), you may begin with such examples as se, having the pupil count as you play, and then write es of the proper value:

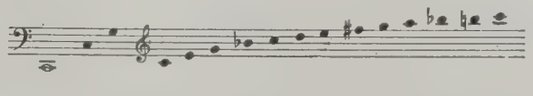
For melodic intervals (2), begin with such as these:

Gradually these exercises may become more complex, l you advance to the third stage, for which materials may easily be derived from studies or pieces on which the pupil is at work. Take little fragments of melody from these, and play them to the pupil either exactly as they are printed, or, better still, with slight changes; and have him write them with the proper signature, note-values, and notation in general. If you are careful to make these exercises at first very simple, you will find it easy to advance soon to more complex problems.

Worn Thumb Nails

Both of my thumb nails are worn on the sides, so that I have difficulty in securing much strength of tone, or in playing octaves. I am an advanced pianist, and have had this trouble for the past ten years. What do you advise?—I. K.

Since your question seems to call for expert medical advice, I have submitted it to a physician, who replies as follows:



A protective covering of flexible collodion, obtainable at any drug store, over the sides of your thumb-nails may in time, through lessening the direct wear on the nails themselves, overcome your difficulty. The growth of a nail is very slow, so that the collodion should be kept on by renewing it when needed, over possibly a period of some months, so that a whole new nail may grow without the wear on the sides which your present nails have had. The fingers should be washed thoroughly before the collodion is applied. Should the condition of your nails be due to any defect in nutrition, perhaps your physician may be able to suggest a special diet that will help matters.

The Natural Chord

Will you please describe, explain and illustrate in full "the chord of nature," so that the amateur harmony student will grasp its meaning?

L. C. O.

A sounding body vibrates not only as a whole, but also in integral parts. For instance, a vibrating string, besides giving its lowest, or *fundamental* tone, divides up into halves, thirds, quarters, and so on; and each of these divisions sounds an upper, or *overtone*, which bears a fixed relation to its fundamental—the whole forming what is called the harmonic series. For the fundamental C, the first fifteen overtones rise in order as follows:

The combination of a fundamental with its overtones gives rise to the *natural chord*. Only the lower overtones are employed in the chords in common use; although modernist composers—such as Debussy and his followers—are experimenting with the use of the more remote overtones in their harmonies.

Note that in our modern "tempered" scale, all the notes of the above harmonic series, except the octave, are slightly out of tune with the fundamental.

Self-Instruction

A girl of fourteen writes as follows:

I have studied the piano for four years with a teacher who gave me such material as Köhler's, Czerny's and Concone's studies, Kuhlau's *Sonatines*, and so forth. Then for a year I took a correspondence course and graduated, receiving a special diploma for my good work. From this course I acquired the knowledge of the theory of music. At present, since I cannot afford to study with a good teacher, I am studying by myself. I am playing studies by Hanon, Concone and Czerny. Will you please give me your opinion concerning this material, and also suggest music to add to this list? S. B.

While the studies which you mention are valuable, especially for technical drill, you should supplement these by others which have more musical value, such as Heller's *Fifty Melodious Studies*, Op. 46; studies by A. Dorn, Op. 100, Book 2; and after these MacDowell's *Twelve Etudes*, Op. 39, of more modern style than the preceding. You are also ready for the sonatas of Haydn, Mozart, and the easier ones of Beethoven, collections of which are readily available at a reasonable price. For modern pieces, try *Romance in D-flat* by Sibelius, *Menuetto Vecchio* by Sgambati, *May Night* by Palmgren and *Air de Ballet*, Op. 36, No. 5, by Moszkowsky.

If you practice systematically a given time each day, and assign yourself a definite lesson each week (studies and pieces), you ought to make good progress, even without a teacher.

Pipe Organ Versus Piano

Ten years ago I received a teacher's certificate, and two years later I started teaching in the afternoon. During these eight years I have also been organist, having a small pipe organ.

Here is my problem. For a year I have been free to take up my neglected practice, but find that I can hardly hold out to play a piece through, since my arms and shoulders tire. After nearly a year of diligent practice, an hour or more a day, I still have the cramps in my right hand and my arms get very tired when I play such a piece as Chopin's Polonaise. I also find that my touch is heavier since playing the pipe organ. How can I regain my old endurance?

MRS. P. J. T.

Evidently your organ has the old tracker action which demands considerable strength to depress the keys, especially when the manuals are coupled. Result—you have stiffened your wrists so thoroughly that they are in a rigid condition when you attempt to play the piano. Consequently, they must be freed again before you can hope to perform with any degree of ease.

Here is an exercise which should be repeated many times each day:

(1.) Sitting easily on the piano-stool, let your right arm hang loosely by your side. To make sure that it is really relaxed, push the arm down from the shoulder as far as it can go, so that the fingers approach as near as possible to the floor without changing your general pose.

(2.) Slowly raise the forearm from the elbow higher and higher, with the hand dangling from the wrist, until the hand hangs over the keyboard, with the fingers an inch or so above it.

(3.) Let the wrist gradually descend, sounding gently and sustaining a key on the way down, until the wrist is very low, and the hand hangs suspended from the key.

(4.) Return slowly to the position in No. 2.

(5.) Let the forearm descend till your hand falls gently into your lap, always hanging from the wrist.

(6.) Repeat all these motions from ten to twenty times, hand hanging above the keyboard, then hanging from a key, then up again, then to your lap.

(7.) Perform a similar set of motions with the left hand. After the motions are thoroughly mastered, they may be done by both hands at once.

Now for the application.

Every time you start to play *anything whatever* on the piano, raise the forearm up as in No. 1, and sound the first note or chord by letting the fingers sink into the keys. Think of keeping the wrist loose all through your performance; and at its conclusion, raise the forearm as in No. 4, and then let your hand fall loosely into your lap.

Remember this: if your wrist is kept loose enough, you need have little fear of becoming muscularly tired while playing a piece. Such fatigue, indeed, is almost invariably a sign of stiff wrists.

I advise you also for a time to avoid playing music with many octaves or "stretchy" positions—such as Chopin's *Military Polonaise*.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

WHEN MELBA WENT BROKE

MELBA'S reminiscences now running in "Liberty" contains an amusing account of a "bluff" she put up when, through her own generous refusal to insist on a literal interpretation of her contract with the Metropolitan, she ran out of funds.

"After seasons at Paris and London and Sicily, where, during the spring of 1892 I appeared in 'Traviata' at the opera house in Palermo, I want back to Paris, en route, as I thought, for America. But the Metropolitan Opera House had been destroyed by fire. Mr. Abbey and Mr. Grau told me that as there had been no clause in my contract concerning delay, I should be legally justified in demanding the whole of my salary. I told them that as I hadn't sung, I didn't expect to be paid. They looked relieved.

"And then I suddenly realized that I was in a quandary. I had two hundred pounds in the bank, no prospect of an immediate engagement, nothing. So I said to myself:

"'I'll gammon. Nobody shall know I'm hard up. I shall go to Nice.'

"I went to Nice. I went with two maids instead of one, and took the best possible rooms in the best possible hotel. What would have happened but for a stroke of luck, I do not know. Probably I should have languished in a debtor's prison. But it happened that Mr. Grau, who was one of the directors of the Nice Opera House, was in Nice. He said to me, 'Would you like to sing here?'

"With assumed indifference I replied that I should not mind, but that I imagined all artists would already have been engaged.

"'Oh, I'm sure they'll be delighted,' he said, 'and I can get you four thousand francs a night.' I waved him away. 'I wouldn't think of singing for less than five thousand,' I said.

"Well, I was given my five thousand. And I often think that it was five thousand francs' worth of bluff."

As an old man, Haydn told the choir-boys of Vienna: "Be good and industrious, and serve God continually."

A YANKEE BOUQUET

IN "My Musical Life" Walter Damrosch tells a good story of Jean de Reszke, the brilliant opera singer, of whom he says, "It was a joy to work with this man. Great artist, courteous gentleman, generous colleague, and (what is most valuable to a conductor) indefatigable at rehearsals. . . . He was a marvelous mimic, and used to give us delicious imitations of the various artists of the company coming into his dressing-room to offer their congratulations after his first appearance.

"De Reszke would first depict the French tenor colleague who in polite, reserved, and even patronizing accents, would say:

"'Vraiment, mon cher, vous-avez chantés très bien ce soir, très bien, je vous assure!"

"Then would come the German baritone in a double-breasted frock coat and punctiliously polite manner, saying:

"'Erlauben Sie mir, Herr de Reszke, Ihnen meine grosse Hockachtung aus zu drücken für den wirklich ausgezeichneten Genuss den Sie uns heute Abend bereitet haben.'

"He was followed by the Italian baritone, who would rush in impetuously and, kissing Jean on both cheeks, would exclaim:

"'Caro mio, carissimo!' followed by a flood of Italian words.

"Then came the real climax of the scene. Enter the electrician who, thrusting a 'horny hand of toil' into that of de Reszke, would exclaim in real Yankee accents:

"'Jean, yer done fine!'"

STORIES OF BEETHOVEN'S "FIFTH"

"OF Beethoven I found a reminiscence in Schönbrunn," wrote Louis C. Elson in his *European Reminiscences,* "the beautiful palace just outside the city (of Vienna). It was an old tree in the garden, with three branches separating from the trunk, about four feet from the ground. These three branches form a natural seat where Beethoven did much of his composing in 1823-24. . . . I can readily imagine his working thus in peaceful solitude, for I visited some of his temporary residences in Vienna and they were in rather noisy localities. It is said that once he was led, through this fact, to write one of his most striking figures. It was in the dead of night, and a drunken man had been locked out of his lodgings across the way. The clatter soon awakened even the semi-deaf composer and he listened; 'Bang-bang-bang-BANG!!' went the irate and homeless lodger, and then followed a pause; no result; again—'Bang-bang-bang-BANG!!' until finally Beethoven was struck with the emphatic rhythm, and down it went into the familiar note-book, and that 'Bang-bang-bang-BANG!!' became the Fifth Symphony. But my old musical friend told me that they have another anecdote about the self-same figure in Vienna, which is that Beethoven was drumming on the window-pane of Artaria's music store one rainy day, when he suddenly jotted down the rhythm made by his own four fingers. . . . But the anecdotes of this particular figure are almost endless, the most pathetic being that Schumann imagined that he heard it rapped out at a spiritual seance, and fancied that Beethoven was trying to communicate with him."

RUBINSTEIN'S TEACHER

RUBINSTEIN in his Autobiography pays warm tribute to Villoing, the only instructor in piano playing he ever had, according to his own statement, except for his mother. "The Grünberg's told her of Alexander Villoing," writes Rubinstein, "who at that time was thought to stand at the head of his profession in Moscow. He was invited to the house, and I think had known us before, when we lived beyond the Pokrovski bridge. However that may have been, he came and heard me play. My mother then told him how she earnestly hoped that he would consent to become my teacher, but that owing to our limited means she was unable to pay a large price for lessons.

"Villoing hastened to reply that he was not pressed for money, and would willingly undertake my musical education free of charge. And with him my lessons began and ended, for no other teacher did I have.

"In my eighth year I began to study with Villoing, and in my thirteenth my musical education was completed; and, as I said before, I had no other teacher. Villoing especially devoted much time and pains—with most successful results—to the correct position of my hands. He was most particular in this regard, as well as the care he bestowed on the production of a good tone.

"To him and to no one else am I indebted for a thorough, firm foundation in *technic*—a foundation which could never be shaken. And let me here affirm that in all my life I have never known a better teacher."

THE IMPORTANCE OF ORCHESTRATION

IN HIS unique book, "Principles of Orchestration," Rimsky-Korsakoff observes that "It is a great mistake to say: this composer scores well, or that composition is well orchestrated, for orchestration is *part of the very soul of the work.*

"A work is thought out in terms of the orchestra, certain colors being inseparable from it in the mind of its creator and native to it from the hour of its birth. Could the essence of Wagner's music be divorced from its orchestration? One might as well say that a picture is well *drawn* in colors.

"More than one classical and modern composer has lacked the capacity to orchestrate with imagination and power. The secret of color has remained outside the range of his creative faculty. Does it follow that these composers do not *know how* to orchestrate? Many among them have had greater knowledge of the subject than the mere colorist. Was Brahms ignorant of orchestration? And yet, nowhere in his works do we find evidence of brilliant tone or picturesque fancy. The truth is that his thoughts did not turn towards color; his mind did not exact it.

"The power of subtle orchestration is a secret impossible to transmit, and the composer who possesses this secret should value it highly and never debase it to the level of a mere collection of formulæ learned by heart."

With all due respect to Rimsky-Korsakoff, who was essentially a musical "colorist," he seems to have failed to differentiate between music conceived for its effect upon the hearer in terms of "pleasure," and music designed to express an idea in which "truth" is the aim, and the hearer left to find the meaning for himself. The finale of Beethoven's "First Symphony" contains a theme obviously planned to "sound well" on violins. In the Fifth, "Fate knocking at the door" is the idea, and the theme given to whatever instruments happen to be best adapted to the needs of the moment.

"That there are worthy American works becomes perfectly apparent to the seeker after them; but that we should espouse the cause because of patriotic reasons is wholly undesirable. Patriotism and art are not fused satisfactorily. Nevertheless, I believe that every serious teacher and student owes a certain duty to the American composer. This is no more than he owes to his art in general."—PETTIS.

ARM! ARM! YE SOLOISTS!

THOSE who attend a modern symph concert frequently object to the neces of wearing evening-dress; but in the g old days they would have had to dress though going to battle, and the artists the stage were apparently under the sa necessity. J. Cuthbert Hadden, in his graphy of Haydn, gives a brief but vi picture of what concert-going was when Haydn gave the first of all s phony concerts in the London of 1791.

"It was the day of the Sedan Ch when women waddled in hoops like that the lady mentioned in the *Spectator* v appeared 'as if she stood in a large dru Even the royal princesses were, in Po phrase, 'armed in ribs of steel' so w that the Court attendants had to as their ungainly figures through the do ways.

"Swords were still being worn as regulation part of full dress, and spe weapons were always provided at a gr concert for the use of the instrume solo performers, who, when about to pear on the platform, were girt for occasion by an attendant, known as 'sword-bearer.'"

Add to this, of course, the fact t neither gas nor electric lights were thou of. Candles or torches were univer and the preference was for closed w dows and doors. Outside, the streets w either cobbled or inches deep in mud (peculiar, sticky clay of London str even to this day!). Braziers with bu ing logs were often used for street-lam but in addition one hired "link-boys" w torches to accompany the Sedan Chair.

"The power of song is as deep as i universal. It gives a liberal course many noble enthusiasms wrongly frauded of expression by the coward of conventionality. It enlivens labor society, exalts religious feeling, transfigures even the crime and hor of barbarous war."—Fanny Raym Ritter.

ORCHESTRAL COLORS

MANY musicians have speculated on "colors" of the orchestra in relation to ors of the solar spectrum. The lates Dan Godfrey, in his "Memories of Mus He compiles an elaborate table descrit the appearance of the orchestral ins ments, their "timbre" and their rela "color" effects, which, to save space modified to the following form:

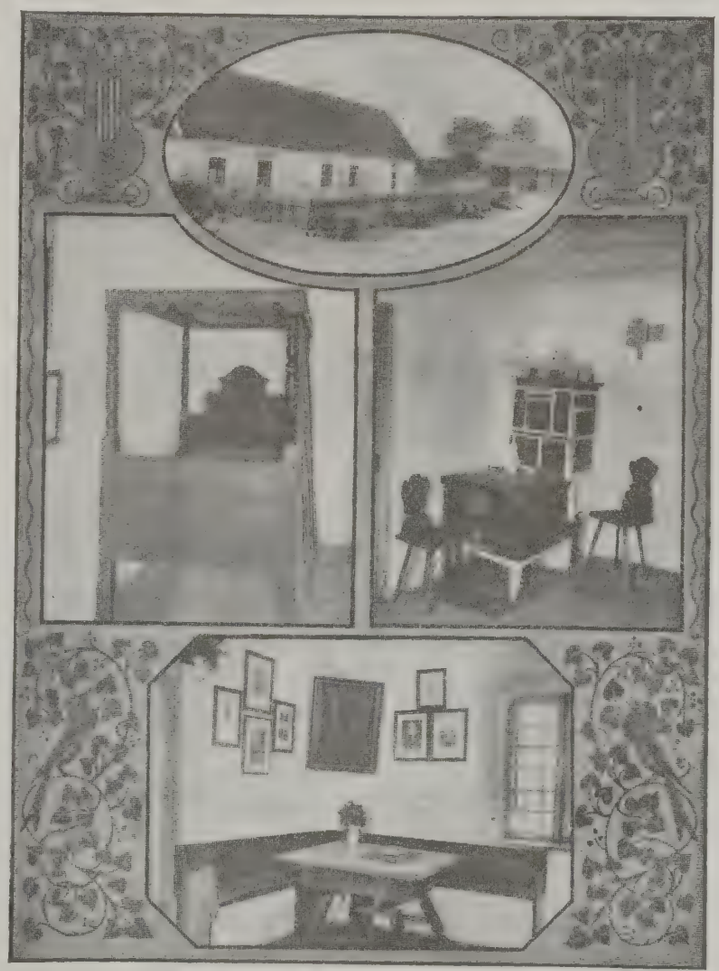
Flute	Bl
Piccolo	Light cold blu
Oboe	Gree
Cor Anglais	Gree
Clarinet	Rose pink to Blush-re
Bass-Clarinet	Rose pink to Blush-re
Bassoon	Brown and Gree
Double Bassoon	Brown and Gree
Trumpet or Cornet	Dazzling Sunligh
Horn	Yello
Trombone	Scarlet and Orang
Tuba	Deep Orang
Percussion	High Ligh
Strings (violin)	Grey Bl
Viola	Grey Bl
Violoncello	Groundwor tinted by woodwind, brass, etc.
Double-basses	Groundwor tinted by woodwind, brass, etc.

This is amusing, but not infallible. M of us will recognize in the strings a meleon-like capacity to change "co with what is required of them. The r tion between sound and light is closer we might suppose. Radio experts rem us that "radio frequencies" are in ma matical proportion to "audio frequenci

A Personal Recollection of Liszt

By CLAYTON JOHNS

Professor of Pianoforte Playing, New England Conservatory



O MUCH has been written and said about Liszt, it seems hardly worth while to add anything more; nevertheless, it may interest and amuse some people to hear a personal experience which ened to me long ago.

ıad never been in Europe, but having decided to go for the purpose of continuing the study of music, 382, and before settling down in Berlin, I took a minary canter through England and Scotland. ng the English Lakes I met a musician by name of t who really shaped my course in Berlin. Mr. t gave me a letter of introduction to Joachim, the violinist. On arriving in Berlin, Joachim received n a most friendly way. Joachim was naturally a and genial person. Under his influence I began to with several teachers belonging to the lty of the Hochschule (High School). work with them was entirely private. lrich Grabau, with whom I studied the , was a very musical person, a lover of best, not a great pianist, and not even a teacher; but he led me into the paths ıusical righteousness. Later on, Grabau ll, so I was left without a teacher; and, left to my own devices, I took a few les- with Franz Rummel, who was what was a virtuoso.

Joachim's Letter

THAT as it may, Rummel was never a good teacher; therefore I decided to make nge. The change was in favor of Oscar with whom I continued to study until I Berlin, June, 1884. Raif was a *born* er, from whom I got a great many valu- hints. My teacher of counterpoint and osition was Friedrich Kiel. He was a ıtful old gentleman (I should think some- like "Papa Haydn"). When I asked im whether it was better for me to study Kiel, or somebody else, Joachim said ody is so good as Kiel." Kiel, and all ıembers of the Hochschule faculty, were tly against Liszt and Wagner, represent- ıe modern school, while the point of view e Hochschule was strictly classical. Kiel said to me, "It is a sin for you to go ar a Wagner opera." Think of that! im and the others being conservatives, s no wonder that I came under their in- e, and no wonder that I was blind to reatness of Liszt and Wagner. I was , inexperienced and "green," fresh from ica (America at that time was a very ent place from the America of today). I ow see that "there were giants in those Liszt and Wagner were musical giants. pianists and composers have appeared but "The scent of the roses will still hang " Liszt and Wagner. What I have said y a prelude to the story I am about to After having passed the year of study rlin, planning a summer trip, I thought ıld be interesting to stop at Weimar and szt. I asked Joachim to give me a letter to him. uid he had seen but little of Liszt for the past ıars, as he did not like Liszt's music; nevertheless m gave me the letter, so I went on my way re- .

14, 1883, I left Berlin. Going to Weimar I was ıg only of *meeting* the great man, not *playing* to Saturday afternoon, July 14th, I left my letter at ofgärtnerei, Liszt's little house, belonging to the Duke's park. The servant said I could see the er" at nine o'clock Sunday morning. At nine I presented myself. The servant led me upstairs second floor. In my hand I had my hat, cane rd. The door was opened and before me stood I tried to put my card into my trousers' pocket. full of embarrassment. Liszt broke the awkward situation with, "I see you have brought me a letter from Joachim." I fumbled about to get rid of my card, and Liszt, looking at my hand in my trousers' pocket, said: Sie sind echt Amerikanisch" (You are real American). "Oh!" said I, "Wenn Sie echt Amerikanisch sein wollen, müssen Sie die Händen in die beiden Taschen stecken" (If you want to be real American you must put your hands into both pockets). Think of my cheek! Liszt was furious, and no wonder, saying: "Wenn Sie das probiren wollen, müssen Sie weiter gehen" (If you want to try that sort of thing you must get out). I don't think I was scared, only lacking in veneration, due perhaps to the influence of my preceptors. In any case, I now profoundly apologize for having been such an ass. In a few minutes Liszt recovered his temper and said "Probiren Sie was *da*" (Try something else), pointing to the piano.

LISZT'S BIRTHPLACE, RAIDING, HUNGARY

Exterior View

Liszt's Bed **The Kitchen**

A Corner of the Living Room

As I have said, I hadn't the slightest idea of playing to Liszt; my only idea was to meet him. However, I did as I was bid, so I sat down at the pinao. Then I *was* scared. I had been studying one of the early Beethoven Sonatas, Op. 14 in G. After a few measures Liszt said, "Das ist ein Conservatorium Stück, probiren Sie etwas anders" (That's a Conservatory piece, try something else). Then I began Chopin's *Polonaise in C Minor*. Liszt "yanked" me off from the stool and showed me how it ought to be played. After a little more talk on music and musicians, he asked me to come to his house on the following Tuesday afternoon, at four o'clock, when his pupils would play. After the above preamble I now quote from my old journal:

Visit to Liszt in Weimar, July 17th, 1883. Liszt lives on the second floor of the Hofgärtnerei (Court gardener's house). At four o'clock I found about thirty young people of both sexes gathered in the vestibule below, waiting to be summoned by the Master, who often sleeps in the afternoon, as Mr. H. told me (Mr. H. was an old pupil of S.'s). Soon after I arrived, the summons came. I went up with the rest. Liszt stood near the door, receiving each one as he or she entered. By the time I made my way in, Mr. H. was at the piano, playing a nocturne by Chopin. Mr. H.'s playing didn't seem to suit the master's taste, for during the course of the nocturne Liszt told him four different times to go to the Conservatorium. Presently a young woman bounced in, Liszt calling out, "Fräuline Méloné, eine Célebrité aus Europé," the music still going forward. This caused a general laugh which didn't disconcert Fräulein M. in the least. When Mr. H. finished the nocturne, Liszt said: "und so weiter" (and so forth). Liszt then called upon "Essipoff die sechste" (Essipoff the sixth) for a Chopin concerto movement. She, having started in bravely, but having fumbled the passage, Liszt cried out "Essipoff die siebente" (Essipoff the seventh). The lady, however, recovering herself by a bold dash, Liszt said: "Essipoff die erste" (Essipoff the first), pulling her from the piano stool and giving her a couple of gentle boxes on the ear. Next came a Miss Stevens from New York, who seemed to be in high favor. She played a Rubinstein* piece very nicely till she reached the last page, when Liszt caught her by the chin saying: "Gehen Sie und lassen Sie sich photographieren" (Go have yourself photographed). After that she sat more quietly, kissing the old gentleman's heart when she finished. There was a good deal of kissing and cheek patting during the afternoon.

A Liszt Lesson

NEXT came a young Fraulein who played a Chopin *Scherzo* beautifully, which Liszt seemed to approve, but didn't give half the praise he gave to others, though it was the best playing of the afternoon. A number of others followed, more or less bad, one particularly bad. A flibberty gibbet person played a *Tarantella* of Liszt, stumbling all the way through, getting "Bravo, gut und bon" ad infinitum from the master. A certain Herr Reisenauer then played Liszt's *Auber-Tarantella*, completely annihilating all technical difficulties, "bringing down the house." Reisenauer has been studying with Liszt for eight years and has a wonderful technic. I was sorry not to have heard him play a piece more worth while, musically.

Liszt called me for the *C moll Polonaise* of Chopin. He said one of the "Herren" had played it to him lately. No one spoke up, I becoming painfully conscious that he might be referring to me. Mr. H., who was standing near, said, "You'd better own up or he would get mad." The room was searched for the music, but it wasn't to be found. By this time he had fixed upon me as the guilty person. Much to my relief Liszt said, "Wir woollen es das nächste mal haben" (We will have it the next time). A half hour was spent over some variations by Weitzmann, the theme being 'Chop Sticks." Liszt made each lady, who already *had not* played, take hand, the lady playing Chop Sticks while Liszt played the variations. This was pretty stupid, but it seemed to amuse the old gentleman and, no doubt, tickled the vanity of the ladies. After a short piece played by Fräulein Méloné, Liszt said, "Ich emphele mich" (good afternoon), and we all took leave. One old lady in doing so kissed Liszt's hand and his heart, he, kissing pretty much all over.

The two hours which I spent there were quite informal. Liszt paces up and down the floor beating time with his hands, talking to different ones who stand and

---

tuosos in those days were not what virtuosos have since Paderewski and Rachmaninoff appeared on ısical horizon. Touch, or tone, is now the prime in pianoforte playing. Strange as it may seem, Mason, who was an actual pupil of Liszt, once told t Liszt never had a good touch, in spite of his mar- power of interpretation. Liszt's personality, too, ave enthralled his hearers, just as do the personali- Paderewski and Rachmaninoff.

*Let it not be forgotten that Rubinstein was one of the stars of first magnitude in those days. Rubinstein and Joachim were contemporaries. I heard Rubinstein the second winter I passed in Berlin, 1883-1884, from time to time, once when Rubinstein and Joachim played together the *Kreutzer Sonata* at a private house. Sitting a few feet behind Rubinstein as he played, I thought it was the greatest playing I had ever heard; but Grabau, my teacher, said afterwards that it sounded as if they had never played it together before! Rubinstein's singing touch was a wonder. With his broad fingers, one tone seemed to last through twice the usual length of time. His *Barcarolles* may be mentioned as examples of his singing quality. Rubinstein's hand was almost as broad as it was long. His fingers were like cushions. Often, he played carelessly, but with great effect. It was said that he played so many wrong notes he might have made a new composition of them. His well-known "Etude on False Notes" was suggested, perhaps, by his carelessness.

sit about leaning on the piano and tables. When anything doesn't please the old gentleman, he goes to the piano himself, playing the passage through, often mimicking the way which the pupil has played it. He is fond of his joke and equally fond of the approbation which he seeks from all sides after the explosion of his wit. I walked home with Mr. H. and we have various opinions about the advantages derived from a summer in Weimar with Liszt.

Four Decades Ago

What I have written is a verbatim account of my experience which happened nearly forty-two years ago. The world and music have entirely changed since then. Liszt at that time was seventy-two years old. He had long before passed his zenith. After having rested on his laurels "he went back to the farm." His farm was Weimar, where a number of aspiring, would-be musicians were collected about him, all manner of different grades of talent and musicianship. Liszt received them all, good, bad and indifferent, as we have seen. The two hours passed after his nap, on Tuesday afternoons, amused him. Whether he took it seriously or not, Liszt's "milk of human kindness" never ceased to flow. I am speaking only of what was called "Der Schwarm" (The swarm). "The swarm" was a hive of busy bees, coming from all parts of Europe and America, each one of them hoping to gather honey from the flowers of the Master's garden. Most of Liszt's pupils who became celebrated all over the world did not belong to "the swarm." The prize pupils went to the Master at other times, not from 4 to 6 on Tuesday afternoon. I dare say a prize pupil occasionally played in the afternoon from "the swarm," capping the climax, like Reisenauer, who *did*, later on, make a name for himself. Whether they were the pupils of "the swarm" or whether it was the individual serious pupil, be it remembered that Liszt never took a penny for the lessons which he so generously gave.

If you have ever read the two-volume *Briefwechsel Zwischen Wagner und Liszt** (Correspondence between Wagner and Liszt), you will see that Liszt was the most unselfish person in the world. Great as he was, he was willing to sacrifice himself for the sake of advancing the interests of the greater man, Wagner. In addition to the book I have just mentioned, if the Gentle Reader would like to look over a little book called "Der Kraft Mayr," by Ernst von Wolzogen, which has been fairly well translated under the title of "Florian Mayr," he would see how nearly like it was to my experience that Tuesday afternoon, when the pupils came together. The pupils I mention in my Recollections were not such a good lot as those who appear in the printed book, but then, poetic license is always allowable.

To wind up my story about Joachim and his letter to Liszt, I left Berlin for Weimar that morning at 7:45. At eight o'clock, Joachim having changed his mind about giving me the letter, went to my lodging to take it back, but it was too late. After my visit to Liszt at Weimar, I wrote to Joachim, putting my experience in as pleasant a light as possible. In any case, the following year, which I passed in Berlin, Joachim frequently asked me to come to his private rehearsals, sometimes telegraphing me at a moment's notice, so all was forgiven and forgotten. Joachim was the greatest violinist of his time. His playing of Beethoven's Concerto was generally accepted as a "high-water mark" of perfection. As an orchestral conductor, he was never a great success. He was probably too subjective; but as a leader of his quartet, when he *could* be subjective, he was not surpassed. The Helmsberger Quartet in Vienna was more or less contemporaneous with the Joachim Quartet and of the same high order of interpretation. Both of these quartets might be likened to our own wonderful Flonzaley Quartet.

*The correspondence between Wagner and Liszt is published by Gravel & Co., London. The translation is by Francis Hueffer.

Der Kraft Mayr, in German, is published in Engelhorn's Roman Bibliothek, Stuttgart. The same book in English, called Florian Mayr, is published by Huebsch, New York. The translation is by Edward Breck and Charles Harvey Genung. The books may be seen or read at the important public libraries of Boston, New York and other cities.

"Since language is the basis of nationalism, it follows that the country which uses its own language will develop a national music, just as Italy and France have a national music through their insistence upon Italian and French language. If we had a national music in this country instead of the present senseless worship of everything foreign on the part of the public, our own composers artists and teachers would have a better chance to earn money in their own land."—Music News.

Preparing the New Lesson

By Grace White

VERY few students are capable of working out new material without aid. It takes a pupil of most exceptional ability to confront the difficulties of new compositions and make any progress with them. And yet how often is this expected! And how much time and energy are wasted!

It is cruel and unreasonable to say at the end of a lesson, "Do the next etude next time—and start to work on the first two pages of this piece"—possibly playing over the piece in a brilliant, rapid fashion which only discourages the confused pupil. The next lesson, the poor student is taken to task for many things that he could have understood at the beginning.

A pupil's advanced lesson will be as good, and only as good, as his understanding of it in the first place. Many students and parents—especially parents—think

[CARICATURE OF FRANZ LISZT AS A CONDUCTOR

that the pupil "learns his lesson at home." This is true only to a small degree. He learns it at the teacher's studio and drills it into his memory at home. The brilliant student can do much alone, but the average pupil needs a clear explanation of any new work before understanding how to master it.

It is better to have your pupil thoroughly understand the time, technical problems and some of the musical content of his new work and, if necessary, to slight some of his present lesson, than to have him blunder unseeing into new difficulties. If the teacher will be clever in knowing what is most important in the lesson and do that first, the rest of the time can be divided in such a way that in two lessons all of a student's work can be covered thoroughly and interestingly.

No two lessons in succession ever need be alike. The tiresome uninspiring business of knowing that the teacher will always hear scales, studies, pieces, new material, in the same order, week after week, is enough to make any pupil play monotonously. One day hear the lesson this way; the next hear the piece first, and make your point in that; the next time startle your pupil into action by suggesting a scale contest with another student. But always allow time to explain sufficiently all new material.

A great effort in preparation will often be made if the teacher will call attention to the special difficulty in a new study and explain it, and tell the student, "This is a spot where ninety-nine out of a hundred pupils stumble. Your attention is called to it, so I shall be watching with great interest to see how you do it." Your pupil will then be determined to be the one out of a hundred, and make an extra effort to measure up to your expectation.

The "Page Turner"

By Eugenio Pirani

EVERY pianist or instrumentalist who plays from n knows how difficult it is to turn the leaf, at the en the page, without interrupting the playing. Somet the left hand can be spared for a fraction of a sec sometimes the right, just long enough to turn the But often both hands are needed in an important pas at the end of the page, and that makes it almost possible to consummate this momentous operation, the result that a gap in the performance is unavoida

Especially when the pianist is accompanying a si or another instrument, the human limitation of posse only two hands is painfully felt.

It seems that all music printers have entered a s conspiracy to end the page with some difficult pas which makes it impossible for the player to free hand for the purpose of turning the pages; and, if composer himself does not prevent this nuisance thr prescribing exactly the place where the turning ma effected without breaking the continuity, for inst where a pause is located, one may be sure that the pr will put the turning at the most awkward and in venient place.

A sympathetic "third hand" is here needed; and is the time when a modest and still necessary artist c forward to the rescue.

Musicians, poets, artists, and men of genius gene have been praised, sung celebrated in poetry, im talized in monuments, that their name may be ha down to posterity; but never, as far as I know, attention or appreciation has been accorded to the hu and still so useful, yet indispensable artist: the Turner. In a concert performance, where an interru would be fatal, he holds the key to success or failu the performer who trusts his fate into his hands. must possess musicianship, skill, quickness of th and discretion. The Leaf Turner must indeed f with his eyes the music, know exactly at every mo where the pianist or instrumentalist is just playing, be ready at the proper moment.

Owing to the fact that the player is always lo one or two measures ahead, he must not wait to over the page in the last moment; but he must one, or in quick tempi, two or more measures a He must grasp the page with security (only one time!) and turn it quickly, so as not to depriv player even for a moment of the sight of the music. must not obstruct the sight of the notes with his and also he must not make himself too conspicuous his motions.

Every one who needs the services of such an a knows that he is completely at his mercy. Is he re and exact, he imparts to the player a sweet sensati security and safety which is liable to enhance his pretation and cause him to look to the "turner" his guardian angel! Is he, on the contrary, not pr coming either too soon or too late, he conveys t player a nervousness, a fear of impending danger, can mar the whole performance and even cause dis in the case he turns the pages at the wrong place.

A tremendous responsibility rests, therefore, upo Leaf Turner and, according to his importance his should be perpetuated.

No wonder that, with this great responsibility, renowned artists do not consider it beneath their d to help their colleagues and to act as humble turners."

In Germany such "virtuosi" are properly remune and receive from two to five dollars according to artistic merits. Concert managers have them on list and furnish them upon request. They are call joke "der Notwendiger," which means at the same "necessary" and "page turner."

In the concert season these modest artists earn times more money than concert givers themselves

Due credit should be given, therefore, to this "tu genius." God bless the Leaf Turner!

One can but wonder when it will become clear however great the part played in musical appre by a trained ear and a trained memory, the fundam of appreciation are sensitiveness, imagination, and m more. Let, then, ear and memory training be acq with a true understanding of both their value and limitations; above all things, let the illusion that appreciation of music the intellect can do the wo the imagination be dispelled forever.—M. D. C CORESSI.

The Violinist's Opportunities

An Interview with the Eminent Virtuoso Violinist-Teacher

CARL FLESCH

Secured Especially for The Etude by Otto Meyer

Y LAST THREE SEASONS in the United States have been largely devoted to teaching in ection with my concert work, and so a pleasure to me to tell ETUDE ers some of my impressions and ob- itions concerning violin study in the ed States and American musical life eneral.

ne of the questions I am most often d (and therefore suppose is one of est) is, "Are Americans as talented he violin as Europeans, and are their rtunities for advancement as great as abroad?"

ow as to talents, there are as great ts here as any place, for the United es is after all a mixing pot of all the ons in Europe with a few gen- ons in the United States at best. ever, there is no question but that are certain blood strains which, her here or in Europe, are furnishing eater percentage of the virtuosi than other nationalities. Russians, Poles, garians, Bohemians and all of the ic nations and the Jewish people, no er in what country they are born, to have some native talent for the n.

ice I asked a very prominent musician n he considered the greatest prodigy iad ever seen, and he replied, "A ian Jewish boy who did not play the n." However, though the Slavic n seems to adapt so naturally to the n, that is no reason for those of other nalities to be discouraged. I have in class a very talented girl who is of ian descent: almost every nation has epresentative in the halls of violinistic .

ow, as to the opportunities for study: are at present in the United States, ers who compare favorably with the in Europe. American wealth has wed schools that compare favorably the best in Europe. The study equip- is present in large measure. BUT— study mood and plan here is handi- ed by one circumstance: in the United s a musical education is generally secondary to general scholastic edu- n, while in Europe the child who is udy music seriously as a profession aced at an early age under the best teachers, other education being made ervient until the music studies are fin- l.

Violin Technic

OLIN technic is a peculiar thing in that it is very quickly and easily ac- ed in the early years while later in o amount of study will make up for ears that have been missed. General ation, on the other hand, may be ac- d at any time after violin studies are ied; and those who want education acquire it by tutors, special study, ng, and so forth. Remember, also the travel which becomes a part of musician's life, and the languages h are learned by living in foreign tries are in themselves a liberal educa-

t us compare the study plan of a acteristic European child, whose par- decide to have him study the violin probable profession, with that of an rican child of the same circumstances. ad of a hypothetical case in Europe, all quote a few actual cases. Fritz sler, at the age of ten, won a first in Vienna, and at twelve won a first prize in Paris. Thibaud, at the age of fourteen, was a finished concert artist, and I myself at the age of twelve had completed my studies and the high school.

In general, the real violin talent who is under the best teachers will have a finished technic at the age of twelve, and will usually have started at the age of six. Later there is plenty of time for a general cultural education. Those who have had the opportunity to have social intercourse with any of the really great violin virtuosi will tell you that they found them men (or women) of broad culture and trained minds, for mark this point: "Only those who have a mind that will seek its own culture will become great artists."

So, I believe, when the best American talents come under the tuition of the best teachers now in this country, at a very early age, say, for example, six years, and study music primarily, with other studies coming second and subservient to it, that we will have an opportunity of furnishing great artists of the concert stage equal to any country in Europe.

A Contrast

BUT IN contrast to this supposed condition let us present what generally occurs. An American father and mother decide to have their boy study the violin and consult with the local violin teacher to get his verdict as to when the boy should begin. He may declare for early studies, but in general the family decides to have him start his studies when he is ten years old (at which age the European talent is perhaps already on the concert stage). Of course the child will continue in the public school, and at best will do a half hour or hour of practice every day. On Saturday he generally will not practice and on Sunday certainly not. In May, as examinations are imminent, violin lessons will be stopped so that he may not fall behind his class in school, and, of course, one would not think of spoiling the dear boy's vacation by having violin lessons during the Summer! So, with perhaps a half hour's lesson each week and a half hour's practice per day for six months in the year, the precious years for acquiring a technic, from six to twelve, are practically wasted. Then comes high school with sports such as base ball and foot ball and all of the delightful school activities to take the boy's time, so that not until the boy reaches the age of sixteen or eighteen, and has finished high school with credit, do the fond parents consider whether or not they will have their boy study music seriously as a profession.

Of course, one cannot develop great artists under such conditions. If it is decided that a child has unusual talent for music and that the effort shall be put forth to make an artist of him, all else must be made secondary for the time (as it is in Europe). When the early years have been devoted primarily to music with perhaps private tutoring in a few related subjects, and when the technic is adequately trained, the young artist should make arrangements to broaden his education by private study, travel, reading, and so forth.

PROFESSOR CARL FLESCH

Virtuosi, Past and Present

I HAVE often been asked whether the great virtuosi of the past would compare favorably with those of today. It is possible for me to give a rather valid opinion on this matter as I studied in Paris with Sauzay, then an old man of eighty-two, who had heard Paganini make his début in Paris; also Sivori, Dancla, and others. The old-time virtuosi had great technic, it is true, but they had to find their own way to get it and were in general much more careless in their intonation. Take Wieniawski, for example. He was a great violin genius, but moody and unreliable: so also with Paganini, Ernst and all of the former lights. We owe them a great debt in that they charted the unexplored country of violin technic; but the early explorer could not know the country as well as we who live in it from our earliest age. Nowadays the violin student has the entire technic served on a platter, especially since Prof. Sevcik wrote his monumental technical works, and the boy who studies from the ages of six to twelve with a fine teacher, making all else subservient to his music, should have a finished technic.

With reference especially to the exactness of intonation, I remember that when in Holland I heard Ysaye and had the pleasure of congratulating him after the concert, I spoke especially of his exact intonation and he replied, "Sarasate has taught us all to play in tune." The great Spanish artist might, in a way, be called the boundary between the old and the new school.

I am often asked what I consider the most important pedagogical message that I give to my pupils. My teaching is in a way negative. I consider it more important to tell the pupil what not to do than what to do; then if the pupil avoids all of the mistakes, he cannot go far wrong.

I also lay great stress on the dual nature of playing and my motto is to study with the head and play with the heart. Too often the pupil who has played in his room with enthusiasm and abandon, on facing an audience is suddenly confused, because he commences to think, something which he had not done before. He should have done his thinking while practicing and then it would have become subconsciously correct and he would have been able to express his musical message without any technical thoughts.

Another question that I am often asked is "what kind of violin do you play and are the new violins any good?" I play a very fine Strad and so do many of the great present-day violinists, but the day will soon be past when Strads will be heard on the concert platform. Now that American millionaires are bidding for them in order to make their collections complete, the price is mounting to enormous heights. I have just received a letter from Hill in London advising me to insure my Strad for $25,000, and that, of course, means that it is really much more valuable than the price for which they would insure it. I predict that in the year

1940 a good Strad violin will be worth in the open market at least one hundred thousand dollars. Of course, when that time comes, no artist will be able to buy them and they will be looked at but not heard. What will happen? I fear that, besides hearing the better of the second-class Old Italian violins, the newer makes will be heard. Recently I had the opportunity of playing on a very fine modern violin by Gallican. It seemed very excellent, but "one unfortunately can tell if a new violin is good only when it is no longer new."

Ensemble Playing

IT PLEASES me greatly to see the spread of ensemble music in the schools and in private life here. Ensemble playing for young students has real value in teaching reading, rhythm and intonation.

In speaking of ensemble, however, for children, I do not by any means mean that it should stop with the younger years. Ensemble music should become a part of the musical life of every home. It is the back-bone of music culture and the playing of sonatas and chamber music will spread the doctrine of good music everywhere. For those who write chamber music never write trivial music. Also, chamber and ensemble music is possible in every town and city, and furnishes a start toward broader musical life. Speaking of sonatas, reminds me that, of the modern Hungarian composers Bartok has written one; Weiner, two; and Kodaly is said to be at work on one at the present time.

It is an interesting fact that in a little strip of ground, about fifty kilometers long, many of the great Hungarian musicians were born. I was born in the village of Moson and within fifty kilometers of my birthplace were born Nikisch, Joachim, Hans Richter, Liszt, Haydn, and others. Of modern Hungarian violinists. I call to mind Hubay, Szigeti, and Telmanyi. The Hungarian music of to-day is often founded on their inimitable folk tunes, and their harmonic treatment is perhaps equally influenced by German and French teaching.

Now to speak of a factor which to me seems very important to the future musical life of these United States: I first visited this country in 1913 and, when I came back to it in 1923, naturally compared its musical conditions in every way. I expected to find a great spread of concert life, but such was not the case. American concerts may have improved in quality, but they certainly have not increased in quantity in proportion to the increase of population.

Educational Facilities

THIS country has greatly increased its facilities for musical education. Private enterprise, as well as endowments, have brought teaching facilities up to a point where no one need lack good tuition. The great schools compare with the best in Europe. But one thing that I do not wish to see carried too far is free scholarships. Of course, in the case of a great talent with lack of funds, the fine teacher will always try and find a way; but it is healthy for the young to have to struggle a bit for their music. What they suffer for, they will prize, while what is handed to them they too often consider no more than their due; and then do not make any special effort to be worthy of the favor.

Now, as I said, we have done much for education here. We have done much, perhaps enough, for the furthering of study, but there is a great field for a new philanthropy in placing the young artists in the concert field. What is the use of training a hundred new violinists to be virtuosi, if in a week they will all be hunting "movie" jobs? When I made my début thirty years ago, I almost wept because, by chance, another concert was booked the same day in Berlin: Gabrilowitsch made his début at the same t Still, within a week I had engagem to play with practically all of the orchestras in Europe. Were one to m a similar début to-day, there would h dozen concerts the same night. Poss the critics would not even visit the certs, and, as for getting the engageme that would take dozens of expensive certs and a large appropriation of mo for advertising managers and so fo Now what is the use of turning ou product for which there is no demand?

This is the solution that calls itsel my mind. There must be an enlarg of the concert field. This must be d as pioneer work, by placing concert cou in the smaller cities which do not now h concerts of merit. Imagine what an mense influence on American music lif would be to have five hundred more ci place concert courses! Five hundred concert courses of, say, four conc each would be two thousand concert year, at each of which at least two ar would perform; so there would be i thousand engagements more for wo young artists.

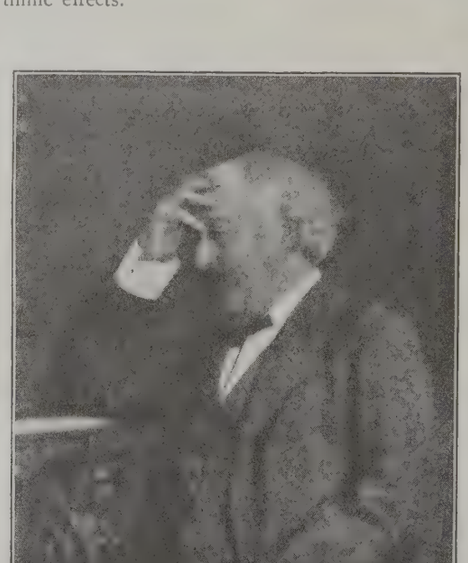
(*Continued on Page 313 of the "Violinists' Etude"*)

The Etudes of Stephen Heller

By ERNEST R. KROEGER

STEPHEN HELLER, *the eminent Hungarian pianist, teacher and composer, was born at Pesth in 1813 and died in Paris in 1888. He studied with Czerny, but received the greater part of his education from Anton Halm. His concert career was begun at the age of fourteen. In 1830 he fell sick on tour and was adopted by a wealthy family of Augsburg, remaining with them till he moved to Paris in 1838, where he became one of the brilliant circle including Liszt, Chopin and Berlioz. He was a prolific composer, publishing one hundred and fifty opus numbers, sev of them containing as many as twenty-five compositi His style was eminently pianistic, technically origi though somewhat limited in virility and variety invention.*

The Present Day Idiom



IN THIS age of strenuosity, it is not easy to place oneself in a mood of calmness and reflection. Quietude and the first quarter of the twentieth century seem to be opposite terms. This has been called the "jazz age," and the composer, Stravinsky, seems to epitomize the life of today as revealed in tone. Nothing can be greater in contrast than Stravinsky and Stephen Heller. But is there no place for pensive reflection in the music of today? Heller's idiom is not the idiom of present-day composers. The tang and "spice" considered necessary in modern music can be nowhere found in Heller. Suavity, grace, gentle refinement, controlled emotion, these are his characteristics.

There are over two hundred of the charming compositions which are called "Etudes." There is no attempt at graded technical progress in them. Authorities like Hans Schmitt have indicated the order in which they should be studied. Lindsey Sloper has edited a number of them in a systematic order. In so many there is bound to be duplication and repetition. But it is easy to discover these. Now, as to those which are desirable to study. If finger work is the end in view, avoid Heller and take up Duvernoy, Czerny and Cramer. Heller etudes mean studies in style.

Style

STYLE comprises expression, shading, phrasing, dynamics, rubato, pedaling and all other features of interpretation. Take, for example, No. 4 in Opus 47. This is thoroughly Heller. It is expressive, yet not deep. The phrases must be well defined. Chords contrast with singing, dynamics range from *pp* to *f*. There is a ritenuto of a measure and a half. In the middle of the study, the melody appears in a minor key—somewhat wistful. Altogether this short piece contains much material for helpful study. Number ten has a rather stern dramatic motive, with a chord accompanient. It is in D minor, rather sombre. In the middle section, the theme, somewhat altered, appears in the left hand, with a pianissimo accompaniment in the right hand. The close is inflexibility, stern and severe. A lovely and appealing one is number twenty-three, in A flat. The serenity and tranquil charm of this *morceau* is unsurpassed in any of the Heller Studies. Opus 46 contains more Etudes of motion than Opus 47. Some are very attractive, but are not distinctly individual. Number ten has a Spinning Wheel character, and yet has the Heller "ear-marks" in it.

Number fifteen is still more a Heller piece. The composer must have liked it, for he prolongs it unduly. Number seventeen is truly lovely music—unquestionably Heller. And number nineteen, of a decidedly "woodsy" flavor, is the most beautiful of this Opus. As a whole, Opus 45 can hardly be said to equal either Opus 46 or 47. But it contains one number which is on a bigger scale than any of the others. It is number fifteen, sometimes salled "The Song of the Hero." It is so noble and massive that it might well be taken for a composition by Brahms. It is in D minor, with chord and rhythmic effects.

STEPHEN HELLER

"Il Penseroso"

NUMBER sixteen is the well-known "Il Pensero The melody is in the left hand and the right h accompaniment is exceedingly graceful. Opus 16, "Art of Phrasing," was Heller's first collection Etudes, and may well be called a series of "M Pictures." Each study has a seperate title. The q ities of wistfulness, and pensive melancholy already apparent in these studies. It is in number two, " promptu;" number three, "Intermezzo;" number "Nocturne;" number fifteen, "Esquisse;" and num twenty-one, "Romanze;" that these characteristics be found.

In Barbedette's "Stephen Heller, His Life and Wor the author alludes to the collection Opus 90 enti "Nouvelles Etudes" as follows:—"From the first, wh pictures the naughty child astray in the woods, to last which portrays the sufferings of mature age— dramatic side, the inspiration is sustained, and with intending it, Heller has perhaps written one of his fi and most touching works." The writer is especi fond of the "Twenty-four Studies of Expression Rhythm," Opus 125. Some of these are indeed "l gems."

"Five Gipsy Melodies"

IN THE *Album dedié a' la jeunesse,* Opus 138, finest numbers are "Five Gipsy Melodies." which has become well-known is the "Curious Story" fine study in phrasing and delicacy. With regard to Preludes, Opus 81, they are, of course, not on suc high artistic plane as are those of Chopin. Still, t are indeed most attractive. They contain many mo from tranquil and calm, to passionate and strong. Preludes, Opus 119 *(á Mademoiselle Lili)* are a delig ful collection of miniatures. There are two hundred thirty-three pieces in the opus numbers above mentio

The "Fruit, Flower and Thorn Pieces," (someti called "Restless Nights," Opus 82, might be added these. They are among Heller's very finest little t poems. In all of these, piano literature possesses wealth of poetic pieces of genuine artistic value. taste of today may call for a more strident, sensatio "effective," sort of music than that which Heller created; but there are many persons who will en the smooth, meditative, serene style, tinged with wis longing, which is to be met with in so many Heller pie Unquestionably, they fill a needed place in the deve ment of taste and expression in young piano students

A Master Lesson on the "Liebestraum" of Liszt Prefaced by a Short Note About the Composer

Especially Written for THE ETUDE by the Distinguished Russian Virtuoso

MARK HAMBOURG

RANZ LISZT was born at Raiding in Hungary, on October 11th, 1811. In versatility he rivals the great artists of the Renaissance. As a pianist he was supreme, and his concert tours were nany triumphal progresses throughout Europe. Unhis leadership the orchestra at Weimar became one he finest and Weimar itself, the centre of German stic musical life. Many of the greatest pianists e pupils of Liszt and bear witness to his inspiration a master.

uccess accompanied all he undertook in life, and his positions for the orchestra, the pianoforte and the e place him in the forefront of distinguished com-ers. His literary works, including his articles on pin and those on the music of the Gypsies, written German and in French, reveal the fact that he had a arkable command over style and language. He ls a unique position in the history of musical de-pment and is an outstanding figure of the stic world of his day.

One of the most interesting episodes in Liszt's was his friendship with Wagner. It is sible that, without Liszt, Wagner never uld have reached such a high stage in the lution of his music. Liszt in his symphonic ms adopted the idea of the "Leit Motif" ch Wagner used with such effect in his ras. He also emphasized the pictorial and tical elements of music. "Mazeppa," one he most celebrated of these symphonic poems, ates almost as vivid an impression of the ject as the poem of Victor Hugo on which was based. Wagner realized the debt he ed to Liszt and used to tell a story of how came to him, after conducting a performance "Lohengrin" and said: "Behold we have ne so far, now create us a new work that may go still farther."

Liszt as Composer

' IS, however, as a composer for the pianoforte that Liszt excelled, and he revolution-l pianoforte technic. For from the age of e, when he made his first public appearance Oedenburg, until he accepted a permanent agement as conductor at Weimar, he pur-d the career of a pianist; so he was well to appreciate to the full the wonderful posilities of his instrument. Equipped with a nomenal technic, his innovations in the art piano playing were manifold. In his parrases and transcriptions he secured technical ires never before employed, and expanded rds to hitherto undreamed of dimensions. liere used to say: *"Je prends mon bien ou le trouve"* ("I take my property where I l it"). Liszt might have said the same. He imilated everything with which he came in tact. The folk songs of Hungary and iin, Paganini's "Caprices," the overtures of igner, the organ works of Bach, furnished with themes for his most brilliant and effective pieces.

Some of Liszt's most delightful music was inspired the literature of his day. The French Romantic nool with which he became associated during his stay Paris influenced many of the compositions in his nées de Pélérinage;" but this *Liebestraum* was in-ed by a poem by Frieligrath, and it is a good exple of the "Salon" music of which Liszt was such a ster. It is published in a series of three Nocturnes tled *Dreams of Love,* and is one of the most popular the composers works. He has embellished his theme h consummate art, and no one who has heard the ebestraum" can fail to appreciate its charm. Graceful l entrancing melody is combined in it with a certain nity and depth of feeling, and ornamented with icate and brilliant arabesques. Above the opening asures is printed a sonnet by F. Frieligrath. It exts the lover to love always with the utmost of his ng, while he may, and never to let a harsh word escape him, as death so soon brings separation and regrets.

In this atmosphere of intense feeling tinged with melancholy the melody of the nocturne should open.

The Melody Sings

THE song must be brought out in declamatory style, as if sung by a singer with all the correct relief and elasticity of rhythm for taking in breath at the right moments. The arpeggio-like accompaniment in the right hand should be played throughout with a juicy tone, not only as a mere figure but as a sensuous adjunct to the melody. In measure 5 the notes F. G. A.-flat: C. B-flat in the left hand, and A-flat in the succeeding measure, must be especially emphasized and played *rubato* to give stress of feeling to the end of the phrase.

In measure 8, on the *fourth beat* in the *bass* there is a *G-flat* which should be brought out. In measure 10 on the high F in the left hand, a pause can be made amounting almost to a Fermata.

In measure 11, as before in measure 5, the phrase F. G. A-flat. C. B-flat, A-flat should be declaimed in *rubato* fashion, with a rise in tone on the culminating C, and then a drop back to the A-flat in the twelfth measure. In the sixteenth measure there should be a *crescendo* beginning on the first E-natural on the first beat, and proceeding to the second E-natural in the middle part, but dropping immediately to *piano* again on the first beat of the seventeenth measure. At the twenty-first measure a spirit of agitation should be introduced, the tempo being slightly quickened, and a *crescendo* rising from the emphasized B-flat of the melody on the first beat of the measure to the D-flat half-note on the third beat. From this third beat to the C-flat on the fifth beat of this same measure the tone should decrease and then rise again in measure twenty-two to the F-flat on the third beat, slowing down with emphasis on the notes A-flat and B-flat on the fifth and sixth beats in the bass of the measure. The culmination of the agitation is reached on the F-flat fermata in the twenty-third measure and then descends in a declamatory phrase to G-natural on the first beat of the twenty-fourth measure, which should also be held like a fermata. A long pause must be made before attacking the ensuing cadenza. This should start *piano* and not very fast, and then *crescendo* and *accellerando* with four well-marked accents on the first, second, third and fourth double notes of the figure in the right hand on the third beat of the twenty-fifth measure. The rest of the figure should be made to sound like a rippling cascade of water falling down in a silver shower and getting slower and slower at the end as the rush dies away. Four accents should be given on the first four notes of the double tremolo which terminates the cadenza, and the tremolo should be kept on and repeated as many times as the technic of the performer permits.

Taking Breath

A LONG pause must then be made, as if to take breath, and then the main theme appears in the right hand (this time in B major). The music is here marked *Piu animato, con passione;* but I do not play it so, but start the song at this point quite quietly and dreamily. in the twenty-ninth measure the tone should sink somewhat from the accented D-sharp on the first beat of the measure to the G-sharp on the third beat. The first, second and third quarter-notes in the treble in the thirtieth measure should be emphasized and the whole phrase declaimed, whilst the second figure in the bass in the thirty-first measure must be brought out with a welling crescendo and decrescendo. I play the thirty-second measure a little slower and the thirty-third one a little faster, and the thirty-fifth again slower, to create variation of expression; and I bring out the accompaniment very much in both hands. In the thirty-sixth measure the declamatory passage in octaves should be played very *rubato,* leading up to a big pause and *fermata* on the fourth beat of the same measure.

The thirty-seventh measure should be resumed *a tempo* in the key of C major. The passage in the accompaniment in this measure is made easier by taking the first four notes of it with the right hand with fingers 5, 2, 3, 1, and then continuing the rest of the passage with the left hand. An accent may be given to the chord on the first beat of the thirty-ninth measure, and the melody should begin to rise in an atmosphere of gathering emotion up to the *fortissimo* in the forty-first measure, where everything should sound *marcato* and *dramatic,* and should continue in suppressed excitement. In the forty-fourth measure I give an emphasis on the note G-sharp on the fourth beat, at the beginning of the descending figure in the left hand, and also emphasis on the chords on the first, second and third beats in the right hand in the forty-fifth measure.

From the forty-seventh measure onwards to the fiftieth the *tempo* should be quickened, and then broadened out again in the fiftieth measure. A *decrescendo* to the middle of that measure, rising once more in *crescendo* to the chord on the first beat of the fifty-first measure is very effective. In the fifty-second measure there are octaves in triplets in the right hand; each note of which must be emphasized; and again in the fifty-fourth measure the triplet passages in the treble must be declaimed and lead up to a big pause on the octave G. Proceeding after the pause, the next passage in the fifty-fifth measure must be played very *rubato,* with a *decrescendo* to the middle of the measure, and then a *crescendo* with prominence given to the octaves G and A-flat. These octaves lead on to an *accelerando* of *tempo* in the next two measures, and to a big attack of the chord on the first beat of measure fifty-eight, where the final cadenza breaks away.

The top note of the cadenza on E-natural in the right hand should receive an accent; and then the tone should diminish as the big passage descends the first time. It should rise again with quickening of speed and accents on each of the E-flats at the beginning of the three ascending *arpeggi*, culminating in a *fortissimo* on C, D, D-flat, A, A-natural, B-flat, F-sharp and G, which are the first six notes of the final descending passage, and should be played slightly slower with accents. From these six notes onwards the cadenza should descend faster and faster like a ball bouncing down hill from one stone to another, until it slows up with a slight *crescendo* and then a *decrescendo* in the last eighteen notes of the passage.

Return of First Theme

AFTER a pause, the original melody is now resumed and should start with a lingering attack from the up beat on E-flat to the C on the first beat of the sixty-first measure, holding the C on just a trifle longer than its real value. This part of the *Liebestraum* must be played reflectively and tenderly, endeavoring to give an effect as of a remembrance of the opening measures of the piece. The tone produced ought to be what I call *flebile*, meaning by that an intangible, far-away sound. The notes on the first, second, third and fourth beats of the sixty-fifth measure should be brought out with feeling, and the accompaniment in the sixty-sixth measure should have an atmosphere of intensity with a rising and falling of tone.

The tempo should be somewhat broadened in the sixty-ninth measure, with a lingering attack again from the C on the last beat in the treble of that measure to the long F in the next measure. From here on I introduce some fluctuation of *tempo*. Measure seventy-one I play somewhat slower; measure seventy-two is in tempo again; measure seventy-three is lingering; measure seventy-four in tempo; and then from the seventy-fifth measure onwards there should be a gradual and continuous slackening of speed, the fingers trailing on the notes as if loath to leave them. The whole of the seventy-sixth measure must be very much retarded, and each of the last four notes in it emphasized, whilst the seventy-seventh measure should be performed as if the notes were almost being spoken *"recitativo,"* rather than played, and trying to give an effect as of a question asked. A long pause in measure eighty brings us to the final chords of the piece, which are marked in the music *mp*. But I start these chords in *mezzo forte* with a good large tone, and then make a gradual *decrescendo*, pressing out the notes of the melody in the middle parts in the eighty-third and eigthy-fourth measures: namely, C, B-flat; C, E-flat; D-flat, C; with a final fervor of expiring emotion.

Tuning the Piano

By August Halling

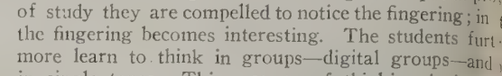
IS IT not the experience of nearly every piano student that a piano in constant use needs tuning often? Tuning can be done, after a little practice, by almost any musician who has an acute ear for tone. It should be done as soon as the tone is heard to quaver. Of course the ear becomes in time accustomed to discord, but the tone that lingers in the memory is out of tune and is the one that the mind retains. A good piano kept in tune has a compelling force.

A key on the piano that is in tune, sounds something like this  The tone waves are steady with regular vibrations. A key out of tune sounds something like this  The tone waves are irregular and the result is an unsteady tone. Have a tuning hammer handy, with mutes of rubber or leather, to insert between the wires in discerning the offending string. Lay the emphasis on a clear ringing tone, with full individual chord tones. The middle tone of the chord needs special attention. With the tuning hammer, draw the string to its needed tension. The piano will not need a tuner's attention for some time. No doubt you have seen the advertisements of the schools that teach piano tuning

Often the young musician would do well to take up piano tuning as a side line. It is an opportunity to earn some money. Towns without branch houses of the larger piano firms usually have no piano tuner and depend on travelling tuners. Besides it will give the student an acute ear for true tone. And surely he will find that to elicit from the piano keys the impression desired, and have at the same time the satisfaction that comes with playing on a piano whose tones blend will be in itself sufficient reward.

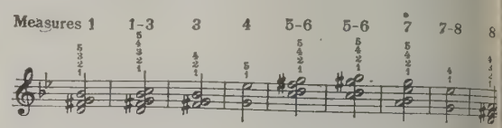
Finger Forms

By Otto L. Fischer



ONE of the most exasperating traits of the average piano student is his carelessness in the matter of correct fingering. This is due to his desire to "play" with a fair degree of fluency, but with as little mental effort as possible. It is also due to his inability to grasp, in his inexperience and haste, the reason for each particular fingering as determined by the numerous conditions of black and white key relations, notes before and after, phrasing, speed, dynamics, hand development and many other physical and musical factors.

Following the analogy of the principle of tapping the rhythm in the development of the rhythmic sense, I have made use of a principle of what might be termed "finger forms" for the development of the sense of fingering. By temporarily putting aside the musical element (as in the case of tapping we lay aside the tonal element) and concentrating his attention on the finger forms, the pupil is no longer hypnotized by the flow of the music into the neglect of the necessary details of logical fingering.

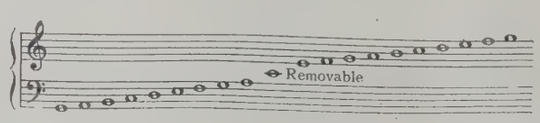


Physically speaking, a musical work, as played on the piano, consists of a large number of forms into which the fingers group themselves. Any group of keys which can be played together like a chord, comprises a "form," regardless of whether they are intended to be played together or not. Of course in passages other than chords, the forms are not necessarily distinct and separate but frequently overlap, the last notes of one form being the first of the next. Thus in the C major scale played one octave ascending with the right hand, there are three forms indicated by the fingering, 123, 231, 12345.

My students, more especially those who are careless in using the indicated fingering, play their studies compositions—that is, before they attempt to make m out of them—as finger forms. Through this special pro of study they are compelled to notice the fingering; in the fingering becomes interesting. The students furt more learn to think in groups—digital groups—and in single tones. This manner of thinking is impor in the development of speed, the basis of which is g thinking.

To illustrate the application of "finger forms," student plays the following passage from Beethove given below:

Now place the hand in turn over each of the ch forms of Example 2.



Place the hand over one of these forms, and then only finger motion play the notes as they are writte the measures indicated by the numbers above the for Try this with other pieces—in fact, with much of y study. Soon the hands will begin to fall automatic over the groups of notes and thus save much labor both reading and execution.

Charting the Beginner

By Emma H. Williamson

INTERESTING beginners in learning the notes is one of the trials of the teacher. Any plan that will help to simplify this or to do it more effectively is a boon.

After a few lessons, in which the pupil becomes acquainted with the staff, clefs and notes in the treble and bass, try making a chart. Make this to include both the bass and treble. Beginning with G on the first line of the bass, put all the notes in their proper places, using red crayon for notes on the lines and green for those on the spaces. Between the two staves put a "movable" middle C, held in place by two tacks. When completed the chart will look like this:

Tack the chart on the wall and explain to the children that they are to play a game of "Make Believe." Let the notes go to a ball game. The two staves represent the seats in the grandstand and the notes are the pe sitting in them. The bass notes will represent the m because their voices are coarse. Have the children play each bass note so they may see that this is so.

Now tell them how each man has brought his w but that all the ladies had to sit in the upper seats wh the treble clef is. This makes plain that two notes the same name do not have to be in the same place on two staves; for Mr. G has brought his wife, as have the other men. Have the pupils to play the treble n so they will see that the ladies have fine voices.

Now explain that middle C is a big fat policeman w sits in the middle to keep order.

After drilling them with this chart till they are fai accurate in naming the notes, make another, on wh some of the notes are omitted. Explain that some of people did not come to the game today, and have them name those who are here and also those who are absent

Invested with personality and life, the notes stand something in the mind of the children, and their att tion and interest are held.

Ideas from a Swiss Teacher

By E. K. Seager

THE celebrated Swiss composer, Dr. Hans Huber of Basle, was an excellent teacher of piano, who always had new and varied ideas to make piano practice more interesting.

The well-known *Schmitt Preparatory Exercises, Op. 16*, were always played in all keys, major and minor, and with a change of rhythm. When possible, they were played hands together, in contrary motion, major and minor, with a passage modulating into each new major key. These, too, were played with a change of rhythm, first slowly and then with increased tempo.

Clementi's *Gradus ad Parnassum* was always played in different keys. The pupil began in the given key; at a signal from Huber, both rhythm and key had to be changed suddenly. He expected the study to be so thoroughly mastered that the student would be ready for anything he might require. He would have childr take etudes they had already learned and practice th in several new rhythms, and also half a tone higher lower than the given key. They thus gained a sense key and rhythm and grew accustomed to long and sh notes, triplets, couplets, and the like.

Practice in the new key was done first in the rhythm, until there was assurance in the new key. Th the rhythm was changed. Also, practice of a new rhyth proceeded in the given key until learned, then the pie was transposed to the new key, a comparatively ea process for the pupil if the transposition was only h a tone higher or lower. Gradually the pupil had no fe of strange rhythms and difficult keys, became a bett sight reader, and developed his power of concentrati

"The employment of weight with properly relaxed muscular action precludes the use of force or excessive exertion of energy. With its use the performer practices a maximum economy of motion with a maximu freedom of motion at a minimum expenditure of energy

—JACOB EISENBERG.

LOVE DREAMS

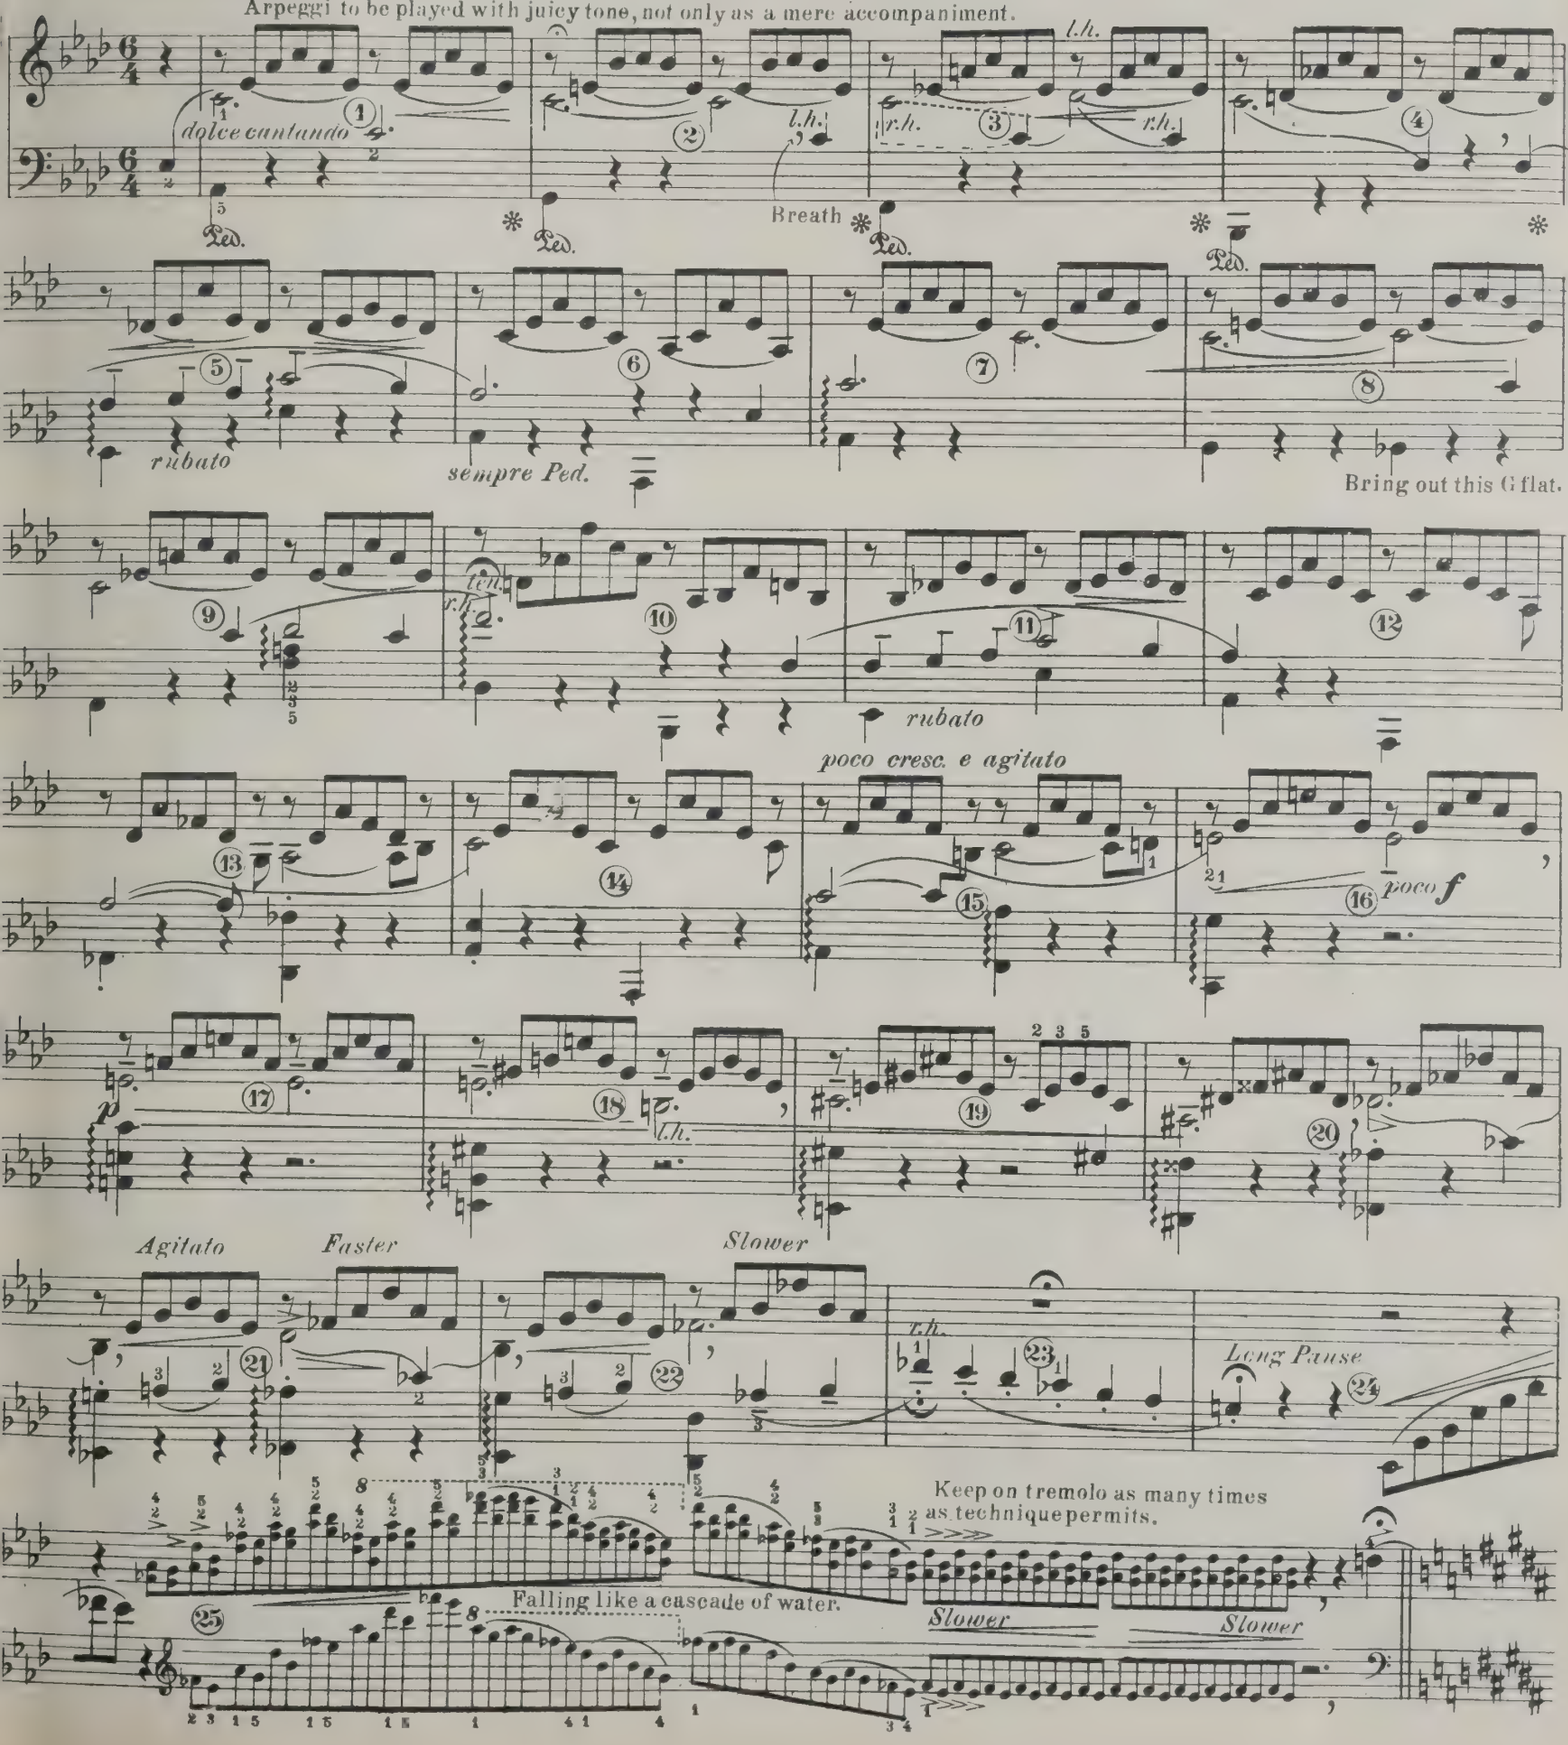
No.3

FRANZ LISZT

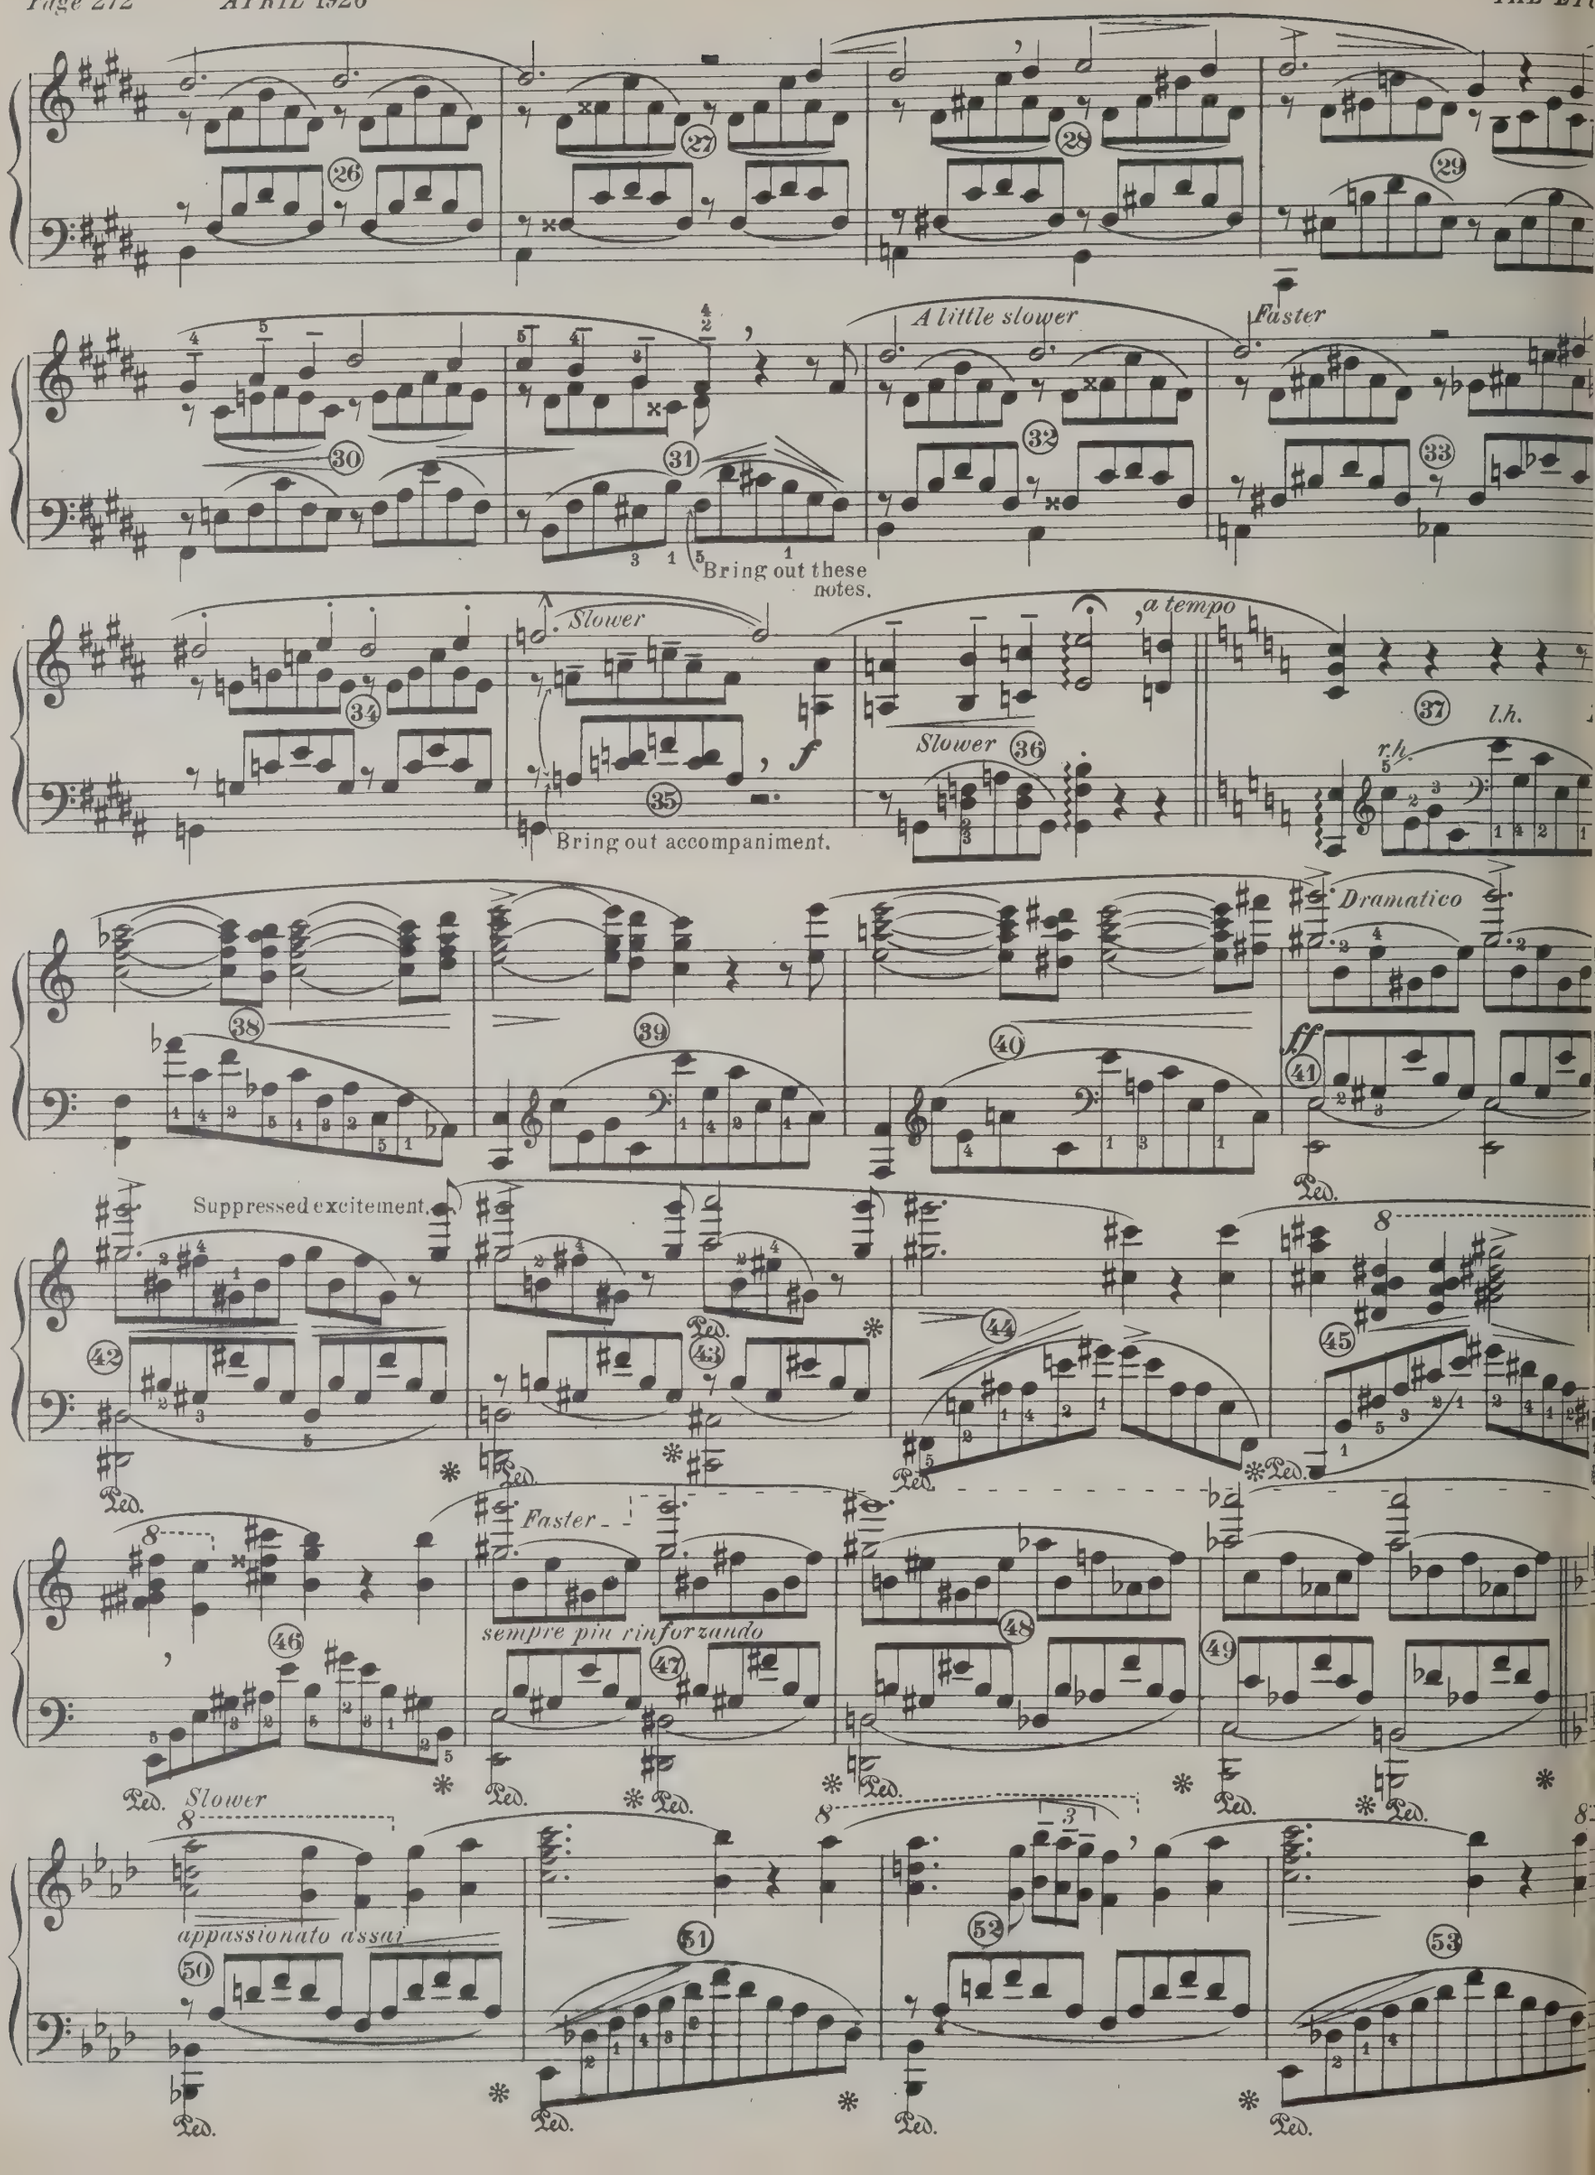
Poem by Freiligrath

Oh! love while love is left to thee;
Oh! love while love is yet thine own;
The hour will come when bitterly
Thou'lt mourn by silent graves, alone!

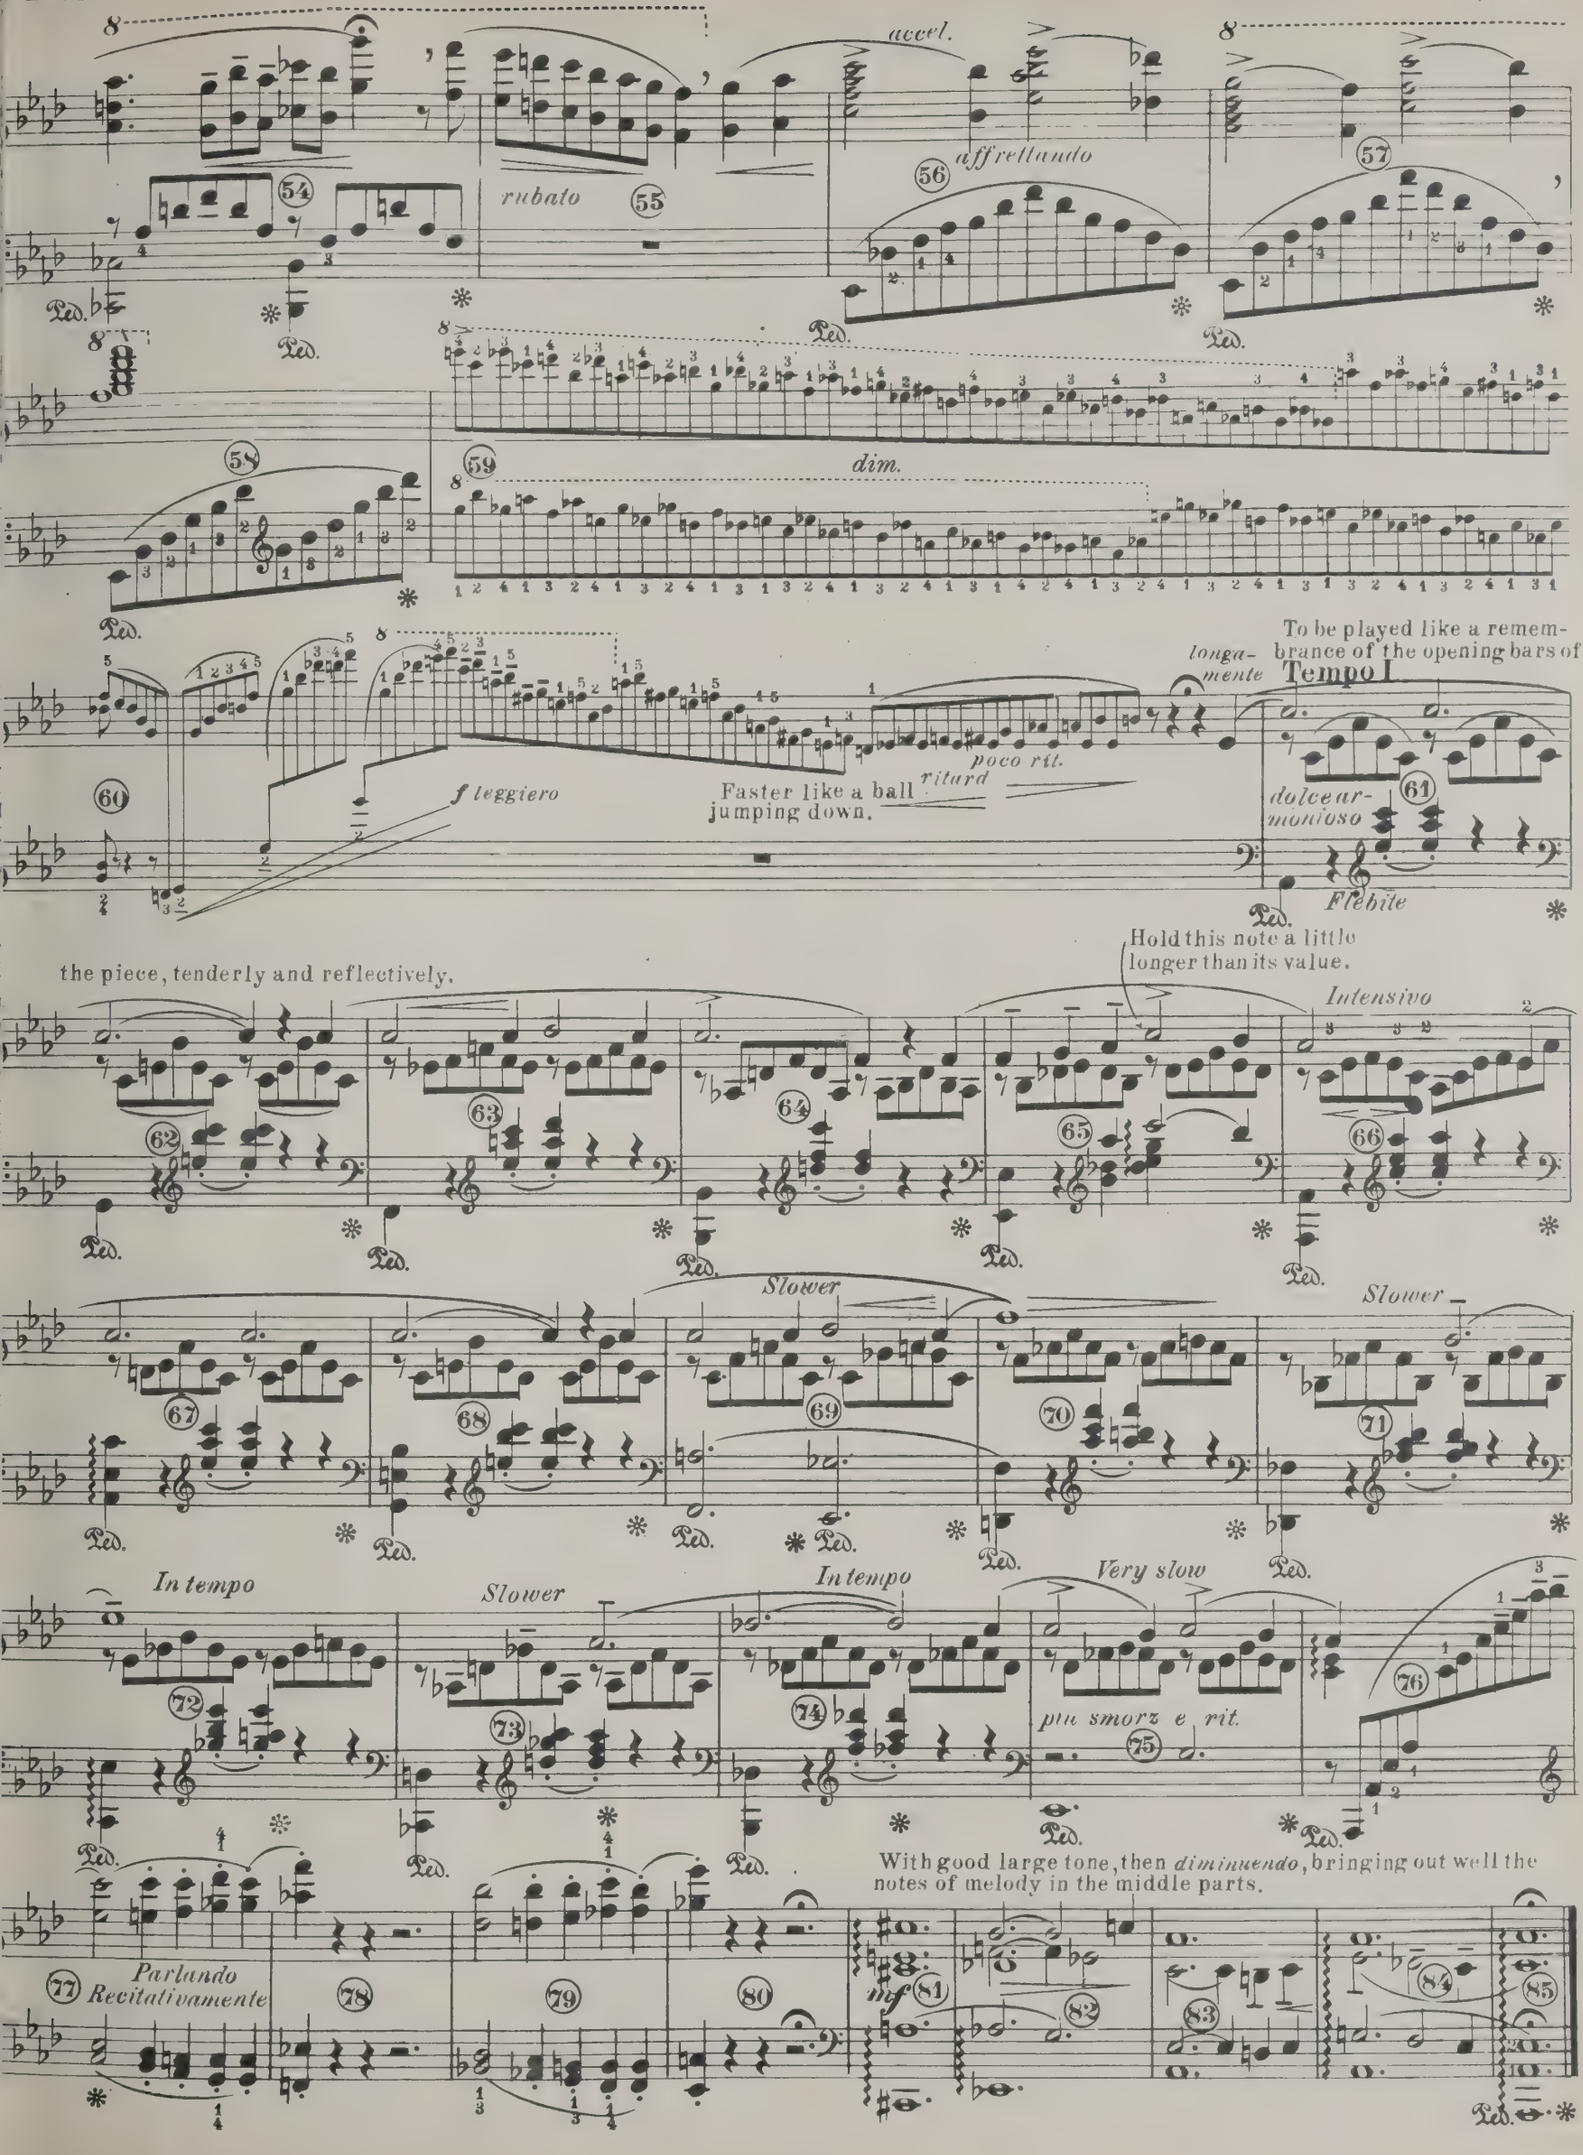
And let thy breast with kindness glow,
And gentle thoughts within thee move,
While yet a heart, through weal and woe,
Beats to thine own in faithful love.



And who to thee his heart doth bare,
Take heed thou fondly cherish him:
And gladden thou his every hour,
And not an hour with sorrow dim!



And guard thy lips and keep them still;
Too soon escapes an angry word:
"Oh God! I did not mean it ill!"
But yet he sorrowed as he heard.



For a Master Lesson on this piece by Mark Hambourg, see another page of this issue.

CHOOSE YOUR PIANO AS THE ARTISTS DO

Bachaus plays only the

Baldwin

MOST exacting of pianists, Bachaus finds in the *Baldwin Piano* the perfect medium of musical expression. In his own words, "The *Baldwin* satisfies the highest demands. The tone is noble and brilliant, the mechanism perfect."

For its enduring purity and resonance, for its perfect concord of tone and action, the *Baldwin* is the choice of exacting musicians the world over—on the concert stage and in the home.

In any *Baldwin* you will find a new revelation of your musical dreams. Visit the *Baldwin* dealer near you.

BALDWIN Uprights, *$850 and up,* Grands, *$1400 and up;* Reproducing Models, *$1850 and up.* Convenient payments if desired.

A SUGGESTION

Choose YOUR piano as the artists do. The book, "How Artists Choose Their Pianos," will help you in selecting the instrument for your home. We will gladly send you a copy free. Address

SIX CENTS A DAY

America Fully Recognized

THE American Supplement, which comes with the six volume set, is an indispensable record of American musical achievements, personages, organizations and institutions. The total number of entries in this work is over 2650. Brief reference is made to about 2000 American musicians, but biographical sketches are made of 700 American musicians. A number of important foreign contemporaries have been mentioned in this work and the many general articles cover subjects such as Indian music, Negro music, orchestras, the piano, ragtime, public school music, the phonograph, etc.

A few of the 200 famous authorities combining to make this monumental work of rich erudition written in thoroughly understandable and human style:

Sir Hubert H. Parry, Sir Frederick A. Gore Ouseley, Dr. Ebenezer Prout, W. S. Rockstro, Sir Arthur Sullivan, Alexander Thayer, Dr. Philip Spitta, Ferdinand Hiller, H. E. Krehbiel, William J. Henderson, Granville Bantock, Frederick Corder, Sir Walter Parratt, Sir G. A. Macfarren, Sir John Stainer, Franklin Taylor, Dr. William H. Cummings, Dr. John Hullah and others.

THE MASTER'S FINGERS ON YOUR PIAN

Think what Welte-Mignon (Licensee) means to you

IMAGINE a musical instrument that brings to your home flawless reproductions of the playing of the greatest pianoforte geniuses, and you have a reproducing piano equipped with the famous WELTE-MIGNON Licensee Reproducing Action.

Think what this means: De Pachmann, Paderewski, Casella, Gieseking and a host of other world-famous pianists. Not approximations of their playing, but their very individuality. *Only* WELTE-MIGNON* *possesses this secret of perfect reproduction.* Select any piano you prefer but be sure the reproducing action is WELTE-MIGNON.*

You can have WELTE-MIGNON* in 112 different pianos. There are WELTE-MIGNON* dealers everywhere.

The famous WELTE-MIGNON* Reproducing Action can be installed in *your* grand piano. Our beautiful brochure sent on request.
